2257. A letter from the Comptroller General of the United States, transmitting a report on construction, technical, and environmental matters on the trans-Alaska oil pipeline through the Spring of 1977 (EMD-77-44, August 23, 1977); jointly, to the Committees on Government Operations, Interior and Insular Affairs, and Interstate and Foreign Commerce.

2258. A letter from the Comptroller General of the United States, transmitting a report on reducing supplemental security income overpayments to medicaid nursing home residents (HRD-77-131, August 23, 1977); jointly, to the Committees on Government Operations, Interstate and Foreign Commerce, and Ways and Means.

2259. A letter from the Administrator, Federal Energy Administration, transmitting a report on the necessity and feasibility of establishing utility reserves of coal and oil, Federal coal reserves, and Remore Oil and Natural Gas Reserves, pursuant to section 158 of the Energy Policy and Conservation Act; jointly, to the Committees on Interstate and Foreign Commerce, and Interior and Insular Affairs.

2260. A letter from the Chairman, National Transportation Safety Board, transmitting the Board's budget request for fiscal year 1979, pursuant to section 304(b)(7) of Public Law 93-633; jointly, to the Committees on Interstate and Foreign Commerce, Public Works and Transportation, and Appropriations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

[*Pursuant to the order of the House on Aug. 5, 1977, the following report was filed on Aug. 9, 1977*]

Mr. MURPHY of New York: Ad Hoc Committee on Outer Continental Shelf. H.R. 3350. A bill to promote the orderly development of hard mineral resources in the deep seabed, pending adoption of an international regime

relating thereto; with amendment (Rept. No. 95–588, pt. I). Ordered to be printed.

[*Pursuant to the order of the House on Aug. 5, 1977, the following report was filed on Aug. 26, 1977*]

Mr. MURPHY of New York: Ad Hoc Select Committee on Outer Continental Shelf. H.R. 1037. A bill to require that a percentage of U.S. oil imports be carried on U.S.-flag vessels; with amendment (Rept. No. 95–589). Referred to the Committee of the Whole House on the State of the Union.

[*Pursuant to the order of the House on Aug. 5, 1977, the following report was filed on Aug. 29, 1977*]

Mr. MURPHY of New York: Ad Hoc Committee on Outer Continental Shelf. H.R. 1614. A bill to establish a policy for the management of oil and natural gas in the Outer Continental Shelf; to protect the marine and coastal environment; to amend the Outer Continental Shelf Lands Act; and for other purposes; with amendment (Rept. No. 95–590). Referred to the Committee of the Whole House on the State of the Union.

[*Submitted September 7, 1977*]

Mr. STAGGERS: Committee on Interstate and Foreign Commerce Report on allocation of budget totals to subcommittees under Third Concurrent Budget Resolution revised for fiscal year 1977 and under First Concurrent Budget Resolution for fiscal year 1978 (Rept. No. 95–591). Referred to the Committee of the Whole House on the State of the Union.

Mr. WOLFF: Select Committee on Narcotics Abuse and Control. Report on opium production, narcotics financing and trafficking in Southeast Asia (Rept. No. 95–592). Referred to the Committee of the Whole House on the State of the Union.

Mr. CLAY: Committee on Post Office and Civil Service. H.R. 5054. A bill to repeal section 3306 of title 5, United States Code, to eliminate the requirement of apportionments of appointments in the departmental service in the District of Columbia. (Rept. No. 95–593). Referred to the Committee of the Whole House on the State of the Union.

Mr. CLAY: Committee on Post Office and Civil Service. H.R. 8342. A bill to amend title 5, United States Code, to provide for the application of local withholding taxes to Federal employees who are residents of such locality. (Rept. No. 95–594). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDREWS of North Dakota for himself, Mr. AUCOIN, Mr. ABDNOR, Mr. BAUCUS, Mr. BUTLER, Mr. CARTER, Mr. FINDLEY, Mr. HOLLAND, Mr. JENRETTE, Mr. JOHNSON of Colorado, Mr. MARLENEE, Mr. NEAL, Mr. NOLAN, Mr. POAGE, Mr. QUIE, Mr. ROBINSON, Mr. ROSE, Mr. SIMON, and Mr. WHITTEN):

H.R. 8934. A bill to amend the Internal Revenue Code of 1954 to provide that certain income from a nonmember telephone company is not taken into account in determining whether any mutual or cooperative telephone company is exempt from income tax; to the Committee on Ways and Means.

By Mr. ARCHER:

H.R. 8935. A bill to amend title II of the Social Security Act to phase out the earnings limitation on beneficiaries, by increasing the limitation to $5,000 in 1978 and to $7,500 in 1979, and to eliminate it in 1980; to the Committee on Ways and Means.

By Mr. BRINKLEY:

H.R. 8936. A bill to provide a voluntary self-help program which is designed to assist producers of agricultural products to protect themselves against loss of cost of production when natural or uncontrollable conditions adversely affect production and which will assure consumers that producers will be able to continue to produce food and fiber; to the Committee on Agriculture.

By Mr. COHEN:

H.R. 8937. A bill to amend the Internal Revenue Code of 1954 to provide that the Federal excise tax on telephone service does not apply to amounts paid as State tax on the same service; to the Committee on Ways and Means.

By Mr. CONABLE:

H.R. 8938. A bill to amend the Employee Retirement Income Security Act of 1974 to provide additional time to study salary reduction and cash and deferred option profit-sharing plans; to the Committee on Ways and Means.

By Mr. DELANEY (for himself and Mr. CARR):

H.R. 8939. A bill to eliminate racketeering in the sale and distribution of cigarettes and to assist State and local governments in the enforcement of cigarette taxes; to the Committee on the Judiciary.

By Mr. FINDLEY:

H.R. 8940. A bill to amend the Internal Revenue Code of 1954 to allow a deduction for amounts paid by speech-impaired or hearing-impaired individuals for use of toll telephone service by means of teletype-writers; to the Committee on Ways and Means.

By Mr. JEFFORDS (for himself, Mr. QUIE, Mr. NOLAN, Mr. CONTE, Mr. PEPPER, Mr. PURSELL, Mr. MARKEY, Mr. BADILLO, Mr. HARRINGTON, Mr. MURPHY of Pennsylvania, Ms. OAKAR, Mr. EILBERG, Mr. DOWNEY, and Mr. FAUNTROY):

H.R. 8941. A bill to amend section 504 of the Vocational Rehabilitation Act of 1973; to the Committee on Education and Labor.

By Mr. KEMP:

H.R. 8942. A bill to provide for the issuance of a commemorative postage stamp in honor and memory of the Jews persecuted and killed in the Soviet Union during the past 60 years; to the Committee on Post Office and Civil Service.

H.R. 8943. A bill to provide for the issuance of a commemorative postage stamp in honor and memory of the Jews persecuted and killed by Nazi Germany before and during the Second World War; to the Committee on Post Office and Civil Service.

H.R. 8944. A bill to provide for an alternative amortization period for pollution control facilities; to the Committee on Ways and Means.

By Mr. McCORMACK:

H.R. 8945. A bill to authorize the Secretary of the Interior to further consider the Liberty Townsite petition; to the Committee on Interior and Insular Affairs.

H.R. 8946. A bill to provide for conveyance of certain lands in the Wenatchee National Forest, Washington, by the Secretary of Agriculture; to the Committee on Interior and Insular Affairs.

By Mr. McKINNEY:

H.R. 8947. A bill to require the Federal Trade Commission to monitor the industries which produce supplies from, and hold reserves of, energy sources and, under certain circumstances, to take action to prevent noncompetitive market situations from evolving or continuing, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Ms. MIKULSKI (for herself, Mr. BYRON, Mrs. CHISHOLM, Mrs. HECKLER, Ms. KEYS, Mrs. MEYNER, and Mrs. SPELLMAN):

H.R. 8948. A bill to establish programs for the prevention and treatment of family violence; to the Committee on Education and Labor.

By Mr. NEDZI:

H.R. 8949. A bill to amend title 38 of the United States Code to make certain that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced because of increases in monthly social security benefits; to the Committee on Veterans' Affairs.

By Mr. OBERSTAR:

H.R. 8950. A bill to establish an arbitration board to settle disputes between organizations of supervisors and other managerial personnel and the U.S. Postal Service; to the Committee on Post Office and Civil Service.

By Mr. PREYER:

H.R. 8951. A bill to amend the Federal Advisory Committee Act to abolish certain specified advisory committees; to the Committee on Government Operations.

By Mr. RUPPE:

H.R. 8952. A bill to amend the Federal Meat Inspection Act to permit States to impose inspection, marking, labeling, packaging, and ingredient requirements that are more stringent than Federal standards; to the Committee on Agriculture.

By Mr. STEERS:

H.R. 8953. A bill to provide for the expansion of the Antietam National Battlefield Site in the State of Maryland, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. THONE (for himself, Mr. ENGLISH, and Mr. WAMPLER):

H.R. 8954. A bill to amend the Federal Insecticide, Fungicide, and Rodenticide Act, as amended; to the Committee on Agriculture.

By Mr. WHITEHURST (for himself and Mr. MIKVA):

H.R. 8955. A bill to protect predators from indiscriminate slaughter; to the Committee on Merchant Marine and Fisheries.

By Mr. WINN (for himself and Mr. GEPHARDT):

H.R. 8956. A bill to amend the Natural Gas Act to provide certain limitations on gas curtailment plans; to the Committee on Interstate and Foreign Commerce.

By Mr. ARCHER:

H.R. 8957. A bill to require that any transfer by the United States to any nation, individual, or entity of title to or other interest in real property located in the Canal Zone be specifically authorized by a law enacted by the Congress; to the Committee on Merchant Marine and Fisheries.

By Mr. HANSEN:

H.R. 8958. A bill relating to a national referendum on the Panama Canal; to the Committee on House Administration.

By Mr. DERWINSKI (for himself, Mr. McDONALD, Mr. MILFORD, and Mr. TREEN):

H.J. Res. 584. Joint resolution to authorize the construction and maintenance of a monument to Gen. Draza Mihailovich in the District of Columbia, in recognition of the role he played in saving the lives of approximately 500 U.S. airmen in Yugoslavia during World War II; to the Committee on House Administration.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

241. By the SPEAKER: Memorial of the Legislature of the State of California, relative to retaining Fort MacArthur as an active military installation; to the Committee on Armed Services.

242. Also, memorial of the Legislature of the State of Texas, relative to the Taft-

Hartley Act; to the Committee on Education and Labor.

243. Also, memorial of the Legislature of the State of Ohio, relative to proposed legislation establishing a water conservation program; to the Committee on Interior and Insular Affairs.

244. Also, memorial of the Legislature of the Territory of Guam, relative to improving the political and economic condition of the Island of Guam; to the Committee on Interior and Insular Affairs.

245. Also, memorial of the Legislature of the State of Oregon, relative to the lack of Federal funding to assist the States in meeting the standards contained in the Safe Drinking Water Act of 1974; to the Committee on Interstate and Foreign Commerce.

246. Also, memorial of the Legislature of the State of Texas, relative to establishing a national energy program; to the Committee on Interstate and Foreign Commerce.

247. Also, memorial of the Legislature of the State of Texas, relative to establishing a Post Office in Klein, Tex.; to the Committee on Post Office and Civil Service.

248. Also, memorial of the Legislature of the State of California, relative to the Sacramento-San Joaquin Delta levees; to the Committee on Public Works and Transportation.

249. Also, memorial of the Legislature of the State of Oregon, relative to the social security system; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. MITCHELL of New York:

H.R. 8959. A bill for the relief of Arun Chandra Das; to the Committee on the Judiciary.

By Mr. SNYDER:

H.R. 8960. A bill for the relief of Yang Chong Chun; to the Committee on the Judiciary.

By Mr. VENTO:

H.R. 8961. A bill for the relief of Anwar; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

178. By Mr. BRINKLEY: Petition of the Retired Earned Benefits Organization (REMBO), Columbus, Ga., requesting Congress to remove the "as Available" clause from title 10 of the United States Code, to insure that, upon retirement, military retirees and their dependents receive full medical care to which they have been historically permitted and allowed; to the Committee on Armed Services.

179. By the SPEAKER: Petition of 80th Division Veterans Association, Pittsburgh, Pa., relative to their opposition to unionization of the Armed Forces and support for the reinstatement of the draft; to the Committee on Armed Services.

180. Also, petition of the Military Order of the World Wars, Washington, D.C., relative to the state of American Armed Forces; to the Committee on Armed Services.

181. Also, petition of the New York State Association of Renewal and Housing Officials, Inc., Albany, N.Y. relative to their opposition to welfare reform programs that affect the HUD assisted housing program; to the Committee on Banking, Finance and Urban Affairs.

182. Also petition of the Military Order of the World Wars, Washington, D.C., relative to Federal aid to education; to the Committee on Education and Labor.

183. Also, petition of the Military Order of the World Wars, Washington, D.C., relative to establishing certain course work criteria for school districts receiving Federal educational aid; to the Committee on Education and Labor.

184. Also, petition of the Daytona Beach Area Young Republicans, Ormond Beach, Fla., relative to instant voter registration; to the Committee on House Administration.

185. Also, petition of the National Federation of Democratic Women, Nashville, Tenn., relative to protecting U.S. water resources; to the Committee on Interior and Insular Affairs.

186. Also, petition of the Board of County Commissioners, Palm Beach County, Fla., relative to urging consideration of including the Loxahatchee River in the National Wild and Scenic Rivers System; to the Committee on Interior and Insular Affairs.

187. Also, petition of the Village Council, Empire, Mich., relative to proposed expansion of the Sleeping Bear Dune National Lakeshore Park; to the Committee on Interior and Insular Affairs.

188. Also, petition of the Parliamentarians of the Warsaw Treaty Member-States, The Kremlin, Moscow, Russia, relative to strengthening peace in Europe; to the Committee on International Relations.

189. Also, petition of the 80th Division Veterans Association, Pittsburgh, Pa., relative to the Panama Canal; to the Committee on International Relations.

190. Also, petition of the Military Order of the World Wars, Washington, D.C., relative to maintaining U.S. military presence in Panama and South Korea; to the Committee on International Relations.

191. Also, petition of National Federation of Democratic Women, Nashville, Tenn., relative to support of the administration's energy plan; to the Committee on Interstate and Foreign Commerce.

192. Also, petition of the Great Lakes Conference of Public Utilities Commissioners, Richmond, Va., relative to supporting consumer communication reform and opposing changes in public utility regulatory policies as proposed in the national energy plan; to the Committee on Interstate and Foreign Commerce.

193. Also, petition of Robert J. Muller, Brookline, Mass., relative to psychosurgery for behavior modification; to the Committee on Interstate and Foreign Commerce.

194. Also, petition of Eugene Bart, Savannah, Ga., relative to redress of grievances; to the Committee on Interstate and Foreign Commerce.

195. Also, petition of the National Federation of Democratic Women, Nashville, Tenn., relative to protecting the rights of victims of sexual assault; to the Committee on the Judiciary.

196. Also, petition of the Daytona Beach Area Young Republicans, Ormond Beach, Fla., relative to investigating charges involving payoffs to Members of Congress; to the Committee on the Judiciary.

197. Also, petition of the Florida State Officers of the Knights of Columbus, North Miami, Fla., relative to the indictment of former FBI Special Agent John J. Kearney; to the Committee on the Judiciary.

198. Also, petition of Clifford Barrister, New York, N.Y., relative to redress of grievances; to the Committee on the Judiciary.

199. Also, petition of Puerto Rico and Virgin Islands Chapter, National Association of Postmasters, Frederiksted, St. Croix Virgin Islands, relative to support of the Postal Service Act of 1977; to the Committee on Post Office and Civil Service.

200. Also, petition of the Union County Board of Chosen Freeholders, Elizabeth, N.J., relative to commemorating Thomas Alva Edison; to the Committee on Post Office and Civil Service.

201. Also, petition of the city council of New York, N.Y., relative to increasing Federal aid to public mass transportation; to the Committee on Public Works and Transportation.

202. Also, petition of the Military Order of the World Wars, Washington, D.C., relative to reestablishing the House Committee on Internal Security; to the Committee on Rules.

203. Also, petition of the National Association of Brick Distributors, McLean, Va., relative to requesting a White House Conference on Small Business; to the Committee on Small Business.

204. Also, petition of the Puerto Rican Delegation to the White House Conference on Handicapped Individuals, Hato Rey, Puerto Rico, relative to extending supplemental security income to the citizens of Puerto Rico; to the Committee on Ways and Means.

205. Also, petition of the Interim Joint Commitee on Highways and Traffic Safety of the Kentucky General Assembly, Frankfort, Ky., relative to the proposed Federal gasoline excise taxes; to the Committee on Ways and Means.

206. Also, petition of the National Federation of Democratic Women, Nashville, Tenn., relative to the Bonnie plan; to the Committee on Ways and Means.

207. Also, petition of the Group Health Association of America, Inc., Washington, D.C., relative to supporting national health insurance; jointly, to the Committees on Interstate and Foreign Commerce, and Ways and Means.

208. Also, petition of the council of the city of New York, N.Y., relative to welfare reform; jointly, to the Committees on Ways and Means, Education and Labor, and Agriculture.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

By Mr. ANDERSON of California: H. Con. Res. 341.

Page 4, line 6, strike out "$19,655,000,000" and insert in lieu thereof "$20,355,000,000".

Page 4, line 7, strike out "$19,667,000,000" and insert in lieu thereof "$20,367,000,000".

By Mr. ROUSSELOT:

(Amendment in the nature of a substitute.)

Strike all after the resolving clause and insert in lieu thereof the following:

That the Congress hereby determines and declares, pursuant to section 310(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1977—

(1) the recommended level of Federal revenues is $404,000,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $17,700,000,000;

(2) the appropriate level of total new budget authority is $448,700,000,000;

(3) the appropriate level of total budget outlays is $404,000,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $0; and

(5) the appropriate level of the public debt is $726,331,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares pursuant to section 310 (a) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1977, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):

(A) New budget authority, $119,000,000,000.

(B) Outlays, $111,000,000,000.

(2) International Affairs (150):
(A) New budget authority, $7,000,000,000.
(B) Outlays, $3,800,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority $4,600,000,000.
(B) Outlays, $4,400,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $20,000,000,000.
(B) Outlays, $16,500,000,000.
(5) Agriculture (350):
(A) New budget authority, $2,700,000,000.
(B) Outlays, $2,200,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $18,000,000,000.
(B) Outlays, $15,500,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $6,200,000,000.
(B) Outlays, $7,000,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $17,900,000,000.
(B) Outlays, $19,000,000,000.
(9) Health (550):
(A) New budget authority, $41,000,000,000.
(B) Outlays, $39,500,000,000.
(10) Income Security (600):
(A) New budget authority, $159,000,000,000.
(B) Outlays, $133,000,000,000.
(11) Veterans Benefits and Services (700):
(A) New budget authority, $18,700,000,000.
(B) Outlays, $18,700,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,100,000,000.
(B) Outlays, $3,000,000,000.
(13) General Government (800):
(A) New budget authority, $3,000,000,000.
(B) Outlays, $2,900,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $7,000,000,000.
(B) Outlays, $6,000,000,000.
(15) Interest (900):
(A) New budget authority, $37,000,000,000.
(B) Outlays, $37,000,000,000.
(16) Allowances:
(A) New budget authority, $500,000,000.
(B) Outlays, $500,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority, $16,000,000,000.
(B) Outlays, $16,000,000,000.

SEC. 3. Pursuant to section 310 of the Congressional Budget and Impoundment Control Act of 1974, the House Committee on Ways and Means and the Senate Committee on Finance shall submit promptly to the Budget Committee in their respective Houses reconciliation legislation to decrease Federal revenues by approximately $17.7 billion; the Appropriations Committee of both Houses shall submit promptly to the Budget Committee in their respective Houses, reconciliation legislation to decrease budget authority by approximately $30.304 billion and outlays by approximately $46.206 billion.

EXTENSIONS OF REMARKS

WAUKEGAN SWEDISH GLEE CLUB AT THE KENNEDY CENTER

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. McCLORY. Mr. Speaker, many of us will have the great pleasure of listening to an outstanding men's singing group headquartered in Waukegan, Ill., in my 13th Congressional District, when it performs at the Kennedy Center this Saturday evening, September 10.

The Waukegan Swedish Glee Club and its members have performed throughout this country as well as in Sweden where some were on a 3-week tour this summer. I am proud for them and proud of them because those of us who spend a lot of time here know that the Kennedy Center has become an artistic and cultural success, which some say now rivals New York.

The Waukegan Swedish Glee Club, of which I am an associate, or nonsinging and—as you may have surmised—a non-Swedish member, will be part of a gala program at which the Honorable Count Wilhelm Wachtmeister, the Swedish Ambassador to the United States, and Mrs. Wachtmeister will represent King Carl Gustaf and Queen Silvia of Sweden under whose patronage the evening will be held.

Swedish Conductor Ulf Bjorlin of Sweden will conduct our own National Symphony Orchestra, and the program, called "A Swedish Musical Odyssey," honors the Swedish challenge in the America's Cup Races at Newport, R.I.

I know the Waukegan Swedish Glee Club will do honor to the patronage, the setting, and the occasion, and I look forward to their presentation. Although they have performed in scores of cities, this is their first appearance in Washington.

I salute them, and because this is a memorable occasion for them and for me, I am listing the names of the 41 men between the ages of 21 and 76 who with their woman accompanist are coming to represent the 52-member singing contingent of the Waukegan Swedish Glee Club:

Dr. Frank Mueller, director; Donna Fortney, accompanist, and Axel Anderson, Walton Anderson, Clarence Axelson, Yngve Carlson, Boyer Clauson, Oke Clauson, Harold Dahl, William Dewey, Karl Edman, and Ray Erickson.

Also, Frederic Fortney, Raoul Geary, Bert Hagglund, Karl Bertil Hagglund, Roland Hagglund, Richard Hopkins, Eskil Janson, Carl Johnson, Eric Johnson, Fred Johnson, Gerald Johnson, and Vincent R. Johnson.

Others include Warren Johnson, Ray Johnson, Sven Kristensen, Roger Lauret, Eric Lindberg, Olov Lindberg, Linee Gust, Gerhard Lorentzen, Gilbert Lundholm, Charley Marcussen, William Marshall, Clarence Olson, George Olson, Ruben Olson, Rolland Peterson, Ray Steeples, Richard Vojtko, and Wayne Zeleski.

Arrangements for the Washington visit of the Swedish Glee Club are being handled in Waukegan by my friend Dick Vojtko, and transportation and accommodation expenses are being defrayed by the well-known Swedish industrial firm ASEA, which also sponsored the Swedish entry in the America's Cup Races.

Mr. Speaker, I know that my colleagues in this House join in welcoming to Washington and to the Kennedy Center Dr. Mueller and all of the members of the Waukegan Swedish Glee Club who will be visiting and performing here this Saturday.

SHOULD THE CONGRESS ENDORSE THE NUCLEAR POLICIES OF THE 1950'S OR DEVELOP NEW POLICIES FOR THE 1970'S AND 1980'S?

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. BROWN of California. Mr. Speaker, as the House moves toward the enactment of legislation to control nuclear exports and nuclear weapons proliferation, it is also confronted with the dilemma that some of the past policies of the old Atomic Energy Commission are now counterproductive to our Nation's nonproliferation goals. This dilemma is dramatized in the proposal, initiated by the old Atomic Energy Commission, to move toward early commercialization of the plutonium fuel cycle by pressing for the early commercialization of the liquid metal fast breeder reactor. The centerpiece of this early commercialization program is the proposed Clinch River breeder reactor demonstration project. Unfortunately, the Congress will have to act on the Clinch River breeder reactor before it acts on a new nonproliferation policy. However, there can be no doubt that the two issues are closely interrelated.

It is interesting to note how we got to where we are today in international nuclear matters. Two recent articles give an excellent review of the evolutionary process that has led us to the brink of the plutonium age and partly over the brink in our sincere efforts to limit the spread of nuclear weapons. The common conclusion of both articles is that military and civilian nuclear activities are more closely related than we knew or expected in the 1950's, and the difficulties of safeguarding nuclear materials, especially in the plutonium economy, are greater than was anticipated by policymakers of the 1950's.

Now, in the late 1970's President Carter is following up on the initiatives of the Ford administration to update our nuclear nonproliferation policies. He has run directly into the opposition of the nuclear industries the U.S. helped form, and the nuclear bureaucrats from abroad that the United States helped train. As the National Journal said—

> Jimmy Carter's crusade to delay—or halt—development of the breeder reactor has run into three formidable adversaries: fear, greed, and envy.

How did we get to where we are today? I think the best way to answer this question is to excerpt a portion of the July 30 issue of the National Journal

article entitled, "Pulling the Plug on Plutonium":

[Excerpt from "Pulling the Plug on Plutonium"]

PAST POLICIES

In part, the United States is now suffering from the consequences of its past policies. One reason for the widespread availability of nuclear technology is the long-standing Atoms for Peace program, begun in 1954, which permitted the transfer of nuclear technology in return for safeguards on the use of nuclear materials for weapons.

"You created this enormous interest group"—government agencies and commercial manufacturers—"for spreading this stuff all over," said NRC member Gilinsky, a critic of past U.S. nuclear policies. The United States has never sold a reprocessing plant abroad, but it did declassify the technology and did not object to its adoption by other countries. "I have gone around the world and talked to these plutonium guys, and they all know each other," said Gilinsky. "They all had adjoining offices at Hanford," the government reprocessing plant in the state of Washington where the old Atomic Energy Commission trained foreign technicians. From 1955–77, the government trained more than 5,000 foreign technicians, according to a recent tabulation by Rep. Clarence D. Long, D-Md. In addition, the Export-Import Bank of the United States has backed more than $3.7 billion in loans to finance U S. reactor sales abroad. (See table, p. 1181.)

Although Atoms for Peace may have hastened the spread of nuclear technology, much of it would have occurred anyway. Britain, France and Germany, among others, embarked on their own nuclear research programs in the early 1950s, and, with the United States having demonstrated the feasibility of certain processes, it was only a matter of time before they were duplicated elsewhere. What happened in the early 1970s, however, is that the Indian explosion and the sales of reprocessing plants to Brazil and Pakistan forced American officials to acknowledge the changing realities of nuclear politics. In particular, it forced them to recognize that the Non-Proliferation Treaty, the centerpiece of American policy to prevent the spread of weapons, was both naive and contradictory.

On paper, the treaty represented an idealistic accommodation between nuclear weapons states and non-weapons states. The non-weapons states agreed to forgo atomic weapons, and, in return, they received a pledge from the weapons states of nondiscriminatory, open sharing of nuclear technology for peaceful purposes.

In practice, however, the treaty amounts to little more than a pledge of good faith, though, under it, all non-weapons signatories do agree to submit their nuclear facilities to the safeguard and inspection provisions of the International Atomic Energy Agency. But potential loopholes make the treaty a tissue-paper shield against proliferation. The most conspicuous weakness is the long list of countries that have not signed, including France and Spain. Significantly, many of the other non-signatories are precisely the states with either the technological capability or the potential political motivation to develop weapons: Argentina, Brazil, India, Pakistan, South Africa and Israel.

But, even if all countries had signed the treaty, stockpiles of reprocessed plutonium would rob the safeguards of their credibility. Those safeguards are intended to assure that no plutonium—existing primarily in spent fuel rods of light-water reactors—has been diverted for secret reprocessing and use in weapons programs. There is some doubt about whether the existing safeguards can even perform this limited job of accounting and supervision, but, even if they could, their usefulness fades if plutonium stockpiles exist and can be diverted at the last moment.

Safeguards, Nye said in a June 30 speech, presumed that once diversions were discovered, time would exist for "diplomacy to work" in pressuring a country to halt its weapons program. "The new plutonium technology threatens to empty safeguards of their central political meaning," he said.

These problems revealed the fundamental contradiction in the Non-Proliferation Treaty. Article I of the treaty barred non-weapons states from acquiring weapons, but Article IV guaranteed their use of peaceful nuclear technology on a nondiscriminatory basis. That guarantee implies access to reprocessing and enrichment technology, but such access, in turn, could easily make them weapons states and destroy the credibility of safeguards.

U.S. IDEAS

What Carter is attempting to do is find a way around this dilemma. The Administration has proposed an international consultation called, somewhat awkwardly, International Fuel Cycle Evaluation.

Though the conference's organization remains in an embryonic state, the basic ideas espoused by the United States seem clear. If an alternative fuel to plutonium cannot be found—and the prospects seem slim—then all plutonium should be made highly radioactive to increase the difficulty of handling it. Despite its potency as a weapons material, pure plutonium is not very radioactive: that is, it doesn't emit deadly gamma rays with high penetration; therefore, handling plutonium requires only minimal shielding. However, incomplete reprocessing—or exposing the plutonium to a nuclear reaction—would increase its radioactivity. Before using it in a bomb, further reprocessing would be necessary. The increased costs and hazards would presumably decrease the chance of diversion by international terrorists.

Governments with reprocessing plants, however, would still have the ability to complete the reprocessing and use plutonium for weapons. To limit those risks, the United States wants reprocessing plants under multinational ownership and international supervision. No one country, the argument goes, could seize control of the plant or divert plutonium without risking political or economic retaliation from other members of the group.

"Those other governments would object strongly if their equity investment is being jeopardized (by plant seizure)," Nye said in an interview. He contrasts such a venture with "fig leaf" proposals for international control that would "take an international flag and hoist it over an existing national plant." The inherent checks under that approach, he argues, would be much smaller. Nye also mentions the possibility of similar arrangements for enrichment plants and, ultimately, breeder reactors—if there are breeder reactors.

Whether other countries would buy the joint ownership scheme remains to be seen. The proposals themselves remain vague, and they still involve a large amount of discrimination between weapons and non-weapons states, which would be allowed to have their own reprocessing and enrichment facilities. Advanced and semi-advanced non-weapons states, such as Germany, Japan, India, Brazil and Italy, might fight such discrimination. And, once the line is broken for one non-weapons state, how can it be held for others?

Such questions explain Carter's determination to slow the momentum towards plutonium technology: the more countries that make commitments—both of money and national prestige—to reprocessing, enrichment and breeder facilities, the more complicated the job of negotiating future limitations.

In the bargaining, the Administration can do more than talk about what it wants. Despite the erosion of America's political leverage, formidable powers still remain. The United States can guarantee supplies of enriched uranium and can offer to make available sites in the United States, for the long-term storage of nuclear wastes. But there is also the stick, the threat of denying the supply of enriched fuel under existing agreements.

Even if other countries build more enrichment facilities, the United States will remain a large supplier for the world's reactors well into the 1990s. Under its existing bilateral agreements that cover nuclear exchanges, the United States has retained an effective veto power over the reprocessing of U.S.-supplied fuel, though the agreement with the European Community countries contains no such veto as long as the reprocessing is confined to the community. Various congressional proposals would insist that the United States use its control over fuel supplies to prevent or limit reprocessing. Under the congressional proposals, if other countries did not agree to give the United States control over the reprocessing of *all* spent nuclear fuel (not just U.S. supplies), the United States would automatically cut off its fuel supplies. The Administration has proposed a milder, more flexible approach that would require only approval over U.S. fuel or fuel that goes through U.S.-built reactors.

The final legislation is likely to be some place in between, reflecting not only Administration pressure but also a growing belief in Congress that the United States cannot effectively wield its ultimate weapons without doing more harm than good.

An early test case may come over the Tokai Mura reprocessing plant in Japan. For months, the Administration and the Japanese have been locked in negotiations over the plant, with the Japanese resisting U.S. efforts to prevent it from opening. "We don't think our leverage is sufficient to bully them into that," says one congressional aide. The State Department is now searching for a formula that would not make Tokai a precedent for other countries' plants—an impossible search, according to some specialists.

"A decision to approve reprocessing . . . at Tokai Mura will set an important international precedent. It will make it more difficult, if not impossible, to dissuade other non-weapons states from acquiring similar capabilities," the National Resources Defense Council Inc. said in a letter to Nye on July 1. The letter contained veiled hints of a lawsuit if the government sanctions opening the plant.

The Tokai plant dramatizes the dilemmas of U.S. foreign nuclear policy. A similar case now exists in India, which has a small reprocessing plant ready to open and reprocess U.S.-supplied fuel, and others are bound to arise. As a practical matter, both these plants probably could not have been undertaken without tacit U.S. approval. Now, however, the United States has reversed its previous favorable attitude towards reprocessing and wants other countries not only to sacrifice their investments, but also to disavow two decades of thinking about their nuclear futures. That other nations regard this as highhanded should not be surprising.

But if the United States insists on using its remaining leverage over supplies of enriched fuel to compel compliance with its new attitudes, the victory could be short-lived and, possibly, harmful. Countries could retaliate by refusing to cooperate with the United States in other areas—trade, economic policy, or relations with developing nations. In the long run, countries would try to eliminate their dependence on U.S.-enriched fuel and reactors.

In short, Carter is playing a very risky game, and—after dangling all his carrots and sticks before other countries—probably must

rely primarily on persuasion. And he must hope that he can quietly fan fears of proliferation and convert other countries to the straightforward and dour logic of the U.S. position, if a weapon exists, it may be used; the more places it exists, the more likely it will be used.

There are other reasons, besides the proliferation ones, for reconsidering the breeder option. This point has been made quite forcefully to the Congress by the administration, which considers the Clinch River breeder reactor demonstration project in particular to be an economic "turkey." Another perspective on this question can be found in an article published in the December 5, 1976, issue of the New York Times Magazine, entitled, "How 'Atoms for Peace' Became Bombs for Sale."

[Excerpt from "How 'Atoms for Peace' Became Bombs for Sale"]

In economic terms, plutonium recycling has become so expensive that it no longer makes much sense, and the American breeder project, years behind schedule and a fortune above estimates, has so far bred more skepticism than plutonium. But the real basis for our plutonium decision should have more to do with avoiding a nuclear war than with cost overruns or schedule setbacks. The breeder reactor could ultimately prove economic. But a world of hostile states and versatile terrorists cannot conceivably be made safe for plutonium. An American decision to develop the breeder can only imply deepest pessimism about alternate energy sources and a heroic faith in international law.

As to the question of American sales abroad, continued promotion of reactor exports would multiply the risk of weapons proliferation even if other nuclear supplies stopped selling reprocessing plants. Nuclear reactors, no matter how "safeguarded" through international inspection, are plutonium factories. India built its own reprocessing facilities; so could others.

Finally, as to what kind of leverage we have with other countries these days, the answer may depend on economic facts no less than on common interest pressure and force of example.

The French have their own breeder program as part of their own vision of energy independence, and they are not about to renounce it simply because of America's proliferation worries. But they might be willing to agree to stop exporting reprocessing plants. Even the nuclear industry agrees that a reprocessing plant makes no economic sense for countries with fewer than 50 reactors. No one, says an American official, "believes that the export of reprocessing plants is a particularly attractive economic market."

The same economic process that has made reprocessing plants unattractive may eventually kill off the breeder. The commercial reprocessing plant in West Valley, N.Y., was shut down in 1972 because radiation hazards were increasing above predicted levels and it would have been prohibitively expensive to meet the Government's rising standards. While the radiation and safety problems of the breeder are different from those of current nuclear facilities, they may be even more severe. The French breeder doesn't breed very fast. Speeding it up may mean compromising safety or multiplying costs. In either case, France might be stuck with another Concorde—a technological accomplishment but an economic dud.

Already, other countries are rethinking their breeder programs. The British have been warned by Sir Brian Flowers, chairman of the Royal Commission on Environmental Pollution and a founder of Britain's nuclear power program, that the breeder is "a billion-pound step down a technological path which may later prove unacceptable or even catastrophic." Carter has proposed slowing down our breeder development program and converting it into a "long-term, possibly multinational, effort."

There is good reason to think, then, that a worldwide plutonium economy is not inevitable. The decision is not ours alone to make, but it can be greatly influenced both by our unilateral actions and by the kinds of agreements we seek with foreign suppliers.

Mr. Speaker, I hope this Congress can put away the outdated and outmoded policies of the past, resist the economic pressures of the present, and adopt a nuclear nonproliferation policy that is consistent and fair in an international as well as a national context. To do so, we will have to support President Carter's call to defer the Clinch River breeder reactor project. As Leonard Ross, the author of "How 'Atoms for Peace' Became Bombs for Sale" stated—

What is needed above all is a clearheaded understanding that the path to plutonium is paved with "demonstration" projects, billion-dollar trial runs, self-serving explanations that everyone else is doing it, and self-fulfilling prophecies that proliferation is inevitable.

DONALD R. LARRABEE

HON. WILLIAM S. COHEN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. COHEN. Mr. Speaker, this week Donald R. Larrabee ended more than a quarter century of service to the people of Maine as the principal Washington correspondent for Maine newspapers. Don has left his desk in the Senate Press Gallery to assume a new role. He will serve as the head of a State of Maine office in Washington which will seek to attract new, nonpolluting small industries to our State.

Last month, as he prepared to shift jobs, Don Larrabee wrote a column for the Maine Sunday Telegram in which he looked back on his many years in journalism. The column was a moving valedictory for an exceptional career, and I insert it at this point in the RECORD so that all my colleagues who have come to know and respect Don Larrabee over the years may share in his insights.

The article follows:

GOODNIGHT! AFTER 30 YEARS THIS VETERAN MAKES A CHANGE

(By Don Larrabee)

WASHINGTON.—How does one say goodbye—or even goodnight—to 31 summers of newspapering in Washington?

The words do not come easily. It is unsettling to shift desks and to type on a different keyboard—but it is also good to settle in a different chair and communicate from a different perspective.

At the end of this month, I will take a sabbatical as a Washington journalist because I think it is time for a repotting and because I can be a catalyst for responsible growth in Maine

The Governor has asked me to help him explore what can be done to bring nonpolluting small industries and technologies to the state. The goal is to attract enterprises which will make the wisest and best use of Maine's resources, its labor and its capital.

It is not an easy assignment but it is appealing to a native son who has watched at a distance for three decades while other parts of the nation have prospered and his home State has struggled to compete.

This is not said out of any sense of despair. Maine has a glorious past and I have faith in its future. It has cleanliness and beauty, the best people in the world and some of the finest minds. It has the stuff of greatness. But for a variety of reasons the state has not fully accommodated to the jet-age, or vice versa.

I do not pretend to have the magic answers. I doubt that anything I can do will transform Maine into an economic paradise overnight. But I intend to give it a very good try with many of the people in Washington whose paths have crossed mine over the years.

Some of them have been my news sources. Now, I hope they will listen to what I have to say and consider the horizons that Maine offers

My work will not be competitive with that of the congressional delegation. I hope it will be complementary, extending into areas where it is neither practical nor appropriate for the congressmen to be involved.

Most states now have Washington offices of varying sizes. Maine, New Hampshire and Vermont are among the few exemptions. The offices perform distinctive roles but most of them devote a great deal of their time to chasing down government grants and contracts. This was a major function of an earlier Washington office for Maine but grantmanship is not what Governor Longley has in mind.

I expect to confer regularly with the congressional delegation to coordinate their efforts to boost Maine's economy. I will act as the Governor's representative in matters involving federal legislation. Not unlike the working reporter, I will also monitor congressional hearings where the subject matter has a potential impact for the state.

I expect to be a trouble shooter, a conduit for information and a source of economic intelligence. I hope I can save the Governor some trips to Washington and save the state some money.

The world, the country and, of course, Washington have all changed enormously since I arrived in town in the summer of 1946 with $40 in my pocket. The federal budget that summer, as I recall, was around $40 billion. Now it is close to $460 billion.

Being a journalist in Washington is a combination of explorer, informer, reporter, and, in a very real sense, public servant. There is a sense of satisfaction in being a watchman, in keeping track of a bill or in keeping our elected officials accountable.

This was not meant to be a memoir but I cannot put down my journalist's pen without a recollection or two. Maine stories, like the brook, go on forever it seems. I have been writing about the ebb and flow of the Passamaquoddy Tidal Power Project for 30 years. It still lives in the dreams of energy planners—and tidal power is making as much news now as it did in those early years.

I remember when the Air Force came to the late Sen. Owen Brewster and revealed that it wanted a huge bomber base in northern Maine where our planes could take off to engage the enemy, with every expectation of returning to the same runway without a refueling stop. That was in 1947 and now, 30 years and $170 million later, the Air Force is trying to dismantle the base at Limestone.

In Washington, people live on promises and words. They also eat them, and they are often indigestible—but time is an Alka Seltzer.

Maine has sent some fascinating people to Washington. A reporter remembers that Brewster was a power in his time but also

that he was unable to handle the great power that came to him. He recalls that Margaret Chase Smith carried her independence and her feminism nobly. She was always lively copy because she was unpredictable to the press and her colleagues.

He cannot forget watching Edmund Muskie rise to the top, grasp for the Presidency and slip and fall. Brewster, Smith, Muskie and others made history for Maine and the country and it was worth reporting. And since 1946, I have also seen seven Presidents take the oath of office, for good or bad, and 15 congresses. They all did their damnedest, as Harry Truman used to say.

For some reason, one memory that haunts me is of a night in late August of 1967 when Lyndon B. Johnson sat in anguish in the White House. The cities were aflame with riots and the country was at war with itself over Vietnam. I accepted an invitation to have a drink with the President in his upstairs sitting room. Half a dozen of us shared a bit of history as Johnson spent four hours defending his decisions and his record.

I came to believe in the fall of 1973 that Richard Nixon would eventually give up the office he had won so handsomely in 1972. As president of the National Press Club that year, I presided at luncheons addressed by 13 heads of state. They had come to Washington to determine how much staying-power Nixon had. Most of them have themselves since fallen from power.

Then there was Jimmy Carter, governor of Georgia, who came to the Press Club that year to tell us what he thought was wrong with Washington. Carter the outsider, is now on the inside and he is beginning to realize that it isn't as easy to create as to criticize. This year, the heads of state are parading to Washington again, this time to determine how much staying-power Jimmy Carter has.

Washington is a transient place but so is the world. It has been a fabulous place to visit these past 30 years but, like most of those who have visited in my time, I have developed Potomac Fever.

I don't want to leave—but I still look homeward and I love the view.

PASSENGER TRAFFIC THROUGH PHILADELPHIA INTERNATIONAL AIRPORT SETS NEW RECORD

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. EILBERG. Mr. Speaker, I am pleased to be able to announce that passenger traffic through Philadelphia International Airport through the fiscal year which ended June 30 reached a record-breaking 8.2 million—a 3.7-percent increase over the previous year.

The new peak is especially gratifying to the city, Mr. Speaker, since it was reached while the $200 million airport modernization and expansion program was still underway.

According to Director of Commerce Albert V. Gaudiosi, the city fully expects passenger traffic to continue to increase as a result of the completion of this massive construction project, because we now have one of the finest airports in the Nation.

Domestic passengers accounted for 7,550,217 of the total and international passengers accounted for 651,356.

The number of plane movements was 324,337, an increase of 7.8 percent over the previous year.

Air freight traffic showed an increase of 2.3 percent, rising to a total of 122,294 tons.

The 8.2 million passengers broke the previous record of 7.9 million passengers set in fiscal 1974.

OPTIMISM FOR GREAT LAKES SHIPPING

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. OBERSTAR. Mr. Speaker, the Merchant Marine Act of 1970 has proved to be a commercial Magna Carta for the Great Lakes. The incentives to Great Lakes shipping made possible by status and a variety of Federal programs have combined with a general economic upswing throughout the Lakes States to stimulate renewed optimism about the future of the Great Lakes region.

The economic problems of Great Lakes shipping, the effect of the Merchant Marine Act of 1970, and the prospective outlook for the future were recently analyzed in a very thoughtful and thought-provoking address by John J. Dwyer, president of the Ogelbay-Norton Co., at the annual meeting of the Council of Lake Erie Ports. Mr. Dwyer's remarks about the competitive position of the Great Lakes fleet as compared to rail transportation, the rapidly growing importance of fuel transportation on the lakes, and the possible adverse effects of waterway user charges are matters that deserve the thoughtful consideration of my colleagues not only from the Great Lakes region but from throughout the United States.

I congratulate Mr. Dwyer on this perceptive analysis of the recent history and development of Great Lakes shipping and commend his message to the attention of my colleagues:

PROGRESS IN GREAT LAKES SHIPPING

(Remarks of John J. Dwyer)

It is a particular pleasure to meet once again with friends of the Lake Erie ports. It was about eight years ago that I last discussed with you lake ports and lake transportation and their significance for the economic health of the region.

At that time I asked the question: Will there be a re-discovery of the significance of Great Lakes transportation? I pointed out that there had been no new construction of lake vessels in a decade and that rate discrimination against Great Lakes ports by the railroads was taking a heavy toll of domestic lake traffic, particularly traffic in coal. I also said railroads were themselves in serious trouble.

I pointed out that there was evidence that the competitive position of the Great Lakes region in the nation was eroding. Based on "value added by manufacture," the Great Lakes states are steadily losing out to the rest of the country. That means loss of jobs and payrolls. While there are certainly many reasons for the erosion of the competitive position of the Great Lakes region, efficiency of transportation is a crucial factor. Our regional economy depends on heavy industry and heavy industry depends on the cheap movement of millions of tons of raw materials and semi-finished products. These movements can best be accomplished by the low cost-modes—railroads and water carriers. At that time, little new investment was going into lake transportation, and the financial condition of the railroads was a continuing cause for alarm.

In the transportation field, a number of things have happened since the summer of 1969, when I last addressed you. There is greater recognition of the importance of lake and Seaway transportation. This area has even been designated as a fourth seacoast to help encourage foreign trade directly to Great Lakes ports.

Our Maritime Administration has taken a constructive interest in the development and improvement of lake shipping.

The energy crisis has resulted in new priorities for the development of our coal resources. Low sulphur western coal is particularly valued, and millions of tons of western coal are now moving over distances in excess of 1500 miles from Montana by rail to Duluth-Superior and by vessel to the electric utilities on the Great Lakes. Expansion of this movement is expected to be quite rapid in the next few years.

Uncertainties abroad have been part of the reason for heavy new investment in the development of our iron ore and taconite resources in the upper lakes region. In turn, this development of coal and ore resources has stimulated welcome new investment in expansion and improvement of the lake fleet. The opening of the new 1200-foot lock at the Soo has permitted new efficiencies in bulk vessel design. Every Great Lakes fleet is showing improvement in productivity.

As the nation responds to the urgent necessities for energy conservation, it will turn more and more to those modes which are the most efficient in the use of fuel. Of the major studies comparing energy efficiency of the different modes, rail and water have been found to be far and away the most efficient, with water transportation having a considerable edge over rail.

The most widely-quoted study shows rail consuming 750 BTU's per ton mile and water transport consuming 500 BTU's per ton mile. Rail unit train does better than rail average, of course, just as special water movements would do better than water average. Our own fleet last year averaged 419 BTU's per ton mile.

The coordination of energy efficient and low cost water service with energy efficient and low cost rail where possible provides the country with its best use of energy for transportation.

In this area of coordination, there has also been significant progress since I last addressed you. Water carriers and ports have complained for years of the rail rate discrimination which has squeezed out connecting water carriers and denied the public the efficiencies of water-rail service.

The classic example involved coal from southeastern Ohio mines via Great Lakes ports to electric utilities in Michigan. Unit train service was provided all-rail, but arbitrarily denied in connection with water carriers at lower Lake Erie ports. The rail rate from the mine to the Lake Erie port for a distance of 150 miles equalled the unit train rate for the all-rail service of 300 miles. This discrimination effectively suppressed rail-like competition.

In a landmark lawsuit, the ICC found for the railroads, but was reversed by a Cleveland federal court in such unequivocal terms that neither the ICC nor the railroads appealed.

As a result, the Commission now appears willing to use its powers to prescribe rail rates on the rail segments connecting with water carriers which are comparable with

the competitive all-rail alternative. It has even endorsed a precise formula for determining comparability.

The formula is simplicity itself. The variable costs of the rail service from origin to destination are determined. So are the variable costs of the movement to or from the connecting water point. The ratio of revenues to variable costs must be the same in both situations. Rates which provide comparable contributions over variable cost on both services would be reasonable and fair to the railroad, the Commission says.

It would be interesting to try this formula in situations in which the railroads discriminate in favor of Atlantic ports against Great Lakes ports on foreign trade items.

On the bulk traffic, we are also watching with interest a case involving the New England Governors' Conference and feed grains. Here the ICC concluded that it is willing to prescribe 10-car volume rates on demand for New England feed grain shippers—a precedent for any shipper and any port willing to meet the usual restrictions and terms for 10-car, 20-car or unit train service. This decision has been appealed by the railroads. The New England interests have logic and good sense with them. There is no possible justification for offering volume rates to some and not to all.

Among the most significant developments contributing to the efficiency of production in our region has been the success of the campaign to bring substantial government aid to the northeastern railroads.

This began as a cooperative effort in 1970 of the Water Transport Association, the American Trucking Associations and the Association of American Railroads with the Surface Transportation Act. That effort evolved into the Railroad Rehabilitation and Regulatory Reform Act of 1976. The cooperative climate of water carriers, truckers and railroads had much to do with the success of this major national drive to provide billions in new aid to railroads.

While we supported these measures to aid railroads, we knew, of course, that the aid would be used to improve rail productivity. This would make the railroads more formidable competitors. But we do not rely for success in water transportation on the inefficiences of our competitors. We believe the national economy and the regional economy is best served—and in the long run our interests are best served—by improving the efficiency of all transport modes.

The assumptions behind this cooperative effort were often stated. The economy would continue its traditional long-term growth rate, a doubling of the GNP every 17 to 20 years. All modes would have to grow and improve their services to meet expanding demand. The chief problems would be raising the funds for investments in expanded capacity.

It is widely recognized that no industry is more inportant than transportation to the efficient functioning of the economy. In a fundamental and crucial way, transportation enters into the cost of every economic transaction. Since earliest times, therefore, the government has played an important role in assuring adequate transport facilities at reasonable cost. To this end, it has established a variety of direct and indirect aids—including tax incentives, relief from money-losing activities, loans and loan guarantees, the underwriting of such items as railroad retirement and the provision of facilities that cannot be financed privately.

There has never been a comprehensive review of all the different aid programs to determine how much they amount to and whether one code is favored over another. Nor is there any "combined transport account" anywhere in the government to facilitate control of what the government spends each year in its direct and indirect aid programs for transportation.

A comprehensive study of the aid programs and the establishment of a "combined transport account" are favored by the water industry. Nor is there any opposition to opening up the question of which method of financing the various aid programs is the most equitable to the public.

But the recent passage in the Senate of a proposal to impose use taxes on the inland rivers without any preliminary examination of the government's total role in transportation or of the impact of such taxes on agricultural and industrial interests served by these rivers seems shockingly premature and unwise.

Though the proposal presently excludes the Great Lakes and Seaport harbors, the Department of Transportation and the Office of Management and Budget have left no doubts that they eventually intend to tax all navigation functions.

The Senate bill would recover costs on a segment-by-segment basis up to 1% of the value of the freight plus transport charges.

Certain segments of the inland rivers cost more to maintain and are due for replacement of locks and dams. These would be particularly adversely affected, as would short-haul traffic. Experts have testified that one of the regions most adversely affected might well be the upper Ohio River, including the Pittsburgh steel district which is served by rail connection from the lower Lake Erie ports. Thus, the Great Lakes may be excluded from this proposal temporarily. But if the Pittsburgh steel district is adversely affected, the Great Lakes and Lake Erie ports will be too. The House has yet to act.

One of the main reasons the sponsors gave for the measure was the alleged inequity in the use of federal funds as between water and rail modes. And yet, rails enjoy a variety of federal aid programs which dwarf aids to navigation.

Tax subsidies amount to hundreds of millions annually. The multi-billion grants and loans under the 4R Act, and Federal aid which relieves railroads of loss operations, are relevant. The $7 billion rescue of the railroad retirement fund is also relevant. Together they all represent a massive influx of federal funds to the railroad industry. If anything, the advantage is on the rail side rather than the navigation side.

Great strides have been made in the past eight years in improving regional transport efficiency. Better recognition for Great Lakes services has been achieved, aid to faltering railroads has been made available, the ICC is at least neutral on intermodal coordination disputes, and new investment is going into lake shipping. But the new uncertainty of navigation taxes hangs over us.

How would such taxes affect the struggle to maintain the region's competitive position in the country? Will navigation taxes on the rivers serving our region—and eventually spreading to the Great Lakes—accelerated the erosion of payrolls and jobs to other regions?

One recommendation made in that earlier speech of eight years ago bore fruit. There is now heightened awareness among our political representatives in the Senate and the House of the need for action on the federal level to promote the economic interests of the Great Lakes region and the Northeast.

This newly aroused political leadership should be aware that a struggle over taxing navigation could well result in handicapping one of the chief economic advantages of the region—the efficiency of its transport capability. And if we are talking, as we should be, about reviving our regional economy—of attracting new industrial payrolls and jobs—maintaining our advantages in efficiency of transport is a crucial consideration.

A VOICE FOR CONSUMERS IN WASHINGTON

HON. MORGAN F. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. MURPHY of Illinois. Mr. Speaker, on July 19 I announced that I would vote for the creation of a Federal Consumer Protection Agency. I made the announcement after receiving assurances from President Carter's chief consumer advisor, Esther Peterson, that Carter intends to fulfill his campaign pledge to curb Government growth.

The Carter administration appears to be keeping its promise. On August 1, the administration announced that 26 consumer affairs offices now scattered throughout the Federal Government could be consolidated into the proposed Agency for Consumer Protection—ACP. As a result of Carter's reorganization, no new money would have to be appropriated for ACP.

Carter's reorganization plan answers my concern that ACP would add to our already bloated bureaucracy. I am now convinced that the new agency would streamline, rather than add to, the Federal Government.

The question remains: Do consumers really need an agency to protect their interests? I believe the need for ACP is well illustrated by a recent Senate committee report. The study, prepared by the Senate Government Operations Committee, points out how consumers are greatly outspent and outnumbered by private industry in proceedings before regulatory agencies.

The Senate study clearly shows why consumers need a voice before Federal agencies and in the courts. Fortunately, the Carter administration has drawn up a plan to create a Consumer Protection Agency without adding to the Federal bureaucracy. I hope the President's reorganization plan will win new supporters for the agency so it will pass Congress this year.

Mr. Speaker, I would like to draw my colleagues' attention to an article I have written on the ACP. The article appeared in the Southtown Economist on August 28, 1977:

A VOICE FOR CONSUMERS IN WASHINGTON

(By Representative MORGAN F. MURPHY)

On July 19, I announced my intention to vote for the creation of a federal consumer protection agency.

I made the announcement after receiving assurances from President Carter's chief consumer advisor, Esther Peterson, that Carter intends to fulfill his campaign pledge to curb government growth.

Carter appears to be making good on his promise. In an Aug. 1 letter to the House of Representatives and Senate, Bert Lance, director of the Office of Management and Budget, said that 26 consumer offices now scattered throughout the federal government

could be consolidated into the proposed consumer agency.

These offices employ more than 200 persons and have a combined annual budget of $10.6 million. As a result of Carter's reorganization, no new money would have to be appropriated for the consumer protection agency. The funds would simply be transferred from existing programs.

Lance said that $11.6 million would be saved by consolidation and $8.5 million by rescinding former President Ford's plan to put consumer representatives in various government agencies.

Among the offices whose functions would be absorbed by the consumer protection agency are the consumer affairs offices of the Departments of Transportation, State, Commerce, Treasury, Labor and Health, Education, and Welfare.

Carter's reorganization plan answers my concern that the consumer protection agency would add to our already bloated bureaucracy. I am now convinced that the new agency would streamline, rather than add to, the federal government.

The Agency for Consumer Protection (ACP) would not be a regulatory agency but would represent consumers in the courts and before federal agencies. The agency would publish and distribute information on consumer protection and would serve as a clearinghouse for consumer complaints.

ACP would be empowered to request information from businesses to protect the health and safety of consumers and to discover consumer fraud. While this provision has drawn criticism from some businessmen as creating more red tape, some 90 per cent of all firms (mainly small businesses) would be exempt from ACP's interrogatories.

To make sure that the agency performs satisfactorily, the House has required that ACP be terminated in 1982 unless appropriate congressional committees recommend its extension. This "sunset" provision will force Congress to carefully monitor ACP's effectiveness and efficiency in representing consumers' interests.

Do consumers really need a consumer protection agency? I believe the need for such an agency is well illustrated by a Senate committee report released Aug. 8. The study documents how consumers are greatly outspent and outnumbered by private industry in proceedings before regulatory agencies.

The report, unanimously approved by the Senate Government Operations committee, says that administrative barriers and the high cost of agency proceedings exclude participation by most consumer interest groups from the start.

The report states: "At agency after agency, participation by the regulated industry predominates—often overwhelmingly. Organized public interest representation accounts for a very small percentage of participation before federal regulatory agencies. In more than half of the formal proceedings, there appears to be no such participation whatsoever, and virtually none at informal agency proceedings."

The study cited cases where industry spent 50 to 100 times as much money on participation at regulatory proceedings as did public interest groups.

Sen. Abraham Ribicoff (D-Conn.) summed up the committee's report this way: "The public's interest versus the private interests before federal regulatory agencies can be likened to the Biblical battle of David versus Goliath—except that David rarely wins."

The Senate study clearly shows why consumers need a voice before federal agencies and in the courts. Fortunately, the Carter administration has drawn up a plan to create a consumer protection agency without adding to the federal bureaucracy. I hope the President's reorganization plan will win new supporters for the ACP so it will pass Congress this year.

SAVING ENERGY IN SWEDEN WITHOUT BIG SACRIFICES

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. OTTINGER. Mr. Speaker, a constituent of mine, Mr. John Klaesges, recently sent me a copy of an article which appeared during July in the Minneapolis, Minn., Tribune. The article, entitled "Saving Energy in Sweden Without Big Sacrifices," bears the attention of all Members of the House.

I have long thought that Sweden provides America with a superb example of what can be done in the area of energy conservation—without any severe hardships or undue sacrifices. It is clear that the possibility of maintaining a high standard of living—as the Swedes do—is a very real one, even while using much smaller amounts of energy in all sectors than we Americans use.

I would like at this point to insert in the RECORD the text of the article by Goran Albinsson:

SAVING ENERGY IN SWEDEN WITHOUT BIG SACRIFICES

(By Goran Albinsson)

STOCKHOLM.—The standard of living in Sweden roughly equals that of the United States, yet the rate of energy consumption here is appreciably lower. A key question worth raising, therefore, is whether Americans currently concerned with saving energy can learn from the Swedish model.

This is not to suggest, of course, that precisely the same approach that has worked in Sweden can be exported to the United States. The two countries are different in their national character, geographical dimensions, population size and political systems.

But the United States and Sweden are also alike in many respects, and, given their similarities, it may be worth examining why the Swedes consume nearly half as much energy as Americans without substantially sacrificing comparable comforts.

At the core of the energy policy here is the fact that Sweden depends almost entirely on imported oil, and has consequently been forced to devise effective conservation methods. Under a new government program, even more drastic than that proposed by President Carter, energy use is going to be further curbed.

The sector in which energy here is most efficiently conserved is transporttaion. In the first place, Swedish cars burn significantly less fuel than American automobiles because they are lighter in weight and not equipped with such gasoline-guzzling paraphernalia as power brakes, automatic transmissions and air conditioners.

The Swedes, moreover, consume dramatically less gasoline than Americans by usifng their cars mainly for long-distance journeys and relying for short trips on buses, bicycles or their own two feet.

The use of cars is discouraged by heavy taxes on both automobiles and gasoline, and also by severe restrictions on city parking. Here in Stockholm, for example, round-the-clock street parking is illegal and fines for breaking the law are high.

On the other hand, the mass-transit system is cheap and smooth. Buses operate frequently during peak hours, and they also run far into the suburbs, thereby providing commuters with an alternative to the automobile. In contrast to U.S. railways, passenger-train service here is excellent.

Living as they do in a cold climate, meanwhile, the Swedes consume a good deal of energy in heating their homes. But here again, their energy consumption is demonstrably more efficient than that of the United States.

For one thing, Swedish building codes and housing loans are designed to make energy conservation in construction economically attractive. Thus contractors are sensitive to the need for proper insulation and fewer outside walls. As a result, heat loss in Swedish apartments and private dwellings is half what it is in the United States.

Energy is conserved here as well through a reliance on central stations that produce both space heat and hot water. Close to 20 percent of all Swedish homes receive their heat from these district plants, which are less expensive and more efficient than individual units.

Swedes are also less dependent than Americans on large electric appliances like air conditioners, though the percentage of households here with refrigerators and vacuum cleaners is about the same as it is in the United States.

In Swedish industry, too, the accent is on energy conservation. The paper industry, for instance, obtains 60 percent of its fuel from waste forest products, and sectors such as steel and cement production are ahead of those in the United States in their use of energy derived from waste.

The government contributes to these measures by granting subsidies to companies that save energy or make investments in the development of conservation techniques.

Nuclear power now supplies 20 percent of Sweden's electricity, compared to 8 percent in the United States. And the expansion of nuclear-energy facilities is scheduled to continue. Though Sweden lacks oil and natural gas, its uranium reserves are considerable.

Here, as in the United States and elsewhere, the nuclear issue has been a subject of controversy. Prime Minister Thorbjorn Falldin is on record as opposing nuclear energy because of the problem of disposing of radioactive waste. But the other parties in his ruling coalition disagree with him, and they are likely to debate the question for some time to come.

In general, then, Sweden's endeavors in the energy field have been successful. The challenge for the future is to assure further success so that another upheaval, like the Arab oil embargo of 1973, is not too disruptive.

REV. CURTIS H. FAULKNER

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. CLAY. Mr. Speaker, I would like to take this occasion to honor a great St. Louisan, who is an educator, a religious light, and a civic leader, the Reverend Curtis H. Faulkner.

Born in DeSoto, Miss., Reverend Faulkner and his lovely wife Ruth have been instrumental in showing the youngsters of our community the right direction to go and then helping them fol-

low that path. Reverend Faulkner is currently the executive director of the St. Louis Baptist Missionary Fellowship and an instructor at the Western Baptist Bible College. He is a member of the Baptist Pastors Conference of Greater St. Louis, Gamma Tau Religious Fraternity, NAACP, Pleasant Green Baptist Church, and the Missionary Baptist Ministers' Union of Greater St. Louis.

Prior to his current positions, Reverend Faulkner served as the dean of men at Western Baptist Bible College in Kansas City, Mo., the dean of the Missouri State Sunday School and Baptist Training Union Congress; the president of the United Ministers Conference, National and Southern Baptists; the chairman of the Clergy Support Committee, St. Louis Opportunities Industrialization Center; a member of the Steering Committee of the Midwest Lower Invitational Committee, Billy Graham 1973 Revival Crusade; and a member of the ad hoc committee of the welfare recipients program. This list is but a few of the many organizations with which he has been involved.

Reverend Faulkner holds bachelor of science and bachelor of theology degrees from Western Baptist Bible College in Kansas City, Mo., and a master of religious education degree from the Drake University Bible College in Des Moines, Iowa.

For his exemplary work for our God and for the people of our community, I commend Rev. Curtis H. Faulkner, a luminary of St. Louis.

THOMAS DORGAN

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. BURKE of Massachusetts. Mr. Speaker, a long and illustrious career, spanning almost five decades, has come to a close with the death of my good friend Thomas Dorgan.

Tom and I were friends for 40 years, and during that time, I always knew him to be a highly dedicated, efficient public official; his lifetime was spent in service to his country, local community, county, and State, and his was a lifetime of achievement.

While Tom Dorgan has left our midst, he has left behind a record of public service which is an example to all who follow.

Tom Dorgan was a compassionate, generous, and decent person. He showed a lifetime of compassion for his fellowman. Tom Dorgan was one of those who first recognized the cruelty and discrimination shown against minority groups as early as 1935. He was a great patriot who loved his country and in his sincere way, tried to combat those forces that sought to rend apart our democracy. His was a powerful voice, and he shall be greatly missed.

I am submitting for the RECORD, an article from the Boston Globe which marks Tom's many accomplishments in his long and dedicated career:

THOMAS DORGAN, FOR 35 YEARS CLERK OF SUFFOLK COURT; AT 87

(By Edgar J. Driscoll)

Thomas Dorgan, 87, clerk of Suffolk Court for Civil Business for 35 years and father of the once highly controversial Teachers' Oath Bill in Massachusetts, died Friday night in Carney Hospital after a brief illness. He lived at 45 Driscoll Drive, Dorchester.

During his long and efficient service as clerk, he was opposed only once for re-election.

Mr. Dorgan first ran for the post in 1936, but didn't quite make it. He came in second in a field of 12. That same year he was appointed legislative representative for the City of Boston and during his three years at the State House brought about much legislation beneficial to the city.

He stepped down to run again for clerk of the court in 1940, this time winning easily. He was sworn in Jan. 2, 1941 At the time of his retirement he supervised 120 employees and administered an annual budget of almost $2 million. His office handled the largest number of civil cases in Superior Court.

Before becoming legislative representative for the city during Mayor Maurice J. Tobin's administration, Mr. Dorgan had served two terms in the General Court as representative from Dorchester, 1933–1936.

Shortly after his election to the Legislature in 1933, the United States gave diplomatic recognition to the Soviet Union. To him this "proved a gateway for the Communist conspiracy to infiltrate America."

And so he filed a bill in the Legislature requiring teachers and professors in both public and private schools and colleges to take a loyalty oath to defend and protect the Constitution of the United States and of the commonwealth of Massachusetts.

The bill was enacted into law the following year and put into effect in 1935. It raised a belated hue and cry with prominent educators, clergymen, civic leaders, parent-teacher and student groups attacking the oath as Fascist-like, un-American, unconstitutional and a threat to education as a whole. Its proponents, including leading veterans organizations and patriotic groups, hailed it as a bulwark of patriotism.

In 1967 the mandatory teachers loyalty oath law was finally struck down by the Massachusetts Supreme Judicial Court. During the 32 years it was on the books, at least four attempts to repeal it were made to no avail.

During his two terms on Beacon Hill, for example, he created a minor international episode in the legislature with a 1935 resolve condemning Nazi persecution of Jews and other religious faiths in Germany; sponsored a bill, which was defeated, to abolish all the statuary powers of the Governor's Council, which he termed a "one-ring Barnum & Bailey Circus"; sponsored a censorship bill to do away with "moral perversion" on stage, which, had it passed, would, as one opponent put it, "kill the legitimate theater in Massachusetts and outlaw much of Shakespeare."

As clerk of the Suffolk Superior Court, he remained active in cosponsoring or plumping for legislation dear to his heart. In the 1940s he fought for legislation to effect a Metropolitan Boston; establishment of a West Point for diplomats where young men could be trained in international affairs; cosponsored a bill in 1953 to put teeth in his Teachers' Oath law by requiring the heads of all Massachusetts schools and colleges to fire Communists or "Communist sympathizers" from their teaching staffs under penalty of losing their charter (it failed); cosponsored a bill, which was approved, outlawing the Communist Party in the Bay State; and, in 1969, went all out for a bill to enlarge the Superior Court Bench, declaring the state's judicial system was "archaic."

During his frequent outbursts on issues that concerned him, either at the State House, as after-dinner speaker on the banquet circuit or in "Letters to the Editor," someone coined the word "Dorganism," meaning a doctrine of interference in matters which should not be interfered with. But he was sincere in the irritations he inflicted on the community. As an observer put it: "He measured society by the yardstick of his own mental and moral processes and would legally press society into his own mould."

For Mr. Dorgan, the road to success was a long one. Born in Cloakilty, Ireland, he came to this country in 1912—a lad of 17 summers without a dime to his name, an infectious smile and the determination to make his way, as they say.

Twenty-four hours after landing here, he had a job rolling huge barrels in a Charlestown sugar plant, went on to rustling iron and steel in a South Boston manufacturing company, worked in a wholesale liquor firm in Charlestown and in 1915 became a conductor on the old Boston Elevated Railway. Each was a step up the ladder.

During World War I he served in the Navy and after the Armistice went "back on the cars." While supporting himself as a conductor and later bus driver for "The El," he also got himself an education. He went to Berkeley Preparatory School in 1921, Boston University from 1922–1925 and later to Boston University Law School.

Mr. Dorgan leaves his wife, Margaret M. (Crehan); a son, William J. Dorgan of Scituate; two brothers, Michael and Robert Dorgan of Mattapan, and five grandchildren.

A funeral Mass will be said at 10 a.m. Tuesday in St. Gregory's Church, Dorchester. Burial will be in Blue Hill Cemetery, Braintree.

AMTRAK CURTAILMENT WILL INCREASE U.S. DEPENDENCE ON FOREIGN OIL

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. MOAKLEY. Mr. Speaker, I am sure most of my colleagues share my concern over the announcement last week by Amtrak that it will curtail service and increase prices on intercity rail routes—primarily on the Washington-Boston corridor.

The importance of mass transit and intercity rail transit has had a very low priority in relation to the enormous impact it can have on this Nation's energy consumption.

In an article in the New York Times on September 2, columnist Tom Wicker presents a compelling review of the interrelationship of the two issues which I am inserting in the RECORD:

ENERGY OFF THE RAILS

(By Tom Wicker)

When the Senate gets back to work after its summer recess, it will take up an Administration energy program that the American people apparently do not believe is necessary. That's the sad conclusion to be drawn from a New York Times/CBS poll in which 57 percent of the respondents said they did not believe the energy situation was as bad as President Carter said it was, and 49 percent suggested that the "crisis" was only a plot to get higher prices for oil and gas companies.

So much wishful thinking suggests that neither Mr. Carter's leadership nor the program he has put forward has as yet made the kind of demands on the citizenry that would force them to realize the seriousness of the energy situation.

He did call the other day for enforcement of the 55-m.p.h. speed limit as a gasoline-saving measure. Combined with the gradual elimination of gas-guzzlers, that would make a considerable difference in the nation's profligate consumption of gasoline in private automobiles.

But the Carter energy program offers no incentives or penalties designed to get people out of automobiles altogether and into mass transit or longer-haul rail facilities. To top this failure, Amtrak—the quasi-governmental National Rail Passenger Corporation, which runs such intercity trains as there are—has announced extensive cuts in service and a rise in fares. Obviously, the left hand knoweth not what the right hand doth.

Cutting service and raising fares is the classic pattern by which ridership on any transit system is inevitably reduced. Those were the steps the private railroad companies took when they were trying to kill off passenger service, an effort in which they mostly succeeded; so it's ironic in the extreme to see Amtrak, which Congress established to rescue passenger service, embarking on the same course.

It's even more ironic in the midst of the energy crisis—which so many erroneously believe is not a crisis at all—that this energy-saving mode of transportation is being cut back instead of extended. Why should anyone believe the crisis is real when such contradictions are permitted?

Worse, Amtrak has not been failing; in fact, it has been extending its passenger train network, improving its equipment and schedules, and attracting increased ridership (up from 16.6 to 18.6 million annually). But the revenues do not as yet cover expenses, making Federal subsidy necessary. And for fiscal 1978, beginning next month, Congress inexplicably reduced Amtrak's fund request from $534.1 to $488.5 million.

Since Amtrak had added major routes this year, the 1978 fiscal year appropriation is, in effect, a cut from the $482.6 million subsidy for 1977. How the deep thinkers in Congress reconcile that with the new taxes and restrictions that will be decreed in the energy program will be painful to watch.

The announced service cuts will affect 26 states but appear to be concentrated on the Boston-Washington line, along which to complete the absurdity, the Federal Government is spending hundreds of million to rebuild the so-called Northeast Corridor roadbed. These cuts "may well destroy what's left" of Connecticut's passenger service, Gov. Ella Grasso said; they will also reduce weekend runs on one of Amtrak's most successful projects, the Metroliner between New York and Washington.

Even so, the announced cutbacks will account for only $28 million of the shortfall in subsidies and revenues that Amtrak faces in 1978. Other cuts may have to be made and Amtrak says a prime candidate is the Floridian, which now provides service—albeit not very good—between Chicago and Miami.

The Floridian loses about $9.5 million a year, illustrating another of Amtrak's problems—the private railroads. The train could pick up major additional ridership and revenue if it were routed through Atlanta, the traditional Southern transportation hub. But the Louisville & Nashville won't let Amtrak use its line from Chattanooga to Atlanta, owing to heavy freight traffic, and the Southern Railway would permit the use of tracks it controls only if Amtrak puts about $20 million into upgrading the line. Amtrak obviously doesn't have the money.

In the West, for another example, Amtrak may sue the Missouri Pacific Railroad to force decent service and schedules on the Inter-American, which Mo-Pac runs on much of the important route from Chicago through St. Louis and north-south across Texas to Laredo on the Mexican border. Mo-Pac operation has made the Inter-American legendary for lateness, slowness and surliness.

On top of such problems, the reduced Federal subsidy, forcing service cuts and fare increases, is nothing less than weird. How do Mr. Carter and Congress expect ever to convince the public that there's an energy crisis—much less that they know how to cope with it?

CURB ON THE GRAND JURY

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. CLAY. Mr. Speaker, there is increasing evidence that the grand jury system has strayed far from its original purpose. More and more of our citizens are intimidated by a system that was set up for their protection against unjust charges.

The Missouri Supreme Court has come to fully recognize the flaws in the present grand jury system and has made a ruling that I believe is worth sharing with my colleagues.

Below is the text of an editorial taken from the St. Louis Post on July 19, 1977:

CURB ON THE GRAND JURY

The Missouri Supreme Court has ruled that grand juries cannot accuse public officials of wrongdoing without indicting them. This is entirely in accord with the State Constitution, and with any sense of fair play and justice. It is also a limited curb on the kind of abuses that can arise in the grand jury system.

Under the State Constitution, grand juries "have power to investigate and return indictments." Nothing in the Constitution, however, says that free-wheeling grand juries can accuse anyone without making the accusations official through indictments.

This was the basis of the case brought to the Supreme Court by a Clay County planning director, who wanted his name expunged from a critical grand jury report. The high court concurred that "a grand jury should either indict or be quiet." It made the point that an indicted person has an opportunity in court to refute the charge, but a person accused only by report has no real redress.

To a degree, what the court has done here is to bring the grand jury back into the judicial system of which it is supposed to be a part. It is not part of the executive branch as is the prosecutor. In ancient England, and according to our Founding Fathers, the grand jury was a citizen's defense by fellow citizens in the grand jury against improper or unfounded charges by the state. Even today, defenders of the system argue that the grand jury places criminal justice in the hands of the community.

But the system has not been working that way. Far too often, the grand jury has become a rubber stamp for the prosecutor. The jurors hear what the prosecutor wants them to hear. A prospective defendant has no right to appear as a witness or to produce witnesses on his own behalf. In short, exculpatory testimony can be excluded. And if, with all these advantages, a prosecutor cannot justify an indictment, the grand jury report may still criticize the target of the investigation.

The misuse of grand juries by the Nixon Administration's prosecutors led federal judges repeatedly to order restrictions on their work. Last year, a group of lawyers, politicians and church groups called the "Coalition to End Grand Jury Abuse" sought federal legislation to let lawyers assist witnesses and to require prosecutors to present exculpatory evidence as well as evidence of crime.

It might be objected that the grand jury was never meant to be a trial jury, limited in its investigatory power. But since the direction of the grand jury has changed, legislation may be required to put it back on its original track. The Missouri court decision offers the individual some protection that a responsible grand jury itself should be willing to provide.

THE STORY OF MOTHER HEN

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. KASTEN. Mr. Speaker, intrusion of the Federal Government into the day-to-day lives of the American people is one of the most alarming, yet elusive, problems facing our Nation.

Often at the expense of personal freedoms, Federal regulatory agencies—and Congress itself—have developed an insatiable appetite for "saving us from oursleves" through costly, confusing, conflicting controls on our lives.

The story of the Federal Government's efforts to pervade our lives is told in a recent issue of Newsweek.

Written by Philip M. Sellinger, former director of the Wisconsin State Chamber of Commerce, "Mother Hen" describes the Government crusade "to create a socially engineered, homogenized utopia."

As Mr. Sellinger says, "The Wonder of It All is how we ever managed to come as far as we have—or live as long—Before Mother Hen took us under her wing."

The article follows:

MOTHER HEN

(By Philip M. Sellinger)

Surely we Americans are thrice-blessed—with a Mother Hen Congress and ever-growing Federal bureaucracy dedicated to saving us from ourselves. Rest easy (if you can find anything noncarcinogenic to wear, eat, sit or lie on). Mother Hen is determined to create for us the safest, most sterile and most orderly of all possible worlds—even if she is forced (reluctantly, of course) to "modify" our personal freedoms, one by one.

Think of it! Eventually, we will be relieved of all personal responsibilities—including thinking for ourselves—and the need to make any personal decisions. The Great White Chicken in Washington, after all, knows far better than we what is best for us.

In fact, the list of Her efforts in our behalf is so extensive and those efforts so pervade our daily lives that it boggles all but Her own imagination. A few examples, however, will illustrate their multiplicity and diversity.

Already we have child-proof (and, often, adult-proof) containers for virtually everything. Tricycles have been studied, wheel by wheel, to determine why our children sometimes fall off. Our Protectors have decreed seat-belt buzzers for our cars—with airbags next. They have removed edges, buttons and "squeakers" from our children's toys, remixed our paints and redesigned our cribs.

Ceaselessly, they overdose rats to expose a constantly expanding list of carcinogens in our environment and everything we use, wear or eat—including mothers' milk!

COMMON SENSE

Fear not! Federal legislators, bureaucrats, scientists, regulators and social engineers strive night and day to relieve us of the need to exert common sense—or teach our children the rudiments of safety and self-discipline.

Their thoroughness is wondrous to behold. One day, a Federal Guardian decrees the fabric of children's sleepwear shall be treated with a flame-retardant chemical. (Since, in residential fires, most children die from smoke-inhalation, presumably this edict was intended to protect children who play with matches in their sleep.)

The next day another Guardian approves the chemical. Finally, a Chicken declares the chemical carcinogenic. (It was not reported whether the test rats were fed pajamas or injected with nightgowns, but a lot of sleepwear manufacturers were "caught with the goods.")

The littel beggars could sleep "in the buff," but before you finish telling them a bedtime story, another Chicken will find that sheets and blankets "are dangerous to their health."

But be of good cheer! Our self-appointed Federal Custodians leave no door unopened—nor spare any cost (to you)—in their Crusade to create a socially engineered, homogenized utopia.

For example, although it is not clear whether concern for "safety" or "health" was involved, not long ago the Sages of OSHA (Occupational Safety and Health Administration) ordered a small "Mom and Pop" business—which does not deal directly with the public—to install a second lavatory, *even though Mom and Pop regularly share the same sanitary facility in their home.*

These Custodians of Life and Limb ordered that construction workers be provided with ear plugs (to prevent impairment of hearing)—and decreed that mobile equipment be equipped with bells to warn the workers (whose ear-plugs block out the sound).

TV "CHANNEL LOCKS"

Recently, the Mother Hen surpassed even herself. She petitioned the FCC to require "channel locks" on all new television sets. This will enable parents to prevent pollution of juvenile minds by "locking out" all TV programs tainted with violence or other socially unacceptable behavior.

This has to be regarded as the Finest Hour of the Great White Chicken in Washington. In a society where self-discipline already is in exceedingly short supply—especially in our schools—our youngsters will be spared the traumatic experience of parental guidance and discipline in their homes. It will be much easier simply to lock them out.

However, this latest brainchick of Mother Hen could revolutionize the Institution of Marriage. Wives will discover that just before kickoff time they can lock out the football games of the week— and throw away the key.

Although there may be some merit in locking out Howard Cosell on Monday night, this is bound to drive husbands to spending the weekend afternoons in the nearest friendly neighborhood inn—where the key was thrown away with all the channels "locked in." Obviously this will increase the potential for alcoholism, drunk driving, and poker-induced bankruptcy.

In retaliation, husbands will use a duplicate key to lock their wives out of daytime soap operas and giveaway shows—thereby driving them out on budget-busting shopping binges. With no one at home to watch the kids, now deprived of their vicarious experience of violence, they will go out to vandalize their schools—or start smoking marihuana to create their own fantasies. To accommodate them, possession of grass will be universally "decriminalized"—thus relieving parents of the necessity to bail them out of juvenile court.

CONGRATULATIONS

Meanwhile, the Great White Chicken will be congratulating herself for rescuing our children from exposure to violence (and/or the kind of hostility, and occasional physical assaults, they can see on the picket line around their school every time their teachers "walk out" in illegal strikes).

The future never seemed brighter, safer or less complicated by the need for personal decisions or responsibility. We can look forward to the day when the Federales will issue each of us an air-conditioned, vacuum-sealed, shatter-proof, sterile, noncarcinogenic plastic bubble—to insulate us from each other and all the Rigors of Life.

Thenceforth, we will be able to roll (or bounce) through life—listening only to television/radio programs that have been pasteurized and homogenized by the Great White Chicken to exorcise all mental and temperamental pollutants.

The Wonder of It All is how we ever managed to come as far as we have—or live as long—before Mother Hen took us under her wing.

FULL EMPLOYMENT WEEK

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. SIMON. Mr. Speaker, this week millions of people throughout the Nation will be participating in activities of Full Employment Week. Rallies will be held in more than 50 cities. Full Employment Week is being sponsored by the Full Employment Action Council—headed by Coretta Scott King and Murray Einley, an old friend who is president of the Amalgamated Clothing and Textile Workers' Union. The events during the week of September 4–10 will highlight the Nation's prolonged unemployment crisis and the need for corrective action.

I want to associate myself with these activities. It is both an economic and human tragedy for us to allow unemployment to continue to hover around 7 percent. While the unemployment rate has been reduced during the 8 months of the Carter administration, there are still more than 6½ million people out of work who are actively seeking jobs. Even more have dropped out of the labor force altogether; they have just given up.

It is time for the Government—in a close partnership with the private sector—to undertake a coordinated effort to alleviate our intolerably high unemployment rate. I have been a consistent supporter of the Humphrey-Hawkins approach. There has been a great deal of criticism and misunderstanding about this approach, but it is clear that we must move in the direction of a full employment policy.

In order to provide a realistic test of a full employment policy, I have introduced H.R. 7193, the Pilot Guaranteed Employment Opportunities Act. This legislation would establish a pilot full employment program that would allow us to see—at a low cost—the implications of a full employment policy.

Specifically, H.R. 7193 would direct the Secretary of Labor to establish guaranteed employment plans in 20 counties throughout the country. A three-tiered system would be set up, with the primary emphasis on encouraging employment in the private sector. If the private sector could not meet the demands for employment, emphasis would be placed on State and local government jobs. Only as a last resort would the Federal Government provide jobs.

Mr. Speaker, it is satisfying for those of us who have been pushing for a full employment policy to see the increased commitment to this goal that is evident in the administration's welfare proposal.

President Carter's "Program for Better Jobs and Income" would expand public service jobs under CETA from 725,000 to 1.4 million. This is a doubly significant increase when seen in the context that there were only 285,000 CETA positions when the President took office.

The administration's welfare plan seeks to guarantee access to work or training for one adult in every family with children. These public service positions will provide both the work experience and training to allow people to move into regular public and private sector jobs.

While this proposal may not be as comprehensive a policy as some full employment proponents would desire, it is nevertheless a major step in the right direction. The administration's commitment to full employment has been concisely stated by Secretary of Labor Ray Marshall:

> I think that we should not be satisfied until we get to full employment and that we need to move as rapidly and as prudently towards full employment as we possibly can. A lot of people have difficulty understanding what full employment means. To me it's a fairly simple concept, and that is that everybody who wants to work can find a job without having to look too long.

From my perspective as a member of the Budget Committee, one of the most encouraging aspects of the administration's proposal is that the Department of Labor will institute about 10 demonstration projects to test the employment aspects of the welfare plan. These demonstration projects are consistent with the pilot program I proposed in H.R. 7193. They should provide us with a much firmer base from which to evaluate and implement full employment policies as well as to consider the specifics of the administration's welfare proposal.

The Labor Department's demonstration projects will be operated by CETA prime sponsors, and will last for 1 year. The projects will begin this fall, so that information and conclusions will be available as the Congress considers welfare reform next year.

The welfare reform demonstration projects will test three critical aspects of the administration's proposal. First, the projects will test the capability of the Department of Labor and related institutions to create public jobs on a large scale that are appropriate for welfare recipients and pay at or near the minimum wage.

Second, the demonstration projects will test variations in delivery systems

or linkages between CETA, the Employment Service, the Work Incentive program, and welfare offices. The projects will also demonstrate the comparative costs of job creation as opposed to income maintenance.

Several other aspects of the employment section of the administration's welfare proposal will be tested by the demonstration projects. They include: First, the actual employment readiness of groups judged to be "employable;" second, the public employment expansion potential of various kinds of institutions; third, the feasibility of various innovative approaches to developing work projects or public job positions for welfare recipients; fourth, the feasibility of various ways of applying work requirements; and fifth, the extent to which welfare recipients who are not required to work volunteer for public jobs.

Not every project will demonstrate each of these factors. But variations in geographic area, labor market characteristics, level of welfare payments and kind of CETA sponsors will provide a balanced mix of useful information.

Mr. Speaker, one of the most serious unemployment problems in this country is among our young people. Unemployment among teenagers is well over 15 percent. This summer, Congress passed H.R. 6138. This legislation was based partly on the Comprehensive Youth Employment Act of 1977 introduced by Senator HUMPHREY and myself, and will have a significant impact on youth unemployment. But because of fiscal restraints on public employment programs such as this one, it will not be enough to alleviate the problem.

As a member of the Budget Committee, I am especially sensitive to the need for programs to increase youth employment in the private sector without a great infusion of Federal money. One such program that will work is a youth opportunity wage.

When the minimum wage bill, H.R. 3744, comes to the floor this fall, Representative CORNELL and I will offer an amendment to establish a youth opportunity wage at 85 percent of the present minimum wage. This provision would apply to youths 18 and under during their first 6 months of their employment. Penalties are provided for employer violations.

There is strong evidence that such a youth opportunity wage would encourage employers to hire young people and provide them with the training necessary to enter the labor force. This can be done without adverse effects on adult employment.

A variety of studies have indicated that a youth differential is likely to be successful. In drafting our proposal, we gathered supportive evidence from studies of the Congressional Budget Office, the Congressional Research Service, the Bureau of Labor Statistics, the Brookings Institution, and a variety of economists. Attached are two fact sheets on the youth opportunity wage amendment.

Mr. Speaker, I want to reiterate my support for the activities taking place during Full Employment Week. We can no longer stand by idly and watch the future of our country dwindle on unemployment lines and welfare rolls. I only hope that someday we will achieve full employment and activities and statements such as these will no longer be necessary:

FACT SHEET ON YOUTH OPPORTUNITY WAGE AMENDMENT TO H.R. 3744

DESCRIPTION

Encourages youth employment by establishing a youth opportunity wage at 85% of the regular minimum wage;

Special youth rate applies to youths through the age of 18, for a training period of six months after they are hired;

Simplifies the current student rate provisions to make them consistent with the youth opportunity wage;

Provides penalties against laying off older workers to hire youths, firing youths as soon as their six month training period expires, or lowering the wages of any youth currently employed.

EVIDENCE

A 1970 study by the Bureau of Labor Statistics found that lower minimum wages for youth in Britain, Japan and the Netherlands increased youth employment with no evidence of displacement of older workers: "Results from abroad do not indicate that adult employment has been affected adversely by lower minimum wage rates for teenagers."

The BLS study also found that youth differentials were successful in many states: "Youth differentials are common in most State laws with no apparent evidence of adverse effects."

A BLS survey of employers and employment agencies found that more teenagers would be hired at a lower minimum wage;

A 1976 Congressional Budget Office paper summarized existing statistical studies by noting that an increase in the minimum wage of 25% lowers teenage employment by 3–6%;

A 1976 study by Edward Gramlich of the Brookings Institution found that minimum wage increases cause shifts from full-time teenage employment to part-time employment;

A 1977 study by Finis Welch of UCLA and James Cunningham of the Rand Corporation found that minimum wage increases reduce employment of 14–15 year olds by 46%, 16–17 year olds by 27%, and 18–19 year olds by 15%;

Just before he died, the late D.C. Councilman Julius Hobson introduced the "Youth Employment Act of 1977," which established a special minimum wage for youth at 75% of the regular minimum wage;

In response to a proposed increase in the minimum wage to $1.60 in 1971, Paul Samuelson of MIT commented: "What good does it do a black youth to know that an employer must pay him $1.60 an hour if the fact that he must be paid that amount is what keeps him from getting a job."

COMMENTARY RESPONDING TO ARGUMENTS AGAINST THE YOUTH OPPORTUNITY WAGE AMENDMENT

1. Opponents argue that a youth differential wouldn't work because "the full-time student exception to the minimum wage has been underutilized by those industries it was designed to benefit." Most Members who have spoken with employers in their districts realize that the main reason the student differential isn't used more is because it is so complicated. The youth opportunity wage amendment encourages use by simplifying the administrative machinery and expanding its coverage.

2. Opponents argue that the cause of youth unemployment is not the minimum wage, but rather the "reluctance on the part of many employers to hire young, inexperienced workers with low productivity and marginal labor force attachment." This makes our point precisely. We do not contend that the minimum wage is the primary cause of youth unemployment. But it does exacerbate it. If the minimum wage for youth were lowered, employers would be more willing to hire youths with little experience and low productivity.

3. Opponents argue that the youth differential would be administratively complex because it would require employers to keep track of how long each of their employees had worked for them. Any employer who doesn't do this already is clearly violating income tax and payroll tax laws.

Once a youth has worked six months for a particular employer, he will have developed skills and work habits that will make him a worthwhile employee for either the same employer or a new one.

4. Opponents argue that our amendment is unnecessary because many youths work part-time rather than full-time. But certainly it is worthwhile to encourage both sorts of employment. The point is to help youths find jobs.

5. Opponents argue that the administrative burdens will be increased because we replace prior certification with a system of penalties for employer violations, particularly for the practice of substituting older workers with younger workers. It is immeasurably simpler and more efficient, however, to bring to court instances where employees have complained of substitution and other violations than to require employers to get prior approval from the Labor Department for every employment decision.

6. Opponents say that youths could circumvent the law by moving to a new area and working longer at the youth opportunity wage. First, since our amendment only applies to each employer, this point is irrelevant. But really it strengthens our argument. If a youth needs a job so badly that he's willing to move in order to keep receiving a wage lower than the regular minimum wage, then our amendment must be something youths need.

7. Opponents argue that evidence from abroad does not provide a "clear" test of how a youth differential would fare in this country. Obviously there can be no perfect test until a youth differential is tried in this country. It is worthwhile to note, however, that according to the Bureau of Labor Statistics study, youth differentials abroad did not result in the displacement of adult workers. Furthermore, the BLS study found that state youth differentials have had no adverse effects. There is also no evidence that the current youth differential has caused displacement of adults.

8. Opponents argue that a BLS survey showing that a significant number of employers and employment service offices believe more youths would be hired at a lower minimum wage is irrelevant because it is opinion, not fact. But the fact that employers and employment service offices share a particular opinion is important. As the BLS study says "The evidence suggests, therefore, that some employers would be willing to hire more teenagers at lower wage rates."

9. Opponents argue that the statistical studies discussed in the fact sheet are misleading because of methodological problems. There are numerous other studies, however, done from a variety of perspectives, pointing to the same results as the Gramlich and Welch and Cunningham studies mentioned in the fact sheet.

A Congressional Research Service paper states that "Empirical evidence has traced an adverse impact between minimum wage requirements and teenage employment." It then cites studies by Adie and Chapie, Brozen, Burns, Easley and Fearn, Hashimoto and Mincer, Kosters and Welch, Moore, and Peter-

son and Stewart. None of these were mentioned in the original fact sheet, but all point to similar results.

Opponents say that Gramlich pulled back from his study findings in testimony to the Education and Labor Committee. Yet Gramlich concluded his commentary on teenagers by saying to the Committee: "The upshot of these results is that while higher minimum wages may be good for adults, they work to the detriment of low wage teenagers."

The Congressional Budget Office paper, "Policy Options for the Teenage Unemployment Problem" reports that . . .

There is a general consensus that the minimum wage reduces employment somewhat below what it would otherwise be . . . Several recent studies have reported statistically significant findings that an increase in the minimum wage, other things being equal, reduces teenage employment. These studies, which cover the period between 1954 and the late 1960's, indicate that an increase in the minimum wage of 25 percent would have lowered the level of teenage employment by something like 3 to 6 percent.

10. In testimony before a Senate Committee on July 28, 1977, Secretary of Labor, Ray Marshall, admitted that the scheduled minimum wage increase could result in increased unemployment of 90,000 people. The evidence indicates that a large portion of these lost jobs would be held by youths. The government should not be working at cross purposes. A conclusion in the BLS study, which the CRS study calls "ironic and even pathetic" is instructive in this regard:

There is some basis for the inference that the effect of Federal manpower programs and the Federal minimum wage have tended to offset each other. The analysis of quarterly data indicates that increase in employment attributed to the manpower programs have been offset, to some degree, by decreases in employment attributed to the minimum wage.

11. Opponents argue that our amendment will not help Black youths since it gives them no special preference for jobs. But to the degree that this program benefits all youths, it will especially help Black youths, since they make up a disproportionate percentage of the pool of unemployed youths. The statement by M.I.T. Professor Paul Samuelson is worth repeating in this regard: "What good does it do a black youth to know that an employer must pay him [the minimum wage] if the fact that he must be paid that amount is what keeps him from getting a job."

GERSHON CANAAN

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. COLLINS of Texas. Mr. Speaker, the Senate of the State of Texas recognized Gershon Canaan with a special resolution submitted by Texas Senator Bill Braecklein. Attached are key summary sections of the resolution which is signed by W. P. Hobby, president of the senate. Gershon Canaan is a dedicated, patriotic American. I have always been impressed to have in our community this spirited citizen of Jewish heritage who today represents West Germany as her enthusiastic Consul.

Whereas, Texas' reputation as a great state is based in large measure on the actions of exceptional citizens such as Gershon Canaan, noted architect and Honorary Consul of the Federal Republic of Germany; and

Whereas, Mr. Canaan, born in Berlin in 1917, moved with his family to Palestine in 1933 and was graduated from the Technion in Haifa with a bachelor's degree in architecture in 1938; and

Whereas, During World War II, he volunteered for the British Army, advancing to the rank of captain in the course of valiant campaigns in Palestine, Africa, and Italy; and

Whereas, After the war, he travelled to the United States to become an apprentice with the Frank Lloyd Wright Foundation, but left in 1948 to join the Army of Israel in the struggle for independence; and

Whereas, When he returned to the United States, he briefly taught design at The University of Texas and furthered his education by earning a master's degree in architecture and a bachelor's degree in city planning; and

Whereas, In 1958 Mr. Canaan became a United States citizen and established a private practice in Dallas;

Whereas, Mr. Canaan has served Dallas as Honorary Consul of the Federal Republic of Germany since 1962 and was instrumental in establishing in 1963 the annual celebration of "German Day in Texas"; and

Whereas, In 1964 he founded the Dallas Goethe Center, serving as its president until 1971, and devoted much effort to bringing about the President's "Von Steuben Day" proclamation which brought national recognition to the outstanding German hero of the American Revolution; and

Whereas, In addition to his other activities, Mr. Canaan authored a book entitled "Rebuilding the Land of Israel" and coauthored "German Days in Texas"; and

Whereas, Among the many honors which he has received over the years are a Presidential Citation for his work for the Public Housing Administration, the Officers Cross of Merit of the Federal Republic of Germany, the Medal of Merit of the Institute of Foreign Relations, the Honor Plaque of the City of Frankfurt, the Americanism Medal of the Daughters of the American Revolution, the first Gold Medal of German Day in Texas, and a Texas Bicentennial medallion for his interest and involvement in the bicentennial celebration; and

Whereas, Mr. Canaan was named Ambassador of Good Will by Governor John Connally in 1965 and again by Governor Dolph Briscoe in 1976 and is an honorary citizen of Texas and the cities of Dallas, Fort Worth, San Antonio, Houston, and Fredericksburg; and

Resolved, That the Senate of the 65th Legislature, 1st Called Session, hereby commend Gershon Canaan for his many years of service to the people of Texas, for his contributions to a growing understanding of the state's strong German heritage, and for his efforts to build strong ties of friendship between the State of Texas and the Federal Republic of Germany.

W. P. HOBBY,
President of the Texas Senate.

CONSUMER PROTECTION

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. CRANE. Mr. Speaker, in recent years, we have watched the structure of our Federal Government expand like an overblown balloon. Agencies such as the Consumer Product Safety Commission, Environmental Protection Agency, and Occupational Safety and Health Administration have added thousands of regulations to the books and costs for these agencies has increased to a whopping $121 million.

With such a large budget for these and other agencies, one would think enough is enough. But then again, we must remember who we are dealing with: a Congress that believes all problems are solved by more Government interference. At the same time Congress is trying to push more Government on the American people, such as a new Consumer Protection Agency, the citizens of this country are saying no! The main reason for this outcry is that people are finally beginning to realize that burdensome rules and regulations increase prices and in many instances, create situations where small businesses are forced to close because of expensive compliance orders.

The Washington Monthly Magazine recently published an article entitled, "The Protection Consumers Don't Want" which further explains why public opinion of Government regulation has gone down. I would like to insert this article into the RECORD at this time:

THE PROTECTION CONSUMERS DON'T WANT

(By Marjorie Boyd)

Congress' reluctance to pass legislation creating a Consumer Protection Agency has been widely denounced. President Carter led the bill's supporters in blaming the delays on the lobbying of powerful special interests, and some editorialists have followed suit. But that is a distorted view; this is not just another case of members of Congress dancing to any tune played by the U.S. Chamber of Commerce. Many congressmen who previously supported the idea of a Consumer Protection Agency were surprised earlier this year to find opposition to the bill growing among their constituents—congressmen are increasingly hearing from the advisers and friends who serve as political barometers in their districts that people are not so keen on consumer legislation as they once were. The bill suffered a severe blow when a recent convention of the Federated American Women's Clubs passed a resolution opposing the consumer agency. What has happened to make consumers leery of the government's protection? Is it a general unease growing out of an anti-Washington mood? Or is it something more specific?

It was in the mid-1960s that Congress discovered the consumer. Polls showed that Ralph Nader was held in the highest public esteem, and his various organizations, staffed with bright young men and women, were producing a multitude of proposals to help consumers. Congress, in its excitement at finding a sizable constituency that posed no political risks, quickly passed Nader-inspired laws with names like the Fair Labeling and Packaging Act, the Truth in Lending Act, the Fammable Fabrics Act, the Poison Prevention Packaging Act, the Refrigerator Safety Act, the National Traffic and Motor Vehicle Safety Act, the Federal Caustic Poison Act, and the Hazardous Substances Act. The Consumer Product Safety Commission was set up and given broad powers to ban unsafe products from the market. Also, other laws designed by the Nader groups to protect workers were passed—for instance, the Occupational Safety and Health Act and the Employee Retirement Income Security Act, which reformed private pension plans. Each of these laws, while meeting real needs, pushed government a step closer to the day-to-day lives of businessmen and consumers.

As a result of the congressional interest in the consumer, there are now 33 federal

agencies and approximately 400 bureaus and sub-agencies operating more than 1,000 consumer-oriented programs. If there is indeed a declining public confidence in the government's ability to protect the consumer, it stands to reason that it is in some way connected with the operation of these programs. An examination of how the consumer laws really work shows why the government's bear-hug of protection, which was at first so warmly received by all consumers, now seems stifling.

SOMETHING HAS GONE AWRY

One of the first consumer laws passed was the Truth in Lending Act in 1968. It was heralded as a great breakthrough. Creditors would be required to disclose the true cost of credit, and, congressional sponsors and consumer advocates pointed out, once the true cost of credit was known, consumers would choose to buy from businesses offering the lowest interest rates, thus helping to fight inflation.

Now eight years later, it is clear that something has gone awry—so far awry that the Senate Banking Committee has called the law in for an overhaul. The original idea for a Truth in Lending Act was simply to require a creditor to disclose the true annual rate of interest he was charging. But as the bill went through Congress other disclosure requirements were added, and when the Act got to tht Federal Reserve Board, the bureaucrats there, charged with writing regulations for the new law, quickly added many more requirements, some so complicated as to be unintelligible.

Now banks and businesses seeking to meet the law's requirements send out lengthy and confusing statements to consumers, who are more puzzled than ever about exactly how much interest they are paying.

Some of the Nader-inspired laws have created problems because they were designed with big corporations in mind and had unanticipated effects on medium-sized and small businesses. For instance, the Employee Retirement Income Security Act (ERISA), which reformed private pension plans, is perhaps the most complicated piece of regulatory legislation ever devised—the annual reports required by the law arrive at the Labor Department in packing crates.

The major impetus behind the reform of private pensions was Studebaker's bankruptcy, which left 8,500 workers without pensions. There were no representatives of small or medium-sized businesses present at hearings on the legislation, and when the law went into effect a huge outcry arose from these businessmen, who complained they could neither understand nor comply with ERISA. Senator Gaylord Nelson's Small Business Committee held hearings for which planeloads of angry businessmen descended on Washington, all testifying that complying with the law would cost them enormous legal and clerical fees in a few cases higher than their companies' annual contributions to their pension plans. Several senators threatened to try to repeal the law, or at least to exempt small business from it. As this was going on, it was learned that since the bill's passage, four times as many companies as usual had terminated their pension plans because they could not afford the legal fees and clerical personnel necessary to assure compliance. The Labor Department finally responded with shorter, simplified forms for small businesses, and private consulting firms sprang up to help the smaller companies bring their pension plan into conformance at prices lower than lawyers would charge.

Confrontation was avoided. But by this time, two years after the Act's passage, more than 10,000 companies had dropped their pension plans and 320,000 workers had lost their pensions.

So while the costs of complying with the consumer laws are a nuisance to General Motors and Nabisco, they are a real burden for small businesses—and their employees. Of course, businesses eventually pass legal and clerical costs on to consumers through higher prices. But this takes time, during which legal bills must be paid and payrolls met. For the businessman with a narrow margin of profit, the cumulative expenses of complying with several different government regulatory programs can change ink from black to red.

And we forget that America is still a land of small and medium-sized businesses. According to the Small Business Administration, 55 per cent of all jobs in the private sector are in small businesses. These businesses produce 48 per cent of our output of goods and services and account for almost 43 per cent of the GNP. There are actually more businessmen working for small businesses than for large corporations.

ARTHRITIC FINGERS

Other consumer laws have had unfortunate side effects that have annoyed or angered various groups of the consumers they were supposed to help.

The Poison Prevention Packaging Act, passed in 1970, required, among other things, that aspirin bottles have caps that could not be opened by a child under five years old. The law provided that aspirin could be sold for use by the old and handicapped in bottles without safety caps, as long as it was labeled "This package for households without young children." But retailers cannot always keep on hand a supply of the aspirin without safety caps, so many senior citizens have been forced to try to manipulate the "child-guard" caps with arthritic fingers as they struggle to get their dosage of aspirin every four hours.

The banning of hazardous substances is provoking increasing skepticism among consumers. Of course, no one has questioned the advisability of banning extremely toxic chemicals, but there are a large number of substances that fall somewhere between safe and unsafe because acceptable levels of exposure cannot be precisely determined. Public reaction to the saccharin ban has been fully explored in the press, and there are other less well-known cases that illustrate the various facets of this problem.

In October 1973, the Consumer Product Safety Commission banned certain brands of spray adhesives because of a researcher's work that concluded that the sprays, when used by pregnant women, would cause birth defects in their unborn children. Seven months later, the Commission lifted the ban. Doctors across the country were horrified because on the basis of the ban they had advised pregnant women who had used the spray adhesives to undergo abortions.

Consumer advocates themselves are sometimes sharply divided over a particular products safety. Some groups have been working to have smoke detectors made mandatory, and several local ordinances requiring them have been passed. At the same time, other consumer advocates, including Ralph Nader, are working to have smoke detectors banned because they believe they emit cancer-causing radiation.

One consumer-protection law that totally backfired involved childrens' sleepwear. In 1972 the Consumer Product Safety Commission, in the course of carrying out the Flammable Fabrics Act, required that all children's sleepwear under size 6-X be treated with a flame retardant chemical (sizes 7 through 14 were added in 1975). Millions of parents, already hard-pressed to keep their growing children in pajamas and nightgowns, watched prices jump by 20 per cent overnight. Some manufacturers attached labels explaining that the flame-retardant chemicals and the processes necessary to apply them were responsible for the price hike, and stores posted signs to the same effect. Then, this spring, when the Consumer Product Safety Commission banned the chemical Tris, which had been used to treat over 40 per cent of children's sleepware, parents were understandably shocked to learn that they had been paying a higher price in order to expose their children to a cancer-causing agent.

The Flammable Fabrics Act has left an incredible imbroglio in its wake. Incensed fabric makers and sleepwear manufacturers have gone to court to try to get the government to make up their losses. Spring Mills, one of the country's largest fabric companies, announced it was ceasing production of fabrics for children's sleepwear because of "unpredictable governmental policies," a development expected to drive up further the prices of children's pajamas and nightgowns, at least temporarily. To bring the fiasco full circle, a federal judge enjoined the Consumer Product Safety Commission from enforcing its ban on Tris because it didn't follow its own regulations in issuing the ban. And a group of scientists is warning that the other chemicals used to make fabrics flame retardant are almost as dangerous as Tris.

Sometimes the Consumer Products Safety Commission seems to be *trying* to make consumerism look bad. For instance, it recently announced plans to require all manufacturers of power lawnmowers to equip each of their machines with a safety device that will automatically shut off the motor every time the mower stops. This means that when you pause to move a tool or toys out of the way or even to answer a question from a passing neighbor, you have to tug at the inevitably balky cord starter. And manufacturers say the device will add an average of $60 to the price of a new lawnmower. Granted, Americans suffered 160,000 cut fingers and toes and other injuries while mowing lawns last year, but the Commission admits that the device "might have prevented only about half of those." No figures are available to show how many of these accidents were caused by carelessness. Some sense of perspective should be brought to bear on this problem, since there are over 40 million power mowers in this country, most of which are used about once a week in the summer months.

THE ISSUE OF INTERFERING

It's clear that a large part of the problem is that consumers define their problems differently from the consumer advocates. For instance, consumers tend instinctively to resent intrusions even if they're for their own good—seatbelts that had to be buckled in order for cars to start were extremely unpopular. Consumer advocates are blithely unconcerned with the issue of interfering in people's lives, and don't mind the government acting *in loco parentis*. Also, Ralph Nader and other consumer advocates who played major roles in designing consumer legislation have always focused primarily on safety. But many people simply do not see safety as the most important consumer problem. To them, consumer problems are the new electric frying pan that fails to work after only two uses; or the unbelievably high price of coffee; or the television set that always seems to be in the repair shop; or the house paint that peels after three months. Laws that restrict their personal freedom for what the government has determined to be their own good are not what they had in mind.

Besides the annoyances they cause, it is possible that the consumer laws are producing detrimental effects that are not so readily apparent. *The Wall Street Journal, Business Week*, and other business organs have long warned editorially that the laws are actually hurting consumers instead of helping them

because the expense of meeting their myriad regulations is added on to the prices consumers pay. But the cost of the government regulatory process is a subject that most consumer advocates, government officials, and liberals would prefer to avoid. When I asked an expert on inflation at the Brookings Institution if he had done any studies on the cost of the consumer laws or their effect on inflation, I was told curtly, "We don't do that sort of thing."

One of the largest costs of government regulation in the consumer field, legal expenses, is rarely mentioned. One does not have to be a statistician or an economist to see how this works. The consumer laws are heavily weighted toward the use of the legal system. Government investigators search out violators of the various regulations and when they find one, the accused business can either pay the assigned penalty or challenge it in court. Businesses must also hire lawyers to represent them at government hearings on ever-changing rules and regulations and to interpret the flood of new rules that pour out of Washington. Wronged consumers are also encouraged to go into court—some of the laws provide for the payment of legal fees by either business or the government. The proposed Consumer Protection Agency would add a new dimension to this legal round robin because it would be permitted to sue all other government agencies.

From the standpoint of the legal enthusiast who is convinced there is no human problem the adversary system can't solve, these laws offer the wondrous opportunity for government, business, and consumer to have the full extent of each and every right and responsibility defined in court.

While a system that assures everyone's day in court makes uplifting reading in a legal textbook, litigation is an expensive and time-consuming process, usually viewed as a last resort. Who is paying for all these lawyers? When you ask consumer advocates this question, you hear such soothing phrases as "negligible expense" and "absorbed by business." But this fails to mollify anyone who has had recent experience with lawyers. "Negligible expense" is not a term associated with that profession's work, and since business is not a charitable activity, it does not "absorb" substantial new costs but passes them along to consumers.

Now it's true that most consumer legislation has a point and that some of it is eminently worthwhile. American businessmen too often confirm the most vulgar Marxist's view of free enterprise, so the public does need protection against fraud, against products that endanger health, or, as Nadar put it, are "unsafe at any speed." The magazine *Mother Jones* has, for example, just revealed that Ford was knowingly producing Pintos with gas tanks that, if the car were hit from the rear, had an excellent chance of incinerating the cars' occupants. Action was needed. But every action taken by government, whether it succeeds or fails in achieving its stated purpose will inevitably produce unintended effects. The more lengthy and complicated the legislation—and consumer legislation is very lengthy and complicated—the more unintended effects there are.

And it is these unintended effects, which range from the laughable to the horrendous, that eat away at the confidence of citizens in their government. The cumulative effect of 720,000 workers telling how a program designed to protect pensions wiped theirs out; of thousands of businessmen complaining about what consumer laws cost them; of women recounting how a faulty government decision led them to have abortions; of the elderly talking about aspirin bottles and parents about Tris; and all the other word-of-mouth about the failings of consumer laws—it all adds up to a disillusionment that's quite widespread. The way to combat the disillusionment is to attack it at its source, by either accepting limited goals or devising laws that are not maddeningly complicated and whose effects have been well thought out in advance. This would be in sharp contrast to our present system of writing laws whose goals are understood fully only by their authors. And the system heaps confusion upon confusion as each law is loaded down with pages of regulations written by bureaucrats who speak a different language from the rest of us.

Senator William Proxmire, chairman of the Senate Banking Committee, which is currently studying the problems of the Truth in Lending Act, has announced his intention to try to strip down the law so that all a creditor is required to send out is a statement with the true credit charge on it—and nothing more. If he could get such a law through Congress and then find some way to protect it from the regulation-writers, it would be a noble experiment in government. Others like it could have a profound effect on the way our government works in the future.

CONGRESS MUST REVERSE AIR BAG ORDER

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. KASTEN. Mr. Speaker, quick action by Congress is needed to reverse orders by the Department of Transportation to install air bags in all cars.

While the air bag order was made in the interest of safety, studies show that safety belts are five and a half times as effective in saving lives as air bags, and almost two and a half times better at preventing serious accidents.

But the issue is not only safety. It is freedom.

The air bag order is an infringement on our individual freedom of choice.

This issue is discussed in a well-written article by Dr. Robert Ulrich that appeared in the Daily Jefferson County Union, an outstanding Wisconsin newspaper. For the benefit of my colleagues and the general public, I would like to insert it in the RECORD:

SEAT BAGS

(By Dr. Robert J. Ulrich)

At first blush it appears entirely proper that Secretary of Transportation Brock Adams should order us to use air bags or automatic seat restraints in our autos in a few years. After all, claims Adams, the devices could save as many as 9,000 lives each year. He is supposed to know. After all, he is the secretary of transportation. His decision to require the new safety equipment on all bigger cars by model year 1982, and on all smaller cars by 1984 (Big Brother Year, according to George Orwell) will automatically go into effect unless the Congress stops him by the end of August.

A number of points should be considered here. First, is Adams' decision founded on facts, or a reasonable interpretation of the facts? Or is it more Ralph Nader? The second is, who will pay for the Adams decision? And the third is, should Mr. Adams have such power over us as he has now exercised? Should a bureaucrat, especially one brand-new to office, have such power?

As to the factual situation, we must be as cautious as is Adams, who will only speculate that his devices "could" save as many as 9,000 lives. He does not guarantee anything, and rightly so, for he doesn't know the truth of his claim. He is guessing, on the basis of information given him by his help and others either for or against the equipment. The testimony has been plentiful on both sides, as emotion-charged as has been the nuclear power plant discussion, and about as sensible.

But since no one can prove that the air bags will not save 9,000 lives, Adams made the obvious choice for them. Someone who doesn't want to save lives is as bad as one who doesn't love Mom, apple pie and baseball.

Who will pay for the experiment? The consumer and the taxpayer, of course. Auto prices will climb even more and taxes will go up even more to pay for more inspectors, more enforcers, more complicated equipment and more Big Government, more of everything needed to carry out an unproved, indeed, unprovable, assumption that seat belts and air bags save lives. We agree with the spokesman for the American Motors Corp., who called the Adams decision "a multi-billion-dollar gamble with consumers' money." If a private person or a private business made these kinds of decisions, they would have to pay for them if they went sour. But not so with Adams' decision. If his idea goes sour, the only penalty paid will be by the auto buyer and the taxpayer and not by anyone in Washington.

Finally, should a secretary of transportation, as typical of the big bureaucrats, have this much power over us? We think not. We assume Mr. Adams to be doing his best, but even if he proves to be completely correct about seat belts and air bags we don't think the Congress should give him the power to act as taxman over all of us and overlord of the automobile industry. We don't think any government servant should have that kind of clout over the people who pay his wages. Yet, little by little, and with a bureaucratic stealth as silent as the stars, the high apostles of Big Government encroach upon our every freedom and our every choice.

Always with the best of intentions, they act only for our own good, to protect us from the ravages of the marketplace, to protect us from the unscrupulous and the swindling, to protect us from ourselves, to protect, protect, protect.

Whence came they to be so wise? How know they so much of what is good for all of us? We frankly don't think the Big Government people really do know very much more than the common man does. We think it would be best for all of them if they were to back off for a long look at the bureaucratic mess already in existence and to cut it down to size so that it will work for the people, rather than for itself. Before they create any more, they could at least control what they already have.

GULF DRILLING

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. ARCHER. Mr. Speaker, the topic of offshore drilling is certainly one of current interest to the Congress and the Nation. On July 26, 1977, the Houston Post published a column by Lynn Ashby which provides an interesting insight into drilling operations in the Gulf of Mexico. I urge all of my colleagues in the Congress to read this excellent commentary:

GULF DRILLING

(By Lynn Ashby)

Platform A-370—Wilburn Kervin, a drilling specialist from Thicket, Tex., looks out the window at the huge drilling derrick

towering over this offshore platform. Then he looks down at his ledger and sighs.

"I've spent $109,000 on pipe in that well, and have another $131,000 worth out there on the deck, waiting to be used. Today alone it's costing $11,589 for the use of the platform and the men, which is not as much as it can be. It can easily run $23,000 to $25,000 a day. For the 19 days we've been drilling this well, it has cost $650,000 and we haven't made a cent. And now this."

Kervin looks at a receipt: "100 nails—$200."

"How can it cost two dollars a nail?" he wonders. Actually, they are drilling pins about six inches long with an eyehole at one end, and look as though they should run all of a dime each. "That's why it's so expensive to get oil out of the gulf," he says, and leaves to inspect his two-dollar nails.

Indeed, it is expensive to get oil and/or gas out of the gulf. As a general rule, it costs from $1 to $1.5 million just to drill and case a well out here, about 120 miles off High Island and two miles from the Louisiana state line. That figure doesn't include the cost of the lease, the discovery or production.

Figures such as these are often trotted out by oilmen, who are rather resentful of what they feel is a failure by the general public to appreciate the high cost and high risk of their jobs. From geologist to roustabout, anyone out here is quick to defend the oil game, and the mere mention of "obscene profits" sends them into orbit.

To make maximum use of their time and trouble, drilling rigs such as this one, contracted by Sunoco and owned by Loffland, are in operation around the clock, every day. The men work seven days on and seven days off. While on the platform, most of them work 12-hour shifts, changing at noon and at midnight. A shift consists of three roughnecks, one derrick man who works high atop the rig, one driller, a motorman to take care of the machinery, a crane operator and four roustabouts. The toolpusher is the top sergeant, on duty—or at least on call—24 hours a day.

Others on board include welders, electricians, cooks and galley hands, and assorted specialists who come and go, depending upon what is needed. There are, on average, about 30 persons on board at any given time, and at least half of them are working.

They are a surprisingly young lot particularly the drillers. Muddy, greasy, encased in hard hats and rubber boots, living and working together in this rough and occasionally dangerous calling. The need for teamwork and level-headedness out here is the reason there are two absolute and immediate grounds for dismissal: drinking and fighting.

"You can't have a rummy out here," one roughneck explains. "He's going to get himself, or someone else, killed. As for fighting, same thing. If you can't get along with the rest, you make it dangerous for us all. We had two guys get into a scrap just recently. They hadn't even really started before they were packed up and out of here. For good."

The pay for such stress and strain is pretty good. They work 40 hours straight pay then the remaining 44 hours is time and a half. A floorhand gets $5.35 an hour, annual base pay for a roughneck is $14,642. A tool pusher will get about $24,000 a year base. One man is in charge of the directional drilling, that is, snaking the bit around to hit a specific point which the geologists think is productive. Right now he is trying to hit a 200-foot-square area in the earth's innards, 7,147 feet down and 6,721 feet away.

He continually studies his charts and maps, feeding 10,574 feet of pipe toward a point more than a mile down and a mile away, drilling at a 69-degree angle. For this, his company gets $1,000 a day, and last year he got $44,400 plus a car and expense account. He rarely gets to use the latter two—he's been on this platform for 21 straight days.

The platform itself is an interesting bit of technology, vanilla stuff to those who work on them, but rather interesting to others. It sits on eight legs in 345 feet of water—water far clearer and bluer than the gulf looks closer to shore. You can see parts of the platform 40 feet below the waterline. They set it up out here, then used huge cranes to place the equipment and living quarters up on top in only seven loads.

From this point out in the ocean, the drillers have 24 openings in the deck through which to drill. They don't always use all of them, but that's the number available. The holes are drilled down into the seabed, this way and that, looking for oil and gas. Right now, this unit is drilling hole number 11 (called Well 13A for some reason). The first 10 are termed "potentially profitable."

"What people don't understand," one Sunoco official says, "is that just because you hit oil or gas, there may not be enough down there to pay for itself. Generally speaking, in the U.S., both offshore and onshore, one out of every 40 or 50 wildcat wells drilled is a commercial success."

No one seems to know just how much this particular rig will make for Sunoco, since—thus far—not a gallon of oil or cubic foot of gas has been sent to market. (Indeed, from the time an oil company gets an offshore lease until the first oil or gas goes ashore is about five years—if there's anything to send.) Right now the goodies just stay down there until the drilling is finished. Then the derrick is taken down, the equipment is hauled away and this becomes a production platform, sending to shore oil or gas or both. That way, they are able to buy 100 nails for $200.

GEORGE BALL GIVES NATION SOUND ADVICE

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. SIMON. Mr. Speaker, from 1961 to 1966, George Ball was the Undersecretary of State for the United States. During that time, he warned about excessive involvement in Vietnam and was one of the few sources of some sensible thinking on what was taking place in Asia.

In the New York Times of Wednesday, August 24, he had an item on the editorial page about our relationships with the government on Taiwan that makes eminent good sense. I hope my colleagues will read it, and I hope those in charge of policymaking in the administration will read it.

We should make clear our willingness to recognize the government that exists on the mainland of China and should have done that a long time ago. In the same way, we should be willing to recognize the governments in Vietnam and in Cuba. But it is especially important that we not turn our backs on the government in Taiwan when it clearly has a better record in the area of human liberties than does the government of mainland China and when it clearly has done an effective job economically for the people of that nation and is a viable entity.

Of no small significance is the fact that the people of Taiwan, whether Chinese or Taiwanese by background, have no desire to be gobbled up by the large nation only a few miles away. Is it of no importance to us what the people of Taiwan want? The morality of the Taiwan situation is not simply a treaty that we have, but an obligation that we clearly have not to sacrifice the future of the people of Taiwan on the altar of our political expediency.

One of the suggestions that Mr. Ball makes, recognizing both Taiwan and the Peoples Republic of China, would make clear that we believe the government of Taiwan is a viable entity and should govern Taiwan, but we also recognize that they are not the legitimate government of mainland China.

We should show a little strength and firmness, and that our friends in Peking will respect.

It is interesting that the same edition of the New York Times, which has the George Ball piece, has a special to the Times, without a byline, from Peking, noting the August 23 edition of the Chinese Communist Party newspaper, Jenmin Jih Pao, in which the text of Chairman Hua's report to the Eleventh Communist Party Congress was published in full. It contained a highly unflattering reference to the United States. In explaining why China should consider working with the United States in opposition to the Soviet Union, Chairman Hua quoted Lenin that a country should take advantage "of every, even the smallest opportunity of gaining a mass ally, even though this ally be temporary, vacillating, unstable, unreliable, and conditional."

What Mr. Ball is suggesting is that we should be less "temporary, vacillating, unstable, and unreliable."

The article follows:

[From the New York Times, Aug. 24, 1977]

AGAINST "CRAVENLY YIELDING" TO PEKING

(By George W. Ball)

Were Secretary of State Cyrus R. Vance to agree in Peking that the United States would break relations with the Nationalist Government in Taiwan in return for de jure relations with the People's Republic, he would make nonsense of the Carter Administration's commitment to morality in foreign policy. Yet some academic China-watchers, amateurs of realpolitik, now advocate that cynical course on the ground that the "normalization" of relations with Peking (which involves the "de-normalization" of relations with Taiwan) is necessary to sustain a Peking-Washington counter to Soviet expansionism.

Throughout history our views about China have often been distorted by fantasy, and this argument is no exception. The Peking Government does not love us for our beautiful eyes, nor would it respect us for cravenly yielding to its wishes; it is interested in conducting limited diplomatic business for one reason only—that we are an enemy of its enemy, the Soviet Union.

So it is fatuous to argue, as some China specialists do, that because we are making the leaders in Peking "impatient" by frustrating their designs on Taiwan, they will run frantically into the embrace of Moscow. In fact, they will maintain whatever relations with us best serve their interests, and it matters little whether those relations are technically defined as de facto or de jure.

What difference does it make if our outpost in Peking is a liaison mission with little official access or an embassy with little official access—as is true of all foreign embassies to the People's Republic?

But if we would gain little from pushing Taiwan overboard, what would we lose? Well,

self-respect for one thing. We would be acting out of character in pursuing the sordid diplomacy of the 18th century when the reversal of alliances was standard procedure.

Nor could we repudiate our security treaty with the Nationalist Government without critically diminishing the confidence of Japan, Korea and other Asian countries in our other commitments.

The time-honored standards for diplomatic recognition require that a government have control of its territory, the support of its people, and meet its international obligations. The Taiwan Government unquestionably controls Formosa and the Pescadores. It has kept its commitments; and, if it is not a model of democracy, the 17 million people of Taiwan would certainly prefer the mildly authoritarian system of the Nationalist Government to the totalitarian anthill of the People's Republic and absorption by a country with a standard of living only one-third their own.

Thus, the honest course is to reaffirm our recognition of the Nationalist Government as having sovereignty over Formosa and the Pescadores, explicitly stating that we do not recognize its claims to the mainland. Moreover, we should make clear that we will continue to support the Taiwan Government only if it stops discriminating against the Formosans who settled there centuries before the advent of Chiang Kai-shek in 1949. If—as seems unlikely—this qualified position would lead Taiwan to sever its relations with us, so be it.

At the same time, while disregarding the "one-China" or "two-China" theology and the studied ambiguities of the Shanghai Communique, which President Nixon signed in 1972, we should assert that the Government of the People's Republic meets the test of recognition with regard to the mainland but not Formosa or the Pescadores, and offer recognition on that basis. That Peking would reject this should not deter us. Our policy would accord with the facts and established diplomatic practice and we would be true to our announced principles.

All of this should be undertaken in the context of a total policy—to regain the "face" we have lost by a demeaning posture of kowtowing.

During the last five years, in addition to the current Vance trip, there were nine visits by Henry A. Kissinger to Peking, while two American Presidents also made the arduous pilgrimage to that far-off capital. Meanwhile, not one Chinese official of any standing has deigned to visit us barbarians in Washington. Are we, or are we not, vassals of the Middle Kingdom? We certainly act as though we were.

HELP FOR HANDICAPPED CHILDREN

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. MOAKLEY. Mr. Speaker, I rise today in order to bring to the attention of my colleagues of the House a most notable and praiseworthy undertaking recently completed by the Northeastern University Student Chapter of the American Society of Civil Engineers in conjunction with the Boston Center for Blind Children. This enterprise consisted of the design and construction of an outdoor coordination and sensitivity development area for visually impaired and handicapped children. The addition of this facility has significantly increased the effectiveness of the program already available at the Boston Center by allowing the physical skills and sensory perception of these children to be developed to their full potential. The design of this outdoor area had to meet four major criteria: the enhancement of the child's coordination; the stimulation of an awareness of the environment; a flexibility which would allow each child to independently control his or her surroundings; and the apparatus to be used had to be safe but not overprotective. Now that these challenges have been met, the students of Northeastern University have provided the Boston community and its visually impaired children with an outstanding new facility.

The coordination and sensitivity area includes many individual components including a swing area, a picnic area, net hammock, water sensation area, fun house, obstacle course, space trolley, basketball track, and a pottery and planting area. Perhaps the cornerstone of this new addition to the center and the best example of its innovative nature is the figure eight asphalt track which allows the children to develop their strength and coordination through tricycling and rollerskating. The shape and construction of the track lends itself to giving the children an awareness of environment while promoting their independence. In the construction of this splendid area, the members of the Northeastern University Chapter of ASCE, through the use of their fine talents in a most unselfish effort, were able to finish the project at a savings of $15,000 under cost estimates.

Founded in 1901 as the Boston Nursery for Blind Babies, the Boston Center for Blind Children has had a long history of exemplary service to multihandicapped, visually impaired children. It maintains a three-pronged program of educational treatment, diagnostic study, and community aid to families who have preschool children with visual impairments. With the addition of this outdoor coordination and sensitivity development area, the center will be all the more effective in serving these children and helping them to attain their maximum potential.

The Northeastern University Chapter of the American Society of Civil Engineers started in 1940 and has since grown to presently include over 200 members. It attempts to supplement classroom education by promoting professionalism among the civil engineering student body by building dedication to the practice of civil engineering and performing service to society. This campus organiaztion has an outstanding record including many regular activities run for the benefit of its student members, and several successful community projects.

It has thus given me a great pleasure to bring the endeavors of two fine institutions to public attention. I congratulate Northeastern University on the professional excellence and considerable generosity of its students. This group of young people has done something which should make the entire city of Boston proud. I hail their singular efforts and selfless achievements.

ALCOHOL ABUSE AND EDUCATION

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. BROWN of California. Mr. Speaker, recently the States Task Force on Responsible Decisions About Alcohol completed its report and presented it to the President. This report concentrates on education and the development of drinking "skills," certainly important factors in curbing alcohol abuse, but fails to deal with the magnitude of this major public health problem. The legislation I have offered in this area is a start toward Federal realization of this problem, but until federally funded studies begin to address the entire problem of alcohol abuse, little will be accomplished.

William N. Plymat, Jr., son of former Iowa State Senator Plymat, a leader in the movement for responsible government policy on alcohol, has written a critique of the task force's study. The article from the American Issue, the publication of the American Council on Alcohol Problems, points out some of the shortcomings of our thinking on the alcohol problem:

WHO'S RESPONSIBLE?

(By William N. Plymat, Jr.)

The Education Commission of the States Task Force on Responsible Decisions About Alcohol was organized in 1973 with a $1,626,674.00 grant from the National Institute on Alcohol Abuse and Alcoholism, a tax-supported federal agency. The purpose of the Task Force was to ". . . determine how the nation's educational system might help reduce one of America's greatest health and social problems—alcohol abuse and alcoholism."

The Introduction to the Task Force's Interim Report No. 4 states:

"There are two distinct approaches to the prevention of alcohol abuse and alcoholism. The approach our society has most often relied on is the use of controls such as laws and regulations governing the sale, cost and availability of alcoholic beverages. The objective of this approach is to make the purchase of alcoholic beverages more difficult and therefore to discourage consumption. A second prevention approach is to develop broad-based educational programs that will help people to develop the attitudes and skills necessary to make and exercise responsible decisions about alcohol."

As the name implies, the Education Commission of the States is primarily concerned with education. A properly designed and implemented educational "delivery system", they say, will lead to responsible decision making, which in turn should lead to prevention of alcohol problems. At first glance, there would seem to be nothing wrong with this concept, but unfortunately, the use of the word "responsible" is a serious mistake.

The difficulty with the concept of responsible drinking is that no agreed upon definition exists as to what constitutes responsible behavior, and additionally, people may be misled into thinking that alcoholics and problem drinkers are merely irresponsible people. The truth is that persons addicted to alcohol are no more lacking in responsibility than in will-power—both are circumvented by the addiction process. The typical alcoholic individual started out drinking socially and later succumbed to one of the half-dozen or more physical and psychological causes of alcoholism. The goal

of teaching people to drink responsibly is hopelessly illusive.

Education is certainly needed. Traditionally, in the area of "drug abuse", educators have relied on scare tactics, the painting of lurid pictures of addiction and death, brain damage, splintered chromosomes, and the like. More recently, sophistication and subtlety of technique has become the panacea, what with "values clarification" exercises. The term "delivery system" has given the impression that problem prevention is something that can be packaged and marketed!

There are many facts, figures, and concepts that need to be gotten across to the public, because, for the most part, Americans drink in almost total ignorance of the potential consequences. How many are aware that alcohol contributes to cancer and heart disease? How many have been told that two ounces of distilled spirits or two beers can reduce driving ability by up to 30%?

The Task Force did not concern itself with filling this awareness vacuum, in fact, the Report contains no presentation of facts that might contribute to responsible decision making. This rather curious omission is explained by the fact that the Task Force was only interested in the process of prevention, not the substance. The only behavior recommendations contained in the Report are those that are more or less obvious, and which should not have cost a million dollars to document. For example, the Report suggests that cocktail hours be kept to a reasonable length, that drinks be carefully measured, that contingency plans be made for those who become intoxicated, that attractive non-alcoholic beverages be made available by hosts who serve liquor, and so on. These recommendations are hardly dramatic revelations.

One recommendation of the Task Force is rather disturbing. The recommendation was made that food be served with drinks. The supposed rationale is that food in the stomach slows the absorption of alcohol into the blood stream, and that the level of intoxication resulting from a given quantity of alcohol will be diminished somewhat. This idea seems harmless enough; however, it is worthwhile to note that the liquor industry, the manufacturers and sellers of alcoholic beverages, support this concept as a prevention tool. In reality, the association of alcohol with eating, which is a pleasant and emotionally positive experience, is calculated to compensate for those negative feelings associated with drinking. Creating an association in people's minds between eating and drinking can have a dual effect. While it may suggest that people should eat while drinking, it could also suggest that people should drink while eating.

Another dubious recommendation is in the form of a full page photograph in the Final Report. It shows a man handing the car keys to his wife with the caption "Know your own safe limits" This implies that there is a safe consumption limit, so far as drinking and driving is concerned. The question is, what's the limit? In most states, .10% of alcohol in the blood stream is considered the measure of drunk driving. Laboratory and field tests have shown that .03%, the result of roughly one mixed drink or beer, is sufficient to affect driving ability. If that is the case, then one is too many, and there is no such thing as a safe limit.

In addition to making these kinds of counter-productive statements, the Task Force seems to imply that education is somehow more democratic than legalistic controls on alcohol sales. The Report attempts to shift emphasis away from laws that limit consumption and towards education as the primary prevention measure. If the Task Force were truly unbiased, it should have acknowledged that every conceivable tool that can ameliorate alcohol problems should be utilized without equivocation.

Yes, education is important. Well-informed decision making through education is a worthwhile goal. But if education and responsible decision making do not result in reduced consumption of alcohol, problems will continue unabated. There is a direct statistical correlation between total consumption and alcohol problems of all kinds. Insofar as the Task Force failed to come to grips with this crucial point, it failed to a substantial degree.

The alcoholic beverage industry, spending an estimated $400 million a year to promote the increased sales of its products, is in effect increasing the size of the alcohol problem. Brand preference is not the only goal of advertising, increased total consumption is another. The level of alcohol sales is not a pre-determined figure that is merely divided up between companies on the basis of advertising competition. Advertising affects total consumption, and for that reason, the liquor industry has a vested interest in creating more and heavier drinkers, not just in meeting the demand of those that already exist. The manufacturers and dispensers of alcohol products can be expected to oppose all measures that will truly reduce alcohol consumption and prevent alcohol problems. The industry does not oppose the Report of the Task Force, giving rise to the question, how much input and influence did the industry have in the drafting of this report?

It is significant that the Report fails to recommend increased governmental control over the promotion and advertising of alcohol products. The Task Force could argue that since it set out to concern itself with education and responsible decision making by individuals, such considerations of public policy are outside its domain. That in itself would constitute a failure to address the real problem, but it would have served as an acceptable explanation of the Report's content had the Task Force chosen to simply ignore legislation aimed at controlling consumption.

The fact is, they did address themselves to such issues, including advertising, in such a way that the recommendations as formulated are distinctly counter-productive. The following is from the Summary of Interim Report No. 4.

"The Task Force reached no consensus regarding what action should be taken on the age limit issue by states."

"Current laws and regulations tend to focus on the legal responsibilities of the serving and selling of alcohol beverages; e.g., liability of purveyors for damage related to alcohol consumption, and hours of sale. The task force recognizes that, of itself, this does not prevent alcohol-related problems."

"Hours of sale alone . . . do not serve as a reliable prevention technique."

"The task force finds no evidence that warning labels, such as those required of cigarette manufacturers, will prevent alcohol-related problems."

"Does putting a ceiling on the number of places to be licensed to serve alcoholic beverages significantly contribute to the reduction of alcohol-related problems? . . . evidence relating to this issue is so meager it would be impossible . . . to determine this issue's contribution to prevention."

"Would higher taxes and prices be an effective prevention tool? The task force agrees that this is a complex and controversial issue. At this time, studies are conflicting and very inconclusive."

"Does testing a person to determine his or her blood alcohol content (with breathalyzer machines in public places) contribute to prevention? . . . The task force is not prepared to recommend this as a routine practice."

The Final Report of the Task Force, released in April 1977, covers these same points in slightly different language. In fact, the straightforward statements quoted above seem to have been softened somewhat in the Final Report. If anything, the final recommendations are more nebulous and non-specific, with more frequent calls for "further study." However, none of the previous statements appearing in the four Interim Reports were specifically disavowed, and since they were distributed to the same 20,000 people as the Final Report, we must assume that the Task Force meant what it said.

This series of positions was supposedly arrived at after due deliberation by impartial members of a fact-finding body. They might just as well have been written by a public relations agent for the liquor industry. Ordinary common sense should be sufficient to show that hours of sale, age limits, dram shop laws, license limitations, taxation and price control, and warning labels all have some potential for reducing consumption. Each item may in and of itself have only modest value on a relative scale of preventive measures, but what rationale can there be for refusing to give them whole-hearted endorsement as prevention tools when collectively they have considerable value.

Every state that has liberalized the liquor control laws has shown a dramatic increase in consumption. Where wine has been put into grocery stores, or where the drinking age has been lowered, increased consumption has followed, and with the jump in sales, has come increases in alcohol problems that are readily provable by even a casual glance at the statistics. What does the Task Force mean when it says, repeatedly, ". . . there is no evidence . . ."?

The ultimate travesty in this series of indefensible positions is the conclusion of the Task Force relative to liquor advertising: ". . . there is insufficient data to indicate that the advertising of alcoholic beverages has either positive or negative effects on drinking behavior."

What does the Task Force mean by "drinking behavior"? Obviously, it would be impossible to correlate advertising with the drinking behavior of any one person, but projected to the entire population, the fortunes spent on advertising by brewers and distillers has a profound effect on collective drinking behavior.

No industry spends nearly a half-billion dollars a year on advertising without a good idea of the value received. Liquor ads are so lucrative to magazines, newspapers, and broadcasters that the liquor industry has been able to exert substantial control over the media's reporting of news related to alcohol problems. In the case of one major distiller, should the publisher of a newspaper place a news item about any alcohol problem on the same page with an ad, a second free placement is requested. This is obvious intimidation The threatened loss of revenue, even covertly implied, is enough to exert tremendous pressure on all media, with the result that the American people erroneously believe alcohol problems to be less significant now than in previous decades. Public attention has not been focused on alcohol problems in proportion to their importance, and advertising by the liquor industry is partly responsible for that state of affairs. The fact that the Report did not document these well known facts suggests that the Task Force was either manipulated by the liquor industry or simply failed to meet its responsibility.

Freedom to advertise is commonly limited by law for the protection of the consumer, and should be in those cases where the product being merchandised has the potential to be manifestly destructive. There is no democratic precept that requires the freedom to portray dangerous materials as wholesome and beneficial products.

Congressman George E. Brown of California has introduced legislation in the U.S. House of Representatives to make liquor advertising a non-deductible business expense for tax purposes. The bill is designated H.R. 6293. Congressman Brown has said, ". . . this legislation would not ban alcohol advertising, it simply removes the Federal Government from the position of providing an incentive for it."

The average businessman, faced with an operating expense, will often rationalize the expenditure by thinking, "The corporation income tax is 48%. If we spend money as an expense of doing business, it reduces our taxable income. The government shares our investment to the tune of 48%." Given this understanding of the corporate decision making, it is clear that the average taxpayer is subsidizing the advertisement of alcohol products.

Were the Federal Government to ban liquor advertising outright, the ban could only apply to advertising in interstate commerce. National media would be discriminated against in favor of local and purely intrastate advertising media. The problem would not be solved unless each state adopted its own legislation. Federal income taxes, however, apply regardless of advertising placement, and eliminating the tax deductibility of liquor advertising would have the net effect of either raising liquor prices or reducing advertising expenditures. Either result would have some impact on total consumption, in the long run if not the short, with a corresponding reduction in alcohol problems. The benefit to society is so clear and obvious that were it not for vested interests, such legislation would be instantly adopted. How can the public be expected to make responsible decisions when its government hesitates to do so.

Responsibility is what it's all about! There is a dichotomy in human behavior about the cause of drug problems. Is the villain the drug itself, or is it some flaw in the makeup of the individual? The word "responsible" connotes not only intelligent decision making, but also the assumption of guilt. The liquor industry wants the individual to assume responsibility, not exercise it. To suggest that alcohol is an inherently destructive substance is not an acceptable concept to those who manufacture it, therefore the liquor industry with its army of advertising and public relations talent will lend support to any effort that tends to diminish their own culpability and responsibility for alcohol problems. The notion that people are making irresponsible decisions takes the industry off the hook. The Report of the ECS Task Force serves to foster that idea, and has therefore received the approval of the industry.

As a rule, any research or fact-findings effort in the area of alcohol problems is welcomed by everyone, if for no other reason than that the issue is once again brought before the public for scrutiny. But in a very real way, the Report of the ECS Task Force on Responsible Decisions About Alcohol constitutes a public relations vehicle for the liquor industry. As such, the decision to publish its findings was not a responsible decision.

ISRAEL, THE PLO, AND THE SEARCH FOR PEACE

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. WAXMAN. Mr. Speaker, when Secretary of State Vance visited Jerusalem during his recent diplomatic mission to the Middle East, he was honored at a dinner hosted by Prime Minister Begin. The Prime Minister's toast recounted, in both historical and allegorical terms, the compelling moral and legal justifications of Israel's right to exist and live in peace. He clearly and simply described Israel's position on the Palestine Liberation Organization and why it cannot—by virtue of its actions and avowed aims—be a partner to negotiations to conclude peace treaties. I am pleased to insert a text of Mr. Begin's remarks in the RECORD, so that my colleagues may more fully understand Israel's unequivocal views on this matter:

EMBASSY OF ISRAEL,
Washington, D.C., August 15, 1977.

DOCUMENT

The toast given by the Prime Minister, Mr. Menachem Begin at a dinner tendered in honor of U.S. Secretary of State Cyrus Vance in the Knesset, August 9th, 1977.

WORDS OF WELCOME

President of the Supreme Court, Your Excellencies, Members of the Cabinet, Members of the Knesset, the Commander of our Army, Chief of the General Staff, my friend and predecessor Mr. Rabin, and Mrs. Rabin, my friend the Leader of the Opposition Mr. Peres, and Mrs. Peres, Professor Yigale Yadin, ladies and gentlemen.

Mr. Secretary, I welcome you on behalf of the Government and the People of Israel, to our land, to its capital Jerusalem, and to the Knesset, the center of our democracy in which recently certain topographical changes took place. It took some time and some patience too, and now we can say that democracy is a matter both of geography and topography. We greet you with all our heart.

I apologize to Mrs. Vance on behalf of my wife who couldn't be here tonight because of her illness. She will not be able to accompany you, our dear friend Mrs. Vance, as agreed between you in Washington. But I know from my personal experience that Mrs. Dayan is a gracious hostess, and you will go to see the country with her. It is a fine country, and worthwhile seeing. As we always say, it's a small country with never a dull moment.

A GREAT ACHIEVEMENT OF THE SECRETARY

Mr. Secretary, we are grateful to you for undertaking this journey to the Middle East, and for meeting the Arab rulers around us. You did this, together with your colleagues, associates, and advisors, in the cause and the service of peace. It is not easy, it's a physical and intellectual effort, and therefore we thank you for undertaking this journey. Following our talk earlier in the evening I can now say with a full knowledge of the facts that the Secretary of State can already note a very serious, indeed great, achievement in the cause of peace. We congratulate you on that achievement. We shall all continue to search for any road, any avenue, any way to promote peace.

ISRAEL'S CONTINUING SEARCH FOR PEACE

When I was in Washington at the invitation of the President we brought on behalf of our government certain proposals to feed the momentum towards the peace-making process. I think this was a positive initiative and we will continue constantly to think of how to promote the momentum towards the peacemaking process. I think I speak on behalf of every citizen—of every woman and man in this country—when I say that we yearn and pray for peace. In this room, Mr. Secretary, there are men who fought for the liberation of our people, risked their lives, led armies, and won victories. On behalf of all those men I am entitled and duty bound to say that now we have one ambition: to bring peace to our land, to our people, and to the region in which we live. And we do hope that peace will come.

We had earlier in the evening a very good, and very helpful discussion, and may I say—I believe the Secretary will bear me out—the reality is not as dark as the press has been for the last 24 hours. I think we shall make progress.

Foreign Ministers will visit your great country next month, you will meet with them, the momentum will go on, and of course, we all hope that the peace conference in Geneva will be made possible with proper representation. We shall start serious negotiations between Israel and the Arab countries, our neighbors, regarding the conclusion and signing of peace treaties.

THE ALLEGORY OF HUNLAND

There is one problem I will shortly dwell on which is now of international significance and interest. It is my duty to raise it. In order to clarify our atttiude I will use an allegorical story. Let us assume that in a certain corner of the globe there is now a country called Hunland, the Land of the Hun, and the basic philosophy of its government is in a book called "Mein-Kampf". It may happen in our time. What would we do, the Jewish State, the State of Israel? Surely we would call upon all free nations to be watchful, to have no rapport with Hunland. We have already had one experience. All mankind paid the price. All nations, because of a basic mistake in the 1930's made the most horrible sacrifices to be rid of that evil. We paid the highest price.

When I use the word "tertiated" I mean to clarify that we do not accept the known term of "decimation". The Jewish people were not decimated because that term stems from an old custom in the Roman legions that when a breach of discipline happened every tenth legionnaire was executed. Our people lost every third one of its sons and daughters and therefore we use the word "tertiated". It is phantasmagoric—it would mean eighteen million Britons wiped out, or ninety million Russians, or two hundred and eighty million Chinese, or eighty million Americans. Many phantasmagoric figures have been worked out by scientists dealing with megatons, but the megatons, although produced, will never be used. We, however, have to live with such phantasmagoric figures, both in our generation, and for generations to come. So, we have had that experience and therefore we would call upon all free nations to be watchful. But then perhaps some would give us the advice "don't take it seriously, it is not as it is written in the book". If that were to happen we would respectfully say to everyone in the world, "Gentlemen, forgive us, but we cannot accept such advice. We heard it forty years ago". Domestic propaganda would be written, "they don't mean it, don't believe them", but then we know what happened. Then perhaps somebody would say, "there is a certain resolution of the Security Council of the United Nations—we have heard that Hunland is ready to accept that resolution". What would be your reaction? I have no doubt we would say, again, "But, we have already had one experience". Nobody paid attention to what was written in that infamous book, yet every word was brought to realization. There may be some people who learn only how to repeat the mistakes of history. Our generation, with its experience, should learn how to avoid the mistakes of history.

Now, ladies and gentlemen, perhaps some of my honored listeners tonight may have a suspicion that when I spoke about the imaginary Hunland and "Mein Kampf" I actually meant the organization known as the P.L.O. I would like to reassure them—I meant it.

THE P.L.O. AIMS TO DESTROY THE JEWS AS A NATION

And now I will read to you a very short document. "Palestine is the homeland of the

Palestinian Arab people and an integral part of the great Arab homeland, and the people of Palestine is a part of the Arab nation". No room for the Jew. "Jews who were living permanently in Palestine until the beginning of the Zionist invasion will be considered Palestinians". (NOTE: the Prime Minister is quoting Articles 1 and 6 of the 1968 Palestinian National Covenant). In other words, Jews who lived permanently in our land, called by foreigners Palestine, until the Balfour Declaration of 1917, will be considered Palestinians. All the others have to leave. The numbers: fifty or sixty thousand to stay—approximately two million nine hundred and fifty thousand to go. "The establishment of Israel is fundamentally null and void . . . The Balfour Declaration, the Mandate Document and what has been based upon them are considered null and void. The claim to a historical and spiritual tie between Jews and Palestine does not express the historical realities nor the constituents of statehood in the true sense." (Articles 19 and 20)

I remember San Remo. In 1922 Britain was given the Mandate to make possible the reconstitution of a national home for the Jewish people. The characteristic of that document is 're'. A thing which has already existed can be reconstituted. In the preamble to the Mandate the words are used "recognition having been given to the historical connection between the Jewish people and Palestine". Woodrow Wilson, the great president who gave to the world the concept of national self-determination, appointed a committee for the Middle East which recommended that it would be just for Palestine to become a Jewish State. The connection between Palestine and the Jewish people was reconstituted.

And now, after recognition by all the civilized nations of that historical connection, we hear that the claim of a historical and spiritual tie between Jews and Palestine is non-existent. Judaism, and its character as a religion of revelation is no longer recognized as a nationality. Now we are only a religion. But we, at least, know when that recognition was given to us and where and when it was denied.

Now may I also inform you, ladies and gentlemen, that since January 1 many attacks have been carried out by that organization, all of them against civilians. Two have been killed, 120 wounded. But when we say wounded, we don't describe the reality. We should say legless, armless, eyeless, handless people, maimed for a life-time; all of them civilians, men, women, and children. The P.L.O. made the civilian population the targets of their attacks. They aimed to destroy a people, to annihilate a people, to renew the unheard of wrong done to the Jewish people for centuries: to turn them again into defenceless and homeless people. That wrong was redresed by the proclamation of our independence, by the creation of our State. Demented genocide killed man, woman, and child. It is a very serious matter to us, dear friend, Mr. Secretary. Some may say that we are sensitive about it. We are—as a result of our experience. But perhaps sensitivity is not the proper word. I think the proper word is rather, logic.

THE P.L.O. CANNOT BE A PARTNER TO PEACE

To learn from experience is the duty of a man who bears responsibility for the future of his nation, and therefore our stand is clear. We want peace, we want to negotiate peace treaties. We brought proposals, and alternative proposals. We have looked, and we shall continue to look, for any avenue to bring about such negotiations to conclude peace treaties. But the P.L.O., the philosophy of which is based on an Arabic "Mein Kampf" is no partner whatsoever, and never would be a partner for us to hold any talks with, because such is their philosophy, such their design, and such their methods. I believe all free mankind should accept and share this attitude. The P.L.O. is a danger to all free nations, and to the free world.

THE HOPE FOR SHARED DECISIONS WITH THE U.S.

Ladies and gentlemen, we believe that our great friend, the United States of America, will comprehend the attitude of Israel toward this special moral issue. We will share the same decision as far as participation in the Geneva Conference is concerned. We believe in the moral greatness of the United States; we hope we shall make progress and achieve peace.

We are grateful to you, Mr. Secretary, for your efforts. We will do whatever we can to make your stay, and that of your gracious lady, in our country, an enjoyable one.

In this spirit of hope, optimism, and faith in the future of our nations, and indeed of human liberty and justice, I raise my glass to the President of the United States of America, to our guest, the Secretary of State, and to the everlasting friendship between the United States and Israel. Thank you very much.

WASHINGTON, D.C., AT FIRST GLANCE

HON. MICHAEL T. BLOUIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. BLOUIN. Mr. Speaker, I would like to bring to the attention of my colleagues in the Congress the following article from the Marion, Ind., Chronicle-Tribune which I recently came across.

I feel the story does an excellent job of capturing and portraying both this body and the entire city of Washington, D.C.:

[From the Marion (Ind.) Chronicle-Tribune, July 4, 1977]

WASHINGTON, D.C., AT FIRST GLANCE

(By Ed Breen)

The pretty young lady chomped on her egg salad sandwich, glancing out occasionally at the landscape 27,000 feet below.

"Those are mountains, aren't they?"

"Yes, they are. The Appalachians."

Left unsaid in this conversation aboard TWA Flight 404 from Indianapolis to Washington: "Yes, sweetheart, those are mountains, and it took a whole generation of Americans to climb and cross them. You're whipping over them in less time than it takes to down an egg salad sandwich."

The majestic Washington Monument slid into view through the porthole window of the 727 jetliner as the plane made its approach to Washington National Airport.

Across the aisle, a man, obviously jaded by time and unimpressed by history, continued reading his paperback novel by Jacqueline Susann.

Left unsaid: "Aren't you capable of getting excited, dummy? Don't you care that the Washington Monument is right outside your window? And there, there's the Capitol!"

The wisdom of growing up in the Midwest dictates a lot of beliefs in our lives. Among them: That Washington, D.C., is a big city and is, therefore, evil; and that the federal government is giant, faceless, unresponsive monolith and is, therefore, evil.

The first sight of the Washington Monument strips away those beliefs, at least temporarily—and even the most cynical among us becomes a sixth-grader all over again, remembering the pictures in the history book.

Those old pictures come alive. They acquire a third dimension, they take on a sense of reality. There are, in fact, people who live and work and play in the shadow of history. Why, you wonder, didn't the people who made the sixth-grade civics books include people in their pictures of the Lincoln Memorial.

Take, for example, the little man who conducts the tours at the Lincoln Memorial. He wears the Smokey-the-Bear uniform hat of the National Park Service. He must be beyond retirement age, but he stays on because he enjoys his job. To him, explaining the Lincoln Memorial is a grave responsibility.

He addresses clusters of tourists as though he were Lincoln at Gettysburg. Each line of the famed statue of Lincoln carries meaning for him, and he peers over his glasses to watch the tourists, just to be sure they understand the meaning he has given them.

And off to the left, several blocks down the street, is the State Department building, that grand structure where diplomacy and the fate of nations are weighed.

The people inside, our Midwest wisdom tells us, must be stern, icy, detached minds that ponder the fate of the world.

Well, that may be. But there is an exception. Up there in a third floor window ledge is a geranium in full bloom. Someone in that third floor office takes time from global diplomacy to water a geranium each day.

Somehow, that's reassuring.

On down the street, at 1600 Pennsylvania Avenue, is the grandest building of them all: The White House.

It is in here, we are told, that great issues are decided. It is in here that a man can lose his sense of perspective. It is in here that he becomes isolated and insulated from the real America.

Well, if he does it's his own fault. There's no reason for it, other than his lack of willingness to walk half a block.

The White House is surounded by city and people. Less than 100 yards from the most powerful man in the world is a fence, and leaning on that fence on this particular warm spring day is a not-so-powerful man munching on a bag of popcorn.

Across the street—five minutes walk from the Oval Office—is a neighborhood bar. If the President wants to know what America thinks, all he needs to do is stroll across the street from home and buy a beer for the boys.

Then there's the bureaucracy, that swarm of federal job-holders that we have been taught exists only to complicate and befuddle our lives.

They are housed in the dozens of federal government buildings along Pennsylvania and Connecticut avenues.

They do, contrary to what we are told, have faces—and arms and legs and eyes and brains. They drive cars to work, just like the rest of us, and lunch room discussion leans toward talk of the traffic jam on I-95, and getting to a Little League ballgame in the evening, and those other things that we all must cope with.

There is office talk of programs and projects, but it doesn't focus on frustrating the public. Indeed, they talk of solving problems and dealing with the daily issues that confuse Americans—issues like hustling out a passport to a man in Iowa who must make an emergency trip overseas.

The finest, most stately building is the Supreme Court—a building which, incidentally, cost $70,000 less than the $10 million that had been alloted by Congress.

Inside these marble-walled halls there is a greater sense of history and dignity than at any other place in Washington.

Regardless of your opinion of the court's verdicts through the years, the solemnity of the place creates a new reverence for the American legal system. It was in this room that Brown vs. Board of Education forever changed the face of America; it was in this room that President Nixon was ordered to

surrender his treasured tapes; it was in this room that the government and the press fought over the Pentagon Papers.

People talk in hushed voices and the ever-present building guards are more formal than anywhere else. Yet, when the court chamber is open to the public, youngsters in blue jeans and tank tops from around the nation snap pictures of the hallowed room with their Instamatics

In the basement hall, beneath the oil portrait of a Marion native, Mr. Justice Willis Van Devanter, the senior class from Albuquerque, N.M., waits in line for lunch in the cafeteria. And behind them waits Fred Graham, the much-seen court reporter for CBS television news.

And out on the lawn, a squirrel scampers up a chestnut tree. Watching this little performance from a window above is Potter Stewart, Associate Justice of the Supreme Court of the United States.

Like the geranium in the State Department window, this too is reassuring in some way.

Across the street is the center of the government: The Capitol of the United States and the Senate and House office buildings.

And inside, if you are looking for a carefully-planned plot to browbeat Americans, you will be disappointed. If you are looking for people who sit back in overstuffed chairs and work four-hour days, you will be disappointed. If you are looking for grand statements on the future of the republic, you will be disappointed.

You will find, instead, hundreds of men and women working in overcrowded offices, staying at their desks until well past sunset. You will find Representatives and Senators who get jostled in the crowds of tourists. You will find aides to Congressmen being polite to a lunatic who prowls the halls of Congress handing out pennies because he firmly believes himself to be Abraham Lincoln.

You will find a large dog leashed to the ornate, heavy wood door at a Pennsylvania Congressman's office. The dog belongs to a visitor from back home who has come to Washington on his vacation and has stopped to talk with his Congressman.

You will find the administrative assistant to a Congressman who is worried about the high price of coffee. His office staff is consuming too much coffee and the cost is making too large a dent in the coffee fund contributed by the office workers.

Across the hall, in a committee room, you will find Muncie Congressman Phil Sharp and a half-dozen other Representatives listening as the new energy czar, James Schlesinger, testifies on the future of America's natural gas supply. All this goes on under the glare of banks of TV lights and the whir of motor-driven Nikon cameras carried by the press corps.

In the back of the room, far away from the TV cameras and the celebrities, you find a family from Arizona. Dad, wearing Bermuda shorts, is holding his five-year-old son on his shoulders so he can see the notables in the front of the room.

On the floor of the House of Representatives clusters of Congressmen display varying degrees of interest as debate goes on on a bill to limit the nation's tuna fish catch because of the harm it is doing to the porpoise population in the Pacific.

In the gallery around the floor, a Congressman from the Midwest confides his position on the issue: "I'm voting for the porpoises because fifth grade children in my district like porpoises better than tuna fish."

And so goes government.

The members of the House see a clear distinction between themselves and the more select body of 100 Senators on the other side of the building

"The Senators are different than we are," says a Congressman. "I have the idea that each of them has a news release all typed up in his desk drawer announcing his candidacy for President of the United States. All he has to do is fill in the date. You see members of the House who get elected to the Senate. Right away they get all cleaned up in a Brooks Brothers suit and start combing their hair more neatly because they're going to be on TV."

Two Senators, who fit the Congressman's description, walk in conversation up the long flight of steps to the Capitol. They walk past a bus load of Girl Scouts from Michigan who are having their picture taken on the Capitol steps.

The conversation of the Senators is drowned out by the Girl Scout leader. "Be sure your knee socks are pulled up evenly, girls," she says, "because we want the picture to look nice."

The Senators continue on, picking up the thread of their conversation, and head into the grand national debating society where public policy is determined—sometimes on a judgment of what fifth graders like, but more often on a judgment of what is possible for agreement among 435 Representatives and 100 Senators.

And the Girl Scouts break ranks and head down Capitol Hill, screaming with glee at the prospect of their next stop: Seeing Lindbergh's airplane in the Smithsonian Air and Space Museum—and, oh yes, the Declaration of Independence across the street at the National Archives.

Such is a day in Washington, D.C., and the Republic endures.

PRESIDENT'S WELFARE REFORM DRIVE

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. CLAY. Mr. Speaker, I wish to take this opportunity to share with my colleagues a statement made by the illustrious Margaret Bush Wilson, chairperson of the NAACP national board of directors, concerning the President's welfare reform drive:

NAACP OFFERS CARTER HELP FOR WELFARE REFORM DRIVE

NEW YORK.—Mrs. Margaret Bush Wilson, chairman of the NAACP National Board of Directors, said that the Better Jobs and Income program outlined by President Carter on Saturday, August 6, was "encouraging" and pledged the support of the NAACP in working to achieve the enactment of a meaningful bill in Congress. In a statement, Mrs. Wilson said:

The proposed program for Better Jobs and Income outlined by President Carter on Saturday, August 6, seeks to eliminate the negative aspects of the present welfare system while striving to provide a minimum income for the poor. The proposal is encouraging in that it seeks to provide:

(1) Jobs for those in need and who are able to work;

(2) Income support, such as part-time jobs for those unable to work full-time;

(3) Earned Income tax credits as incentives for the working poor.

Clearly, in a program of this complexity, President Carter sought to stress the positive aspects of his proposals. He also sought to blunt the attacks of those who are adamantly opposed to any form of public assistance programs.

The NAACP, however, perceives a real danger in just such an approach. The danger is that, in attempting to scrap the old system, Congress will devise one that increases the burden of poverty on the most disadvantaged segments of society.

Work incentives, therefore, should not penalize the poor. They should instead relieve the burden of poverty while providing meaningful jobs for those able to work. The need for readily available daycare centers for mothers wanting to work should be adequately met.

The proposal to reduce the burden on local governments is praiseworthy. But it does not go far enough. It should completely relieve local governments of the responsibility for income support payments. The states should be made to assume this obligation.

There is also the danger of robbing Peter to pay Paul. Income support benefits in one area of the country should not be reduced just so that assistance to the poor in other regions can be increased. The essential benefits of the present food stamp program should also be maintained within the Better Jobs and Income program.

The NAACP especially wishes to commend the President for recognizing the stigma that is attached to welfare and for seeking to eliminate this negative aspect of the program. We also commend the President for wanting to strengthen the family structure.

The NAACP is prepared to work with the President to achieve the enactment of a meaningful Better Jobs and Income program.

ENLISTING OURSELVES IN THE WAR ON CRIME

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. CONYERS. Mr. Speaker, more than 9 months has passed since the President signed the Crime Control Act of 1976, which extended for 3 years the authorization of the Law Enforcement Assistance Administration in the Department of Justice, and, among other changes, established the community anticrime program in LEAA. This program, which I authored and sponsored, authorizes a modest appropriation—$15 million per year for 3 years—to support citizen and neighborhood participation in community anticrime efforts. I sponsored such legislation because, although a high of almost $1 billion a year was being handed out by LEAA, the most important link of all in crime reduction—the citizens themselves—was being neglected and shortchanged in the belief that the fight against crime was the private domain of the criminal justice professionals.

I am sorry to report, Mr. Speaker, that although less than 1 month remains in fiscal year 1977, not 1 cent of the money authorized and appropriated for this program this fiscal year has been given out in a grant or contract to any community or neighborhood organizations. The Subcommittee on Crime, which I chair, has been required to expend an inordinate amount of time and efforts to prod LEAA to get this program off the ground. If LEAA's handling of this small program can be considered a microcosm of the agency's approach to the entire three-quarter-billion-dollar-per-year program, it is not hard to understand why even the Department of Justice itself has de-

cided it is time to make some drastic changes in LEAA.

The value of the community anticrime program, unrealized so far, is excellently illustrated in a feature article which appeared in the Washington Post on July 24. Authored by John Hollister Stein and entitled "Enlisting Ourselves in the War on Crime," the article stands in contradistinction to most of the history of LEAA in that its thesis, in Mr. Stein's words, is that—

Experience shows that the contest with criminality is basically the private citizen's to win or lose. not the public servant's.

Mr. Stein's article is a thoughtful examination of not only the value of community anticrime efforts, but of the difficulty of organizing and sustaining such efforts. I commend it to you, Mr. Speaker, and to all Members, and suggest that it is an excellent reference point from which to consider not only the future of the community anticrime program itself, but the broader question of the proper direction of Federal assistance in the fight against crime.

ENLISTING OURSELVES IN THE WAR ON CRIME

(By John Hollister Stein)

Americans persist in believing that crime control is and, indeed, should be the exclusive responsibility of state and local government. It is a costly concept which prevents us from using the most cogent forces of crime control at our command—ourselves.

For experience shows that the contest with criminality is basically the private citizen's to win or lose, not the public servant's.

Police officers like the public to think that arrests are the product of police acumen, though in fact most are the result of citizens' timely emergency calls or their identification of suspects with whom they are acquainted. Prosecutors take pride in their legal skills, but some, at least, recognize that prosecution success is usually attributable to the strength of "civilian" testimony, actual or potential.

Citizens rarely get credit for their contributions to the system's effectiveness; nor do they get the blame when the system fails (which is most of the time). Yet research findings tend to underline how crucial the private citizen's role is:

Surveys conducted by the Census Bureau show that, of every three crimes, only one is reported to the police.

A study in Kansas City, attempting to determine how long it takes the police to respond to crime calls, discovered that police "response time" was not the problem: the common practice of victims was to wait 15 to 20 minutes or longer before calling the police and it was this which made on-scene arrests unlikely.

Most prosecutions in most jurisdictions fail to convict anyone. Studies in Washington, using the computer-based Prosecutor's Management Information System, show that the chief cause of prosecution failure is that crucial witnesses stop cooperating with the authorities in mid-course.

Put bluntly, the average citizen, functioning as the principal custodian of his neighbor's security, is a sorry incompetent. It is not difficult to discern why—not, at least, where the injustice of crime is most acute, in big-city neighborhoods.

Urban dwellers don't look out for their neighbors for the simple reason that they frequently don't know their neighbors. Instead, they tend to live in isolation, somewhat rootlessly. A disturbance in the street or in the adjoining apartment, a group of unknown teenagers in the hall, all are disconcerting but outside the shrunken space the urban alien calls his own.

And when, as can so easily happen, his space is violated—when he, too, becomes a robbery, burglary or assault victim—he fears retaliation if he seeks legal redress. He is, after all, more or less on his own, and manifestly vulnerable. Though he may have a wide circle of friends, they are not centered in his immediate environs. For him, neighborhoods are no longer a social organism.

CITIZENS FIGHT BACK

Compounding the problem are the public agencies of criminal justice. For when the crime victim or witness meets his civic duty, he often encounters police, prosecutors and other officials who are no more consumer-oriented than other public bureaucrats. When he stops cooperating with them, they will classify him as another drop-out, though in fact he may well have been pushed out.

On occasion, however, urban residents shake off their paralysis, often with surprising success. In the past several years, three instructive case histories of collective citizens' action in response to crime, with mixed results, occurred in Adams-Morgan, a racially and socially Northwest Washington neighborhood that has changed from an urban backwater to the archetypical "back to the cities" area. Many blacks and Spanish-speaking residents, once three-fourths of the mix, are being exiled in the process, with possible bitter social repercussions.

Adams-Morgan's crime rates have been relatively high but steady for years. According to the police, reports of serious felonies numbered around 1,000 for 1974, 1975 and 1976—fairly high for a neighborhood of some 20,000 people. But in 1977, 1,005 such reports were filed in the first six months alone.

If those reported rates reflect a major increase in actual crime, they may impel a collective citizens' reaction of the kind that gripped one block of Adams-Morgan eight years ago.

"It was a modest effort, really, a mundane, American thing, like raising a barn," Tedson Meyers has said about the project he and other residents of the 1800 block of Wyoming Avenue instituted in 1969.

That effort was in response to a rash of violent crimes on the block. Once, months earlier, Meyers himself had rushed outside at the sound of an "explosion," a shotgun blast, he discovered, which wounded a neighbor. The young man couldn't talk and, as Meyers knelt beside him, "he looked at me, and I looked at him" until, a few minutes later, the victim died.

When neighbors began threatening to move away, Meyers hosted a meeting of about 20 Wyoming Avenue residents, some black but mostly white. "Did we take matters into our own hands?" he asks rhetorically. "We certainly did."

The project involved trimming the shrubs bordering the street so that they could no longer conceal a waiting mugger. The neighbors also trimmed a few boughs off the city's trees, to improve the illumination of the streetlights, and installed their own floodlights on the exterior walls of 22 rowhouses and apartment buildings along the block.

VANISHING CRIME

The visible changes helped to draw other neighbors to the group's monthly meetings. Residents began knowing each other by name and pausing to chat as they met each other on the block. Night-time motorists who chanced down the block drove slowly, baffled by the extraordinary brightness of it all.

Not so the criminals, who recognized what the block residents were up to. Crime didn't diminish—for a time it vanished. From as many as three muggings a week, Meyers recalled, the block experienced none for 18 months, and relatively few in the years afterwards.

A newspaper article described the enlightenment of Wyoming Avenue—local and national TV reports followed, as did Meyers' appointment to the City Council and the installation of sodium vapor lights on most of Washington's residential streets. Ironically, despite local objections, the sodium vapor lights were also installed on Wyoming Avenue, which all but ended the floodlighting.

Yet only two or three distant blocks, less preyed-upon than Wyoming Avenue, followed its example. And militants attacked Meyers and his neighbors as racists, on the theory, perhaps, that resisting street crime camouflages racial antipathy toward its perpetrators, thought to be exclusively black.

That common impression is misleading. The Community Release Organization (CRO) which worked with Adams-Morgan adults arrested on criminal charges from 1972 to mid-1976, found that 11 per cent of these defendants were white and another 8 per cent were Spanish or "other."

Robert Walsh, who directed CRO, moved to the 1800 block of Wyoming Avenue in 1975. His impression is that, in recent years, the block has been relatively safe, if not exactly crime-free. He had heard about the earlier crime-prevention program—something to do with shrub trimming and Tedson Meyers, he recently told a visitor. He did not, however, know the historical significance of the floodlights attached just outside his third-floor apartment windows; he had never turned them on.

He and the visitor sought to analyze why community endeavors like Wyoming Avenue's seem so transitory. One major reason, they believed, was the mobility of Americans generally, which also affects neighborhood activists like Walsh himself (in fact, the conversatior was interrupting his packing to move to a new job in Charlottesville). He regrets these breaks in the social ties of Adams-Morgan, especially the involuntary displacement of working-class families who often have stronger social roots in the neighborhood than their more affluent neighbors.

Another reason for the demobilization of the Wyoming Avenue effort, they supposed, was its success—the crisis brought on by several odious crimes had passed. Regrettably, neighborhoods which respond only to the most frightening crimes seldom show interest or concern over the much more common lawbreakers in the community, whose crimes are usually less serious and who are rarely banished to prison for their misdeeds.

Programs like CRO, which can attract volunteers to work constructively with neighbors who are accused or convicted of such crimes, generally need a paid staff to recruit, train and supervise those volunteers. When CRO's funding ended, so did that neighborhood effort to deal humanely with the effects of crime.

THE LACK OF PERSISTENCE

The protagonist of the second story is a young man who, over several weeks in 1976, surreptitiously followed three lone women to their doorways, forced them inside and raped them. One such victim, though stabbed repeatedly and twice shot in the face, survived and gave the police an excellent description of her assailant.

Such informal block associations as existed in the immediate area of the crimes sprang to life under these attacks. The same thing had occurred a few months earlier, when another series of rapes had prompted a special meeting of the Lanier Heights Association. The attendance was unprecedented both in size and composition—black participants, for once, outnumbered whites. The new outbreak of rapes induced a similar sharing of fear.

One encountered it not only in meetings among neighbors, but in the composite drawing of the rapist, which was soon posted on neighborhood trees. A few of the white neighbors, still angry over the first series of rapes, then volunteered to investigate

other neighborhoods' crime prevention methods.

At last, a person who worked in a store on Columbia Road connected the police drawing to a regular customer. Within hours, the suspect, William Edward Thomas, was in custody; he confessed and last week he was sentenced by a Superior Court judge to serve at least 37 years in prison.

Meanwhile, the crime prevention investigators had contacted the Citizens Local Alliance for a Safer Philadelphia (CLASP) and had talked to members of a similar group on Capitol Hill. Although interested in both programs, the Adams-Morgan volunteers could find neither the time to attend CLASP training sessions in Philadelphia nor the energy to start a prevention program of their own. Two months after Thomas' arrest, all remnants of their mobilization had disappeared.

There is certainly nothing un-American in that relapse toward private lifestyles. But in this case, it was hastened by the intricacies of race and class in Adams-Morgan. Despite evidence that the neighborhood's repugnance to violent crime crossed social divides, the self-appointed volunteers—all white, mostly homeowners—found no allies among black and Spanish residents of the neighborhood. As one of them said, "We looked for some spontaneous action among our black neighbors and, when we didn't see it, we took that to be a signal."

DISCOMFORTING CHOICE

The natural forum for such a dialogue would have been either the Adams-Morgan Organization (AMO) or the Advisory Neighborhood Commission (ANC). The integrated leadership of both bodies is similar in outlook, and both are chaired by Frank Smith, Jr.

Smith is a veteran of the civil rights movement, from which he still carries a certain skepticism toward the privileged classes. His most persistent campaign in Adams-Morgan is to preserve the economic balance of the neighborhood—which translates into slowing down the influx of wealthier homeowners, mostly white, and the departure of low-income tenants, mostly black and Spanish.

When Smith was approached during the period of crisis over the rapist, he was reluctant to put crime control on the AMO/ANC agenda. He estimated that a publicized anti-crime program in Adams-Morgan would achieve its greatest effects as a free source of advertising for the real estate interests seeking middle-class settlers in the area.

Smith's choice, as he saw it, was between the preservation of neighborhood diversity and the restoration of neighborhood tranquility. Elsewhere, in fact, successful crime prevention efforts have led to increased real estate values and the very change Smith feared.

And yet, Smith's choice was discomforting. Like other blacks from the South, Smith is appalled at the contempt many youngsters in the city show toward their elders. "The social fiber that has bound black families has broken down," Smith says. Crime is only one manifestation of the breakdown and he hopes it can be alleviated by helping low-income tenants get a stake in the community through home ownership and by improving economic and recreational opportunities for their children.

Elsewhere, black politicians, once known for their abhorrence of "law and order" politics, have been turned around through constituent pressure. Atlanta's black public safety commissioner, Reginald Eaves, expressed this new impatience in what he called Eaves' Law: "No matter how poor you are, there is no excuse for knocking a lady in the head or stealing her purse."

There are other problems.

One summer night in 1974, four black teenagers from a distant part of the city were walking along the 1800 block of Kalorama Road (paralleling Wyoming Avenue) when they noticed an open window on the first floor of a townhouse. They were soon inside that apartment and had tied up the two occupants at gunpoint. As the gang members collected the victims' valuables, they berated them for being white. After leaving, the gang knocked on the door of the second-floor apartment and, when it was opened, barged in and attacked that couple in just the same manner—only this time they also gang-raped and sodomized the woman resident.

Detective Tom Kelly of the Sex Investigation Division was assigned to investigate both Kalorama Road cases. His first intuition was to connect these home invasions to three others involving rape which had occurred in the preceding month around Adams-Morgan. The gang's size had varied from case to case, and a black couple had been among the victims. Yet Kelly suspected that it was all the work of a single confederation.

Ten days later, Kelly was called by 3d District Det. Peter Banks. Banks had just been interviewing a burglary suspect, Charles Isaac Kirkland, who had almost bragged of his burglaries of unoccupied homes, but had been suspiciously adamant in denying involvement in any crimes of violence.

Kelly got a copy of Kirkland's photograph, assembled it with pictures of eight other young men of similar appearance and showed his "photo lineup" to the Kalorama Road victims. Independently, all picked Kirkland out as one of the assailants, indeed the apparent ringleader.

So Charlie Kirkland was rearrested and, with his prospects looking miserable, began to talk. Four others soon joined him behind bars; a fifth, involved in only one of the cases, was arrested weeks later.

As the months passed, the 12 victims of the home invasions were brought together to observe police lineups, to give grand jury testimony and to identify their belongings from property taken from the defendants. Each trip strengthened the victims' chance alliance.

Whenever the proceedings began to wear excessively on one member, others would band around with comfort and support. Two, who worked for a local justice agency, began to monitor the case for the group. Two others became the victims' emissaries to the U.S. attorney's office.

As Assistant U.S. Attorney John F. Evans later told a reporter, the group was unusual "in the amount of contact and cooperation they offered us." Evans added, "I'm sorry we disappointed them."

What "disappointed" the victims ("infuriated" is the word they used) were the effects of the plea bargains agreed to by the prosecutors. (Despite what they thought were assurances to the contrary, the victims were not fully consulted in these negotiations.)

Kirkland, for example, was offered a plea of guilty to one armed rape, two armed robberies and a burglary—a heavy dose of culpability, claimed the prosecutors. The victims disagreed.

VICTIMS EXCLUDED

Their fears of relatively lenient sentences were not groundless. In a hearing before Judge Leonard Braman, Kirkland's lawyer seemed to get the judge's agreement to sentence Kirkland and the others under the Youth Corrections Act, which is designed to rehabilitate young first offenders.

In reaction, one victim sent Detective Kelly a note saying, "We've sent letters to Judge Braman and have contacted the Post re: publicity—what else can we do????" As it turned out, the group did not need Kelly's help, since their initial efforts proved successful.

Judge Braman withdrew the Youth Corrections Act possibility (and in doing so, allowed two defendants to withdraw their guilty pleas). And by the time each of the gang members faced a sentencing judge (the two holdouts having been convicted on practically all counts), their violent rampage through Adams-Morgan had been well publicized in the press. For the five principal offenders, the sentences ranged from a low of 10 years in prison up to Kirkland's sentence of 144 years.

The victims' alliance had affected the course of justice, and they were satisfied. And yet, what makes this "consumers' revolt" most memorable is that it was exceptional, perhaps unique, and achieved only accommodation, not reform.

Take, for example, the question of whether crime victims should be consulted when prosecutors enter plea negotiations. Unlike many others, Washington's prosecutors generally make these private arrangements with defense counsel alone, sometimes on grounds of principle, not convenience—"justice" should not be swayed by the vindictive motives of victims.

This is one of the more regrettable by-products of the latitude given American prosecutors, judges and parole boards in punishing offenders. In order to temper the harshness in this overly discretionary system, one of the two parties who have a legitimate stake on the outcome—the victim—is simply excluded.

For all its unique qualities, Adams-Morgan has two characteristics which make it comparable to certain neighborhoods in other cities. First, it suffers from a high rate of crime—not as high as many depressed neighborhoods, but certainly high enough.

And second, it is a thoroughly integrated community; its crime victims come from all strata, while its victimizers are mostly from the poor, who in this case are mostly black. As Adams-Morgan has demonstrated, that circumstance can inhibit a sustained, collective response to crime, lest the motives be considered bigoted.

Therefore, it is worth examining one integrated neighborhood which has overcome that inhibition, to see what lessons it has for others which have not.

The Citizens Local Alliance for a Safer Philadelphia is an outgrowth of a crisis which afflicted a section of West Philadelphia in 1971. When Ellie Wegener's neighbor was raped—the third such attack in a few weeks—she and her husband, a Lutheran pastor, invited a few neighbors in to discuss the crime situation. Instead, about 30 showed up.

They mapped out several approaches to the problem. One was to seek more police protection (on the popular misconception that saturation patrols appreciably reduce crime). Within a few days, their petition contained nearly 800 signatures. When this got a chilly reception from the police, the group returned to its alternative strategy of self-help.

The technique hit upon was "block organizing." Working with Ross Flannagan, a member of a Quaker-rooted community in West Philadelphia, Mrs. Wegener encouraged neighbors to have meetings to which every block resident was invited.

The monthly meetings involved a mix of discussions about crime—from victimization stories to reports on crime prevention techniques—plus an equally long period of socializing, so that newly acquainted neighbors could get to know one another not just as victims but also as parents, basketball fans, house painters, whatever.

Many of the crime prevention measures which the block clubs adopted were of their own invention—like the use of a small freon horn which neighbors sounded whenever they were attacked or as soon thereafter as they could. To a person on an organized block, that signal means to call the police and then to sound your own horn. More than

one would-be criminal has been forced to flee from a cacaphony of these devices.

While crime was the medium of organizing, the Wegener-Flannagan message involved something larger. To Wegener, "People can't live together without taking responsibility for each other."

VULNERABILITY REDUCED

That viewpoint suffuses the entire program. Organized blocks sponsor flea markets, summer-long volleyball tournaments in the streets, programs for exoffenders and many other social and civic activities. Teams of neighbors regularly tour their streets in the evenings, armed only with freon horns, to chat with other neighbors and to indicate that they have reclaimed their neighborhood turf.

On integrated blocks, blacks and whites got to know each other, often to their mutual relief. Residents of primarily black streets also began showing interest in the program, but more in terms of "block building," not "crime prevention"; they were relatively unenthusiastic about techniques to secure their houses and apartments, over the freon horn device or over other crime prevention concepts.

And yet, just as crime prevention on Wyoming Avenue "accidentally" produced a network of friendships on the block, so the restored social networks on certain black blocks in Philadelphia reduced their vulnerability to crime. From this, Flannagan concludes, "the restored fabric of community in a neighborhood is the real basis for protecting its streets."

The block organizing led to the formation of the West Philadelphia Block Association, from which CLASP drew its citywide (now statewide) program ideas and its original co-directors. Wegener and Flannagan. Over 900 blocks in Philadelphia have been organized in this fashion and perhaps half of them continue to hold regular meetings, even long after crime and fear have gone down. (The figures are Mrs. Wegener's best estimates; the CLASP program has not been carefully evaluated.)

One offshoot of the CLASP model was "Friends in Need," a project which trained volunteers to serve as "crisis intervenors" for people left traumatized by crime. The service was effective for a time, but eventually succumbed to a case of too many demands and too few resources.

Flannagan is discouraged over the demise of "Friends in Need" and not just because crime victims who experience psychological crisis can be, but rarely are, helped. "If you leave that victim upset and unattended," he reasons, "he or she is likely to poison all the neighbors' confidence you've tried to build."

The program uncovered racial tensions which still concern Flannagan. Once, after a black youth murdered a young white man, the group fanned out to canvass the entire neighborhood, to dispel rumors and fearfulness. Another time, in helping track down a rapist, the picture of a black suspect was posted around the neighborhood with an inscription, "This brother needs help."

If, as Flannagan believes, CLASP got much of its initial momentum from white fear, it seems to be past that now. Mrs. Wegener describes the "absolutely extraordinary" success the program has had in low-income, high-crime sections of North Philadelphia over the past 1½ years—in neighborhoods which are virtually all black.

CLASP's ability to achieve what the Wyoming Avenue neighbors could not—to establish and sustain block organizations—is by no means unique. There are dozens, perhaps hundreds, of community crime prevention programs around the country, and many have found ways to endure long after the crises which spawned them.

The instinct to get involved in the prosecution and sentencing of offenders—which motivated the Kirkland gang's victims—has also been institutionalized in some neighborhood justice programs. Two examples:

In Chicago, activists in the Organization of the North East (ONE) lobbied successfully to get two assistant prosecutors moved from headquarters to their area. These "community prosecutors" handle, from arrest through appeals, the most fearsome crime cases referred to them by neighborhood groups. Recently, ONE convinced the branch office prosecutors, probation workers and police to concentrate efforts on certain high-crime "hot spots" in the area. ONE volunteers will work closely with both the victims and the offenders in these target areas.

Trained volunteers who live in Boston's Dorchester section serve on two panels. One panel hears cases involving family or neighborhood strife and seeks to work out a mediated settlement between the disputants. The other hears cases of convicted minor offenders and fashions recommendations which are accepted by sentencing judges in over 90 per cent of the cases. These neighborhood advisers have almost never recommended jail terms, but they often recommend that offenders make restitution to their victims.

These programs and many others offer a variety of techniques by which neighborhoods can resist crime. Together, they add up to a nascent "neighborhood justice" concept which has a comprehensive panoply of reforms to offer:

The organization of block residents to prevent crime and help the police apprehend suspected offenders.

The decentralization of criminal justice agencies into urban neighborhoods in order to make them more accountable to an organized citizenry and to encourage a compassionate response to the worst casualties of crime.

The adoption of reforms which recognize the legitimate status of victims in criminal prosecutions and which seek to involve neighbors in devising just sentences for local offenders.

Even without scientific findings, sponsors of the new neighborhood justice programs have ample impressionistic evidence that the programs work; that organized neighborhoods actually reduce crime; that they often become an effective social force of much broader scope, and that, far from exhibiting repressive instincts, such programs are usually civil and caring.

Those encouraging reports must be tempered with four reservations:

First, for every organized West Philadelphia neighborhood, there may be 50 Adams-Morgans, mobilized only fitfully, if at all.

Second, despite the impressive voluntary energies these programs inspire, virtually all of them have, and need, at least some financial support to stay alive.

Third, without alternatives, some neighborhoods still rise up in arms over crime—literally.

Finally, even though neighborhood justice programs can instill a degree of harmony in integrated neighborhoods, their economic effects, intended or not, are to "upgrade" the neighborhood and, at times, to displace many of its poorer residents—a harsh problem which calls for stabilization programs to complement the anticrime efforts.

THE NEED FOR STABILITY

The idea of organized neighborhood involvement in crime control is very promising but equally fragile. As the Adams-Morgan experience shows, the concept requires more than citizen anger and mutual goodwill to survive. Inescapably, its fate is largely dependent on governmental support. As the Philadelphia experience demonstrates, such programs require a core of full-time staff people to sustain the effort once the emotional drive provoked by the immediate crisis is dissipated.

Most of the pioneer neighborhood justice programs were started by indigenous organizations with modest funding from state and local agencies receiving grant money from the Law Enforcement Assistance Administration (LEAA).

Recently, however, Congress required the national LEAA office to begin supporting such projects directly. The $15-million Community Anti-Crime Program will begin making grants to neighborhood organizations this fall. The program is designed to minimize bureaucratic red tape. It encourages applicants to devise crime-prevention programs which also take on other elements of the neighborhood justice concept, such as services to crime victims and neighborhood participation in the sentencing and rehabilitation of offenders.

The federal government's involvement in this novel approach to crime control is salutary. Even if crime rates have leveled off, as seems to be the case, that plateau is very high: criminals victimize about 40 million Americans, or 1 in every 6, each year. These figures add up to a terrible volume of suffering. They mandate remedial inventiveness at every level of public responsibility, including the federal level. The neighborhood justice concept is an excellent candidate for that kind of experimentation.

UNITED STATES MUST KEEP PANAMA CANAL

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. COLLINS of Texas. Mr. Speaker, the Carter administration has recently made public their intention to relinquish U.S. control of the Panama Canal. This would be a disastrous mistake and would seriously threaten the security of our Nation. Let us look at the background and history of the Panama Canal and weigh the facts.

In 1903, at the insistence of the Panamanian Government, the United States agreed to the Hay-Bunau-Varilla Treaty. That official Treaty stated:

ARTICLE II

The Republic of Panama grants to the United States in perpetuity the use, occupation, and control of a zone of land under water for the construction, maintenance, operation, sanitation and protection of said Canal of the width of ten miles extending to the distance of five miles on each side of the center line of the route of the Canal to be constructed.

ARTICLE III

The Republic of Panama grants to the United States all the rights, power and authority within the zone mentioned . . . which the United States would possess and exercise if it were the sovereign of the territory within which said lands and waters are located to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority.

Under the terms of the 1903 Treaty, the United States paid Panama $35 Million for the right to build the canal and another $160 Million for title to the Canal Zone. We also agreed to pay $250,000 per year to Panama to compensate for revenues that the railroad would lose because of the canal. We have voluntarily raised those payments to $2 Million per year. The canal itself cost $366 Million to construct.

The 1904 Constitution of the Republic of Panama, the 1904 and 1914 United States-Panama Boundary Agreements, and the 1936

and 1955 Treaties of Friendship and Cooperation between the U.S. and Panama all clearly define a role of total sovereignty over the canal by the United States.

In addition to our annual payments, our presence in Panama has created countless jobs for Panamanians and a standard of living higher than any other Latin-American country. One-third of all jobs in Panama are related to the canal. Our record of running the Panama Canal has been superior. Accidents have been rare and the tolls have only been increased twice during the entire period that we have been running it. We should not place our security and the economic security of the world in the hands of an unstable, communist leaning government.

As if giving away our canal isn't bad enough. the proposed Carter treaty also calls upon the U.S. to make some $2.3 Billion in payments to Panama. Since Panama would be getting U.S. property and a U.S.-built canal, it is beyond my understanding why the Carter plan suggests that we give them billions of American dollars to boot. Keeping the Canal has become the rallying cry of all Americans who are standing up against the Washington bureaucracy. During my speaking tour through Texas, I have found overwhelming opposition among the solid American citizens in every town and city I've been in. While a national poll showed 78% of the American people nationwide are opposed to this new treaty, the percentage in Texas is undoubtedly much higher. It is high time the big government people in Washington gave up the idea that they know what's good for us better than we do ourselves. It's time for the Administration to start reflecting the views of the common people of America.

To surrender the Canal to a communist line government in Panama that has established close ties with both Russia and Cuba and then pay Panama astronomical yearly fees would be submitting ourselves to absolute robbery. If you remember the Marines' Hymn, "From the Halls of Montezuma to the Shores of Tripoli", the Barbary Pirates of Tripoli were robbing all ships off the North African coast. Our American Marines stood strong against them, and as a young nation we defended our interests, rather than give in to a petty local tyrant in the Mediterranean. Similarly, when the French were boarding American merchant ships, and Talleyrand attempted to exact payments from the U.S. Ambassadors, the cry went up, "Millions for Defense—Not One Cent for Tribute". I think it is time to stand strong again, and, as Teddy Roosevelt often stated, to "speak softly but carry a big stick".

We paid for the Panama Canal just as we paid for Alaska and the Louisiana Purchase. We bought it. We built it. We own it. I believe it is in the best interest of our country to keep it.

THE FAMILY VIOLENCE PREVENTION AND TREATMENT ACT AND THE DOMESTIC VIOLENCE PREVENTION AND TREATMENT ACT OF 1977: LEGISLATION TO HELP BATTERED WIVES

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. STEERS. Mr. Speaker, today my distinguished Maryland colleague, Congresswoman BARBARA MIKULSKI, will introduce the Family Violence Prevention and Treatment Act. This follows introduction by Congresswoman LINDY BOGGS and me of the Domestic Violence Prevention and Treatment Act of 1977 on June 21. Both measures seek to provide solutions to the tragedies of family violence particularly that between spouses.

I want to commend Ms. MIKULSKI on introduction of her bill which proposes stipends for local volunteers who want to work in their neighborhoods to establish and operate programs for battered spouses through the use of shelters, hotlines and other supportive services.

As a former social worker, Congresswoman MIKULSKI is convinced that programs work best when initiated by citizens of the community they serve. Following this belief, the Mikulski Family Violence Prevention and Treatment Act would be administered within the ACTION Agency.

The Domestic Violence Prevention and Treatment Act of 1977, jointly introduced by Congresswoman BOGGS and me grants demonstration funds in the amounts of $9 million in 1972, $12 million in 1980 and $15 million in 1981 to groups working with battered spouses to test out ways of preventing and treating family assaults.

Among a number of other provisions, our bill further authorizes $750,000 in 1979, $1,000,000 in 1980 and $1,250,000 in 1981 to provide technical assistance to those nonprofit organizations which do not possess the resources and expertise necessary to develop and transmit an application for grant money.

Both the Mikulski and Steers-Boggs bills are designed to help the nearly 100 local nonprofit shelters for battered women, their children and husbands across the Nation.

My own study shows that a majority of these shelters are operating at 150 percent to 250 percent above authorized capacity: This despite the sad fact that about 50 percent of applicants to the shelters are being turned down for lack of space.

Thus, it is evident that both the volunteer component of the Mikulski bill and the grant money provided in the Steers-Boggs bill are needed not only to help these shelters survive, but also to help expand their facilities and services to accommodate all victims of such abuse.

By introducing these measures, it is our hope to bring nationwide recognition to the deadly serious tragedies of violence within the home—violence that extends well beyond the horrors of child abuse.

MEDICAL CARE FOR MILITARY RETIREES

HON. JACK BRINKLEY

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. BRINKLEY. Mr. Speaker, much attention has been given in recent months to the serious problem facing our military retirees in obtaining adequate medical care for themselves and their dependents. I submit for the RECORD a copy of my letter to you today concerning this urgent situation:

HOUSE OF REPRESENTATIVES,
Washington, D.C., September 7, 1977.

Hon. THOMAS P. O'NEILL,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: Today I have submitted to the Bill Clerk of the House of Representatives petitions in support of my legislation to remove the "as available" clause from Title 10 of the U.S. Code. These petitions have been provided me by the Retired Earned Military Benefits Organization (REMBO) headquartered in Columbus, Georgia.

This is demonstrative evidence that military retirees do not believe they are receiving the medical care historically permitted and allowed. Upon enlisting, they were led to believe these benefits would be available to them and their dependents upon fulfilling their contracted service in the Armed Forces. Generally, these retirees have served their country in two or more military conflicts and are at that point in their life when medical services are most needed. In all too many instances, they are unable to obtain or afford adequate medical care.

The petitions being submitted today are symbolic of the many thousands sent to other Members of Congress from throughout the Nation. Therefore, I respectfully request they be referred to the Armed Services Committee where my legislation is pending so they may be made a part of the Committees' official record. I urge favorable consideration.

With thanks for your attention and cooperation, I am

Sincerely,

JACK BRINKLEY,
Member of Congress.

SILENT MINORITY SHOULD BE HEARD

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. FINDLEY. Mr. Speaker, today I am introducing legislation to provide an income tax credit to deaf individuals and others requiring the use of a teletypewriter for communication. A TTY, as it is called, is a typewriter attached to a phone and capable of transmitting a message over telephone lines to any other teletypewriter in the country.

The cost to the deaf of using a teletypewriter can be as much as three times higher than the charge paid by people with normal hearing. The reason is the vastly longer time it takes the deaf to communicate by phone.

Those who speak well and fairly rapidly can complete an average conversation in 1½ to 2 minutes. The same call made with a TTY can take as long as 5 minutes, or even longer depending upon the typist. The cost for a long distance call can be prohibitive. With the cooperation of Gallaudet College, the Nation's only liberal arts college for the deaf, I timed a phone call requesting information on President Carter's recent press conference. The caller wanted to know what time the conference would be, on what television channel, and whether a deaf interpreter would be present. This conversation by TTY took

4½ minutes. We talked it in 1½ minutes. Under the current reduced daytime rates, the cost of a call from Washington, D.C., to San Francisco, similar to the one made at Gallaudet would cost, if spoken, 92 cents. If it were made by TTY, however, it would cost $2.06 plus tax. Of course, the speed of the typist is an important factor. In this case, a competent typist was at the keyboard. If the user has never been trained in typing the time required would be even more expensive.

The average deaf family cannot afford the expense. The median income of a family of four headed by a deaf person is only 84 percent of the hearing family's income. While the average hearing family's income was $9,902 in 1971, the latest year for which comparable figures are available, the average deaf family's income was only $7,338.

The telephone is without question one of the most important items in any household. It is a family's connection to the outside world, vital in emergencies and in virtually every aspect of daily life. The deaf, and others who cannot communicate by phone through the normal speaking process, should not be required to pay an extraordinary amount for this vital necessity or forego its use completely. It is time for this silent minority to be heard. That is what the bill I am introducing today will help to accomplish.

RAUTA FAMILY SEPARATED

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. CRANE. Mr. Speaker, the tragic plight of the Rauta family was brought to my attention during the August recess, and I would like to share, today, with my colleagues, yet another inhumane example of the Communist world's attitude toward human rights. I insert in the RECORD an article written about the Rauta family, a family separated by the obvious unfulfilled obligations of Rumania, in accordance to the Helsinki agreement.

The article follows:

RUMANIA IGNORES HELSINKI PACT

(By Dumitru Danielopol)

The man spent hours on the transatlantic telephone trying to reach his son who was celebrating his fourth birthday. He never got through. Bucharest's Communists refused to complete the call—for "political reasons."

If this had happened during the Hitler or Stalin era, it would have been understandable. Those people's callous disregard of human behavior has gone into history.

But this happened on the last weekend in July 1977 in this era of "detente," in the glow of "open" communications between the peoples decreed by the Helsinki agreement of 1975.

The father is Constantin Rauta, a 35-year-old Rumanian electronics engineer.

Three and a half years ago, on a visit to the United States he sought, and was granted, political asylum. His wife and son, six months old, were home in Rumania. Ever since, he has tried in vain to get permission for his family to join him.

On direct orders from Rumania's Red Cross boss Nicolae Ceausescu, exit permits for the Rauta family have been forbidden. In recent weeks even telephone conversations have been denied.

Rauta, a former member of the Communist party, had had enough of Red tyranny when he decided to defect. In an open letter to former President Gerald Ford, dated Nov. 25, 1975, Rauta explained: "I love my country and I respect my people, but I reject the tyranny in which the Rumanian people are forced to live and the Communist society in which the individual is considered and treated as a slave who must be exploited in his work and denied his rights."

He went on to explain that because he left his country, "Ceausescu ordered that my family be destroyed as an example to other Rumanians who are seeking human rights and freedom."

Rauta is now employed as an engineer by the Computer Sciences Technicolor Association, which is under contract with NASA.

After 60 years of observing communism, starting in the streets of Moscow as a child in the fall of 1917, I have learned that rabid Communists of the Ceausescu type are ruthless, cruel and often seem totally bereft of humanity.

The Rauta case wouldn't be so scandalous did it not happen in "year one" of President Carter's era of "human rights," and at the same time when the Ceausescu regime is knocking at the doors of the White House and the U.S. Congress to renew the benefits of the "most favored nation" trade agreement.

It also happens at a time when Rumania is spending a $20-million gift from the American taxpayers—a gift to ease the damage caused by the Bucharest earthquake.

Later this year, 32 nations will gather in Belgrade to study how Iron Curtain countries have fulfilled their obligations deriving from the Helsinki agreement.

According to the terms of that document, Rauta has all the rights to be reunited with his family.

"The participating states," says the Helsinki agreement, "will deal in a positive and humanitarian spirit with the applications of persons who wish to be reunited with members of their family . . . as expeditiously as possible."

It also stipulates that "until members of the same family are reunited, meetings and contacts between them may take place. . . ."

Thus, Ceausescu is in flagrant violation of his obligations under the Helsinki agreement.

Both the Administration and Congress have the right to demand a change of attitude of the Red boss of Rumania.

President Carter has a good reason to intervene. It would be consistent with his "human rights" campaign.

The argument that the United States cannot interfere in the affairs of other countries simply doesn't hold water. Helsinki says we have the right to demand that wrongs be righted.

It's up to you, Mr. President.

And what a perfect opportunity for Ceausescu to prove that he was not cast in the same mold as Hitler and Stalin.

KLEIN, TEX.—A HISTORICAL COMMUNITY

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. ARCHER. Mr. Speaker, the Senate and House of Representatives of the State of Texas have called upon the Federal Government to prevent the disappearance of the historical identity of the community of Klein, Tex. Senate Concurrent Resolution No. 91, as introduced by State Senator Walter H. Mengden, Jr., is a plea on behalf of this community and others throughout the Nation for assistance in preserving our cultural heritage:

SENATE CONCURRENT RESOLUTION NO. 91

Whereas, The richness of American culture is due in large measure to the diverse backgrounds of this country's early settlers; and

Whereas, Because of expanding urbanization and the centralization of governmental services, a number of old settlements are in danger of losing their ethnic identity and cultural uniqueness; and

Whereas, Klein, Texas, settled in the 1850's by German immigrants, is a historical community which may soon disappear except from the pages of obscure local histories; and

Whereas, The residents of this unincorporated Harris County community are proud of their heritage and wish to preserve the name of Klein in tribute to the area's early German pioneers; and

Whereas, These descendants of Klein's founders and the Klein Independent School District now receive their mail from Houston, Tomball, and Spring, Texas; and

Whereas, A major goal of this nation's bicentennial celebration was to reacquaint the American people with their cultural and anthropological heritage and to foster the appreciation and preservation of its diversity; now, therefore, be it

Resolved by the Senate of the State of Texas, the House of Representatives concurring, That the 65th Leegislature hereby respectfully memorialize the Congress of the United States to seek the establishment of a post office in Klein, Texas, to aid in the preservation of this historical community's identity; and, be it further

Resolved, That copies of this resolution be prepared and forwarded to the President of the United States, the President of the Senate and the Speaker of the House of Representatives of the United States Congress, and all members of the Texas delegation to the United States Congress with the request that this resolution be officially entered into the Congressional Record as a memorial to the Congress of the United States of America.

AFTER THE BLACKOUT: THE HUMAN FAILURES . . .

HON. WALTER E. FAUNTROY

OF THE DISTRICT OF COLUMBIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. FAUNTROY. Mr. Speaker, following the recent blackout in New York City, Mr. M. Carl Holman, president of the National Urban Coalition, sent a letter to the editor of the New York Times.

Mr. Holman's letter, which was published by the editor, I believe, capsulizes an important aspect of that blackout which most news accounts overlooked.

I wish to share Mr. Holman's letter with my colleagues. The letter follows:

AFTER THE BLACKOUT THE HUMAN FAILURES . . .

To the Editor:

It does not excuse one single act of looting or burning or injury to insist that something more is required than calling the per-

petrators animals or demanding higher bail and longer jail sentences. It is not enough to express sympathy for the merchants who had no insurance—though it turns out that some of them were eligible for insurance that they did not know existed. As one who happened to be in blacked-out New York City that night, I don't find it necessary even to wonder at how few accounts have appeared about those blacks and Hispanics and poor people who also directed traffic, protected others, did not loot or burn.

It is not even worth going through the ceremonial apportioning of guilt among those who were or were not present. Because by now we must know that there are problems we have deferred too long and will defer again, work that is too hard to do, personal and group sacrifices we find beyond our capacities, corrective action which must be sustained over a period too long for a people too impatient, too easily diverted to stay the course

Meanwhile, those who customarily clean up afterwards will do so. The reports will be duly written and filed. Those who were already in a bad way will be worse off. Those who had little sympathy for them will probably have less. And those who go on tugging at one end or another of the tangled skein will persist—knowing that only the toughest of the sparse converts to their causes will stay around long enough to see the broken glass ground into powder. Because we have not yet found the lightning that will fuse enough of us into a force that can use the ordinary political, economic, social and moral instruments at our disposal to make changes of the scale, depth and duration required before the lights go out again.

M. CARL HOLMAN,
President, National Urban Coalition.

MUDD CASE NOW UP TO PRESIDENT

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. SIMON. Mr. Speaker, Senator CHARLES MATHIAS, of Maryland, and I have been joined by 26 of our colleagues in the House and Senate urging that Dr. Samuel Mudd, a physician who treated John Wilkes Booth following the assassination of President Lincoln, be officially declared innocent. Historians have made that judgment, and now his family would like to see that it be officially rectified.

We have the phrase in common usage now, "His name is mud." That, unfortunately, stems from the humanitarian act of a physician who, in the hysteria of the moment, was found guilty of being part of the conspiracy to kill Lincoln.

We hope that President Carter will take this step, which historians and people interested in justice would welcome.

I thought my colleagues would be interested in the editorial which appeared in the Washington Star on the question.

The article follows:

[From the Washington Star, August 25, 1977]

MUD? MUDD

There are longings for justice, or, maybe, just vindication, that know no time limits. Call it truth, call it obsession—and it doesn't seem to matter which it is—something cries out for the present to settle with the grievances of the past.

We've seen efforts to rehabilitate Lillian Hellman, Alger Hiss, the Rosenbergs and the Hollywood writers who got in trouble over communism in the Fifties. We're seeing the innocence of Sacco and Vanzetti asserted as passionately as it was when the two anarchists were on trial for murder 50 years ago.

And now another figure out of the past has come forward, in the person of a grandson, to ask that his reputation be restored. This time it's Dr. Samuel Mudd, the man whose destiny enriched American idiom with the expression "His name is mud." The man whose name was mud as well as Mudd because he set John Wilkes Booth's broken ankle after the assassination of Abraham Lincoln.

Dr. Mudd had met the assassin before the historic melodrama in Ford's Theater. Furthermore, he was a Marylander of Confederate sympathies. But John Wilkes Booth was wearing a false beard when he brought his broken leg for treatment and the doctor did not learn of the assassination until after he had set the bone. Then, becoming suspicious, he reported the incident to the authorities.

Such were the emotions of the time that none of it seemed to count. Dr. Mudd was arrested, convicted by a military tribunal and sentenced to life imprisonment as part of the conspiracy to kill President Lincoln. He was pardoned four years later, because of his heroism in fighting a yellow fever epidemic.

But, as any observer of recent events knows, a pardon is by no means the same thing as exoneration. And exoneration is what Dr. Mudd's descendants want for him and for their family name. His grandson, now an elderly man himself, has been appealing to president of the United States about the matter for 50 years. Roger Mudd, the TV commentator, and another descendant of the unfortunate doctor, is also convinced an injustice was done.

President Carter, whose Southern background makes him particularly sensitive to the dark places in 19th Century American history, has every reason to judge Dr. Mudd's case sympathetically. Here's one old wound that could be healed without either moral default or political penalties. The name of Mudd should be mud no longer.

VALLEY OF NORTHERN NEW JERSEY ANCIENT ACCEPTED SCOTTISH RITE RAISE OVER $6 MILLION FOR MENTAL HEALTH

HON. MATTHEW J. RINALDO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. RINALDO. Mr. Speaker, I wish to call to the attention of my colleagues the commendable efforts of the Valley of Northern New Jersey Ancient Accepted Scottish Rite. Since 1934, the Scottish Rite in the northern jurisdiction has directed and financed the first coordinated research program into the cause of schizophrenia, the most widespread and serious form of mental illness. This research activity, of benefit to all mankind, is carried on with the cooperation of an advisory committee composed of leading medical scientists, psychriatrists, and psychologists. To date the Scottish Rite has raised more than $6 million.

The critical need to provide mental health care for our country's citizens cannot be minimized. The annual cost of mental illness to the economy has been estimated to be $36.8 billion. Mental and emotional illness does not differentiate between economic class or race. It strikes children, youth, the middle-aged, and the elderly, creating great economic and emotional hardships.

In addition to its outstanding fundraising achievement, the rite has performed notably in educating the public on the problems of the mentally ill. There are approximately 20 million Americans who suffer from mental and emotional illness. Less than one-third receive some minimal type of help, and 14 of the 20 million go totally untreated.

It is reassuring to know that the fundraising and educational achievements of the rite will aid those who are presently in need of help, as well as enlighten others in understanding the needs of the mentally ill, and inspire them to work toward the attainment of a viable national mental health policy.

CONGRESSIONAL SALUTE TO THE HONORABLE STELLA MADAY OF CLIFTON, N.J., UPON HER ELECTION AS PRESIDENT, DEPARTMENT OF NEW JERSEY, AMERICAN LEGION AUXILIARY

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. ROE. Mr. Speaker, on Friday, September 9, a good friend and most distinguished citizen of my Eighth Congressional District, State of New Jersey, the Honorable Stella Maday of Clifton, N.J., will be installed as president, Department of New Jersey, American Legion Auxiliary, and I know that you and our colleagues here in the Congress will want to join with me in sending our warmest greetings and felicitations to this wonderful lady whose standards of excellence and untiring efforts on behalf of our veterans and their families has truly enriched our community, State, and Nation.

Stella Maday is an outstanding individual who throughout her lifetime has earned the respect and esteem of all of us who have had the good fortune to know her. She will be honored this week in Wildwood, N.J., at the American Legion installation ceremony of the New Jersey Department's convention for her exemplary service of over three decades with the American Legion Auxiliary. Her outstanding record of service with this prestigious veterans organization is a credit to her lifetime of dedication, sincerity of purpose and personal commitment to the needs of our people.

Mr. Speaker, Stella joined the Rosol-Dul Memorial Post No. 359, Passaic, N.J., as a charter member in 1946. She has served in all offices as well as chairman of all major committees of this most important veterans auxiliary unit and attained the presidency of post No. 359 in 1960.

She was subsequently endorsed by the membership for office on the Passaic County level and after serving in all of-

fices on the county level became Passaic County president in 1965–66.

In testimony to her many achievements in service to the veterans and their families, in 1971 Stella was endorsed by the Passaic County American Legion Auxiliary for induction into the auxiliary's Department of New Jersey where the richness of her wisdom and quality of her leadership were fully recognized. She served in all offices and major chairmanships of the department's committees and has now been endorsed by the Passaic County American Legion Auxiliary for the office of department president for the year 1977–78.

Mr. Speaker, in her daily career pursuits Stella is the principal bookkeeping machine operator in the office of the treasurer of the city of Clifton. Throughout her lifetime she has constantly sought the highest standards of excellence in everything she has set out to do and the veterans and their families can be deeply appreciative—as we all are—of her championship endeavors on their behalf.

We share the pride of her husband Stanley, who served our country with distinction as a member of the U.S. Army infantry, 77th Division in World War II, other family members and her many, many friends in this most noteworthy achievement with the American Legion Auxiliary which brings great honor to the city of Clifton, county of Passaic, my congressional district, and State of New Jersey.

Mr. Speaker, it is a pleasure and privilege to seek this national recognition of Stella Maday and all of her good works. Her compassion, benevolence, and continuing faith, hope, and charity in working toward a better way of life for all of our people is applauded by all of us. We do, indeed, salute a distinguished citizen, community leader, and great American, the Honorable Stella Maday, president, Department of New Jersey, American Legion Auxiliary.

MR. EILBERG CRITICAL OF IMMIGRATION SERVICE "REPORT" ON NAZI WAR CRIMINALS

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. EILBERG. Mr. Speaker, the former Commissioner of the Immigration and Naturalization Service, Gen. Leonard F. Chapman, issued a contract a few months ago to James J. Carey, a retired Immigration officer, to make an independent investigation of the Service's handling of allegations regarding Nazi war criminals in the United States.

The ostensible purpose of the investigation was to reconstruct for the Commission the activities of INS in this field, especially with regard to allegations received prior to 1973, the year in which we, in the Congress, focused attention on the inaction and procrastination of the Immigration and Naturalization Service in actively pursuing alleged Nazi war criminal cases.

The report compiled by Mr. Carey in March, 1977, may be judged by INS to be an adequate defense of its role in these cases over the years. I characterize it as a weak, inconclusive, superficial document which speaks louder for what has been left unsaid than for what it says.

I can only conclude that during the period when these Nazi war criminals were permitted to enter the United States, the Immigration and Naturalization Service, in fact the entire U.S. Government, was completely preoccupied with communism. Nazi Germany had been obliterated and the new enemy, the Soviet Union, had emerged. That is not to say that the Communist element should not have been controlled. But to do so, at the expense of allowing war criminals responsible for the slaughter of 25 million people go unpunished was and is unconscionable.

The rationale was easy, palatable, and reflective of the mood of the times.

We may never know, for certain, whether top officials of INS gave direct orders to "go slow" on pursuing Nazis. Perhaps the go slow directive was given by means of a "wink and a nod." The Carey report sheds no light on this.

It does make abundantly clear that INS kept no real records on Nazi cases for years, gave no central supervision to the active prosecution of or specific attention to the investigations in these cases, to the point that even now, we have no assurance that whole files may not have been destroyed.

One fact emerges clearly—INS was more concerned about possible Communist propaganda and political alliance with postwar Germany, than it was with bringing to justice criminals who participated in genocide on a scale unknown to mankind throughout history.

The Carey report clearly demonstrates that INS was concerned that the United States would be branded by the Soviet Union as a "haven for Nazis" were it to be known that Nazis were, in fact, in the country.

Also, in spite of clear evidence in recent years of the cooperation by the Soviets in finding witnesses and furnishing affidavits to INS in cases referred to them, INS still questions this Soviet action on the basis of an expressed uncertainty that the Soviet Union will continue this cooperation.

I am completely convinced that had we in the Congress not taken the lead, these criminals would have been able to mask their culpability and succeed in their plan to make a mockery of the principles of international and social justice.

The American people would have been better served had the Carey report rejected the premise of self-service and exposed the true facts, letting the blame fall on the guilty parties, whoever they may be.

The report in its present form contains a number of deletions. It is also "sanitized" as to third agency documents. Our true final assessment of this document will only be possible when all of the information is made available.

CONSUMER-ORIENTED MEAT LAWS

HON. PHILIP E. RUPPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. RUPPE. Mr. Speaker, today I am introducing legislation that would undo a recent Supreme Court decision that set back the American consumer protection movement by as much as 20 years.

The Supreme Court decision I refer to is the case of Jones against Rath Packing Co., handed down on March 29, 1977. In that case, 39 States filed in support of the California petitioner arguing in part that stricter State laws governing meat standards were not preempted by Federal law. However, the Court determined that the language of section 408 of the Wholesome Meat Act of 1967 preempted stricter State meat standard laws. Thus, in my own State of Michigan, the court delivered a death blow to Michigan consumer-oriented meat laws that have been in effect since 1952, 15 years before the Wholesome Meat Act was passed.

What does this decision mean to the average consumer? It means that States can no longer require meat standards that afford the consumer more protection than the Federal law now permits. It means that comminuted—pulverized—meats like bologna, sausage, and hot dogs may contain such ingredients as snouts, goat tripe, spleens, hearts, salivary glands, and tongues permitted under the Federal law.

Further it means that States can no longer restrict the fat and bone in these meats. Indeed, I understand that the Department of Agriculture is planning to again propose regulations on the use of mechanically deboned meat, which will mean more bone and fat in the meat we eat. Previous interim agriculture regulations on this issue were enjoined last year by U.S. District Court Judge William Bryant in a suit brought by a number of consumer groups.

It would be a step backward in our attempts to provide the American consumer with safe, wholesome, and nutritious food if we allow section 408 of the Federal Wholesome Meat Act to continue to preempt stricter State meat laws, as the Supreme Court has ruled. Indeed, legislative history on this act would indicate that, in fact, the goal was to raise State meat laws to a Federal minimum, not establish a Federal maximum standard for meat ingredients labeling, packaging, and inspection.

To the contrary, we should allow States such as Michigan and California to retain their high standard meat laws, which were in effect long before the Federal Wholesome Meat Act was ever passed.

With 39 States supporting this California position in the Jones case, this issue is indeed of importance to consumers nationwide. The States participating in this suit included:

Alabama, Alaska, Arizona, Arkansas, California, Colorado, Delaware, Florida, Georgia, Hawaii.

Idaho, Illinois, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Mississippi.

Missouri, Montana, Nebraska, Nevada, New Hampshire, New Mexico, New York (filed own brief), North Carolina, North Dakota, Texas.

Oklahoma, Oregon, South Carolina, South Dakota, Texas, Utah, Virginia, Washington, West Virginia, and Wyoming.

Because of the pressing need to resolve this issue in light of this recent Court decision, I will seek the immediate support of my colleagues to see that the legislation I am introducing receives prompt attention. Hopefully, action can be taken this Congress to revise the present law and continue our progress in improving the quality of the food we consume.

PHILADELPHIA CITY COUNCIL URGES UNITED STATES TO GRANT LANDING RIGHTS TO EL AL ISRAEL AIRLINES

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. EILBERG. Mr. Speaker, the city of Philadelphia, the fourth largest city in the United States, is currently engaged in serious efforts to win landing rights for El Al Israel Airlines at Philadelphia International Airport.

As part of that endeavor, the city council of the city of Philadelphia has adopted a resolution in support of these landing rights, and calling on the Department of State, the Department of Transportation, and the Civil Aeronautics Board to approve this arrangement.

Mr. Speaker, it gives me great pleasure to place in the RECORD the full text of the resolution adopted by the city council on this important issue:

RESOLUTION No. 216

(Council of the City of Philadelphia)

Memorializing the Honorable Cyrus R. Vance, Secretary of State of the United States, the Honorable Brock Adams, Secretary of Transportation of the United States, and the Honorable Alfred E. Kahn, Chairman of the Civil Aeronautics Board of the United States, to aid in granting landing rights to El Al Israel Airlines at Philadelphia International Airport and other major cities.

Whereas, Many thousands of citizens in Philadelphia and the Delaware Valley are desirous of visiting Israel and the Holy Land as tourists, pilgrims, or on economic missions, but are greatly inconvenienced, as are people in other parts of the United States, because the El Al Israel Airlines may land only in New York City; and

Whereas, Philadelphia, the fourth largest city in the United States, with the third largest Jewish population in the nation, is deserving of a direct air link with the State of Israel; and

Whereas, Philadelphia, a great cultural and historic area, steeped in the traditions of democracy, would attract and serve many visitors and tourists to the United States with a direct air link to Israel and the Holy Land, foster democratic values, stimulate trade and commerce; and

Whereas, Granting El Al Israel Airlines direct landing rights to Philadelphia International Airport with its modern large-scale improvements, would help establish Philadelphia as a major metropolitan gateway for world air travel, add to its growing reputation as one of the best overall airports, and increase the nation's ability to provide convenient and efficient air travel to and from the United States; therefore

Resolved, By the Council of the City of Philadelphia, That we hereby memorialize the Honorable Cyrus R. Vance, Secretary of State of the United States, the Honorable Brock Adams, Secretary of Transportation of the United States and the Honorable Alfred E. Kahn, Chairman of the Civil Aeronautics Board of the United States, to aid in granting landing rights to El Al Israel Airlines.

Resolved, That certified copies be sent to the Secretary of State of the United States, the Secretary of Transportation of the United States, the Chairman of the Civil Aeronautics Board of the United States, the Congressional Delegation representing Philadelphia and the Delaware Valley area, and to the City Representative and Director of Commerce of the City of Philadelphia.

Resolved, That an engrossed copy of this resolution be presented to the Honorable Asher Naim, Counsul-General of Israel in Philadelphia, as evidence of the sincere sentiments of this legislative body.

FEDERAL YOUTH EMPLOYMENT PROGRAMS MUST BE IMPLEMENTED FAIRLY: SUBURBAN AND INNER-CITY TEENAGERS ALL SHARE COMMON PROBLEMS

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. STEERS. Mr. Speaker, youth unemployment is becoming increasingly recognized as one of the most intractable problems our country has had to solve. The issues involved in dealing with out-of-work teenagers present many hard choices to our country's legislators and administrators.

Mr. Rudolph P. Savage, Jr., of Kensington, Md., is presently coordinator of the employment program of the Mental Health Association of Montgomery County, Md. He has gained a detailed, first-hand knowledge of the problems associated with helping unemployed teenagers. His expertise in the field has led him to conclude that all out-of-work teenagers deserve Federal aid in becoming gainful members of society no matter where they live—whether in old cities or in affluent suburbs. I am inserting in the CONGRESSIONAL RECORD an eloquent letter which Mr. Savage recently sent me. His comments will, in my opinion, inject some much-needed commonsense in the debate on how to eliminate the scourge of youth unemployment.

Mr. Savage's expertise in the area of youth unemployment confirms my strong feeling that all teenagers must receive equal opportunity and equal access to Federal programs to aid the unemployed youth. An out-of-work teenager's eligibility to participate in an employment program should not be based solely on the unemployment rate of the locality or State in which he or she happens to reside. Neither should the income level of a region be used as the sole criterion in deciding which unemployed youths to aid. Instead, the problem of unemployment should be viewed as a universal one, hitting middle-class and poor people alike.

This is the problem which I hope the Federal Government, and especially the Labor Department, will keep in mind as it implements the recently passed Youth Employment and Training Act—Public Law 95–93. Only when we eliminate the idleness of teenagers who linger in suburban shopping centers for lack of jobs—as well as unemployment among teenagers in the inner cities—will the entire problem of youth unemployment be truly solved.

Following is Mr. Savage's letter:

MENTAL HEALTH ASSOCIATION OF MONTGOMERY COUNTY, MD., INC.,
Kensington, Md., August 22, 1977

Hon. NEWTON I. STEERS,
Cannon House Office Building,
Washington, D.C.

DEAR CONGRESSMAN STEERS: I am again corresponding with you concerning the youth employment issue and the recently passed legislation in this area. I would like to continue my efforts, that began with the testimony before the subcommittee on Employment Opportunities, to provide input that hopefully will lead to the implementation of an effective nationwide youth employment program. At this point, my focus will be upon the guidelines for the allocation monies rather than upon the component programs.

When I attended the hearings I heard much discussion about the low income youths and how urgently funds were needed to meet the problems in this area. As I listened I was very much in agreement with many of the statements. However, as I listened, I began to wonder whether the discussion centered around a welfare issue or an employment issue. More and more the bill was talked about in terms of a program to meet the needs of low income people rather than a bill to meet the needs of unemployed youth.

My goal and the goal of any input I can provide is to meet the needs of all unemployed youth whether their parents are poor or rich. I think that we are discussing areas that are much more crucial to the country than just economics. Youths of all income levels need the opportunities available to obtain training, career counseling and to work to gain maturity and a sense of responsibility. If middle and upper income youths are deprived of these opportunities by funding that is targeted only at the poor, we may be creating problems that will effect this nation for years to come.

The point is that in areas that have a high income base such as Montgomery County, the problem of youth unemployment will persist, unless funding for these kinds of areas is made available. People have responded to this statement with replies such as, "The upper income level areas attract retail business which in turn provides employment for youth." My experiences have shown that this is a misconception bred by a lack of knowledge about the hard realities in the job market. Take a trip to the large retail area within Montgomery County and survey the employees, my guess would be that about nine out of ten times the employer will not hire the youth until they turn eighteen. Rationalizations such as high income is equal to no youth employment problems are faulty.

A part of my concern is how the lack of funding will effect middle income youths.

What messages is it that we will send to him, whether it is conscious or unconscious, about society's desire for him to work. Let's pretend for a minute that you are a fourteen-seventeen year old who is motivated to go out and earn money for yourself. You begin your search by talking to various retailers with high expectations of going to work. These are quickly squelched when you are constantly told that you must be sixteen or eighteen to work at this place. But, you can't give up easily. A few weeks later, after repeated attempts to find work, you decide to check on your local employment program. You begin to talk to a counselor and find out that you can't be helped because your parents make too much money! You ask, "What does that have to do with me, I still don't have a job and want to work?" Your counselor says, "I'm sorry there is nothing we can do for you." Hypothetical? Maybe, but very much a part of every day life for many middle class youths who turn to government funded sources for aid. What is it that we have said to them! I think it is go home and live off of your parents income until age sixteen or eighteen and then go to work. That is the beginning of a habit and set of values that will effect the youth of America's middle class many times until they become settled. I wonder if this is really how an employment bill should function in our society.

Therefore, I would urge you to advocate for guidelines that tackle the youth unemployment problem head on rather than by dealing with side issues. Two options that might be considered, out of many, would be the establishment of guidelines based upon the per centum of unemployed youth within various jurisdictions or the establishment of guidelines allowing each jurisdiction to assess its own needs and implement programs to meet these needs. In an effort to truly be fair and meet the unemployment problem squarely I would lean towards the establishment of a youth unemployment index and an allocation of funds to jurisdictions based upon the needs indicated by the index. This type of solution would then target the legislation directly at those for whom it was designed to serve.

I would hope these thoughts are of some help to you in this area. I have other thoughts and if at any time you or others might desire input within this area I would be willing to work with you on this matter.

Sincerely,

RUDOLPH P. SAVAGE, Jr.,
Employment Program Coordinator,
Middle Earth Youth Services.

HANNA-BARBERA PRODUCTIONS: 20 YEARS YOUNG

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. WAXMAN. Mr. Speaker, this year Hanna-Barbera Productions celebrates its 20th anniversary. An entire generation of television viewers—many of them now with children of their own—cherishes the memories of the enormous cast of characters which continue to generate the laughter of our children.

In addition, Hanna-Barbera's 20 years of technical achievements in the field of animation have become both a benchmark for the industry and an integrated part of our popular culture.

"Tom and Jerry," "The Flintstones," and "Yogi Bear," among many other animated creations of William Hanna and Joseph Barbera, have just been honored at the 11th Annual International Animation Film Festival in Annecy, France. The honors they received reflect not only the continuing resiliency of this industry, but also international recognition of that special breed of creative genius—the animators—and their contribution to the entertainment of audiences in the United States and throughout the world.

The contribution of William Hanna and Joseph Barbera to greater appreciation and understanding between our citizens and the peoples of the world deserves our wholehearted recognition and gratitude. I am pleased to mark Hanna-Barbera Production's 20th anniversary with my colleagues.

ALCOHOL FUELS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. OTTINGER. Mr. Speaker, European countries have for decades conserved scarce petroleum by running their vehicles on what we now call gasohol—a blend of alcohol and gasoline. The United States, however, still has not taken any serious steps toward making alcohol from agricultural surpluses, timber waste, municipal garbage, wastepaper and coal. Of the 103-page national energy program presented by the administration this spring, only a single sentence was devoted to the potential of using alcohol as a substitute for the scarce fuels that we increasingly import from the OPEC nations.

On Tuesday, August 9, 1977, Jack Anderson and Les Whitten summarized the need for action in their column, titled "Alcohol Fuels May Be the Wave of the Future," which I include for the RECORD:

[From the White Plains (N.Y.) Reporter Dispatch, Aug. 9, 1977]

ALCOHOL FUELS MAY BE THE WAVE OF THE FUTURE

(By Jack Anderson and Les Whitten)

WASHINGTON.—A grim President Carter told the American people on April 18 that they should brace for the equivalent of war to overcome the energy shortage. He called for smaller cars, better insulation, simpler lifestyles.

Last week, the Senate Energy Committee responded dramatically by outlawing automobiles that get less than 16 miles per gallon, beginning with the 1980 models.

Some energy experts have told us that Americans may not have to change their way of life It may not be necessary for them to junk their big cars, give up their weekend drives to the beach and move back into the city from the outlying communities.

Before the nation runs out of gas, these experts say, much of the fuel that is needed can be distilled from agricultural surpluses, timber waste, municipal garbage, wastepaper and coal.

These plentiful products can be converted into alcohol fuels, which can be blended into gasoline without even changing the engines. In fact, with slight modifications, automobile engines can be adjusted to run entirely on alcohol.

Already, Brazil and Germany have made commitments to start the switch to alcohol fuels. Brazil seriously is considering a plan to draw 75 per cent of its liquid fuel from alcohol by the year 2000.

Neither the idea nor the technology is new. European producers have sold alcohol blended with gasoline for decades. In the 1930s, Chrysler Motors modified some cars slightly to accommodate alcohol fuels and shipped them to oil-short New Zealand.

International Harvester used to advertise in the Philippines that its motor trucks were "powered with engines especially designed to burn alcohol." Today, many race-car drivers prefer alcohol fuels to gasoline.

We have spent several weeks investigating the dramatic possibility that alcohol could end our immediate dependence upon overseas oil. Alcohol fuels don't have to be pumped out of foreign fields but can be produced right here in the United States This would stimulate the U.S. economy and reduce the massive flow of dollars to the oil potentates.

For the amount it will cost to transport Middle East oil across the ocean and store it in our strategic reserves, experts insist the government could build dozens of alcohol fuel plants throughout the nation.

These plants are far cheaper to construct than gasoline refineries. They can also utilize waste products, thus producing vital fuel and cleaning up America at the same time. Experts told us, for example, that most of the garbage and trash New York City now dumps into the ocean could be transformed into alcohol fuels. The benefits to the beaches, which now are awash with pollution, would be worth the cost of the project, one authority suggested.

Speaking of pollution, the use of alcohol fuels would reduce the noxious exhaust fumes that now choke our cities. Comprehensive studies by Volkswagen, General Motors and even Exxon indicate that pure alcohol fuels cut down dramatically on auto pollution.

Yet the Carter administration, despite the high stakes involved, has failed to pay much attention to alcohol fuels. The 103-page National Energy Program devotes only a single sentence to the alcohol potential.

The Energy Research and Development Administration has devoted a few dollars to alcohol fuel research. The experiments have yielded promising results but, strangely, have been virtually ignored by higher-ups.

The all-powerful oil industry, of course, opposes developing rival alcohol fuels. This not only would threaten oil profits but could break the industry's monopoly. A city government could produce fuel from its garbage, a timber state from its wastewood, a farm state from its surplus grain. Then the big oil companies might be left with a lot of unused crude on their hands.

The oil operators, for example, quietly have tried to block the state of Nebraska from producing and marketing a 10 per cent blend of grain alcohol and gasoline. This product, known by the nickname "gas-o-hol," could be used in existing engines.

Suddenly, Nebraska congressmen began receiving quiet calls from representatives of the Nebraska Petroleum Marketers, urging them to oppose the gas-o-hol project. They cooly predicted that Nebraska's Gov. James Exon would withdraw his previous support of the project.

The governor denied he was opposed to gas-o-hol, but he called for further study. This was interpreted inside the statehouse as a political stall. Disillusioned legislators are convinced he caved in to oil pressure, a charge he vigorously denies.

Alcohol blends would cost a few cents per gallon more than gasoline, at the current prices. But insiders expect that gas prices

not only will catch up but surpass what it would cost to produce alcohol fuels.

The benefits in reducing pollution, improving the economy and reducing the dependence on oil imports should also be cranked into the economics. Favorable tax incentives could help make alcohol fuels competitive.

SBA RECOGNIZES IMPORTANCE OF WOMEN'S CONTRIBUTIONS IN BUSINESS

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Ms. MIKULSKI. Mr. Speaker, I would like to bring to my colleague's attention an important press release issued by the Small Business Administration during our district work period. The action detailed in the release is an important step forward for women who are already involved in business or for those who are planning on entering the business world but have hesitated to because of lack of funds. It is my hope that other agencies will take similar steps in the future to help women in their goal to gain equality.

The press release follows:

SBA WILL TARGET $100 MILLION FOR BUSINESS LOANS TO WOMEN

WASHINGTON, D.C.—The U.S. Small Business Administration will target $100 million for guaranteed business loans to women during the first quarter of Fiscal Year 1978 as a part of the Agency's National Women's Business Ownership Campaign, SBA Administrator A. Vernon Weaver announced today.

"The first increment in our Financial Assistance program to encourage women's business ownership will be an initial targeting of $100 million for guaranteed business loans to women in the first quarter of FY 1978," he said.

For the remainder of FY 1977, the Agency will provide whatever is necessary and needed to accelerate the campaign, he added.

The National Campaign was announced Wednesday at the White House by Ms. Margaret Costanza, Special Assistant to the President for Public Liaison, SBA Administrator A. Vernon Weaver, and Ms. Pat Cloherty, SBA Deputy Administrator-Designate.

"This campaign will begin immediately and is keyed to short-term goals designed to reorient SBA priorities, and a longer term strategy geared to developing specific programs," Ms. Cloherty said.

"The key elements of the campaign are based on a maximum utilization of existing resources at SBA coupled with a reorientation and much sharper focus on women," she said.

The National Women's Business Ownership Campaign will be funded to the maximum extent necessary from the resources of the Agency, Mr. Weaver said today. "But I want to make it clear that we do indeed have the financial resources to see this program through on a practical basis," he added.

Current SBA programs to be used in this campaign include:

Advocacy—This SBA office represents the small business community at all levels of government, and with business, professional and trade associations. The office will mount a series of some 110 seminars and conferences designed to inform women about SBA programs; about how to get into business; and how to expand an existing business.

Financial Assistance—SBA offers a broad range of loan programs for small businesses needing money that cannot be borrowed from conventional lenders. Field-level loan officers are being encouraged to seek out opportunities to involve women in business through the lending programs.

Management Assistance—This program is extensive and diversified. It includes Pre-Business Workshops, Problem Clinics, free individual counseling by retired and active business executives (SCORE/ACE), and for the socially or economically disadvantaged, the Call Contract program, which provides management and technical assistance from professional counseling firms under contract to SBA. SBA is devoting more resources in this area specifically to women.

Assistance in Securing Contracts—Specialists in this field counsel small businesses on how to prepare bids and obtain prime contracts and subcontracts. A systematic and deliberate search is being instituted to locate and add to source files the names of eligible women-owned small businesses. They will also be assisted in the mechanics of securing Federal contracts for goods and services.

ANNIVERSARY OF JEFFERSON DAVIS

HON. WILLIAM L. DICKINSON

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. DICKINSON. Mr. Speaker, each year the Sophie Bibb Chapter of the United Daughters of the Confederacy in Montgomery, Ala., pauses in commemoration of the anniversary of the birth of the first and only president of the Confederate States of America, Jefferson Davis. The ceremonies include the placing of a wreath on the brass star on the west portico of the Alabama State Capitol which marks the spot where Jefferson Davis took the oath of office and assumed the reins of the new nation.

This year's ceremonies in the Alabama Capitol included an address by Mr. Thomas B. Hill, Jr., a noted attorney in Montgomery and one of Alabama's most outstanding citizens. I am taking the liberty of inserting his address in the RECORD to share it with other Members of the House.

ADDRESS BY THOMAS B. HILL, JR.

Madam Chairman, ladies and gentlemen, we are assembled here this afternoon to commemorate the 169th anniversary of the birth of the great civilian chieftain of the South, the first and only President of our beloved Southern Confederacy, Jefferson Davis. I am deeply honored and profoundly grateful for the invitation to participate in the program on this occasion, to honor the memory of President Davis, whom I have, since earliest childhood, held in reverent veneration as one of the truly great statesmen and heroes in the history of our country.

Truly the brightest and most cherished page in my book of golden memories is the privilege that was mine to portray President Davis on the occasion of the Centennial Celebration on February 18, 1961, of his inauguration as President of the Confederate States; and, as I stand today upon this golden star which marks the hallowed spot on which he took the Oath of Office; and, as I stood here on that occasion and redelivered his inaugural address, there came to my mind the admonition of the Captain of the Lord's Hosts to Joshua, upon the Plains of Jericho: "Remove thy shoe from off thy foot, for the place whereon thou standeth is Holy Ground."

As we gather here this afternoon, on the portico of the building within whose walls the new nation was born on that eventful day, February 18, 1861, just a stone's throw from that consecrated structure, the First White House of the Confederacy in which he lived and moved, and adjacent to the monument to the bravery and valor of the Confederate Soldiers and Sailors, the cornerstone of which he laid on April 28, 1881, I seem somehow to have the feeling that he is with us; that his valiant and venerated spirit has returned from his home beyond the River to linger here for a few fleeting moments this afternoon with us, his people, in his earthly home. And, I seem to hear him whisper: "Well done, Sons and Daughters of the Confederacy! From the ashes to which your grandfathers returned from Appomattox in 1865, you have builded a grand and glorious Southland, an enduring monument to the sacrifices they made and to the ideals and the principles for which they fought and bled and died."

As we think of President Davis on this his natal day, the episodes in his eventful career pass in panoramic view before us, can we not picture him in our minds as the young and spirited cavalier, returning from his father's plantation in Mississippi to old Transylvania College in Kentucky, his native state? Can we not see him as he graduates from the Military Academy at West Point, and becomes the magnanimous captor of Chief Black Hawk? And then we see him like an archangel of war, leading his Mississippi Rifles at Buena Vista, wringing victory from defeat, and glorifying American Arms in the war with Mexico.

And next in our panoramic view of his life, we see him as he stands in the halls of Congress, representing his proud Southern constituency; and, then we see him adorning the Federal Senate Chamber, espousing the cause of the South, the contemporary of Webster and Clay, of Benton and Calhoun. We see him adding lustre to the Cabinet of President Franklin Pierce, as Secretary of War.

When the storm clouds are gathering, we see him as he stands on this hallowed spot, and takes the oath of office as President of our revered Confederacy, and pledges his loyalty and devotion to our people and to our cause; and, then, as the lightning of fratricidal strife flashes from every hilltop, we see him as the tall, suncrowned leader of the South, standing four square while the tempest rages about him.

We see him as the President of the Confederate States, directing the civi destinies of the new-born government at Richmond. And then, when all save love and honor is lost, we see him in irons confined in a prison casemate at Fortress Monroe, his proud spirit unconquered and unconquerable, preferring to endure chains and indignity rather than sacrifice principle and honor.

For two long years, he was incarcerated in that living tomb within the impregnable walls of that prison; most of that time being manacled and fettered on hands and feet in the fashion of a common criminal, upon instructions of Charles A. Dana, Secretary of War, and with the consent and approval of then President Andrew Johnson, turncoat Southerner from Tennessee. Indicted upon a charge of treason, he implored the Government to give him a trial, which they refused to do for two long years, realizing full well that no charge of treason could be sustained in any fair and impartial court of justice

And, finally, when those years of suffering and privation were at an end, and when broken in health and frail of body, away from the storm of the "bloody shirts," away from the forum that was striking at the South as she lay prostrate and bleeding, away from the ranchor and with his great heart broken, Jefferson Davis sat himself down at

Beauvoir, to write for you a true history of our Southland, that we should not be ashamed of its history. Of all the pictures that hang on memory's wall, none to me is so tragic, so pathetic, as Jefferson Davis, sitting there writing, while his enemies without sought in every way to compass the destruction of his name.

Almost eighty-eight years have passed since he received God's summons, and his spirit was wafted across the Great Divide to walk once more with his Captains. We may say of him, as was said of another distinguished Southerner, Henry W. Grady, who died literally loving a nation into peace:

"I have seen the light that gleamed at midnight from the headlight of some giant locomotive rushing onward through the darkness, heedless of opposition, fearless of danger, and I thought it was grand.

"I have seen the light come over the Eastern Hills in glory, driving the lazy darkness like mist before a seaborne gale, until leaf and tree and blade of grass glittered in the myriad diamonds of the morning rays, and I thought it was grand.

"I have seen the light that leaped at midnight athwart the storm-swept sky, shivering over chaotic clouds mid howling winds, until cloud and darkness and the shadow-haunted earth flashed into midday splendor, and I knew it was grand!

"But the grandest thing, next to the radiance that flows from the Almighty Throne, is the light of a noble and beautiful life, wrapping itself in benediction 'round the destinies of men, and finding its home at last in the Blessed Bosom of the Everlasting God. That man is great who has the strength to serve, the patience to suffer, who seeks not to conquer the world but, mastering himself, spends his life and energies in unselfish service for his fellow man."

Such a man was Jefferson Davis, and we shall revere his memory 'til time shall be no more.

BERTEL VOTED TO SOCCER HALL OF FAME

HON ROBERT A. YOUNG

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. YOUNG of Missouri. Mr. Speaker, I would like to take this opportunity to congratulate Gene Bertel of Berkeley, Mo., on being voted into the St. Louis Oldtimers Soccer Hall of Fame.

Gene Bertel began playing soccer when he was 16. In 1927, at age 19, he played with a team that joined the St. Louis Muny League and he was the only one on his team to turn professional.

A goalie, Gene played for several local teams until 1947 and became well known for his ability to "punch" the ball with his fist as far as most players could kick it.

Soccer is not the only achievement Gene has been recognized for. He was a supervisor for the St. Louis Post Office for 22 years, and he served as president of the Post Office Junior Drum and Bugle Corps, leading them to several city and county championships.

Now retired, Gene is active in church and civic affairs, and serves as vice president of the Airport Township Democratic Club. He will be inducted into the Hall of Fame in November.

He has 5 children and 26 grandchildren.

Mr. Bertel is truly an outstanding athlete and I wish to take this time to commend his achievements.

THE CASE AGAINST RATIFYING THE NEW U.S.-PANAMA TREATY

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. RUDD. Mr. Speaker, when President Carter affixes his signature today to the administration's proposed new treaty with Panama, he will be repudiating his solemn campaign pledge to the American people that he would never give up complete or practical control of the Panama Canal, if elected President of the United States.

This is one of the best reasons why the U.S. Senate should refuse to ratify this unfortunate treaty, and the U.S. House of Representatives should defeat the necessary legislation to implement its provisions.

It is not so long since October 6, 1976, that the American people have forgotten this pledge by Presidential candidate Jimmy Carter during his televised foreign affairs debate with President Ford:

I would never give up complete control or practical control of the Panama Canal Zone, but I would continue to negotiate with the Panamanians. . . . I believe that we could share more fully responsibilities for the Panama Canal Zone with Panama. I would be willing to continue to raise the payment for shipment of goods through the Panama Canal Zone. I might even be willing to reduce to some degree our military emplacements in the Panama Canal Zone, but I would not relinquish practical control of the Panama Canal Zone any time in the foreseeable future.

Mr. Speaker, just 11 months since that promise—without which, given the closeness of his election, it is certain that Mr. Carter would not today be President of the United States—President Carter is joining Panama's dictator Omar Torrijos in signing a proposed new treaty to turn over to Panama complete sovereignty, ownership, and control of the Panama Canal.

The proposed treaty, which was delivered to my office just yesterday afternoon despite numerous previous efforts to obtain the final text, totally abrogates legitimate American ownership and operation of the canal since its construction by the United States with these opening phrases:

The United States of America and the Republic of Panama, . . . *Acknowledging* the Republic of Panama's sovereignty over its territory, *Have Decided* to terminate the prior Treaties pertaining to the Panama Canal and to conclude a new Treaty to serve as the basis for a new relationship between them. . . .

Turnover of the canal and the Canal Zone to Panama would be immediate under terms of the proposed treaty, not gradual as the administration and the media have led us to believe. The opening gesture—an insult to our people—would be the immediate hauling down of the American flag in the Canal Zone.

Article VII of the proposed treaty states:

ARTICLE VII

FLAGS

1. The entire territory of the Republic of Panama, including the areas the use of which the Republic of Panama makes available to the United States of America pursuant to this Treaty and related agreements, shall be under the flag of the Republic of Panama, and consequently such flag shall always occupy the position of honor.

Mr. Speaker, under these proposed treaty provisions, the American people would be subjected to the unnecessary indignity of seeing their flag hauled down over American property, and the flag of Panama hoisted in its place.

Our American flag would be permitted to fly only in a subservient position to Panama's flag, at the headquarters of the new Panama Canal Commission during the transition period while American canal technicians teach Panamanians how to operate and maintain the canal, and at the site of the Combined Board where defense and protection of the canal would be continued under U.S. direction at our expense.

In other words, the treaty requires the United States to give up ownership and operation of the canal right away, and to provide the necessary expertise at American taxpayer expense for Panama to learn how to keep it open.

Mr. Speaker, I continue to be outraged by the sub-rosa manner in which the President has attempted to impose this proposed new Panama treaty upon the American people. First, he waited until Congress had adjourned and we had dispersed for the August recess before announcing that a new agreement had been made by his representatives and Panama's dictator government. This prevented any organized discussion or questioning of the treaty terms by the people's elected representatives, until after the treaty had been signed at today's carefully orchestrated media event.

Despite the announcement of a new agreement, no one had a copy of the treaty terms until yesterday. The 61 pages of treaty text, annexes, and protocol were delivered to congressional offices yesterday afternoon—and no one has had the opportunity to study them carefully before the signing ceremony.

Even the treaty material does not tell the full story of what the President is attempting to commit us to. A printed letter to all Members of Congress accompanying our copies of the proposal yesterday, signed by Frank Moore, the President's assistant for congressional liaison, stated that:

There are a number of maps, implementing agreements and other supplementary documents that are not enclosed here.

"We will be happy to provide these to you promptly upon request", Moore assured us in his letter.

But this was not true, since these supplementary materials have not been prepared yet. I had my staff call Mr. Moore's office to request these maps, implementing agreements, and other documents 5 minutes after I received the pro-

posed treaty texts. After being referred to the State Department, where no one seemed sure who was handling distribution of this material, my staff was finally told to call Mr. Curt Cutter in the State Department's Congressional Liaison Office.

After several calls, I was finally informed that the materials which Mr. Moore stated would be provided promptly upon request were nonexistent, and would not be printed until at least the end of the week or more likely next week. I was told we would have to wait, which gives the administration another week or 10 days of propaganda time to promote this treaty before the full facts of what he is getting us into start reaching the people and their representatives in Congress.

I don't believe that the American people will allow themselves to be railroaded by such devious tactics. This is an appeasement treaty that is an insult to all Americans. Even the President himself has stated that we need a new treaty only to placate General Torrijos and other Latin American rulers, and to avoid the chance that some extremists goaded on by Torrijos and his henchmen might resort to violence or sabotage unless the United States backs down and gives away the Panama Canal.

Mr. Speaker, there are many solid reasons why the U.S. Senate should refuse to ratify this bad proposed treaty with Panama.

Not the least of them is that Panama's dictator Omar Torrijos has alined himself with the most repressive pro-Communist regimes in this hemisphere—those of Cuba's Fidel Castro, Jamaica's Michael Manley, and Guiana's Forbes Burnham.

According to the U.S. Information Agency, Torrijos issued a communique last April with pro-Arab terrorist dictator Col. Moammar Khadafy of Libya, denouncing what they called "Zionist aggression" by Israel. The communique was issued at the end of a week-long visit by Torrijos to Libya, for the purpose of creating close economic and political ties between the two countries.

Columnists Jack Anderson and Les Whitten stated in their nationally syndicated column on June 16 that they had evidence that this Torrijos-Khadafy meeting had also resulted in a secret deal between Libya and Panama to give Arab extremists a foothold in the Americas and to cooperate with the Arab boycott against Jews.

Torrijos has also busied himself with making closer political and commercial ties with the Soviet Union and its Communist Party international leadership. Again, according to the U.S. Information Agency, top officials from the Soviet Politburo and Central Committee of the Soviet Communist Party visited Panama last June.

The Soviet delegation, which met with Panamanian Government officials and Communist leaders, was headed by Aleksei Romanov, a leader of the Central Committee's ideological department, whose work includes maintaining the discipline of foreign Communist parties and making sure that they are correctly implementing plans for subversion and world domination.

Almost immediately after the Soviet Politburo team left Panama, a Soviet commercial delegation headed by Nikolai Zinoviev arrived and concluded a major Soviet-Panama commercial agreement with the Torrijos regime.

This agreement, according to news reports in the Torrijos-controlled newspaper Critica, could result in the opening of a Soviet bank to run Soviet commercial activities throughout Latin America, as well as a series of other multimillion-dollar-trade and construction projects with Panama.

Mr. Speaker, these are only some of the most disturbing reasons why the Senate should refuse to ratify the proposed treaty relinquishing U.S. sovereignty, ownership, and control of the canal and the Canal Zone to Panama.

The only argument that I have heard in favor of the treaty is that it is necessary to prevent anti-U.S. feeling in Latin America and possible sabotage of the canal by Panamanians.

The sabotage argument is without merit, because to allow such destruction of the Panama Canal would be economic suicide by the Panama Government.

This is the view of all Latin American experts with whom I discussed this issue during the August congressional recess, including Harold K. Milks, managing editor of the Arizona Republic, who served on antisabotage military duty at the canal during World War II and as the Associated Press bureau chief in Havana just prior to Castro's takeover of Cuba in 1959.

Milks writes a regular column in the Republic entitled "Latin American Memo," and is well informed on political and economic conditions through his sources in all hemispheric nations.

His column on August 31 was entitled, "Panama To Invite Ruin if Canal Is Sabotaged." I would like to include Mr. Milks' throughtful comments on this subject in their entirety at this point in the RECORD:

[From the Arizona Republic, Aug. 31, 1977]

PANAMA TO INVITE RUIN IF CANAL IS SABOTAGED

(By Harold K. Milks)

One of the big clubs used by the Carter administration to swing support behind its controversial Panama Canal treaty campaign was the threat of major sabotage against the canal unless Panama was given control of the "big ditch."

This club is swinging back on its wielders today with the growing knowledge that the last thing Panama strong man General Omar Torrijos wants or can afford is any destruction or interruption of the canal.

"The economy of the Republic of Panama is inseparably linked to the safe operation of the canal," said a senior U.S. official recently returned from Panama. "Gen. Torrijos knows that if the canal runs dry from any act of sabotage his country's economy will dry up with it. Panama without the canal is nothing."

Torrijos and his supporters made open threats of attacks on the Canal Zone and sabotage to the canal during early discussions of the new treaties. According to news releases from the White House, these threats—and the danger of "alienating the friendship of other Latin American nations" were among the strongest planks in President Carter's drive for the new pacts.

As a wartime military officer once assigned to antisabotage tasks in the Canal Zone, this writer is fully aware that protection of vital areas there is virtually impossible. Gatun Lake, the huge reservoir from which water is drawn to operate the multiple sets of canal locks, would be especially vulnerable to saboteurs. Destruction of retention dams there would leave the canal high and dry for many months.

But, say those who have recently visited Panama, the best defense against sabotage is Torrijos' knowledge that neither he nor his country can afford it.

TEXAS STATE SENATE RESOLUTION NO. 758—A NATIONAL ENERGY PLAN

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. ARCHER. Mr. Speaker, the Senate of the State of Texas has passed a resolution expressing its concerns with regard to the energy policy debate currently underway in the Congress. The resolution, introduced by State Senator Walter H. Mengden, Jr., reflects a commonsense approach that should be adopted by the Congress.

The resolution follows:

SENATE RESOLUTION NO. 758

Whereas, President Carter's national energy plan places primary emphasis on conservation, essentially through special taxes, to solve this nation's energy problems; and

Whereas, While conservation should be a major part of the national energy program, overemphasis in this area will have a disastrous impact on the country's economy; and

Whereas, A strong economy must be a goal of the energy program, and this can be achieved if the program is based on the free enterprise system, involves a minimum of government control, and fosters the maximum development of all energy sources on a nationwide scale; and

Whereas, Federal policy should encourage the production of domestic oil, natural gas, and coal and should promote the development of new energy sources, for example, synthetic fuels, nuclear fission and fusion, and gasified and liquefied coal; and

Whereas, Texans are acutely aware that this country's future well-being is greatly dependent on the implementation of an effective national energy program and, therefore, earnestly seek the formulation by congress of a comprehensive, balanced program which is consistent with the principles of American democracy; now, therefore, be it

Resolved, That the Senate of the 65th Legislature of the State of Texas hereby respectfully memorialize the Congress of the United States to adopt a national energy program which, while promoting energy conservation, equally encourages the development and production of all energy sources throughout the nation; and, be it further

Resolved, That copies of this Resolution be prepared and forwarded to the President of the Senate and Speaker of the House of Representatives of the United States Congress, the Honorable Thomas Ashley, chairman of the Ad Hoc Committee on Energy of the United States House of Representatives, the Honorable Henry Jackson, chairman of the Energy Committee of the United States Senate, and all members of the Texas delegation to the Congress with the request that this Resolution be officially entered in the Congressional Record as a memorial to the Congress of the United States of America.

MR. CARTER: MEET BEN LEVICH

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. LENT. Mr. Speaker, the cause of Soviet Jewry continues to be of concern to freedom-loving peoples everywhere. "Northern Virginia People" recently carried an article by William Steif concerning the plight of one Soviet Jew who wishes to emigrate to Israel, Ben Levich. Dr. Levich is a distinguished physicist who lost his job because of his desire to leave the Soviet Union, not unlike thousands of other members of religious and ethnic minorities within that country. I commend Mr. Steif's article to my colleagues:

MR. CARTER: MEET BEN LEVICH—SOVIET JEWRY AND HUMAN RIGHTS

(By William Steif)

Every time I hear or read the words human rights, I think of Ben Levich.

He is a short, stocky Soviet Jew with a halo of gray hair and the air of a man who's just stepped out of a road company of "Fiddler on the Roof."

He is also a distinguished theoretical physicist who's been a member of the Soviet Academy of Science, the most illustrious scientific body in the USSR, for 35 years. He has published a four-volume physics text, has held a chair at the Electrochemistry Institute in Moscow 25 years, has founded his own seminar, and in the last two years has had invitations to teach at 15 American universities, including MIT and Cal Tech, and six Western European universities, including Oxford. He's made more money—above 1,000 rubles (1,350 dollars) monthly—than all but the most highly paid Soviet citizens.

In February 1972, Benjamin G. Levich, now 60, and his wife, Tanya, applied to the Soviet authorities to emigrate to Israel.

"The next month," he recalled at his Moscow apartment last winter, "I was fired and my chair was abolished."

The reason: His "disgraceful behavior."

This is the reality of President Carter's human rights campaign, a campaign that is being nit-picked to death by State Department bureaucrats, deep-dish columnists like David Broder and Joseph Kraft, and Capitol Hill types who worry more over snagging a dam for their local construction company than over the freedom of worthy people.

Even Carter has pulled in his horns. He pays lip-service to the human rights pledged by the Soviet Union, the U.S., Canada and 32 European nations at Helsinki on Aug. 1, 1975, but there is precious little pressure. It is as if the U.S. fears the Soviets will start a shooting war over a few thousand miserable people who want to leave the USSR.

I may be wrong in one aspect of this, however: There probably are more than a few thousand who want to leave—the numbers may be in the hundreds of thousands. I am surely right in another aspect: They are miserable.

In the course of a reporting journey through the Soviet Union last winter I searched out and found about 15 families of Soviet Jews who had applied for emigration visas in Leningrad, Moscow, Kiev and Odessa and had been refused. Some had been waiting two years, some as many as seven years. They had lost their jobs. They had been harassed. They had been arrested and jailed numerous times. They were trapped in a system they understood all too well.

They were not, of course, alone. There are thousands of Baptists, Pentecostalists, ethnic Germans, Armenians and other minorities who would like to leave. And there are hundreds—perhaps thousands—who, "infected" by western ideas, would like to stay, like to reform the system from within. Andrei Sakharov, the physicist, is only the tip of the "dissidenti" iceberg.

But Levich's story, in many ways, is the most poignant.

He and his family were refused visas and harassed, and he was demoted from the academy's highest rank to "researcher, my status of 35 years ago." He was forbidden to teach or to hold the seminar he'd founded. He was barred from every scientific board and every scientific journal to which he'd contributed.

Tanya Levich was equally affected.

"I was a translator of American and English fiction," she said. "My work was canceled immediately. A new and very hard life started."

With a rueful smile, she added: "Only the dog was not fired."

On May 16, 1973, their younger son, Yevgeny, also a physicist, was seized in the street and disappeared.

"He was missing seven days," said Levich. "Then we heard he'd been drafted into a military unit. Later we learned he was at a punitive camp on the Arctic shore, a very severe camp for deserters, Baptists, religious dissenters and the like. He had a stomach disease, but he was sent there anyway, against every rule. We were told he would not leave."

A year later the son was released "in very poor condition," the father said. "There are ups and downs, depending on pressures from the west."

In late December 1973, Levich said, "Something changed for the better"—he's not sure what.

After his son's return, Levich was told a commission had been formed to see if he still knew any "state secrets." A month later he was told his "secrets" were "obsolete."

In June 1974, he said, "I was invited to the office of the Moscow emigration service's chief, who said that 'because we now have evidence that you're now secret-less, your case is solved. Your sons will leave within a half-year and you'll receive permission in the year after they depart.' It was the day before your President Nixon's visit here."

On the second day of the 1974 Nixon visit to Moscow, Levich was interviewed on American TV and reported the emigration chief's statement. No Soviet official disputed him.

His two sons and their wives left April 1, 1975. Alexander, 32, is in business in Tel Aviv; Yevgeny, 28, is a scientist at Israel's Weizmann Institute.

"We have grandchildren we've never seen," said Tanya Levich.

The months passed. Nothing happened.

"Finally I sent a letter," Levich said, "and asked, 'how about me?' "

The reply was oral.

Levich was told he had "misinterpreted our words." The emigration chief told Levich, "The institute director and another person of high rank have given us assurances about you. We have evidence from the academic side that you know secrets."

Levich sighed, gazing woefully around the barren little apartment on Leninsky Prospekt.

"It was the rebirth of secrets," he said. That was in October 1975, and "ever since, my secrets grow and grow."

He is barred from speaking at meetings. One time colleagues cut him off cold. His correspondence is stopped. His state stipend was slashed by more than half and at one point held up for nine months on various pretexts. Fearful relatives snub the couple.

Why did the Leviches—people who had everything Soviet society could offer—apply to leave?

"It was emotional, of course," said Levich. "But it involved principles, too. I'm absolutely an unorthodox Jew in every sense of the word. But in this five years my view of religion has improved. Very often, pious people are better than others. They have moral standards, feel more responsible"—he cited a Catholic nun in Chicago who'd taken an interest in his case.

The Leviches had no contact with religion in the USSR, "but we never stopped being Jewish," he said. "We never tried to assimilate, as so many try to do. Long ago, any Jew could answer, 'I'm Russian,' and just fill out a form. That isn't true today." On his internal passport, every Jew must write "Jewish" today in the space reserved for "nationality."

"Then there was all the cruelty to Jews during our lives," Levich continued. "First the extermination in Germany, then the growth of anti-Semitism in this country. These made different impressions on different minds. Some tried to lay low. Others wanted to protest."

In recent years, Levich saw "lots of frightening examples. . . . I couldn't hire a bright Jewish boy, younger Jews couldn't enter the university or had less opportunity to be promoted."

Tanya said: "The authorities felt the older Jews who'd achieved positions would just die out."

Israel's 1967 Six-Day War "encouraged our feelings," said Levich. "The authorities took such an unjust attitude. Ever since, the newspapers have been filled with stories about Israeli fascists, the Jewish military threat, Jewish tentacles and so on. I suppose applying to leave was an expression of self-dignity."

Western reporters—"especially American"—have "saved our lives," he said. "We are eternally grateful," and he urged that the spotlight continue to be shown on the Soviet system's brutality. In this, he was not alone: Every Jew, every dissident to whom I spoke urged the same thing. It is the only tactic that works, they all agreed, and they have only scorn for the half-hearted bureaucrats who would soft-pedal the Soviet abuse of human rights in order to reach "agreement" with the Kremlin's rulers.

These are the people who know, who have dealt with the Soviets close-up, in the jails and in the streets, not over the green baize of negotiating tables. And if they say to continue to spotlight the Soviet brutality, I for one will believe them. They are the people who, in a sense, are paying for our freedom.

Ben Levich and his wife are still cooped up in that apartment. I shall never forget him, looking out the window at the gray Moscow sky and the dirty piles of snow below him and saying:

"I thought my children and maybe myself could be really free, say what we want. We are cut off from this country. It is as if we are in some kind of a railway station, waiting."

That is what the human rights campaign is all about, really.

THE OIL COMPANIES AND THE GOVERNMENT: A CITIZEN'S VIEW

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. ARCHER. Mr. Speaker, the Houston Post recently printed a letter to the editor by one of my constituents, Grayson L. Moss of Houston, Tex. The comments of Mr. Moss reflect a widely held feeling in this country that does not often receive the attention of many elected officials and it is for this reason that I

commend it to my colleagues in the Congress for their reading:

LETTER TO THE EDITOR

One writer defends the oil companies while another defends the government. One believes the oil companies will rip off the public, another believes the government will waste a lot of money (another form of rip-off).

My question is: How does the ordinary citizen decide who is going to "rip" whom?

I am confident of the following:

The oil companies pay taxes when they make a profit, the government does not.

The oil companies do not benefit from my income taxes, the government does.

When the oil companies make a mistake, they and the stockholders lose; my taxes do not go up to offset the loss.

When the government makes a mistake, the loss is paid for out of income taxes and the deficit goes up and my income taxes go up.

When the oil company loses money long enough, it goes out of business.

When the government loses money long enough, it simply increases the government debt and my taxes continue to rise.

I am tired of supporting the federal government to the extent required. I have not been forced to support the oil companies; in fact I haven't even been asked . . .

YOUNG ISRAEL EMPLOYMENT BUREAU

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. MURPHY of New York. Mr. Speaker, many times it seems that we hear only criticism of Federal Government programs, but today I wish to insert into the RECORD a commendation by the Council of Jewish Organizations in Civil Service, Inc., of the Department of Labor, the CETA program, and the Young Israel Employment Bureau, a CETA contractor. I commend it to your reading:

YOUNG ISRAEL EMPLOYMENT BUREAU

In times when critics arise to find fault with government sponsored programs designed to alleviate unemployment, it is incumbent upon us to state for the record those exemplary achievements that give credit to the United States Department of Labor. As an example of a viable outstanding program, we submit the record of the Young Israel Employment Bureau, a non-sectarian undertaking sponsored by the National Council of Young Israel with its national headquarters in New York City and branch operations in 17 states. It operates employment bureaus in six states: New York, Ohio, Michigan, Missouri, California, and Florida.

In 1929, it established its first Employment Bureau designed to find jobs for all people regardless of ethnic background. During and immediately after the war years, it added a Veterans Division to the Employment Bureau with the particular concern with the unique problems of the returning veterans, in the field of education, employment, and social adjustment. In 1966, the Employment Bureau applied to the United States Department of Labor and received its first federally funded On-The-Job Training Program (OJT). Subsequently, it has successfully executed 12 employment contracts under Ephraim H. Sturm, the founder and director of the program.

With the advent of CETA, they spun off their national programs in Los Angeles and in Dade County, Florida as independent CETA operations. Albeit, the records will clearly indicate that the local CETA programs are far more costly than the same operation when administrated as part of the national program.

This program called for placing 70 people in each of the above cities with reimbursement for training costs to be given for 35 slots in each area and the additional 35 slots in each area for non-reimbursable OJT. Each area was serviced by one job developer at $9,816.00 annual salary or $188.76 per week, and a secretary with the annual salary of $6,165.00 or $118.55 per week. This is far lower than the normal amount of $15,000 for a job developer and $8,500 for a secretary. In addition there are the normal fringe benefits which amount to approximately 9 percent.

Reimbursement averages $600 per trainee. On a matching one to one basis this means actually that the reimbursement cost is only $300 per trainee. The normal amount of reimbursement nationally and under CETA is well over $1,500.

The National Program was continued with Detroit, Cleveland, and St. Louis as basis. On July 14, 1977 they completed the program with 120 percent record.

The entrance rate ranged from the $3 minimum requirement to $6 for reimbursable trainees and from $2.90 to $4 for non-reimbursable ones.

The trainees were placed in the type of program which will lead to the learning of a particular skill and talent. The following are examples of the type of positions in which trainees are placed: office machines mechanics, carpet cutters, clerk-typists, orthopedic shoe fitters, auto-mechanics, secretaries, bookkeepers, metal fabricators, butchers, machinists, medical assistants, geriatric nurses, jewelers, store managers, security officers, etc. We note that in the foreseeable future these areas will need workers.

This OJT Program including the reimbursable funds costs only $185,656,00.

One can't judge statistics without yardsticks. Let's, therefore, suggest the following: the average retention rate is approximately 60 percent, 70 percent is considered good. Their retention rate is over 90 percent.

The mean cost for reimbursement for training is $1,500, theirs is $300 with the training period being equal. CETA programs are happy with an 80 percent performance and theirs is over 100 percent, normally 120 percent.

On July 15, 1977, the United States Department of Labor once again recycled the Young Israel Employment Bureau National Program for the above mentioned three cities. It is to the credit of the United States Department of Labor for recognizing the Young Israel's national program service as a yardstick in evaluating the efficacy of the local CETA sponsored programs. We wish to acknowledge the astuteness of the Honorable Ernest Green, the Assistant Secretary for Employment and Training, and his staff for recognizing the uniqueness of dedication and achievements of the Young Israel National OJT Programs.

DEDICATION OF THE NAPOLEON J. LAVOIE FIELDHOUSE

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. KILDEE. Mr. Speaker, on September 11 the Flint, Mich., community schools system will extend a rare honor to one of its great former athletic directors, the late Napoleon J. LaVoie, with the dedication of its newest athletic facility named in his honor.

Mr. LaVoie devoted 38 years to Flint education as a teacher, coach, and director of athletics—all but one semester of it at Central High School, where the new fieldhouse is located. It was also at Central High School that as a student he was an excellent athlete in both basketball and football, leading his teammates to State championships in both soprts. He was director of athletics at Central for nearly three decades, retiring in 1968.

As a former teacher at Central High School, I had the honor of becoming a colleague and friend of "Nap" LaVoie, and I cherish my memories of this remarkable, humble, and talented man. The Flint Board of Education, in its resolution naming the structure as the Napoleon J. LaVoie Fieldhouse, said:

It is a name borrowed from a man whose own accomplishments and proportions befit the Flint Community Schools' newest athletic facility.

It is with pleasure that I bring to the attention of the Members of the U.S. House of Representatives the honor being extended to Mr. LaVoie.

HATCH ACT

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. DERWINSKI. Mr. Speaker, one of the points I tried to make during the House debate on H.R. 10, was that rank and file Federal employees have expressed very little interest in this legislative proposal.

A succinct editorial, appearing in the Federal Times of August 22, very properly states this viewpoint, and I wish to insert it at this time:

HATCH, AGAIN

Two weeks ago in this small newspaper more than four pages were turned over to Hatch Act Reform debate, complete with a large "plug" for the debate on Page One. We had two strong pro views, two strong con views.

And at this writing, despite all the letters we receive from readers each week on a wide range of federal problems, we have yet to receive a single letter of comment on anything said about the Hatch Act in this paper two weeks ago. In fact, we haven't received a Hatch Act letter, pro or con, for some time.

We think this bears out what we said in a June 20 editorial opposing present legislation to water down the Hatch Act so that federal workers could run for political office and participate actively in political campaigns.

As we said then: We talk to countless numbers of federal workers in the course of a year and we have found few federal workers concerned about Hatch Act restrictions. There is no groundswell of resentment against the Hatch Act from federal workers.

Since publication of still more on the Hatch Act two weeks ago we find no reason to change our mind.

Union leadership is indeed fighting for Hatch Act reform. But we think federal workers, by and large, are not.

We think most federal employees agree with us: There is too much politics in the federal government now and we don't need any more.

"GIVEAWAY" OF THE PANAMA CANAL

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. CARTER. Mr. Speaker, during the August recess, I held county meetings throughout my district in Kentucky. I listened to hundreds of my constituents voice their viewpoints and concerns. One frequently mentioned concern was the proposed "giveaway" of the Panama Canal. And let me say that a "giveaway" is exactly how the fine people I represent describe the proposed treaty. The people with whom I met rightly believe that the Panama Canal belongs to the United States in perpetuity, every lock, stock, and barrel of it.

Do the people want to give the canal away? Let me just say that the following letter to the editor of the Richmond Daily Register by Mr. Robert E. Lanter of Richmond, Ky., exemplifies what many people in the United States and in my congressional district are saying about the canal treaty. It is a shame that this administration has not been listening to the people or else we might not now have the treaty.

The letter follows:

RICHMOND, KY.,
August 16, 1977.

The EDITOR,
Richmond Daily Register,
Richmond, Ky.

DEAR SIR: We Americans are being taken for a bunch of fools. O.K., so you've heard that old song before, but does it ever shock or alarm you? It should. Sad to say, most people couldn't care less. But let me explain.

As we all know, it is against the law of the land to give or sell secrets or anything which is vital to the security of America, especially to those who are openly hostile to our way of life and way of government. And don't ever let yourself be led to believe for a moment that there are not those in the great scheme of world politics who are not working night and day to bury U.S. As a matter of fact, they are right on schedule in their program.

But back to the subject at hand. It concerns the pack of lies the American people are being fed concerning our ownership of the Panama Canal. The treaty drawn up between Panama and the United States in 1904 is as clear as any document can be. The treaty plainly states the ten-mile wide canal zone and the canal itself are to be United States property "in perpetuity" or as the dictionary defines it, "lasting for eternity." Any fool knows that doesn't mean the year 2000.

Now there was no great clamor for us to give up the Canal until the present, unelected, viciously criminal, Communist dictator, Omar Torrijos, overthrew the former government in a military coup about ten years ago. Torrijos is not only a Communist, he has time and time again shown his utter contempt for the United States in his remarks about us. We owe him less than nothing. There is no reason we should even deal with him. For the most part, the people of Panama realize the great advantage of the United States presence in the "Zone" and they let that fact be known.

I mentioned the Communist program earlier. Latin America is very much a part of that program. This program as set forth well over fifty years ago was summarized and paraphrased into the following famous outline: "First, we will take Eastern Europe. Next, the masses of Asia. Then we shall encircle that last bastion of capitalism, the United States of America. We shall not have to attack; it will fall like overripe fruit into our hands." Who said this? That's right. Lenin wrote it over fifty years ago.

Now our man in the White House is making it come true.

As I said earlier, giving or selling things which are vital to our security is against the law. They call it treason.

Are we really stupid enough to fall into such a trap? I would hope not.

ROBERT E. LANTER.

EXPANSION OF ANTIETAM NATIONAL BATTLEFIELD AND NATIONAL CEMETERY IN WASHINGTON COUNTY, MD.

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. STEERS. Mr. Speaker, I am today introducing legislation designed to provide for the expansion of the Antietam National Battlefield and National Cemetery in Washington County, Md.

Identical legislation is being introduced in the other body by Senator Charles McC. Mathias, Jr.

The confrontation at Sharpsburg, Md., between the Grand Army of the Potomac, commanded by Gen. George B. McClellan, and the Army of Northern Virginia, led by Gen. Robert E. Lee, is of great historical significance. September 17, 1862, was the bloodiest day in our Nation's history, with over 23,000 Union and Confederate casualties. September 17 will mark the 115th anniversary of the Battle of Antietam and the battlefields stand as a reminder of the horror of war and a monument to human courage.

Many of the important battlegrounds are outside the present Federal holdings. These include the West Woods behind the Dunkard Church, the probable site of Clara Barton's field hospital; the locations of much of the Union lines opposite the sunken road, now called Bloody Lane; and much of the fields south and east of Sharpsburg where A. P. Hill's forces rebuffed the afternoon advance of the Union troops under General Burnside to end the battle.

This legislation would authorize expansion of the Antietam National Battlefield to a maximum of 3,300 acres. This additional land would include 400 acres to be set aside for the expansion of the Antietam National Cemetery in an appropriate location, and an expansion to 1,440 acres of the actual battlegrounds.

For over a century, these battlefields have been preserved by private citizens who appreciate their significance and have a commitment to conservation and historic preservation. This area is vulnerable to incompatible use and development and should be preserved and protected as a part of our national heritage.

This legislation is important. I encourage the House of Representatives to enact this legislation during the 95th Congress.

THE VOICE OF MAINE FISHERMEN

HON. WILLIAM S. COHEN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. COHEN. Mr. Speaker, there are few industries more important to Maine and more closely identified with Maine's heritage than the fishing industry.

But these are difficult times for Maine fishermen. The depletion of Maine fisheries by foreign fishing vessels continues despite enactment of the 200-mile limit. Economic pressures and Government regulations put great strain on Maine's independent-minded fishermen.

If there is one publication that gives voice to the concerns of Maine fishermen, it is Maine Commercial Fisheries. It is a subscriber-owned publication produced in Stonington by Nat Barrows, an energetic journalist vitally concerned about the future of fishing in Maine.

This month's edition of Down East magazine contains a story by David Jay which recounts the career of Nat Barrows and the effect of Maine Commercial Fisheries on our State's fishing industry. The article will be interesting reading for all who are concerned about the U.S. fishing industry, and I urge my colleagues to take the time to read it:

NAT BARROWS—A LANDLUBBER EDITOR WHO FISHES IN TROUBLED WATERS

(By David Jay)

Walking through the fishing village of Stonington, you'd never suspect that the island it's on is connected by bridge to the mainland. Located at the tip of Deer Isle, the community is as tightly knit and closed to outsiders as if it were miles at sea. The white clapboard houses and weathered storefronts have remained largely unchanged since the turn of the century, and on the main street, all the buildings seem to turn inward, away from the harbor. The sea is a fact of life here, a means of livelihood, and while the harbor is magnificently scenic, punctuated with jutting rock ledges and moored lobster boats, no one in Stonington seems to take special notice of it. Relatively few tourists visit the town, even at the height of the summer, and that seems to suit most of the residents just fine.

Ironically, in this ingrown fishing community, the fellow who publishes the local paper, *Island Ad-Vantages*, is neither a native nor a fisherman. He's a thirty-one-year-old journalist from Connecticut who still looks more like a college student on vacation than a busy editor and publisher. But, nine years after arriving in Stonington, Nat Barrows is emerging as one of the leading spokesmen for Maine's fishing industry. Founder, publisher, and managing editor of the monthly *Maine Commercial Fisheries*, he is reaching a significant segment of the state's fishermen with a pragmatic blend of information and common sense.

How does an outsider who spends more time in his office or his garden than on a fishing boat explain such a paradox? "I'm a journalist," he says. "You don't hire a fisherman to run a newspaper. And you don't hire a journalist to run a fishing boat. Fishing is a life you have to be born into to be

good. Journalism you can learn. I'm comfortable here."

If Barrows' present life is comfortable, it can also be hectic. He launched *Maine Commercial Fisheries* just in time to chart the long legislative journey of the 200-mile fishing limit law which went into effect early this year restricting the activities of foreign fishing vessels in U.S. waters. Today he finds himself at the helm of the paper at a time when the Maine fishing industry has an opportunity for substantial expansion.

"There will definitely be more fish if—and it's a big if—the fishery is managed more efciently under the 200-mile limit legislation," Barrows declares. "The most energy-efficient way to fish is inshore with 50- to 100-foot boats, not with the big factory ships like those that the foreigners use. Happily, this is just where Maine fishing is at." Barrows strongly supported the 200-mile limit and claims that the legislation has already had a strong psychological effect. Small fleets like that at Stonington are benefiting from a general feeling of optimism. New boats are being built, many of them equipped for multiple uses: lobstering in season, shrimping, scalloping or tub-trawling when the conditions are right. More young fishermen are entering the industry by choice instead of default, adding to the slow growth of the fleet in Stonington's island-sheltered harbor.

According to Barrows, however, the 200-mile limit may not prove to be an unmitigated boon. "In order to get rid of the foreign fleets, fishermen had to get in bed with the feds," Barrows observes. "As a result, there will be more federal involvement than most people are expecting.

"All you have to do is to look at agriculture in this country to see what might be in store for the fisheries. There's a vast bureaucratic tangle in agriculture. The traditional independence of fishermen will surely be curtailed by bureaucratic restraints." Indeed, among some observers, the agriculture parallel conjures up visions of fishermen being paid not to fish and of price supports that would end forever the traditional reliance on an open market, something neither Barrows nor his readers would favor.

Maine fishermen got a taste of federal involvement several years ago when the Internal Revenue Service reclassified sternmen on fishing boats as employees of the boatowners instead of independent entrepreneurs as they had traditionally been considered. The change vastly increased paperwork and altered the time-honored relationship between a captain and his crew. After a strenuous editorial campaign, *Commercial Fisheries* was able to arrange a meeting between representatives of the IRS and Maine fishermen. The IRS later rescinded its ruling.

Long before he ever envisioned fighting battles with the federal bureaucracy on behalf of Maine fishermen, Barrows had set himself a goal of settling in Maine. He had spent his childhood summers in a big old house in Gorham that was built by his great-great-grandfather. "Those summers," he recalls, "made a distinct impression on me. I wanted to return to Maine and work the land. I looked for years, mostly inland because I couldn't afford to buy along the coast, but I never made connections.

"Then, during the summer of 1968, I was home in Connecticut recovering from a knee operation and a neighbor brought over a copy of Down East Magazine with some real estate ads circled. One said something like, 'Do you want to move to Maine and run a small weekly?" The ad carried a Stonington address. "I'd never been there," Barrows admits. "I looked for it on a map and read a guidebook, but I couldn't learn much. I thought, 'Gee, it must be great.' "

Just graduated from the University of Denver, he had taken some journalism courses and spent some time as copyboy for a Denver paper. When he responded to the real estate ad, he learned by return mail that the paper had been sold. "Three weeks later, the lady—Mrs. Helen MacKay—called and said that the deal had fallen through. I came right up and bought it."

"For a lot less than the price of a new car," Barrows got the subscription list, two presses and a quick lesson in journalism. *Island Ad-Vantages* was—and is—a small weekly tabloid covering Stonington, Deer Isle, Isle au Haut, Swan's Island and a bit of the mainland. It was printed in a room behind the drugstore on equipment less than modern. The first few issues that Barrows put out were a one-man operation. He did it all: writing, typesetting, and printing on a small sheet-fed press. Soon he was able to farm out the printing to a Belfast shop and, in time, began hiring editors and staff personnel.

The new owner had taken over the paper during the riotous Chicago Democratic Convention of 1968, a time when youthful newcomers to the state were suspect. Barrows studiously avoided controversy for a number of months, but finally was drawn into an argument over long hair in the local schools. Next, the paper became involved in a bitterly contested school districting issue. But by 1970, Barrows was well enough regarded to be appointed to a three-year term on the Planning Board, and in 1973 he was elected to the Stonington Board of Selectmen. "I like to think it was because I had gained a reputation for getting things done," Barrows says. He helped push through a shoreland zoning ordinance and has been a forceful spokesman for preserving the area's natural resources.

Although he has never owned a boat and his experience with fishing has been limited to occasional day trips with members of the Stonington fleet, Barrows has a number of good friends among the fishermen and "probably some enemies, too." Energetic, enthusiastic, he is happily putting down deep roots in Stonington. His mother is an artist. His father was a writer for the Boston Globe and a foreign correspondent for the Chicago Daily News before being killed in a 1949 plane crash in India. Although people occasionally allude to his "family money," he says that a bank is "by far the majority owner" of his small five-room house and twenty-seven acres located a few winding miles out of Stonington. Unmarried, Barrows has been keeping company with a local nurse for the last several years. When not putting in a typical twelve-hour day at his office, he's apt to be found tending his fine organic garden. Save for the books that cram his home, Barrows allows himself few luxuries. "I don't spend my money on snowmobiles or outboards. I like to travel and that's where what money I have goes." Since coming to Maine, he's taken three long trips outside the state, most recently a month-long sail from Gibraltar to Grenada with friends last fall.

Although he came to Stonington to be a writer, over the years Barrows has come to spend increasing amounts of time as a businessman, personnel man, bureaucracy-fighter, and billpayer. In the last four years, he admits that he's become "philosophically removed" from Ad-Vantages.

The major reason is his brainchild, Maine Commercial Fisheries. Launched in 1973 with the aid of cofounder Robin Peters, now a Sea Grant program employee, and Peter van der Kieft, who has since left to join his family business, the monthly paper has two basic purposes. The first, Barrows says, is to improve communication among the fishermen along the Maine coast, to help them organize and make their voices heard on fishing matters. The second is to relay the findings of university and fishery agency research programs. The paper regularly carries the newsletter of the Maine Department of Marine Resources and the Maine Lobstermen's Association, and occasionally prints similar releases from the Massachusetts Lobstermen's Association and the University of Rhode Island fisheries program.

Maine Commercial Fisheries is owned by some 1,500 member-subscribers who elect a board of directors to chart policy for the paper and is published by the non-profit Fisheries Communications, Inc. Barrows serves as chairman of the board, president of the company, and publisher. A staff of more than twenty full- and part-time writers, editors, advertising and production people are employed in getting out Fisheries and Ad-Vantages and in operating Penobscot Bay Press, a job-printing business that handles town reports and contract design work. Fisheries has sailed some rough seas in its short history. Originally it was sent free to all holders of Maine commercial fishing licenses, a diverse group that includes seafood restaurant owners and part-time clammers as well as lobstermen, draggers, and trawlers. That policy had to be scrapped when the post office refused to grant a nonprofit mailing permit. After four years of arguing, Fisheries finally won its permit this summer, but only after the involvement of Washington lawyers, the Maine Congressional delegation, and the expenditure of nearly $8,000 in as-yet-unpaid legal fees.

Now available on newsstands as well as by mail, Fisheries regularly features in-depth analyses of a particular aspect of the industry, rundowns on recent and pending legislative action, stories on practical improvements in fishing gear, tide and fish-landing statistics, and even ideas for cooking with fish. The paper boasts a current circulation of 3,000 and is beginning to challenge the older, better-established National Fisherman as a Maine fisheries news medium.

What interests Nat Barrows even more than the success of his publishing ventures, he says, is the future of the Maine fishing industry. "If there's money coming in from the sea, then there'll be less incentive to build factories along the ocean. A prosperous, well-functioning fishing industry is the key to keeping Maine Maine."

DR. BILL JACOTT, MINNESOTA ACADEMY OF FAMILY PHYSICIANS TEACHER OF THE YEAR

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. OBERSTAR. Mr. Speaker, I would like to take this opportunity to commend a fellow Minnesotan, Dr. Bill Jacott, who was named Teacher of the Year by the Minnesota Academy of Family Physicians.

In an age where family practice is rapidly giving way to increased specialization, it is refreshing to see that Minnesota is attempting to improve its long-standing tradition of producing high quality family practioners.

I congratulate Dr. Jacott for his excellent performance in the field of medical education. I would also like to include in the RECORD the following article which appeared in the April 19 edition of the Duluth Herald:

DR. JACOTT HONORED BY PHYSICIANS

Dr. William Jacott, director of the Duluth Family Practice Residency Program, has been given an Outstanding Teacher Award by the Minnesota Academy of Family Physicians.

He is the third person to receive the award since it was instituted in 1973. It was pre-

sented last week at the annual meeting of the 1,500-member organization.

Jacott has been involved with medical education since 1971 when he began part-time with the UMD School of Medicine, principally involved in coordination of family practice experiences for first year medical students He has directed the Duluth Family Practice Residency Program since it began in 1975.

The Family Practice Residency is a three-year program of graduate studies and experience that lead to a certificate as a family practice specialist. It is affiliated with the UMD and University of Minnesota medical schools.

Jacott expressed pleasure at the award, not only for personal recognition but for the recognition of the Duluth program.

"It really says the family doctors are recognizing us as doing something right here in Duluth when you consider there are eight family practice residencies in the Twin Cities plus instructors at the medical schools in Minneapolis and the Twin Cities," he said.

FUN CITY POLITICS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. DERWINSKI. Mr. Speaker, this coming Thursday is the mayoral primary in New York City. There is more attention being given to this race than any other political event in the country at this time, and it is only natural that newspaper columnists throughout the country and for that matter, around the world, concentrate on Fun City politics.

Columnist Michael Kilian of the Chicago Tribune, turns his imaginative eye toward the race in his column of September 6:

NINE RUN FOR MAYOR IN NEW YORK—FOR, NOT FROM

(By Michael Kilian)

NEW YORK.—Nine presumably rational and reasonable people are actually trying to get themselves elected mayor of New York City.

The only job less appealing would have to be something along the lines of neutron bomb assembler or leper colony masseuse. Idi Amin's press secretary has easier work.

But they come forth anyway, kicking/biting/scratching to be in the presiding officer's chair at the ultimate failure of urban civilization. This week, like someone looking for literature at a comic book stand, New York voters will begin the process of choosing between them.

Symbolic of the comic nature of this election—and symptomatic of New York's malady—is the fact that one of the front-runners is the man who presided over the last four years of New York's glory, Mayor Abraham Beame.

Now 71, seemingly 2 feet tall, and an exponent of the buy-now, pay-sometime school of economics, Beame can only be seeking another term because his retirement fund is all in New York municipal bonds and he needs the money. Yet, as the primary approaches, he remains right at the top of the popularity polls.

It is to be remembered that New Yorkers re-elected former Mayor John Lindsay, who would have called Dante's Hades "a fun inferno."

Lindsay had the election-eve triumph of the New York Mets. Beame has the capture of Son of Sam [though thousands of less celebrated fiends still prowl the streets] and the fact that he came out against the recent New York blackout.

Beame has campaigned as the man who made "the tough decisions"—such as whether to prosecute the human fly who scaled the World Trade Center and how much money to beg from the federal government. A clumsy attempt to knock him out of the race by accusing him of swindling New York out of bankruptcy naturally failed. New Yorkers could only ask, "What other way?"

If Beame is the least rational of the nine, the least reasonable is Battling Bella Abzug, also at the top of the popularity polls. Late of the Congress—which still echoes from her complaints about the coffee and from other oratory—she is campaigning on the theme that she is really quite reasonable after all.

In fact, she is attempting to present herself as coy, sweet, and gentle—not at all the sort of person who would terrify soft-spoken Georgia peanut farmers and other benefactors with her screeching. Because of frequent lapses, her lovableness tactic has been exposed as a fraud, which probably accounts for her popularity.

Another possible winner is the extremely rational and reasonable Mario Cuomo, whose chief political advantage, and disadvantage, is that he seems to be a wholly-owned subsidiary of New York Gov. Hugh Carey. Many New Yorkers resent the idea of being ruled by a stooge of Albany. However, they are fearful that, if Cuomo loses, an enraged Carey will cut off New York's water and electricity and sell Manhattan to New Jersey.

The liberals' favorite is Congressman Edward Koch, who represents what used to be called Manhattan's "silk stocking" district until it got runs. His campaign theme is that he is not really all that liberal. The New York Times gave each candidate space on its op-ed page to present views, but accompanied each presentation with a scurrilous cartoon representative of the candidate. In his cartoon, Koch came across as a bemused penguin.

The other candidates, all trailing badly, include Manhattan Borough President Percy Sutton, who is running as a black; Congressman Herman Badillo, who is running as a Latino; and Joel Harnett, who is just sort of running. There is also a Conservative Party candidate, whatever that is, and a Republican one.

The Republican represents the sanest constituency of all. Most Republican voters moved out of the city years ago.

ILLEGAL IMMIGRANTS

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. EDWARDS of California. Mr. Speaker, the problem of undocumented aliens entering the United States from Mexico has been the subject of much debate here in Congress and throughout the country. It seems evident that so long as the economic situation in Mexico remains the same, illegal immigrants will continue to find their way into the United States in search of an improved standard of living.

During the recent district work period, an excellent editorial appeared in the Los Angeles Times which examines the relationship between the illegal immigration situation and Mexico's economic woes. I commend the article to the attention of my colleagues.

[From the Los Angeles Times, Aug. 11, 1977]

THE OTHER SIDE OF THE BORDER

Jerry Brown has been wondering aloud why it is that the United States, so involved in Europe, Asia, the Middle East and Africa, pays so little attention to one of its potentially biggest foreign-policy challenges right next door: Mexico. The governor has an excellent point, and we commend it to the Carter Administration.

Brown's taking-off point is the illegal-alien problem, which, to be solved, must be treated at its source: the chronic, worsening inability of the Mexican economy to produce enough jobs to keep pace with Mexico's rapidly growing population.

Steps taken on this side of the border can alleviate but cannot cure the trouble; the massive inflow of work-hungry illegals will continue as long as millions of Mexicans have no hope of a decent life for themselves or their children in their country.

Mexico, blessed with an abundance of natural resources, is an inherently rich country. It is in an economic slump now, but in past years it enjoyed one of the world's highest economic growth rates. In the process it developed a relatively large, prosperous middle class of businessmen and technocrats.

Unfortunately, a large percentage of Mexicans have not shared in the growing abundance. Close to 40% of the working-age population is either unemployed or underemployed in such marginal occupations as street vending. An estimated 17% of the population exists on incomes of less than $75 a year.

Even among those who have jobs, the maldistribution of wealth is shameful for a country whose government still takes pride in its revolutionary origins. According to some estimates, for example, the average Mexican business executive earns 40% to 50% more than his counterpart in Argentina, while the average factory worker earns 50% less than his Argentinean counterpart.

Because Mexico has one of the world's highest rates of population growth, the economy would have to produce over 750,000 new jobs per year just to absorb new entrants into the labor force. Ambassador Hugo Margain told newsmen Wednesday that in the coming year his government expects to do just that. In view of the fact that job creation usually runs at less than half that level, however, this claim cannot be accepted at face value.

Part of the chronic labor surplus is exported to the United States as illegal aliens. The rest gathers in festering poverty in the shantytown barrios ringing Mexico City and other large urban centers.

The problem threatens to get worse, much worse, as Mexico's population—already estimated at 63 million—grows to a probable 100 million by 1990, and to 130 million by the turn of the century.

In effect, the Mexican government uses the export of illegal aliens to the United States as a safety valve; the U.S. economy becomes an employer of last resort for a large and populous country that cannot provide jobs for its own people.

This is an unsatisfactory arrangement from the U.S. viewpoint. This country, which has unemployment problems of its own, cannot absorb a huge, never-ending stream of illegal immigrants—no matter how much we sympathize with their plight as human beings—without peril to America's own social and economic fabric.

It is easier to say this than to figure out a workable solution. Maybe it would be physically possible, though repugnant, to build a veritable Berlin wall along the most accessible stretches of the border. But there is danger that applying the brakes suddenly and harshly would create violent chaos in Mexico and ethnic conflict in the United States.

Although Mexico has the fundamental responsibility for coping with the problem—and U.S. diplomacy should make that plain—it is in the self-interest of the United States to do what it can to help.

Mexicans are a proud people. They don't seek U.S. foreign aid as such, nor do they especially welcome American advice. What they do want, they say, is easier access to U.S. markets for their manufactured goods, and a large, continuing flow of American investment, technology and free-spending tourists.

There is talk of raising to $200 the amount of duty-free purchases an American can bring back from Mexico. The Carter Administration plans to use its influence within the World Bank and other multilateral lending institutions to help Mexico get the credits it needs to climb out of the present slump and to exploit its huge oil and gas reserves.

Washington should also do what it responsibly can to lower barriers to imports from Mexico.

All this should help. What will help more is the oil and gas bonanza, which may be producing export earnings near $7 billion by the mid-1980s. In terms of economic growth and bringing the now-huge external debt under control, the long-term outlook for the Mexican economy is reasonably good.

But it is hard to see how any of this will make much of a dent in what concerns the United States—the army of job-hungry Mexicans posing the illegal-alien problem. Though progress is being made on slowing population growth, the effects won't show up in the job market for at least 20 years.

Meanwhile, much of the oil money will have to be plowed back into development of the oil and gas industry. As for what's left over, Mexico's investment strategy appears to emphasize capital-intensive industries that will not produce all that many jobs.

Mexico's ability to compete in world markets is hampered less by other countries' trade restrictions than by the deeply ingrained attitudes of its own businessmen and bureaucrats.

Mexican businessmen typically expect to make two to three times as much profit as their U.S. counterparts. And all too frequently the profits are not plowed back into job-creating expansion but deposited safely in U.S. banks or spent ostentatiously.

Bribery (*La Mordida*) is a large and inescapable cost of doing business. Tax evasion is rampant.

The government of Mexico is not especially receptive to accept American advice on how it should invest its money to produce the maximum number of jobs, or on how to reform Mexican business and society. Yet if the illegal-alien problem is to be kept from reaching unacceptable proportions, Washington has no choice but to try, as tactfully as it can, to nudge Mexican policymakers in the right direction.

WORLD HUNGER

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. DRINAN. Mr. Speaker, there has been increasing global recognition of and a call for accountability concerning the lack of progress made in dealing with the world hunger situation. The United States, by its own action, or inaction, has made itself vulnerable to such questions.

On August 30, the administration announced its commitment to the establishment of a 30- to 35-million-ton grain reserve by October, 1978. This announcement was made concurrently with a 20 percent acreage set-aside plan. It is essential for reasons which Mr. Brennon Jones, an issues analyst for Bread for the World, states in the following article which was published in the New York Times on August 29, that the administration monitor progress toward the fulfillment of its commitment and that the administration has congressional support.

Mr. Jones has presented a practical and concise argument for the immediate necessity of building a domestic grain reserve. We are all familiar with the legislative activity of Bread for the World and again find this organization, through this article, drawing upon our sense of logic and foresight. I commend Mr. Jones' article to the attention of my colleagues.

OF FAT YEARS AND LEAN YEARS—AND FOOD RESERVES

(By Brennon Jones)

The Carter Administration should build a sizable domestic grain reserve now. A reserve of at least 25 million tons of wheat and feed grains is in the United States' self-interest and that of world food security. To delay may mean to miss the opportunity completely to build stocks, and could spawn another round of skyrocketing food prices.

In early August, Congress gave the Administration a mandate to build a farmer-held reserve of 8 million to 19 million tons of wheat and as much feed grain as deemed necessary. But to date, the Administration has announced only that it intends to put 8 million tons of wheat in reserve—hardly a dent in the surplus on hand.

Administration reluctance to build a larger reserve is based primarily on a desire not to tie its hands before difficult international negotiations on a world food reserve system. Those negotiations are to begin in late September in the International Wheat Council, with a number of nations, including the United States, expected to offer reserve proposals. But June 1978 is estimated to be the earliest that an agreement might be reached—an optimistic schedule given the complexity of the task. And no guarantee exists that by the time international agreement is reached sufficient world surpluses will still be available to stock such a reserve system.

Consider wheat, the chief grain in world surplus. At present, the world has 40 million to 50 million metric tons more on hand than are needed in the coming year. But this surplus is the result of two exceptionally good harvests worldwide, a situation unlikely to occur often because of the unpredictability of weather and political and economic disruptions.

Without a reserve, another large-scale shortfall, in the Soviet Union, a combination of shortfalls in South Asia or Africa, or extended drought in major grain-producing areas of the United States, as has threatened in each of the last two years, could leave the world with no stocks, and prices that lock the poor out of the market.

A substantial reserve serves the interests of United States producers, who are holding 30 million of the 40-to-50-million-ton world wheat surplus. With limited export markets and depressed prices, they are aggressively seeking markets to dispose of their surplus. Much of the wheat is being fed to livestock, because high-protein wheat is now priced about the same as corn in many areas. Some farm groups are even exploring alternative markets including the use of wheat as fuel and wall insulation. And United States farm groups are urging cheap sales and gifts of United States grain to the developing countries—a step that, under present circumstances, would only glut those countries' markets and destroy the incentive of their farmers to produce their own food.

All such solutions squander precious food that eventually will be needed. And, ironically, none of them affords the farmer his cost of production. A reserve, however, becomes an alternative market where he can place his surplus in lieu of marketing it now at a loss. His short-term cash needs are met through a Government loan on his crop until market prices rise sufficiently for him to sell his crop at a price that will assure him his cost of production.

Establishing a domestic reserve also enhances the climate for international agreement. Negotiations under the Nixon and Ford Administrations were blocked primarily by America's unwillingness to commit itself, other than rhetorically, to a reserve of any kind, either domestic or internationally coordinated. The Carter Administration and Congress have now reversed this stand, and a clearly defined domestic reserve would signal American commitment to the rest of the world.

And should our explicit price levels for accumulation and release of grain under the reserve conflict with what might subsequently be deemed necessary for United States participation in an internationally coordinated system, the Farm Act can simply be amended. This is done routinely—for example, on international trade and tariff agreements.

A large United States reserve does not make the United States the stockpiler of the world at our expense. A reserve of a minimum of 25 million tons of wheat and feed grains is based on domestic necessity: the amounts needed to bring relief to United States farmers. Moreover, it is realistic in terms of the quantities the United States might be expected to carry in any subsequent international agreement.

For example, all serious United States and international studies suggest that the minimum quantities of grain needed in an international reserve system to bring sufficient food security and price stabilization are 60 million to 80 million tons. Given the major United States role in production and international trade in grain, the amount is modest.

More important, the reserves are ultimately financed by the purchaser. United States grain is put into reserve and held until market prices reach the defined higher release point. It is then sold on the commercial market at the higher price, with the profits realized by the United States farmer. The cash loan that allowed him to hold his grain off the market is repaid to the Government. Surprisingly, the Agriculture Department estimates that such a plan would result in substantial savings because direct Government support payments to the farmer decrease when the market price the farmer receives for his crop increases, as it would under such a sizable reserve.

A substantial reserve of his design turns price-depressing surpluses into needed reserves, and could prevent a recurrence of the kinds of extreme production controls and stock cutbacks that began in the late 1960's and set the stage for the deadly shortfalls of 1973–74.

WASHINGTON: BEHIND CLOSED DOORS INACCURATE

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. STEERS. Mr. Speaker, the portrayal of Washington, D.C., in the ongoing television special, "Washington: Behind Closed Doors" being shown

across the Nation is grossly inaccurate, because you can hear the dialogs in the outside scenes. As a Representative from a district in suburban Washington, I would like to say that the dialogs of individuals outside buildings in Washington are almost drowned out by the sound of a jet plane winging its way over the District of Columbia and Montgomery County. However, in the glamorous, high-powered world of television, these realities of life are sometimes overlooked.

The realities are droning jets. That is why I have sent a letter to the Federal Aviation Administration suggesting changes in various cockpit procedures which can have a significant impact on reducing noise from jet planes over residential areas.

THE ECONOMY AND INFLATION

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for September 7, 1977, into the CONGRESSIONAL RECORD:

THE ECONOMY AND INFLATION

There is not much doubt but that the economy has begun to move again.

In the first six months of this year the nation's economy grew at a rate of 7%, faster than even the most optimistic forecasters had predicted and in spite of a devastating winter that crippled production and kept consumers at home. During the same period 2.2 million jobs were added to the economy, reducing unemployment to almost a full percentage point below what it was late last year. The first six months of this year have also seen upward trends in housing and business investment, and recently there has been a decline in wholesale prices. So the economy this year has fared surprisingly well.

Moreover, the economic projections for the balance of the year, if not rosy, are nevertheless upbeat. Unemployment should drift slowly downward, the rate of inflation is expected to slow considerably later this year, the growth rate of the next year should be healthy, and corporate profits should climb.

Hopefully, the economic upswing is settling into a sustainable advance. The experts agree that the last half of this year should be encouraging, with growth declining only modestly, and they are quite optimistic about prospects for next year. Of course, there are always worries. Can the recovery be sustained? Will the political pressures to get the economy moving more vigorously be irresistible? Unemployment remains very high, and the inflation rate thus far in 1977 has been disappointing, largely due to food and fuel price increases. The nation's huge foreign trade deficit, now approaching $20 to $25 billion for this year, is worrisome, and the gap between the economy's actual and potential output remains very large with the economy still performing, by conservative estimates, 6–7% below its capacity.

In this setting the Carter Administration has laid out an ambitious array of economic targets to be achieved by the end of its term of office. Unemployment is to be cut from today's 7% to a goal of 4¾%. Inflation is to be reduced from the current range of 7–8% to about 4½%. The federal budget is to be balanced. In the meantime the President seeks major reforms in the tax, welfare, and health care systems. Many people question whether all these objectives for the economy, the budget and social policy can be met. To do so will require job creation at an unprecedented rate year after year, while reducing inflation and moving to balance the federal government's budget. It will require business expansion to remain steady and strong through 1981, even though many experts talk of a business expansion that is already middle-aged and may soon run out of steam. If all these things cannot be achieved, priorities will have to be established and certain objectives will have to be modified.

So, despite the promising outlook for 1978, the nation is a long way from achieving its goals for the economy. From my perspective, inflation remains the most serious long-term problem. My expectation is that we will likely live in an inflationary economy for some years. Bringing down the rate of inflation will be a long difficult task. There is no inexpensive way to reduce inflation quickly. A tough fiscal policy, restrictive enough to take one percentage point off the rate of inflation in three years, is estimated by the Congressional Budget Office to cost 1.2 percentage points in the unemployment rate or an addition of more than one million unemployed workers.

In the past wage and price guidelines and controls while in effect, have worked to reduce inflation. However, this economic gain has usually been temporary and accompanied by problems of evasion, inefficiency and inequity. Policies directed toward individual economic sectors, like holding down medical costs, are strongly resisted by the groups affected. A number of tax incentive schemes to penalize inflation and reward wage stability are uncertain and untried.

Government economic policy must continue, then, to wrestle with its anti-inflationary policy and our hopes must not rise too high. The truth of the matter is that nations just do not know how to control inflation and maintain high employment at the same time. A multifaceted approach is necessary, using several mild approaches simultaneously, including 1) preventing excessive aggregate demand, 2) accelerating the growth of supply, 3) increasing consultation by government, labor and industry to restrain price and wage increases, 4) reforming government practices that encourage inflation, 5) using tax incentives for increased investment, and 6) furthering research and experimentation in the use of tax incentives to encourage moderate price behavior.

Government must strive to set economic policies that inspire confidence of businessmen and consumers in the future of the economy. The limitations of government economic policy, however, must also be recognized. Government alone cannot achieve economic objectives. Moderation of wage and price demands by labor and businesses is essential. A real question is whether it is possible to get the kind of restraint in the decisions of labor and management.

TEXAS SUPPORT FOR SECTION 14(b) OF THE TAFT-HARTLEY ACT

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. ARCHER. Mr. Speaker, the Senate and House of Representatives of the State of Texas recently adopted Senate Concurrent Resolution No. 4 as introduced by State Senators Walter H. Mengden, Jr., and Kent Hance. It expresses the strong, grassroots support that exists in Texas and throughout the Nation for the retention of section 14(b) of the Taft-Hartley Act of 1947. This demonstration of support for the right of States to enact right-to-work laws should be a clear indication to the Congress of public sentiment on this issue:

SENATE CONCURRENT RESOLUTION

Whereas, During the recent session, the State of Texas consistently maintained an unemployment rate at a level one-third below the national average, while new jobs in private business and industry in Texas increased at a rate two and one-half times greater than that of the nation; and

Whereas, During the first 11 months of last year approximately 135 industries established new plants in Texas, and another 200 existing plants were expanded; and

Whereas, During the second half of 1976 more Texans were gainfully employed than at any time in our history; and

Whereas, This outstanding economic performance and posture can be directly attributed to the absence of any form of the economically crippling union shop or agency shop arrangements which restrict productive output and serve as a gross infringement upon the labor markets of 31 states; and

Whereas, One of the basic principles of the Constitution of the State of Texas and the United States Constitution is the freedom to choose one's livelihood; and

Whereas, Neither constitution in any form or fashion requires that a citizen must by contractual mandate join or financially support any union organization in order to be employed; and

Whereas, Any form of compulsory unionism or nonunionism is completely repugnant to the freedom of choice, as every working man should decide for himself if he wants to join a union or not; and

Whereas, No one should ever lose his job because he declined to join a labor union, a church, a civic club, a political party, or any other private organization; and

Whereas, Section 14(b) of the Taft-Hartley Act of 1947 permits individual states to enact right-to-work laws that prohibit union shop and agency shop arrangements; and

Whereas, Texas and 19 other states have passed such laws; and

Whereas, Serious attempts will be made in the United States Congress to repeal Section 14(b) of the Taft-Hartley Act of 1947 in order to void all of the state right-to-work laws and thus result in the emergence of an economically stifling compulsory unionism in Texas; now, therefore, be it

Resolved by the Senate of the State of Texas, the House of Representatives concurring, That the 65th Legislature of the State of Texas hereby memorialize the Congress of the United State to oppose repeal of Section 14(b) of the Taft-Hartley Act of 1947; and, be it further

Resolved, That copies of this resolution be prepared and forwarded to the President of the United States, to the President of the Senate and the Speaker of the House of Representatives of the United States Congress, and to all members of the Texas delegation to the congress with the request that this resolution be officially entered in the Congressional Record as a memorial to the Congress of the United States of America.

IMPROVING CHILDREN'S HEALTH

HON. ANDREW MAGUIRE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. MAGUIRE. Mr. Speaker, I am introducing today a bill to provide for a major improvement of the health care provided to many of our Nation's children.

Protecting the health of our children must be a national priority. Child health care is a long-term investment in the future productivity and creativity of our country and its people. It is of crucial importance in enabling each of our children to develop his or her full potential.

And yet, many of the children from our poorer families do not have access to the most basic facilities for identification and treatment of potentially serious health problems. Congress recognized this problem 10 years ago, and created a program intended to alleviate the problem—the early and periodic screening, diagnosis, and treatment program—EPSDT.

However, that program has never lived up to the expectations held out for it. The definition of the children to be served was too limited. Inadequate attention was given to coordination with similar programs. Little thought was given to how best to get children involved in the health programs theoretically available to them. As a result, even among eligible children, awareness of and participation in the program have been unacceptably low.

While EPSDT has been moderately successful in bringing children in for screenings its record for successful treatment of discovered problems has been weaker. Telling a parent that a child is anemic, or has vision problems, or dental disease, or lead poisoning is pointless, and even cruel, if the child is not given the necessary followup care.

In effect, we have not made much of a dent in the child health problems afflicting our less well-off families. Congress must now develop a comprehensive program that provides all of our children an opportunity for uniformly high quality health care. For many of these children, the success or failure of this program will make the difference between an active and productive life, or one limited by chronic or disabling illness.

Congress can choose to simply add pieces to a program with a dismal record or to strengthen it at its foundations by developing a child health assurance program that can serve as a model for future comprehensive health programs. My bill, the Child Health Assurance Act of 1977, seeks to strengthen the foundation and remedy the flaws in the existing legislation.

This bill will encourage the Federal Government to provide not only the financial means to carry out Federal directives, but leadership and positive incentives to promote the delivery of health care services. It rewards effective ways to reach eligible children and to provide the necessary followup and treatment.

Research has shown that the most effective way to involve poor people, who have traditionally been outside the health care system, in preventive health programs is through direct, personal contact with other members of their community. My bill encourages the States to use community-based organizations to perform outreach and followup services by providing a 90-percent Federal reimbursement of the costs of these services. An example of a community organization that does this well is the Tri-City Citizens Union for Progress in Newark, N.J. The union operates a successful child health program by linking its clinic with a thorough outreach effort. The clinic serves a 12-block neighborhood in a most depressed urban area. But innovative programs such as the Tri-City Union are not reimbursed either under the current EPSDT program of the administration's proposed child health program.

The bill I am introducing establishes a uniform age eligibility limit of 21 years for both children who are covered by aid to families with dependent children—AFDC—and for children from intact families who meet the income requirements of AFDC. We should encourage the family to remain a viable institution among our Nation's poor. Children from intact, but poor, families have the same health needs as do children who qualify for AFDC. Quality preventive health services must be available to all indigent children.

Prevention is the key. It is through early intervention that many childhood diseases can be avoided. Early treatment will be encouraged under this legislation with 90 percent Federal reimbursement for screening, diagnosis, and treatment of all conditions discovered in an assessment. In exchange for these funds, the States will be required to coordinate the various programs provided health services to children, to offer contracts with reasonable terms to all qualified health care providers, and to reach an acceptable percentage of eligible children.

If prevention is truly our intention and if meeting the greatest needs of these children is really our purpose, then we must include the dental needs of children. Dental disease is often so virulent in these children that it is physically and mentally debilitating. But dental disease is preventable. My bill provides necessary dental care for these children—an area unfortunately left uncovered in the administration's proposal.

A program such as the one I propose may involve some higher short-term costs than the present program. But these costs are slight compared to the long-term cost of treating unchecked disease.

Our long-term goal should be a national health insurance program that insures access and quality health care for all Americans; however, this goal is somewhat down the road. In the meantime, we must design a child health program that meets the present needs of our Nation's poor children. We must act quickly, but diligently, before we lose more children to crippling, chronic, disabling, and avoidable conditions.

STATEMENT BY CONGRESSMAN WILLIAM R. COTTER ON THE NATIONAL ENERGY BILL

HON. WILLIAM R. COTTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. COTTER. Mr. Speaker, on August 24, the Mobil Oil Corp., took out a full page ad in the Hartford Courant to detail its position on the national energy bill, H.R. 8444. Many of my constituents used the coupons provided in the advertisement to give me their views on this legislation. I would like to take this opportunity to explain the major provisions of the bill and to address some of the issues raised by the Mobil Oil Corp. statement.

As a member of the House Ways and Means Committee, I had an active role in developing the tax-related provisions of this legislation, which the House passed in August.

The bill is a response to two indisputable facts: The dwindling worldwide oil supply—that is intensified by increased world demand—and the growing dependence of the United States on foreign oil imports to meet its energy needs.

Since oil is a finite resource, it inevitably will cost more as its supply becomes scarcer. Therefore, efforts must be made not only to conserve, but also to encourage development and usage of alternative energy sources. The national energy bill basically is a conservation measure, designed to encourage usage of other, more abundant fuel sources and to equalize the price of oil with its replacement cost.

The Mobil Oil ad does not make clear that under either its proposal or the Carter program, energy prices will increase dramatically in the future. In my opinion, the virtue of the House bill is that it returns most of the price increase to the consumer in the form of rebates, thereby cushioning the economic repercussions and insuring continued economic growth.

I disagree with the oil industry's claim that without deregulation, it will be impossible to generate the necessary capital to expand exploration and drilling operations. Figures released by the oil industry's own American Petroleum Institute show that the industry's investment in exploratory operations is now at a record level without deregulation. It is important to remember that all newly discovered oil is totally exempt from Federal price controls.

The tax on the industrial use of oil and natural gas is aimed at discouraging their use as boiler fuels. The bill provides relief to industries for coal conversion costs through an additional 10 percent investment tax credit. Industries which use oil and natural gas as part of the manufacturing process, or which would be unable to convert to coal because of conflicting environmental restrictions, are exempt from the tax.

One other point must be stressed. While this bill does not address energy research and development needs, efforts are being intensified in this area. Approximately $4 billion has been appropriated for fiscal year 1978 for R. & D. efforts in such areas as nuclear, solar, geothermal, wind, and fossil fuel power.

The Carter/House program is not a cure-all for our energy problems, but I think it is a good beginning in the establishment of a realistic national energy policy.

I expect the energy debate to continue for many years and sincerely appreciate my constituents taking the time to share their views with me.

THE SLAUGHTER MUST NOT BE IGNORED

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. BAUMAN. Mr. Speaker, a distinguished Italian journalist recently had one of the only interviews ever given by Cambodia's new de facto ruler, Khieu Samphan. I ask you to carefully listen to this final exchange between the two:

SAMPHAN. In five years of war, more than a million Cambodians died. The present population of the country is five million.

JOURNALIST. What happened to the other million?

SAMPHAN. (visibly annoyed) It's incredible the way you Westerners worry about war criminals.

(From *El Bourghese*) March 1977.

The irony of this is, of course, that the West is not worrying about them. There is a lot of talk about human rights in many circles. There is also a conspicuous lack of expressed concern or action to do anything to preserve or recover the human rights of many groups of people, particularly those millions of Cambodians who have been systematically murdered over the past several years.

Cambodia's new Communist regime has succeeded within a period of less than 2 years in murdering close to a third of its people, destroying the country's institutions, economy, culture and every last vestige of liberal thought or difference of opinion. It has done this in the face of contemptible silence by the United Nations, and forceless protests by the U.S. State Department. It is a crime of the East, but it is also the shame of the West.

I talked and spent time with three Cambodian refugees last month. It is a depressing thought to consider how sensitive, decent people are being reduced to the level of concentration camp victims in a fashion reminiscent of Nazi horrors earlier in this century. It is depressing to realize how little is being said, and nothing being done to stop the slaughter. Alerting those of us unaware of the present situation is a first step, and in this spirit I am inserting into the RECORD a motion by Cambodian refugees and residents of the United States and Canada. It is preceded by a short statement prepared by Messrs. Prum Horn, Vanary Prom and Pna Chhay Norin. I urge you to read it. I urge you to spread the word in order that the veil of silence be lifted.

CAMBODIAN SITUATION

Two years have passed since we, Cambodian refugees (an estimated number is about 6,000 people) have been resettling in the United States. We faced many difficulties on the way to start the new life here and also to adjust into the American Society. Due to difference of living status, in particular the English language, we struggle in different ways to accept employment regardless of our previous occupational level. As you are confident that the Cambodian refugees followed and will follow in the tradition of other refugee groups by becoming an overwhelmingly self-supporting, tax paying, contributing group whose cultural backgrounds will add to the enrichment of American Society.

After the fall of Cambodia, our country into Communist enclave, we suffer deeply from the atrocities, genocide committed by the Cambodian communist rulers to the innocent Cambodian populace. We support Carter administration officials on July 26, 1977 blamed Cambodia's communist rulers for one of the world's worst continuing tragedies of disease and hunger. Based on all the evidence available to us, we have concluded that Cambodian communist rulers have flagrantly and systematically violated the most basic human rights. They have forcibly relocated the urban population, brutally treated supporters of the previous government and suppressed personal and political freedoms. The present Cambodia lacks a school system as such. The nation is also reported to have no money system. As all other intelligence channels had been effectively cut off, the U.S. intelligence agencies were hesitant to accept the word of refugees who escaped daily to the Thai border.

The government of Democratic Cambodia has destroyed our cultural heritage. Customs and tradition are completely uprooted, religion is not permitted; books and documents have been burned. The remaining people are living a miserable life—little food, no medicine, lack of adequate shelter and clothing, no fundamental human rights and no concern from the outside world. Families are still kept separated. Marriages are now permitted, but a love affair can be a capital offense. Most reports are that genocide in Cambodia is still going on. Beautiful words are still written and spoken about peace, harmony and humanity, but the Cambodians who are being enslaved by the communist rulers have been left to die.

Based on all information, reports and or accounts stressed by Cambodian refugees in Thailand, we have sent motions to the United Nations to help us stopping genocide, atrocities committed by the Khmer Rouge in Cambodia. In a nation of 7 million people, an estimated 2 million have already died from mistreatment and executions. To date no positive result to our appeal.

During the five year war the Cambodian people had a good discipline; their morale was high to defend their country, culture, religion and traditions. At the time the United States cut off aid to Cambodia in 1975, the Cambodian communist government was aided by other communist countries to take over our gentle land, Cambodia.

We hope your congressmen, senators, government could immediately put an end to the genocide and to restore the basic Human Rights and fundamental freedom of the Cambodian people. We plead for your help to come to the assistance of the Cambodian people, the victims of a brutal policy of genocide by Cambodian communists called Khmer Rouge.

MOTION OF CAMBODIAN REFUGEES AND RESIDENTS IN THE UNITED STATES AND CANADA

We, Cambodian refugees and residents in the United States of America and Canada,

Considering that one year and five months after the Khmer Rouge took power in Cambodia, on April 17, 1975, streams of Cambodian refugees of all ages and social classes are still fleeing their home country daily, in spite of obstacles and dangers to life along the way;

Considering that accounts of refugees, reports by the international press and the statement made by Swedish Ambassador to Peking, His Excellency Kaj Bjork after his visit to Cambodia recently, confirm that the Khmer Rouge have been conducting a policy of terror in the country, massacring no less than 800,000 Cambodians; have created a situation in which only death, hunger, disease, forced slave labor and trembling fear of "Angkar" reign; and have eliminated the educated class, and forcing the repeated evacuations of people from one area to another, and back again;

Considering that the Khmer Rouge have pronounced their intention to keep only one million Cambodian people from a nation of seven million inhabitants to build their "new" Democratic Kampuchea; and that aside from the loss of human lives, everything which relates closely or remotely to the civilization of the Khmer people, to its culture and to its history—arts, literature, worship, schools, monasteries, national archives, morals, traditional customs etc.—has been ridiculed or destroyed so that the two-thousand year old Khmer cultural heritage is in danger of extinction;

Considering that the policies and acts of the Khmer Rouge are, in every respect, contrary to all basic principles of international law and agreement on human rights, including the principles and Charter of the United Nations, and are contrary to principles of human decency; and that these policies and acts fall squarely under the definition of genocide as adopted by the United Nations General Assembly on December 9, 1948 as a crime under international law;

Considering that in its Preamble, the United Nations, of which Democratic Cambodia is a member, is determined "to reaffirm faith in fundamental human rights, in the dignity and worth of the human person . . ."; and that in its purposes, the United Nations is to promote and encourage "respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion";

Be it unanimously resolved:

To condemn with the greatest vigor the crime of genocide committed by the Khmer Rouge, new rulers of Cambodia, against the innocent and helpless Cambodian people;

To appeal to His Excellency Kurt Waldheim, General-Secretary of the United Nations, the highest world body, to use his power and influence within the international organization to put a halt to the most blatant violation of human rights and fundamental freedoms of the Cambodian people by the Khmer Rouge;

To urgently request the United Nations to send a neutral investigating team to Democratic Kampuchea under the Khmer Rouge to verify the charges to genocide by the Khmer Rouge and to immediately put an end to it, and to restore the basic human rights and fundamental freedom of the Cambodian people;

To appeal to the conscience of all government and religious leaders in the world, to all international and humanitarian organizations, and to all people of good-will everywhere to come to the assistance of the Cambodian people, the victims of a brutal policy of genocide by the Khmer Rouge, by using all means and possibilities to put an end to needless atrocities which have already cost nearly one million Cambodian lives.

Done in Washington, D.C., August 17, 1976.

We, Cambodian refugees & residents in the United States and Canada.

MOTION

Khmer refugees and residents in Washington DC and its metropolitan area,

Referring to:

The living testimony from victims: men, women, children taking refuge in Thailand and in USA,

The articles appearing in the international press (including the weekly TIME of April 19, 1976, PARIS MATCH of April 24, 1976, the daily LE MONDE of the 17 and 18 of February 1976, of April 6, 1976, the New York Times,

the Washington Post and the Washington Star of April and May 1976, to cite only a few of the recent publications),

The public declaration of March 7, 1976, in Pekin by the Swedish Ambassador Mr. Kaj Bjork upon return from his two weeks visit to Cambodia,

Whereas since April 17, 1975, the date of the takeover of power in Phnom Penh by the "Khmer Rouge" leaders, the new regime in Cambodia has engaged in various methods including daily massacres among the innocent and helpless population. Victims at the present time are estimated to number at least 800,000, whereas during the 5 years that the war lasted imposed by Foreigners, there have been at most 600,000 killed,

Whereas the Khmer rouge themselves admit to their odious crimes perpetrated in cold blood and go to the point of hinting that they would spare only a million men out of the seven millions who existed for the purpose of building their new "Khmer Society" having no need of help any intellectual elite in this plan of national reconstruction. And in addition, a foreign observer having been able to visit Cambodia recently, the Swedish Ambassador Mr. Kaj Bjork, who cannot be suspected of hostility to the new Cambodia regime, could not help but to publicly confirm the suffering the Khmer population is undergoing and who continue to suffer much.

Whereas in consequence of these crimes entire families have been wiped out or deported to unsanitary places in the interior of the country or scattered throughout the world, for want of not being able to live in security in their own country,

Whereas aside from the loss of human lives, all that which relates closely or remotely to the civilisation of the Khmer people, to its culture and to its history: arts, literature, worship, schools, monasteries, national archives, morals and popular customs etc. . . have been ridiculed, destroyed or handed over dirt cheap to neighboring countries to such an extent that the two-thousand year old cultural heritage of the Khmer nation is gravely in danger of extinction,

Therefore:

Denounce with the greatest vigor these crimes of genocide that the Khmers have never known in the past,

Solemnly appeal to conscience and to the international organizations: the United Nations, UNESCO. the League of the Right of Man, the International Amnesty and all humanitarian organizations in order to help the Khmer Population, member of the United Nations to survive as a genuinely free nation, peaceful, democratic, independent and sovereign in the international community,

And urgently ask the United Nations, whose charter is recognized by the new regime of Cambodia, to please send an on-the-spot neutral commission entrusted with the duty of investigating these enumerated barbarous crimes and to find all means and all possibilities to stop these needless atrocities and genocide.

Prepared in Washington, DC, May 23, 1976.

SMALL BUSINESS CONTRACTING: "A GROWING ABSURDITY"

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. DRINAN. Mr. Speaker, I suspect that few of my colleagues fully appreciate either the degree to which existing Federal procurement policy discriminates against small business participation, or the almost insurmountable obstacles which small firms must overcome in order to do business with the Federal Government.

I have recently authored and introduced the Small Business Government Contracting Reform Act, H.R. 8262, which would greatly simplify the contracting process for small businesses, grant procedural rights—such as adequate bidding periods and full access to bidding materials, and enable genuine competition with large firms for Government procurements. In this context, I highly recommend the following article from Government Executive which discusses the small business contracting issues toward which H.R. 8262 was specifically addressed:

A GROWING FEDERAL ABSURDITY

(By Ernest Baynard)

When the average small businessman first signs a Government supply contract, he probably has no idea of the nature and extent of the liabilities he has assumed—nor is there any easy way for him to find out.

The most honest businessman, fully capable of delivering the supplies called for in the contract, could end up bankrupt, investigated, audited or having his contract canceled through no fault of his own. He might even go to jail.

For decades, the Congress has been concerned about the vitality of the Nation's small business community. There is a Small Business Act creating a Small Business Administration that has a variety of programs designed to assist the small businessman. Small business committees in the House and Senate "watchdog" the interests of small business on a day-by-day basis.

Federal Access.—A prime objective of both the Congress and the President is fair and reasonable small business participation in the Government's multi-billion-dollar procurement program. In this arena, there are Certificates of Eligibility, contract preferences, procurement set-asides and unlimited free advice.

Unfortunately, no one in the Federal Government, concerned with the interests of small business, seems to have read the Government procurement contract—the General Services Administration (GSA) Federal supply contract used to acquire thousands of items obviously within the scope of small businesses to produce. It is the contract the small businessman must perform before he goes to the bank with his reward for doing business with the Government.

The big trouble is that no single document is identifiable as a Federal Supply contract. The GSA has, instead, a maze of material containing terms and conditions binding on a contractor. Some of these documents are difficult, to say the least, for the average small businessman to obtain. Much of what all of them contain is difficult, if not impossible, to understand.

Policy Extension.—As a result, the prudent businessman has no reasonable way to readily determine the nature and scope of the contingent liabilities he assumes incident to doing business with the Government. Today's Government contract contains many provisions that directly obligate the contractor to carry out Federal policy in social and economic areas. He also is made subject to the Federal Privacy Act under certain conditions.

Provisions of the Clean Air and Water Pollution Acts affect his eligibility for and performance of Government contracts. He may also have to cope with the Cost Accounting Standards the Government has adopted. A reasonably wise small businessman would realize his efforts to sell to the Government may not succeed. But if his efforts may do him no good, he at least wants to be sure they do him no harm.

That, in turn, becomes a question of what the contract will require of him—not only in substantive terms but in the submission of reports and data concerning his operations to GSA and the other Government agencies referred to in the Federal Supply contract documents. What those reports have to be and for whom are, indeed, difficult determinations to make.

The primary document the small business man must contend with is the Solicitation, otherwise known as Form 33. This is a random listing of terms, conditions and instructions together with the forms the prospective contractor must fill out, quoting his price and other essential product data.

Mazy Route.—Among the clauses in the Solicitation—which are not numbered consecutively and do not appear in any logical form—are references to other contract forms. At one point, Form 33A is incorporated by reference. Forms 1126, 1426, 1790 and 2984, referenced elsewhere, are also part of the contract. Adding these terms and conditions to the Solicitation means, in effect, the Federal Supply "contract" has 176 clauses. In them are cited 35 Federal statutes, half a dozen Executive Orders and almost countless regulations of the GSA, Department of Labor and other Federal agencies. In addition, there are other forms the contractor may have to fill out and file with GSA and/or other agencies during performance of the contract.

GSA has "Business Service Offices" throughout the country. But they do not have copies of the references made in the Solicitation. Collecting this material requires direct contact with a number of Federal agencies such as Defense, Labor, Justice and the Environmental Protection Agency.

Legal Grouping.—What small businessmen have either the time or the resources to undertake this tiresome, frustrating task? As a result of this overwhelming maze, businessmen trying to sell something to GSA fall into three categories.

A majority which probably fills out the forms, quotes a price and ignores the jungle of redundant, ambiguous and often meaningless language which makes up such a large part of Government's contract terms and conditions.

The cautious businessmen who are repelled by the terms and conditions and decide doing business with the Government is not worth the effort.

Lastly, there may be some who take the time to attempt to extract some meaning from the terms and conditions, trying thereby to gain some understanding of their commitments and liabilities under the contract.

With some luck, that last businessman obtains copies of the four basic contract documents, the Solicitation, Form 33A, Form 1426 and Form 32, from the Business Service Office. He looks over the material in the "Procurement Kit" given him—and soon tosses it aside as of little help.

After a few days hard work with scissors and paste, he probably can reassemble all the clauses in the four forms so that those dealing with the same subject are together. He then spends several days on the telephone, collecting material referred to in the terms and conditions. At this point, he's ready to begin reading the contract.

What's A Lawyer?—It takes just a few minutes for him to realize that an understanding of the contract will require expert legal advice. But, as he is about to call his lawyer or possibly some procurement specialist in Washington, he notices Section 3 in the Solicitation.

Titled Contingent Fee, it requires that he state whether he ". . . ( ) has, ( ) has not, employed or retained any company or person (other than a fulltime bona fide employee working solely for the offeror) to solicit or secure this contract, and he ( ) has ( ) has not paid or agreed to pay any company or person . . . any fee, commission, percentage, or brokerage fee contingent upon or resulting from the award of this contract, and

agrees to furnish information relating to (the above) as requested by the Contracting Officer."

What that seems to tell the small businessman is that he should check the "has" box at the beginning of the clause if he retains a lawyer or any type of procurement specialist on a non-contingent basis. (It is non-contingent because one can solicit unsuccessfully.) Thus, any activity by a retained agent on his behalf would seem to fall within the intent of the first part of Section 3.

He also sees that he must check the second "has" in the section if he ". . . has agreed to pay . . . any person . . . any fee resulting from the award of this contract . . ." The problem here is that "resulting from" does not mean the same thing and has a broader significance than "contingent upon."

Multiple Meanings.—He becomes annoyed. Why should the law prohibiting payment of contingent fees also rule out the payment of non-contingent fees? Finally, he calls the GSA General Counsel's office and asks why he is prohibited from paying "any fee."

They understand his question, they say, but that is not what the clause really means. He gets the same opinion from the Office of the Comptroller General. Our businessman gets a copy of the Federal statute requiring the contingent fee clause in contracts. He finds that Congress did not prohibit the payment of "any fee."

Apparently, GSA just added this unlimited, non-contingent category to commissions, percentages and brokerages set forth in the statute.

The addition of the phrase "any fee," used in conjunction with the term "solicit," alters the meaning of the Congressional prohibition. Our prudent small businessman, recalling procurement scandals and Congressional investigations in the past, is reluctant to ask for expert assistance because he doesn't know what the law prohibits him from doing—especially after reading the contract language.

That's hardly his only problem. On the front of the Solicitation is an additional sheet containing amendments to the original. It contains a clause: "The following clauses on the cover-sheet are deleted." The "coversheet," he thinks, is apparently advice to prospective contractors on modifications and additions to the contract of the prior year.

Wrong Again.—Among the clauses the coversheet contains is one which requires the listing of job openings with the local office of the State unemployment service. He turns to this provision in the contract and is about to draw a red line through it when he pauses. Why would the GSA delete such an obvious labor-oriented clause?

Out of curiosity, he calls GSA. Sometime later, his call is returned and he learns the clause was not deleted from the contract at all. What GSA intended was simply to announce that the *reference* to the clause on the "coversheet" be deleted. Nor can anybody explain why the formal contract amendment process is used to remove the reference to a contract provision from the "coversheet."

The Solicitation and the supplemental provisions of the Federal supply contract contain a number of clauses relating to small business. Studying them is of little help to the small businessman. Government efforts to develop a viable small business program have always amounted to an uphill fight.

All the program does is offer free advice, loans and loan guarantees (provided the small businessman has not succeeded because, if he has, he's not eligible for a small business loan guarantee because he can get a loan from a commercial bank), Certificates of Competency, and finally, procurement set-asides and preferences. But he finds that set-asides are limited to some specified types of supplies and his product don't fit those categories. And "preferences," he finds, apply only in case of equal bids.

While he might dismiss these provisions as being of no concern to him, he realizes that the contract says he must "agree to accomplish the maximum amount of subcontracting to small business concerns that (he) finds consistent with the efficient performance of (the) contract." A comparable provision requires he favor labor surplus areas in his subcontracting.

Now What?—By this time he has begun to realize there is no distinction under the Federal supply contract between subcontractors and suppliers. "Just what am I to do to show reasonable and honest effort to comply with these provisions?" he asks. What does he say if he's investigated for "failure to comply?"

Every paper clip and cotter pin in his office and plant become suspect. What is the source of his materials in this context and are other sources available and, if so, at what cost and effort to find?

He can just hear the legislator in committee hearing or the judge: "You mean to say you ignored these important provisions that Congress directed be placed in every Government contract expressly to help small businessmen such as yourself?

Section 33A provides that "General information concerning the requirements of the Walsh-Healey Public Contracts Act, the Contract Work Hours Standards Act and the Service Contract Act of 1965 may be obtained from the Department of Labor." A call to the Department ends up in a day-long hassle with telephone operators and hair a dozen different offices.

More Inapplicables.—(The Department's telephone system is being "improved" and many of those he must talk to are not at the numbers listed in the telephone book nor, at times, known through the information operator.) Finally, copies of the statutes arrive in the mail. After hours reading them, he learns that none apply to supply contracts for items sold commercially. With just one line in the Solicitation contract, GSA could have saved the small businessman a week of work.

Often, it seems these days, nothing is more important than "equal opportunity." In favor of the idea, anyway, he hunts for days to see if any special or unique requirements for complete compliance arise from being a Government contractor. Several days study of Executive Orders, which are the basis for "equal opportunity" clauses in the contract eventually lead to the realization that they require essentially the same conditions as already apply to everyone under provisions of the Equal Opportunity Act.

But, he reads that he must file an annual "Affirmative Action" program report with Labor. This does not concern him—assuming he has some idea what a report of this type has to contain. When he asks Labor, he learns, after some hemming and hawing, that "If you have less than 50 employees you don't have to file."

Non-Standard Standards.—The Solicitation also contains several pages of complex language relating to the application of the Government's cost accounting standards. The meaning of these clauses lies beyond the comprehension of mortal man—even of those officials who drafted the clauses in the first place. However, because of the emphasis placed on the subject, a small businessman could easily conclude he is in some way bound by them.

Rather than this mass of language, the contract could simply point out that the sale of supplies sold in substantial quantities to the general public as well as annual sales to the Government in amounts of less than $500,000 are not subject to the cost accounting standards. It would also help to note, in the contract, that copies of the standards, themselves, can be bought from the Government Printing Office.

One additional comment would help: tell businessmen not to try to read and understand the cost accounting provisions unless they are trained accountants. To the uninitiated, the standards will not make sense.

Clean Everything.—When a small businessman reaches the Clean Air and Water provisions, his problem with the contract will become intense. First, he must agree to comply with all requirements of these two Acts and insert comparable provisions in all his subcontracts. He must agree that no portion of the work, either his or his subcontractors, will be performed in facilities listed in the Environmental Protection Agency's (EPA) "List of Violating Facilities."

He must adhere to all: ". . . enforceable rules, regulations, guidelines, standards, limitations, orders, controls, prohibitions, or other requirements which are contained in, issued under, or otherwise adopted pursuant to the Air Act or Executive Order 11738, an applicable implementation plan described in Section 100(d) of the Clean Air Act, an approved implementation procedure or plan under Section 111(c) or Section 111(d), respectively, of the Air Act or an approved implementation procedure under Section 112 (d) of the Air Act."

Empty Lists.—If that doesn't confuse the businessman enough about his responsibilities and liabilities regarding the environment, reading the Clean Air and Water Pollution Acts, themselves, will. Although ordinary English-speaking people don't understand either, they can at least check the EPA "List of Violating Facilities."

After calling EPA and going through another long shuffle from one office to another, he finally reaches "the keeper" of the list. He is told it has been twice published in the *Federal Register* and he will be sent a copy. What he receives is a "list" that starts with a lengthy introduction—and has no facilities listed on it.

The Privacy Act is supposed to apply only to activities of the Federal Government, itself. However, the GSA Federal supply contract applies it to the small businessman as well. Few persons not already familiar with the Privacy Act could understand the Privacy clauses in the contract.

Whose Privacy?—Apparently, the provisions say, in effect, that if a contractor performs what otherwise would be an internally handled function—and if includes the development and/or maintenance of data on individuals—the contractor is bound by the same policies as if the work were being done in-house. But this is not evident in the contract language—except, as in the case of other provisions—the businessman is warned that violation of this Privacy provision could result in criminal sanctions.

The potential contractor also will be apprehensive when he learns, if he gets some Government work, that he must permit both the GSA and the Comptroller General the right to audit his books and records for three years following completion of the contract. In practical terms, these provisions don't mean much because the number of such audited contracts is small, and the audit is supposed to be limited to books and records pertinent to the contract.

However, to the small business unfamiliar with the ways of Government, the possibility of confidential data on his costs and overall operation being blown open to the public has to sound very unattractive. And, besides wondering why two arms of Government need that auditing right, he probably has the fear that an "audit" will be confused in the Press with an "investigation." How could such potential bad Press be good for his business?

Predicting Markets.—And then there is the "Price Reduction Clause." Under it, the businessman must agree to an automatic reduction in the price he quoted in the supply contract by a percentage equivalent to any general reduction in his commercial price during the contract period.

Example: a small businessman sells his product commercially for $500. In his Federal supply contract, he agrees to give the Government a 20% "quantity" or otherwise discount to $400 a unit. But, during the contract year, competition forces him to reduce his commercial price to $450—a 10% cut. Under the Price Reduction Clause, he must then give the Government a 10% further discount on top of the one already negotiated—or a price of $360.

Obviously, the contractors who give GSA the best initial discount below their commercial prices are the ones most grievously affected. In essence, the Government hurts most those that treat the Government best. The clause also is against public policy in that it may inhibit reduction of commercial prices during a period of inflation.

It also is against the best interests of the Government because it creates a contingency—which also is contrary to established Government procurement policy. And it discourages contractors from initially quoting the lowest possible price.

Varied Translations.—After two or three weeks, a careful, astute small businessman can begin to gain control over the most glaring deficiencies in the Federal supply contract as discussed above. This leaves him with almost 170 other contract clauses to read and understand. They are a mixed bag. Many are well drafted and easily understood.

But a substantial number do not say what they mean nor mean what they say. Invariably, when he seeks help from procurement specialists, in or out of Government, he is advised, "Yes, I know it does not say that, but that is what it means." He begins to realize he is in a curious dilemma. Suppose a question on one of the clauses he does not understand to begin with comes up during contract performance.

The Federal supply contract has a clear, unambiguous answer in a clause of Section 33A:

"Any explanation desired by the offer or regarding the meaning or interpretation of the solicitations, drawings, specifications, etc. must be requested in writing . . . Oral explanations or instructions given before the award of the contract will not be binding . . ."

In short, he is on his own in trying to understand the nature and extent of his liabilities and obligations should he win an award. It is a puzzlement. Several things appear to have contributed to the problem of how the Federal supply contract got to where it is today. For one, many legal documents seem written more to be interpreted by the courts than to be easily understood by those who use them. The Federal supply contract suffers from excessive reliance on legalistic language.

No Operational Control.—Another factor is the structure of Government. Operating personnel of the Federal Supply Service evidently have little control over the substantive provisions of the contract. Policy personnel in GSA and other agencies draft the clauses and stick them in the contract. The drafters do not come in routine contact with the businessmen who must try to understand what they mean.

Lacking the pressure of having to explain their use of language, policy development personnel are free to use complex and often excessive language to close every possible loophole—no matter how remote—without considering the "readability" of the contract. Another factor is that the present contract has evolved over many years.

Present experts, in and out of Government, have refined their understanding of the contract on a gradual basis. They did not acquire their comprehensive knowledge overnight nor necessarily from reading its terms and conditions. In contrast, the small businessman, initially seeking a Federal contract, is plunged instantly into an unfathomable sea of gobbledygook.

An Epidemic.—The Federal Supply Service is not the only producer of complex, ambiguous prose others find difficult to understand. American businessmen, large and small, have been known on occasion to confront the Public with contract "fine print." (Anyone read their automobile insurance policy lately?)

Even Congress has passed legislation—such as some tax laws and the aforementioned Clean Air Act—few people can understand. In government, business and industry, there must be countless poorly drafted, excessively legalistic documents that are far worse than the Federal supply contract.

So businessmen may have to ask for mercy rather than justice in urging the Federal Supply Service to make its contracts more readily understandable. Simply because others may do worse, however, is no reason why FSS should not try to do better.

An easily understood contract would lead to increased competition, and presumably lower prices, on a broader array of Government-purchased items. A clearer statement of contractor obligations in a broad stretch of Congress-enacted social and economic programs, e.g. clean air and water, labor surplus, aid to small businesses, might significantly improve compliance with the laws and result in greater progress toward these difficult goals.

One reasonable way to build clarity into the contract would be to consolidate all the clauses into one document. At the same time, arrange them in some logical format; carefully edited to remove redundant material indicate applicability and improve readability. The entire document could be republished (on less expensive paper) every year.

Fight For Simplicity.—Amendments during the year would only be made under the most pressing circumstances. GSA should also discard the present hand-outs businessmen are given when they visit Business Service Offices. all of the forms as well as copies of all the material cited in the contract document should be available at the Business Service Office, including the forms and materials that originate in other departments and agencies.

Until the GSA takes effective action in dealing with these problems, the prudent and responsible small businessman will continue to find doing business with the Federal Supply Service a frustrating—and even dangerous—experience.

ENERGY AND CLIMATE: A NEED TO ASSESS BOTH

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. BROWN of California. Mr. Speaker, now that the House has completed action on the National Energy Act, and is nearing completion on other major bills, such as the Farm Act, some Members may be wondering why we have so many minor bills still pending on the House calendar. There are many reasons for this, obviously, but one of the most overlooked reasons is that many of these bills are not minor at all, but simply are less complicated and controversial than the so-called major bills.

Among these bills is one that I believe is very important, not only in its own right but because of its relationship to such major issues such as farm and energy policy. I speak of H.R. 6669, the National Climate Program Act of 1977, which has been pending on the House calendar since May. While there have been many reasons why this bill has not yet been considered by the full House, the lateness of the session clearly calls for expeditious consideration of this bill. There are few minor bills before this body which have such a major purpose as does the National Climate Act.

The need for this legislation has been very thoroughly documented in the hearings before the Subcommittee on Environment and the Atmosphere of the Science and Technology Committee. A recent major report by the National Academy of Sciences urgently called for the type of action this bill authorizes and numerous other prestigious groups have endorsed such action. Those most deeply involved with the issue are quite concerned that we may act too late to prepare for the climatic fluctuations that most expect. Enactment of H.R. 6669 would allay these fears, and give us the resources to prepare for the future.

A recent editorial in Science Magazine described the relationship between energy and climate, and called for the enactment of the pending legislation. I urge my colleagues to consider these views as you consider this bill.

The article follows:

[From Science, Sept. 2, 1977]

ENERGY AND CLIMATE

Whenever the weather in a region departs from norms for a few weeks or more, anxious queries arise. Is the world's climate changing? When leading meteorologists are questioned they usually equivocate. At one time considerable optimism was voiced that new insights would be gained soon from modeling calculations. In the past decade much time on some of the most powerful computers has been devoted to such calculations. But success has been elusive. The best performance on weather seems to be in short-range prediction—that is, the next day or two. Even then surprises occur. In predicting weather, meteorologists can take as a point of departure current conditions, but in attempting to estimate climate change there is little guidance. Some cyclical patterns related to the 11-year sunspot activity have been noted, and a 2- to 3-year cycle also seems to persist.

Meteorologists still hold out global modeling as the best hope for achieving climate prediction. However, optimism has been replaced by a sober realization that the problem is enormously complex. In a recent report* Verner E. Suomi listed 27 variables that must be monitored to obtain data needed for studies of climate dynamics. These include total solar flux, cloudiness, surface albedo, sea and surface temperature, thickness of polar ice sheets, water vapor, CO_2, and tropospheric aerosols. Human activity has been changing at least three of the variables—albedo, aerosols, and CO_2. The report emphasizes potential effects of increasing and long-term use of fossil fuels.

One fact about CO_2 that is known with certainty is that the concentration in the atmosphere is increasing. Charles Keeling has been conducting precise measurements of atmospheric CO_2 since 1957. In two decades the concentration at the south pole has increased from 314 to 331 parts per million. It is estimated that since the beginning of the industrial revolution the change has been about 13 percent. Roger Revelle has analyzed cogent factors. Part of the increase is due to deforestation. About half of the CO_2 that has

Energy and Climate (prepublication version. National Research Council. Washington, D.C., July 1977).

been produced remains in the atmosphere, and the rest has been absorbed in the ocean or removed by increased photosynthesis.

What are the likely future trends? For the remainer of this century the clearing of land will continue and the use of fossil fuel will increase. As a result, by the year 2000 the CO_2 concentration will exceed preindustrial levels by about 25 percent. Ultimately, other forms of energy such as solar may come to play a more substantial role. However, humanity's appetite for energy use seems insatiable.

What will be the climatic consequences of increased CO_2? S. Manabe and R. T. Wetherald have calculated that a doubling of CO_2 would lead to an average global increase in temperature of 2.5°C. Their model was necessarily oversimplified, but it seems plausible on the basis of a greenhouse effect. However, a few scientists can be found who privately suggest that because of complex feedback phenomena the net effect of increased CO_2 might be global cooling.

The most likely trend appears to be warming, with effects considerably greater in the polar regions than at mid-latitudes. In the polar regions CO_2 can have a relatively large greenhouse effect. Changes in global circulation would also contribute to the increase.

Humanity is in the process of conducting a great global experiment. If unpleasant effects are encountered they cannot be quickly reversed. Although a comprehensive understanding of what is going on may be difficult to attain, prudence requires at least a determined and sustained effort. Congress is considering bills aimed at improving climate monitoring, augmenting climate research, improving services related to the climate, and identifying the domestic and international impacts of changes in the climate. Such legislation should be enacted.—PHILIP H. ABELSON.

MODERN HONDURAS: A REPORT FROM A RETURNING AMBASSADOR

HON. E de la GARZA

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. DE LA GARZA. Mr. Speaker, as a member of the International Relations Subcommittee on Inter-American Affairs, I have recently had the opportunity to visit with the returning Ambassador of the United States to Honduras who has completed a 9½-month tour of duty. Ralph E. Becker, an internationally known Washington attorney who has devoted much of his professional life to public service, has detailed some of the Embassy's activities and made some interesting observations concerning the Central American post to which he was assigned. But before I report Ambassador Becker's comments, I would like to mention that the Honduras chief of state, Gen. Juan Alberto Melgar Castro, is in the United States today with the heads of state from the other sister states of this hemisphere.

The following are Ambassador Becker's comments and observations:

The Republic of Honduras is a microcosm of the potential as well as the difficult problems that confront the relatively small developing country in the modern world. It faces monumental challenges in meeting the needs and aspirations of its people.

Without the background of a landed aristocracy, this nation of warm and genuine people is taking significant steps with the needed assistance of the United States to develop a middle class which will enable it to move forward as a nation.

In rights, Honduras has a good record. There is a respect for human rights, with no violations of these rights, no political prisoners, no exiles and no torture. In general, the Honduran people enjoy freedom of opinion, religion, expression and association. The press is free to criticize the government and does so. The news media and people have a right to dissent without retaliation or retribution. Finally, the judicial system continues to function as it did under previous regimes. There is reason to believe that there will be elections in 1979, which will advance the constitutional processes of the country. Thus, in this regard, Honduras should be individually considered as a country of domestic tranquility.

The U.S. has long enjoyed close and friendly relations with Honduras, based on geographic, economic and social factors. While other countries of Central America are oriented physically to the Pacific, Honduras is oriented to the Atlantic. Rich farmland, forests, natural ports and rivers to the north early invited U.S. investment. Rugged mountains fragmented most of the remainder of the country. Until 1970, U.S. investment in agribusiness, forestry and mining accounted for half or more of the exports and led economic growth. Half of Honduras' total trade is with the U.S. Maintenance of good relations requires an awareness also of Honduras' present difficult conditions: low incomes, malnutrition, illiteracy, underdevelopment, vulnerability to weather, social and agrarian unrest, and tension with El Salvador.

Honduras is the geographical heart of Central America. It borders Guatemala, El Salvador and Nicaragua—with coastlines on both the Pacific Ocean and the Caribbean Sea. Its Pacific coastline consists of a 90-mile arc along the Gulf of Fonseca and its Caribbean coastline is 400 miles long. The country's three and one-third million citizens live in a 43,277 square mile mountain and tropical paradise (roughly the size of Pennsylvania). About 90 percent of the Honduran population is a mixture of Caucasian and Indian (mestizo). There are small minorities of Caucasians, Indians and Blacks.

Tegucigalpa, the proud capital of Honduras, traces its heritage to 1578 when the Spaniards founded a gold and silver mining settlement. Its 3,500 feet altitude guarantees reliable climate. Fast developing San Pedro Sula is the industrial and commercial center of the booming North Coast area. It is the distribution center for banana, sugar and manufacturing for the entire north coast. The Bay Islands, located close to the north coast, have an active multimillion dollar lobster and shrimp industry and a growing tourist industry. The Honduran Government is attempting to tie the Bay Islands, (Roatan, Gunaja and Utila) to the mainland through the implementation of several programs. For the most part, the islanders are English-speaking.

Honduras needs to expand its industry—67 percent of its labor force are involved in agriculture, forestry and fisheries; 90 percent of the children under five years of age suffer from malnutrition; 40 percent of the population earn an annual per capita income of $75 or less; and 50 percent of the population over 10 years of age are illiterate.

The North Coast of Honduras is the backbone of the country's economy due to its agricultural, industrial and commercial activities. Puerto Cortes is, by nature, the shipping and commercial center of Honduras and has the advantages of a sheltered, natural deep water harbor. Therefore, since 1965 it has been the object of various development programs that have greatly contributed to its modernization by the creation of an autonomous institution named the National Port Authority (ENP). It is managed under an experienced, seasoned Director, Antonio Coello, who has business administration experience in both the academic and private sector. He has a highly skilled, sophisticated, computerized, modernized operation. This port is being expanded into a major container port to serve Honduras and is now ranked as the largest, most efficient and inexpensive port in Central America. Also, it has now developed a large free zone for investment and business opportunities.

Puerto Castilla on the Bay of Trujillo is three times larger than Puerto Cortes (it was formerly a United States submarine base). This port (for which finances are committed) will be important commercially because it will be the open door for productions from the Aguan River Valley where there is large scale farming and stockbreeding. A new paper and pulp industry is being established there. In addition, its potential forests can be utilized in various ways. The Trujillo port will also serve the Olancho area, which has the largest pine forest reserve in Latin America. Several sawmills are being built and hundreds of millions of dollars will be spent in building the roads, setting up the communication system and maintaining the forests.

These forests come under the jurisdiction of the semi-autonomous Honduras Corporation for Forestry Development (COHDEFOR). It has only been in existence a little over three years; the organization has grown from zero into a $50 million operation and is growing in its scope and activities. The manager of this organization, Lic. Ricardo Reyes, was formerly the manager of ENP. Lic. Reyes runs a computerized, businesslike management which is developing and growing.

Another new investment and financial vehicle is Conadi, a new and fast-growing entity. It is well capitalized to fill an important vacuum; to wit, taking equity positions in diverse business, industrial and tourist projects. Here again is an illustration, under the direction of a well-educated and experienced managing director, Juan Marinakys, who has come from the private sector. With ENP, Cohedifors and Conadi, there is a new stimulus to the fast-growing development of economic potential with the help of financial institutions such as the World Bank, the Inter-American Bank and OPIC.

One of the problems that threatens its stability and whose solution would increase the economic growth of Honduras and have a beneficial impact in Central America would be the settlement of the boundary dispute between Honduras and El Salvador, which erupted into war in 1969. Last year, the Foreign Ministers of both countries signed an agreement to mediate this dispute. Immediately thereafter, Honduras ratified the agreement, but to this date. El Salvador has not done so for various reasons. The uneasy detente is monitored by an OAS Commission consisting of officials of Central and South America. In addition, OAS has helicopter observer teams and a Commission representing Central and South American countries. This is merely a deterrent or stopgap. It would be to the benefit of both countries, the other Central American countries and the U.S. to take immediate appropriate steps to remove this tension. This issue should be given a top priority before October 15, the date when the extension of the OAS observer team terminates. A settlement will reestablish peace and the regional common market which existed prior to the 1969 war, with its attendant economic and social benefits.

During my tenure, I was deeply impressed and involved with many U.S.-sponsored economic assistance programs.

In a country where over three-quarters of all rural children under 5 years old are malnourished, the importance of Honduras' efforts to improve nutrition cannot be overemphasized. Following an A.I.D.-assisted assessment of the nutrition situation, the Government of Honduras decided to undertake a broad national initiative to confront malnutrition. A national planning and coordi-

nation body was established known as SAPLAN (The System for the Analysis and Planning for Food and Nutrition) together with and supported by Mrs. Juan Melgar, the First Lady who heads up the social welfare organization, and the U.S. Government undertook to support this important national program.

In November 2, 1976, the Minister of Finance and I signed the far-reaching Nutrition Loan ($3.5 million) which, along with complementary grant assistance ($750,000), provides funds to support Honduran programs including nutrition education; rural potable water supply and sanitation in the form of wells and latrines; pilot activities to introduce new and more nutritious foods; a nutrition status vigilance system to identify and monitor malnutrition by area and groups; and national nutrition planning. If properly implemented, in three years it will serve 300,000 people.

Honduras is a rural country. Agriculture employs two-thirds of the population, many of them at a bare subsistence level. In September, 1974, Hurricane Fifi struck northern Honduras leaving in its watery wake widespread devastation and human suffering. Agriculture and national agricultural development programs were particularly hard hit. On November 2, 1976, the Minister of Finance, Porfirio Zavala, and I signed the $9.5 million Rural Reconstruction II Loan Agreement to continue support for recovery from the effects of the hurricane and to enable the Government to maintain the momentum of its development programs. The loan contains three elements, two of which focused on the needs of agriculture and especially small farmer groups. Five million dollars in loan funds were directed to credit for small farmer groups who were severely affected by the hurricane. In order to provide access to credit, other services and markets, $2.5 million in loan funds were provided to put in access roads and, thus, to enable year-round vehicular access to up to 125 small farm communities, especially those in the hurricane zone.

The third element ($2.0 million) of the loan is destined to support Rural Primary Education, especially the Government program of Central/Satellite Schools which stresses greater relevancy and thus improved learning for rural children. About 335 classrooms will be constructed, equipped and furnished, and teacher training will be substantially improved.

While in Honduras, we were involved in numerous projects of the U.S. Government which related to the poorest campesinos. Shortly after our arrival, a check for L 4,500 ($2,250) was presented to the Mayor of the town of Ojojona to be used for the construction of an all-weather foottrail from Ojojona to San José de Jicaro and Santa Cruz. This trail will enable the people to increase the amount of food and cottage industry goods they can market, to increase commerce in general and to increase their access to schools, health care and other public services.

We met with students, teachers and parents in the small village of El Carrizal at the inauguration of the primary school which was built by the community itself with materials financed in part by A.I.D. The people of the same community later requested A.I.D. assistance to install a potable water system in the community. Subsequently, A.I.D. granted L 1,600 for materials and the people of the community installed a spring fed, gravity flow water system. For the first time, the people of the village have a central source of potable water which, aside from the obvious health implications, will free the women of the community from the drudgery of spending hours carrying water from several kilometers away.

The southern community of Agua Caliente de Linaca has completed a bridge over the nearby River Istoca which will enable people and vehicles to cross the river yearround. I delivered the first part of the U.S. donation to the bridge project. It was recently completed.

We also inaugurated a low and middle income housing project in San Pedro Sula (La Aurora). This is a $4 million A.I.D. loan to FINAVI for a housing program for people with low to middle incomes in San Pedro Sula known as La Aurora. By means of this program, A.I.D. has contributed to the establishment of FINAVI, whose role in the development, improvement and alleviation of the housing problem in this country will be of great importance to the low and middle income population of this country. FINAVI is a national housing finance institution created during the last two years. This program assists the construction industry and related industries while it increases employment in the construction field. A.I.D. reimburses FINAVI for the interim financing of housing contractors whose mortgages will later be discounted for by FINAVI. This arrangement of interim financing and the establishment of an institution like FINAVI will resolve in large measure the problem of lack of working capital which constrains contractors and promoters of housing projects.

Another AID program is ParamedicAID and nursing programs. On June 9, 1977, two checks were presented representing the first contribution to the Ministry of Health's program for providing basic health services to rural areas (the total amount of the program is $3,000,000). One check is for $35,000 to assist in the payment of stipends for auxiliary nurses and other paramedic personnel. The other check is $3,000 which will provide equipment for the three paramedic and auxiliary training centers.

It is such U.S. programs that reach to the people in the rural areas, and the hearts of the people are filled with gratitude.

While in Honduras, I spent approximately 60 percent of my time in the field visiting practically all parts of the country, meeting and working with AID, Peace Corps, and other American personnel on various projects as well as the Patronatos and Campesinos, Government officials, military leaders, leaders of business, industry and community. I found that substantially all those with whom I had the pleasure of working were dedicated and committed to doing the job required, both for the benefit of the Honduran people and of this country. There is a new day dawning in Honduras; a middle class is beginning to appear, which is a good sign of a growing prosperity, notwithstanding its social problems and needs. The Government is realistically facing up to their problems with the assistance of the United States, for which aid the Honduran people are most grateful. It is my opinion that this new image of Honduras is quietly emerging and its future is limitless in the areas of agribusiness, education, economics, industry, culture and in every other sector of Honduran life. This is modern Honduras.

THE IMPORTANCE OF COMPETITION IN TELECOMMUNICATIONS

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. WHALEN. Mr. Speaker, the North American Telephone Association, NATA, the trade association for the companies that manufacture, sell, lease, install and maintain telephone terminal equipment in competition with the regulated—monopoly—telephone companies, will be holding its annual convention at the Hyatt Regency Hotel in Washington from September 8–10. I would like to welcome the members of NATA to our Nation's Capital.

I understand that the NATA convention will include many displays and exhibits that will illustrate the contributions the nonmonopoly telecommunications companies have made to enhance the standard of living we enjoy in this country. I encourage my colleagues and other interested persons to take advantage of this opportunity to see the communications systems of tomorrow on view today.

Mr. Speaker, in the coming weeks and months, one of the key issues before the Congress will be the debate over, and the determination of, our future national communications policies. With the exception of energy, probably no other area of deliberation will have a more profound effect on the conduct of daily business by future generations.

Our society is quickly being transformed from an industrial-oriented one to one whose economic base is information. The technological breakthroughs in the communications and computer industries have been the vehicles for this change, and the recent marriage of these technologies can only serve to accelerate the speed at which this transformation takes place.

Things that we take for granted today, which are already in their third and fourth generations of development—like computers, and microwave voice transmissions and data transmission via satellite—were considered farfetched scientific fantasies only 20 or 30 years ago. Information-related industries accounted for less than 20 percent of our gross national product in 1950, while today they account for close to 50 percent.

Developments like electronic funds transfer, electronic mail, information utility banks, and home and office information centers are no longer distant dreams. The technology is here today, and continued technological breakthroughs will make these services not only possible, but also affordable to most Americans in the very near future.

Congress has an obligation to insure that the transformation of our society does not result in a severe case of future shock. The innovation process that is leading us toward the 21st century must be encouraged, but not at the expense of any abridgement of our basic rights. For this reason, Members must become educated in the issues surrounding the contemplated rewriting of the Communications Act of 1934, an effort which is being very ably directed by Representative LIONEL VAN DEERLIN, chairman of the House Subcommittee on Communications.

The issues are tremendously complex, and are growing ever more so as technology blurs long-standing lines of differentiation between modes and means of communication. As the technological lines have become blurred, so too have the lines of differentiation among the providers of service and equipment in the information industries. Our old standards for regulating or overseeing the activities of information industry companies are being called into question.

The question of regulation goes to the heart of our debate over what our future policies should be for the communications industry. The regulatory process defines the parameters of industry infrastructure, and it is questions of infrastructure which will determine whether we speed into the future in an organized manner.

High on our agenda should be a look at whether our allowance of the growth and practice of monopoly in large sectors of our information economy is in the public interest. Monopolies may have served us well in the establishment and provision of basic communications services, but it is certainly a debatable question as to whether it is wise for a society based on information and communication to allow one or two corporations to have pervasive control.

I, along with many of my colleagues who have also studied this issue, believe that in areas where natural monopolies do not exist then there should be open competition. Yes, even in the communications industry. This is not a statement of abstract philosophy, but rather is a statement of economic fact.

In an age when all levels of government are constantly under attack for interfering too much in our daily lives, the Federal Communications Commission, properly anticipating the revolution in communications technologies, has taken the bold step of introducing and encouraging competition in two limited areas of telecommunications. The FCC's 1969 Carterfone decision brought competition to the telephone terminal equipment market, and their 1971 specialized common carrier decision extended competition to private line communications; both decisions should be hailed as examples of enlightened regulation.

Time has affirmed the wisdom of those decisions. Regulatory and judicial bodies have consistently found that:

First. Competition has led to the introduction of new products and services that are often superior to those being provided by monopoly suppliers, when measured on the basis of costs, features, reliability, and flexibility.

Second. Competition has caused the monopolists to accelerate their own processes of innovation.

Third. Competition has filled certain consumer needs which were not being met by monopolists, and these new services will be even more helpful in the future as our information needs become even more complex.

Fourth. Competition has caused no impairment of the preexisting communications network, but rather has served to enhance it.

Fifth. Competition has been of significant economic benefit to many communications service consumers and has been of economic benefit to the general public.

The counterattack that has been launched against the FCC by the monopoly interests speaks directly to my concern about pervasive control of the marketplace in the future. Despite all the data that support the preceding five findings, the monoplists will still argue, without any hard facts, that the absolute opposite is true.

In fact, in the face of our entire free enterprise tradition and philosophy, which tells us that competition is the best way to stimulate innovation and to insure the proper pricing of products and services, the American Telephone & Telegraph Co. and the independent telephone companies are promoting legislation to protect their monopoly positions. Their legislation, labeled the Consumer Communications Reform Act, but more commonly referred to as the Bell bill, would not only put the present competition out of business, but would make it virtually impossible for anyone to compete in the future. A careful reading of this bill makes it clear that it has nothing to do either with consumers or with reform.

As I stated previously, Mr. Speaker, the questions Congress will have to decide can alter our way of life dramatically. Thus, they deserve full and open hearings.

The Senate Communications Subcommittee already has conducted a preliminary airing of the issue of competition in telecommunications. I understand that later this month the House subcommittee will take up the same issue, giving it a detailed examination. I trust that they will carry out this difficult task with their usual care and concern, and I encourage my colleagues to follow this debate closely. Its outcome will help determine the shape of our daily lives in years to come.

LET SHCHARANSKY GO

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. LENT. Mr. Speaker, I would like to call to the attention of my colleagues an editorial broadcast on WOR–TV, Channel 9, New York City, August 18 to 24. I found the editorial a succinct and pointed commentary, not only on the plight of Anatoly Shcharansky, whose situation is typical of far too many Soviet Jews, but also on the need for the free world to focus on the Helsinki Accords as a means of curbing the very serious abuses the Soviets have inflicted on their citizens who want only the freedom to practice their religion and to emigrate to Israel. I commend WOR–TV and its editorial spokesman, Robert J. Williamson, vice president and general manager, for this commentary:

LET SHCHARANSKY GO

Anatoly Shcharansky is a 29-year old computer specialist in the Soviet Union. He hasn't seen his wife since the day after they were married *three years* ago. That's because she was then given an ultimatum by Soviet authorities: leave the country now or never.

Shcharansky is Jewish and a key leader and spokesman in the activist movement. The Soviets have refused to let him emigrate to Israel, and now, have charged him with the very serious Soviet crime of treason.

Some people believe that human rights are strictly internal matters for nations to decide themselves. But human rights in the Soviet Union is no longer an internal issue, if it ever was. The Helsinki Accords, which both the United States and the U.S.S.R. signed, guarantee free emigration, the right to practice one's own religion and culture, and even free expression. So the Soviets are committed, on paper, to *exactly* what Shcharansky is demanding.

But to allow Shcharansky to leave might cause the Soviets to lose face, according to the Communist mentality. And face-saving almost always comes before human rights in Moscow. There *have* been exceptions, notably when world opinion becomes too embarrassing for the Soviets to bear

We hope the United States and other free nations make Shcharansky just such an exception. Then he can emigrate to Israel. And then the Soviets will be setting two precedents: one, by fully living up to the Helsinki agreement; and two, for free emigration for many of its suffering citizens.

And that's our opinion. I'm Bob Williamson.

CAPTIVE NATIONS WEEK

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. DERWINSKI. Mr. Speaker, I wish to insert the following speech by the chairman of the Captive Nations Week Committee of the Republic of China, Dr. Ku Cheng-kang, given before more than 3,000 people attending the annual Captive Nations Week rally held in Taipei, Taiwan on July 22, 1977.

The following guests also spoke at this rally: U.S. Congressman William L. Dickinson; Senator Orlando Montenegro of Nicaragua; Dr. Tran Van Do—former Foreign Minister of the Republic of Vietnam; Dr. Jeno Platthy of Hungary, who was President of the Third World Congress of Poets; and Mr. Felipe Sin Garciga, Secretary of Foreign Relations of Cubanos Unidos en la Batalla Anticomunista.

As an original supporter of Captive Nations Week, which was dramatically and very effectively observed in the United States, I wish to bring the attention of the Members to the significance of Dr. Ku's address:

ELIMINATE COMMUNISM AND SLAVERY! ASSURE FREEDOM AND HUMAN RIGHTS

(By Dr. Ku Cheng-kang)

Distinguished Guests, Ladies and Gentlemen: The "Captive Nations Week" Movement calls for free world support to the subjugated peoples' endeavor for freedom and human rights. As the freedom of mankind remains exposed to serious threats of Communist expansion, and as the United States of America is promoting a human rights campaign but at the same time seeking "full normalization of relations" with the tyrannical Chinese Communist regime, we the representatives of various circles of the Republic of China are gathered here to intensify the "Captive Nations Week" Movement. Our purpose is to provide support to the struggle for freedom and human rights waged by our 800 million enslaved compatriots on the Chinese mainland and by all the other captive masses of people behind the Iron Curtain of the East and the West. We are here to issue calls that all the human beings rise and jointly undertake this loftiest mission of mankind.

COMMUNISM VS. FREEDOM AND RIGHTS

U.S. Congress initiated the "Captive Nations Week" Movement, thus fully reflecting the great American spirit—love of freedom and respect for justice. President Carter is now promoting a human rights campaign.

We at this moment must emphasize that human rights and freedom are inseparable and that human rights are not possible in the absence of freedom. We must further note that efforts to win and assure freedom and human rights cannot be separated from endeavors against Communism and slavery. We would be contradicting ourselves if we were to allow Communist systems of enslavement to continue as we entertain hopes that human rights will prevail behind the Iron Curtain. Our present major goal of support to the captive Iron Curtain masses is to put the human rights campaign together with anti-Communist and anti-slavery struggles and powerfully promote this combination in all areas under Communist rule.

HISTORIC FREE WORLD RESPONSIBILITY

Free nations should have a keen sense of responsibility for the captive peoples. Assistance for their effort to win freedom and human rights is the action free nations must take. More than a billion subjugated individuals are now striving for freedom and human rights. They have not yet attained their goal. This does not mean that Communist tyranny cannot be overthrown but is because free nations are soft and tolerant and, instead of providing necessary aid to the captive masses, have even been conducting negotiation and taking compromissary steps to let the Communists tighten their control of the oppressed people.

The United States is presently exploring ways to move toward so-called full normalization of relations with the Chinese Communists, but it must be pointed out that such steps contradict the principle of assistance to the captive peoples, are not in line with the wishes of the majority of Americans, and will doom the future of those now suffering under the Communists. The U.S. must not commit such a blunder in the face of history.

DANGER OF RAPPORT WITH PEIPING

At this seriously critical moment of history, we at this assembly must raise our voices and point out that if Washintgon were really to have full relationship with Peiping, the action would be tantamount to condonation of that regime's infringement upon the freedom and human rights of the 800 million Chinese mainland people. We must state that if the U.S. were to continue treating relations with the Chinese Communists as a central part of her foreign policy, America would be negating her own transitional national stand for justice and freedom. The U.S. must not entertain the idea that normalized relations with the Chinese Communists would contribute to the maintenance of world peace and global equilibrium, for such steps would, quite on the contrary, stimulate the Moscow-Peiping race for aggression and expansion and also serve as a pat on the shoulder for the Communists elsewhere who are likewise eager to stretch out. World peace would be seriously threatened and global equilibrium irreparably destroyed.

In America's search for the solution of global issues, great importance must be attached to the restoration of a fourth of mankind to freedom. We therefore must make it clear that by normalizing so-called relations with the Chinese Communists, the United States would help Peiping keep a fourth of mankind deprived of freedom and human rights and let the regime use that much manpower for slave labor. Very obviously this would gravely damage Asian security and global peace and equilibrium.

We must particularly emphasize that there exists only the China issue, not a Taiwan question, and that there is only one China—the Republic of China that upholds freedom and democracy. The United States must understand that the only solution to the China issue lies in the return of the 800 million Chinese mainland people to freedom and human rights, and in the rebuilding of the mainland under freedom and democracy so that China as a whole can contribute importantly to the security, peace and equilibrium of Asia and the world.

Secretary of State Cyrus Vance is scheduled to visit the Chinese mainland late in August. We earnestly hope that he will clearly see the tyrannical regime's unchanged goal of world communization and human enslavement. We sincerely hope that he will attach importance to the voices raised in so many U.S. and foreign quarters against American recognition of Peiping and to the determination of the 800 million Chinese mainland people to win freedom and human rights. Our hopes are ardent that Mr. Vance will refrain from taking any step that will harm America's glory and prestige. If the U.S. were to depart from treaty obligations and defense commitments for the Republic of China, the trust held in America by the other free nations would be shattered. Consequences would be truly serious.

CAPTIVE PEOPLES' CORRECT ENDEAVORS

Ladies and Gentlemen: The Captive Nations Week was started by U.S. Congress in 1959. But the Communists still are keeping more than a billion people in chains and threatening the freedom and security of the free world. This cruel reality testifies that if freedom and human rights are to be assured, opposition to Communism and the Communists must be thorough. At this stage, the "Captive Nations Week" Movement demands that appeasement and compromise in the face of Communist forces must be immediately abandoned.

We must first urge the Carter Administration to cast aside the so-called Shanghai Communique and stop moving in the direction of so-called normalization of relations with the Chinese Communists who have committed the most atrocious crimes against human rights. This concrete action is necessary if the U.S. is to uphold human rights. Washington furthermore should understand that any attempt to win Peiping over as a checkmate against Moscow would irritate the Russians and bolster the possibility of a nuclear war. The U.S. therefore should bring together the anti-Communist strength of free nations and captive peoples and adopt a strategy and foreign policy for joint dealing of heavy blows at the Communist forces of enslavement. The U.S. public and mass media should now fully exert influence to make Washington adopt a foreign policy more in line with the popular American wishes that are characterized by love of freedom and respect for justice.

We must expose the scheme behind Peiping's anxiety to decoy the U.S. into the trap of diplomatic recognition. It must be understood by all that the Chinese Communists want formal American ties so as to isolate the Republic of China, save their tyrannical rule from falling apart, secure sophisticated American facilities and weapons for better confrontation against Russians and further bellicose expansionist moves, and furthermore use diplomatic relations as a cover for stepped-up united front maneuvers to destroy the American stronghold from within.

We also must call the attention of all the free nations to the fact that unity of freedom forces is a must if freedom and security are to be safeguarded. Through regional security systems, we should greatly enhance the unity and cooperation of free nations so that the strength thus consolidated can effectively promote efforts for self-help and mutual help in the face of the Communists who are attempting to divide and conquer free countries one by one.

We must unequivocally tell the world that the national policy of the Republic of China is one of staunch anti-Communism for the sake of freedom and human rights. We of the Republic of China will never talk or compromise with the Chinese Communists who think nothing of humanity and are bent on destroying freedom and human rights. We strongly request the United States to abide by her treaty obligations and defense commitments for the Republic of China. We are vehemently opposed to America's intention to normalize relations with the Chinese Communists. All the people of this nation, military and civilian alike, understand that we hold the key to our future and will with self-respect continue our revoluntary effort to make ourselves stronger. With firmness, calmness, unity, and unmatched spirit of endeavor, we will further effect social mobilization and help our Government attain the national recovery and reconstruction goal. We will pool the strength of all the patriotic Chinese at home and abroad and unite with all the other freedom-loving people of the world for joint endeavor to win freedom and human rights for the enslaved 800 million Chinese mainland people and others similarly held in captivity by the Communists.

Power struggle of the Chinese Communists has reached a stage of serious internal rift, thus providing opportune moments for the 800 million captive Chinese mainland people to rise against tyranny. We assure our mainland compatriots that we will continue to assist their anti-Communist struggle for freedom and human rights until the goal is fully attained. We passionately urge all our compatriots behind the Bamboo Curtain, including all the disgruntled cadres and military personnel, to emulate the gallant step taken by MIG Pilot Fan Yuan-yen and rush out of the Iron Curtain for freedom or take advantage of the widespread mainland confusion and launch an all-out anti-Communist revolution.

Ladies and Gentlemen: Man's determination to have freedom is indomitable and Communist rule can never be stable. Because of the Communist failure to make their totalitarian rule work the way they want, internal struggle is now interminable and the whole Communist forces are divided and disintegrating. This is the time for the free world to provide every possible assistance to the captive peoples struggle for freedom and human rights. We are firmly confident that once the Bamboo Curtain is brought down, the entire Iron Curtain will fall apart. We assertively believe that the pooled will power and strength of all the Chinese people here, abroad and on the Chinese mainland rising together for freedom and human rights can never be undermined. Our anti-Communist endeavor for freedom and human rights will be victorious. With supreme confidence we will steadily move toward this ultimate goal. We will strive indomitably to the very end.

DECLARATION—CAPTIVE NATIONS WEEK RALLY OF THE REPUBLIC OF CHINA

As the world is now boiling with a human rights campaign and flames against enslavement and for freedom are being spread by people everywhere behind the Iron Curtain, representatives of various circles of the Republic of China have gathered in Taipei today for a Captive Nations Week Rally to issue calls for the winning and promotion of freedom and human rights.

Together with freedom-fighter guests from throughout the world, including those representing subjugated peoples, we the rally participants have hoisted high the torch of "Anti-Communism for Freedom and Human Rights" and raised our voices to condemn all the Communist regimes for their totalitarian tyranny and enslavement of people in total disregard of human rights. We have resolved to further unite the world's freedom forces, step up assistance to the enslaved 800 million Chinese mainland people's struggle to win freedom and human rights, and strive on for the elimination of the ignoble phe-

nomenon of the world being half slave and only half free.

The world situation remains changeable and threats of Communist expansion are serious, but we are absolutely confident that our anti-Communist national recovery mission will succeed. We are certain that the sustained endeavor of all the people of this nation, united under the Three Principles of the People, will ultimately bring attainment of the goal of national survival and independence with freedom for all.

We are very much concerned about our 800 million compatriots who are chained and suffering under Communist tyranny on the Chinese mainland. We will punish the Chinese Communists for their oppression and enslavement of the mainland working masses, for the harm they have done to the bodies and minds of mainland intellectuals and youths through rustication and reform through labor, and for their crimes of massacre, terrorism and armed suppression as part of their power seizure struggle. We swear that we will thoroughly settle this blood debt with the group of fanatic rebels that are occupying the mainland.

We also are deeply concerned about all the other enslaved masses of people behind the Iron Curtain. Human sentiments are just as closely interrelated as flesh and blood. When a group of people in an area are subjected to Communist persecution, all the free world people similarly feel the pain and burn with anger.

We respect President Carter for his human rights campaign, but we also are disappointed by the regrettable fact that the United States is not promoting thorough human rights diplomacy and has been using different yardsticks in interpreting human rights.

We are confident that the ceaseless Communist oppression and slavery rule will ignite wide-spread opposition and fight to overthrow Red tyranny.

We are confident that even though the world still is confused, clarity and calmness will return, and that although Communist forces are now rampant, they will ultimately fall apart. We therefore must pool all the freedom forces and make the rule that "tyranny cannot last" ascertain itself before long.

The Rally therefore solemnly declares the following points to all the free nations and the subjugated peoples behind the Iron Curtain:

The Rally urges President Carter to see clearly that the Communist goal of world communization and human enslavement will never change, that the Chinese Communist regime is the source of most troubles in Asia, that America must abandon attempts to use Peiping as a checkmate against Moscow, that Washington should halt all moves toward so-called normalization of relations with Peiping, and that the U.S. ought to firmly abide by her treaty obligations and defense commitments for her allies and positively act at the head of free nations to assure free world security.

The Rally urges all the free nations to grasp the truth that peace is not possible in the absence of security, freedom and justice, and understand unequivocally that attempts to have "peaceful coexistence" with the Communists will only lead to the deplorable result of infiltration and subversion by the Communists. Free nations, therefore, must cast aside any hope to have peace through declaration of neutrality because such peace can only be precarious. Instead, unity must be enhanced for self-help through mutual assistance and for the safeguarding of freedom and human rights through application of strength.

The Rally urges all the captive masses of people behind the Iron Curtain to perceive the fact that all the Communist regimes are receiving blows from human rights promoters and that Communist rule is now shaky from its very foundation as a result of opposition by the people. Our hopes are earnest that the enslaved Iron Curtain people will pool their strength and will power for the overthrow of evil Communist rule so as to end slavery and win freedom.

All the rally participants extend their hearty welcome and sincere respect to Mr. Fan Yuan-yen who recently defected to freedom by flying a jet plane in response to Chairman Chiang Chiang-kuo's call for "spiritual alliance and active return" (to the Republic of China's fighting units). The gallant step taken by Freedom-Fighter Fan demonstrates that the mainland people view this island as a beacon of hope. The step furthermore has generated great encouragement for the free world and sharp impacts against the Chinese Communists. We the rally participants earnestly hope that all the disgruntled cadres and military personnel on the Chinese mainland will stop serving as tools of Peiping's power struggle, that the working masses will cast off the yokes, that the intellectuals will reject ideological persecution, and that the rusticated youths will take no more humiliation by the Communists. Through all-out emulation of Mr. Fan Yuan-yen's heroic move, our compatriots can launch a mainland-wide anti-Communist revolution to destroy the tyrannical Peiping regime.

Anti-Communism for freedom and human rights is now a mighty driving force for the march of man's history. The "Captive Nations Week" Movement is now a powerful call for the winning and promotion of freedom and human rights. All the freedom-loving people of the world must now unite ever more strongly and, taking advantage of opportune moments, move ahead decisively for the restoration of the captive masses to freedom and for the hewing of a bright future for man's society.

CABLE MESSAGE TO PRESIDENT JIMMY CARTER

JULY 22, 1977.

President JIMMY CARTER,
White House Washington (DC):

Representatives of the Republic of China's various circles and freedom-fighter leaders from throughout the world, including those representing subjugated peoples, have gathered in Taipei today for a Captive Nations Week Rally in response to the movement initiated by the United States and resolved to express sincere respect for your lofty human rights ideal.

Tyrannical Communist regimes have not changed their goal of world communization and human enslavement. Masses of people behind the Iron Curtain remain oppressed and the free world is exposed to serious threats. All lovers of freedom should jointly oppose Communist enslavement and win and promote freedom and human rights.

Secretary of State Vance spoke before the Asia Society in New York June 29 and said America would move toward full normalization of relations with the Chinese Communists. This contradicts your human rights principle and serves only to help the Chinese Communists perpetuate their dark rule of the 800 million Chinese mainland people in complete disregard of human rights, thus bringing further serious damage to world peace.

The United States should not entertain the mistaken idea that the Chinese Communists can be won over as a checkmate against Russia. The Chinese Communists are backward and confused and have no such ability. American rapport with them will stimulate expansionist Russian moves and make America face the danger of nuclear holocaust.

If America as free world leader were to depart from her treaty obligations and defense commitments for the Republic of China, her international prestige would be impaired and the trust held in her by other free nations would be lost. The Communist scheme is to thus isolate America.

At this crucial moment, we the rally participants, respectfully urge your Excellency to see clearly that the China issue urgently demands strengthened friendship and mutual defense of America and the Republic of China for the assurance of the security and peace of the Taiwan area and for support to the struggle for freedom and human rights waged by one-fourth of mankind.

We sincerely hope that your Excellency will uphold America's traditional spirit and moral stand and write a brilliant page of American history by making important contribution to man's struggle against slavery and for freedom.

DR. KU CHENG-KANG,
Chairman, Captive Nations Week Rally of the Republic of China, Honorary Chairman, World Anti-Communist League, President, China Chapter of World Anti-Communist League and Asian Peoples Anti-Communist League.

COMPETITIVE ENERGY DEVELOPMENT ACT

HON. STEWART B. McKINNEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. McKINNEY. Mr. Speaker, today I am introducing a bill which will enhance the effectiveness of the national energy plan, recently passed in the House, and which will insure that our alternative energy sources, so essential to the economic well-being of our country, are developed in a competitive environment.

I am pleased with much of that which was included in the House version of the energy program and I congratulate my colleagues on their efforts in successfully accomplishing so arduous a task. However, Mr. Speaker, the national energy plan, with its emphasis on the rapid development of alternative energy sources, is not totally void of inadequacies. Both the General Accounting Office has criticized the program for its omission of milestones or thresholds by which we can monitor the progress—or lack of success—of our efforts to produce alternative energy supplies.

The omission of these indices to measure competition in alternative resource production—and the intentionally rapid production mandated by the energy program—intensifies both the potential for and severity of the problems we will confront in implementing this program. The potential dangers of artificially induced market conditions, such as a legislated time for production, have precedent in antitrust case law. In *United States* v. *Reading Co.* (253 U.S. 62), before the Supreme Court in 1920, the court found that when market power is not obtained by the normal expansion of enterprising management, but by deliberate, calculated purchase for control, regardless of its subsequent use, that power constitutes a menace and undue restraint upon interstate commerce. As such, it violates the antitrust laws. There is justifiable fear that the legislated rapidity of alternate energy production may further limit

the effectiveness of both monitoring activities and of antitrust enforcement procedures by amassing dangerous market power in the name of our new national energy production goals. Already, Mr. Speaker, suspicion abounds regarding the possible effects of horizontal integration in alternate fuel production. In short, and however necessary, the enforced, rapid development of alternate fuels creates a dangerous uncertainty about the future competitive integrity of our energy markets.

Mr. Speaker, as a result of these concerns a substantial number of Members in both Houses have proposed or supported divestiture of horizontally integrated energy producers. While I can appreciate their concerns, I do not see legislative divestiture as the most constructive solution to present or potential problems of excessive concentration. There are many variables and potentially dangerous implications associated with direct legislative divestiture. In fact, the same nagging uncertainties which confront our future alternative energy production plague the future of legislative divestiture.

However, Mr. Speaker, there is a way to maximize the advantages which can be accrued from the participation of oil firms in the development of alternative fuels, while simultaneously assuring that these sources are developed in a competitive environment. And, I think my bill can accomplish that.

The Competitive Energy Development Act is essentially divided into three parts: The development of criteria to measure competition, the continuous monitoring and enforcement of competitive practices in alternative energy development, and the annual evaluation and reporting of the state of competition within local, regional, and national energy markets.

Specifically, Mr. Speaker, the bill establishes the following:

CRITERIA

The Federal Trade Commission in consultation with the Department of Energy will develop criteria to measure the level of competition in alternative energy source markets and will schedule a public hearing to provide for widespread input into criteria formulation. The process of criteria development will be completed within 18 months after enactment of the bill.

The bill stipulates that the criteria will be based on both structural aspects of alternative energy production industries—including concentration, barriers to entry, reserve ownership, and distribution—and on performance aspects—including profitability, rates of production, and investment and expenditures for research and development. In addition the criteria will be designed to identify cross-subsidization of integrated energy segments, and will consider the similarities and differences of each regional market, industrial segment, and individual producing firm. Finally, the criteria will be revised at the end of every 5-year period in order to make it applicable to the changing market conditions mandated in the national energy plan.

MONITORING AND ENFORCEMENT

Based on information supplied by the Department of Energy and on data accumulated through its own jurisdictions, the FTC will continuously monitor competition in the markets to determine if the aforementioned criteria has been violated and by whom. If such violations exist, the FTC will then convene a hearing and issue an "order to show cause" why the violator should not be held responsible for anticompetitive behavior. At the conclusion of the hearing, the FTC will issue a final report and make recommendations to remedy the anticompetitive situation within the affected market. These recommendations could include requests for action to be taken by any agency or department of Government, including the FTC, and would not exclude divesting the violator of its holdings in that market. The FTC will naturally base its recommendation on a complete assessment of each possible option to remedy the violation.

ANNUAL REPORT

A report will be issued by the FTC on the state of competition—based on the aforementioned criteria—within the alternative energy source market and will explain changing trends in each market with respect to the state of competition. From these reports the FTC can and should make recommendations, legislative or otherwise, aimed at correcting any regressive trends within the industry.

Finally, the bill requires the Department of Energy to supply the FTC with any requested materials which would assist them in carrying out the provisions of this act. No information provided shall lose any confidentiality, which it had by law, when in the possession of the Department of Energy.

Mr. Speaker, I am proud of this bill because it represents a reasonable and effective way to assist in the development of the badly needed alternative energy sources and maintains the competition essential to the best interests of this country. I would urge my colleagues, all of them, on each side of the divestiture issue, to join with me in supporting this reasonable and fair approach.

A TRAGIC GENOCIDAL ANNIVERSARY

HON. WILLIAM M. BRODHEAD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. BRODHEAD. Mr. Speaker, on August 12, 1952, at the height of Stalinist terror against Soviet Jews, 24 leading Jewish writers and intellectuals in Moscow were executed for being "enemies of the U.S.S.R., agents of American imperialism and bourgeois nationalist Zionists." This tragic event, which occurred only 25 years ago, was only one of a long list of atrocities committed by the Soviet Union against its Jewish citizens.

Today, as Soviet Jewry continues to struggle for basic human rights, we can ill afford to forget the history of this movement for civil rights in the Soviet Union or the sacrifices that have been made by thousands of Soviet citizens. The Detroit Jewish News recently commented on this matter and I would like to share this editorial with my colleagues:

A TRAGIC GENOCIDAL ANNIVERSARY

This is a tragic day on the Jewish calendar and in human relations.

In a sense Aug. 12 is a genocidal day. It was 25 years ago on this date that the most distinguished Jewish writers were massacred in Russia as part of the Stalinist madness.

Only the death of Stalin in 1953 brought respite to a decade of killings from 1946 to 1955, during which everything religious and cultural was under attack and the very lives of those engaged in them were in jeopardy. The period of 1946 to 1953 was labeled "the Black Years." The 431 eminent Jews who were murdered at that time included 217 writers, 103 actors, 87 painters and sculptors and 10 musicians. They were imprisoned in labor camps and many were tortured. A chronology of the horrors of these "Black Years," compiled by the National Conference on Soviet Jewry, reveals the following tragedies:

1946—The Soviet Yiddish writer Vasili Grossman, in the city of Berdichev, was refused permission to publish his "Black Book" of Nazi crimes against Soviet Jews.

1947—Rabbi Lev of Kharkov was arrested, after refusing to become an informer, later dying in a labor camp. The Kharkov synagogue was closed in 1948.

1948—The Jewish writer Solomon Mikhoels was killed by the KGB in Minsk.

1949—The Olevsk synagogue was closed and its building confiscated. That same year the Jewish Anti-Fascist Committee was dissolved, its leaders arrested. Many Jewish writers were accused of Zionism and of links with "American Imperialism."

1951—Rabbi Labanov of Leningrad was sentenced to five years in prison, while Rabbi Epshtein was sentenced to 10 years. Seven houses of worship were closed in Leningrad.

1952—On Aug. 12, 24 of the leading Jewish writers and intellectuals in Moscow were executed at the Lubianka prison as a climax of Stalin's terror campaign to wipe out all vestiges of Soviet Yiddish culture. The execution took place less than one month after they had been accused of being "enemies of the USSR, agents of American imperialism and bourgeois nationalist Zionists."

January, 1953—Prominent doctors, many of them Jewish accused of conspiring to kill Soviet leaders were arrested. A wave of government inspired anti-Semitism swept through the USSR.

1953—The Communist magazine Krokodil attacks, in the same article, "American and British bankers, colonialist's, armament rings, Nazi generals, the Vatican and the Zionist conspiracy."

1956—Several hundred Jews arrested for 'economic crimes' and sentenced to long prison terms in labor camps. Seventy-five percent of those arrested were executed.

In the process of the confrontation with the Soviet Union that escalated from President Carter's emphasis on human rights, it is of the utmost importance that the recollections of what had occurred under Stalinism should not be dimmed, that the rights of Jews should not be ignored, that the elementary principle that people have a right, often a duty, to emigrate when they live under oppression, should not be abused.

A serious duty devolves upon all free men not to reduce the efforts in behalf of Russian Jewry and to carry on the battle in their behalf without uncalled for intermissions. The tasks ahead were notably outlined by Eugene Gold, the chairman of the National

Conference on Soviet Jewry, who declared, memorializing the 24 Jewish poets, writers and intellectuals who were murdered on Aug. 12, 1952:

"Those cruel and senseless series of executions, which demolished the remnants of Jewish culture in the USSR, have been commemorated in the best possible way—hundreds of thousands of Soviet Jews have declared their Jewish consciousness, refused to be intimidated by Soviet agents and tactics, and applied to emigrate to Israel and elsewhere. Soviet officials must realize that while it executed the finest of Soviet Jewish intellectuals, it will not eradicate Jewish culture, as shown by last year's symposium on Jewish culture in Moscow, and it cannot destroy Jewish will or subvert Jewish consciousness.

"Once again, there will be events nationwide commemorating those murdered 25 years ago. We call upon the Soviet Union to let those Jews who wish to emigrate to do so, without further harassment. We call upon them to rehabilitate the names of those murdered, acknowledge their grave sites so that they may be taken out of historical oblivion and properly memorialized and we call upon the USSR to cease the pattern of anti-Semitism which has tragically become so prevalent in publications and the media, and end the persecution of Soviet Jews seeking their basic human rights."

The American concern is especially heartening on this sad day. Not only the President, but leading members of Congress, including members of the Michigan congressional delegation, consistently exert their energies in behalf of the rescue and emigration efforts for the Jews of Russia. Many have been aided in emigrating, others are being assisted. With such continuing support as a basic American policy of succor for the oppressed, and with the tragic Russian occurrences during the "Black Years" as reminders, there is hope that what had happened then will not recur.

FOLLY IN THE AIRBAG EDICT

HON. BUD SHUSTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. SHUSTER. Mr. Speaker, James J. Kilpatrick wrote a thoughtful column in the September 6 Washington Star entitled "Folly in the Airbag Edict." I commend it to my colleagues for their consideration as the Congress moves toward a decision to accept or reject the recent airbag/passive restraint mandate by the National Highway Traffic Safety Administration.

FOLLY IN THE AIRBAG EDICT

(By James J. Kilpatrick)

Marshall Wright, president of the Eaton Corp., testified last spring during the course of hearings on whether airbags should be made mandatory on passenger cars sold in this country. He made a whole lot of sense.

The Eaton Corp. is deeply involved in the controversy. Eaton has produced and helped to install more than 4,000 airbags in automobiles made by Ford, General Motors and Volvo. The company has invested 12 years and $20 million in developing an airbag to protect motorists in head-on collisions.

You might expect that Eaton would have been out in front, begging Transportation Secretary Brock Adams for an order mandating the universal and immediate installation of these devices.

Not so. Wright spoke in opposition. His testimony recently was reprinted by *Car and Driver* magazine, from which I pass along these excerpts. They constitute the best argument I have read against Secretary Adams' order.

"The worst thing that ever happened to airbags," said Wright, "was their premature mandate in 1970. If the DOT had played a more restrained role in encouraging this product, the airbag would by now be commonplace on the highway. When the mandate was issued, we had an active program of cooperation with the manufacturers of 80 per cent of U.S. automobiles.

"Much has been said about the hostility of the auto makers to the airbag. Let me make it clear. We did not find them hostile to the airbag, but rather to the prospect of having it rammed down their throats.

"The renunciation of the test program proposed by former Transportation Secretary William Coleman (a pilot project involving 225,000 GM and Ford cars) fills us with what I can only describe as a sense of moral outrage. At long last, after all the false starts, the DOT had a program in cooperation with the industry by which hundreds of thousands of airbags would actually reach the public. They would get a chance to judge its value for themselves. Manufacturers of both components and automobiles would get invaluable experience with the problems inherent in volume production of this product.

"After its recent experience with mandates, Eaton finds it incredible that the DOT should now be contemplating the across-the-board mandate of the airbag. Nothing is so surely calculated to kill the airbag as a mandate. No one has the necessary experience and knowledge to go from zero to 10 million airbags a year. And if government forces that kind of irrationality upon industry, the result is certain. There will be an unacceptable number of malfunctions, and public attention will focus on them. The public will lose confidence in airbags and become hostile to the mandate. And the DOT will reverse its decision, as it was forced to do with the ignition interlock.

"But huge investments will already have been made. And who will pay the cost for this folly? If you mandate airbags now, you are trying to repeal by fiat what is a natural law of product development. . .

"One final point, and it is the heart of the matter: If you truly want to improve highway safety, you must find a means to work with industry to develop, to test, to refine, to manufacture on a limited scale, to refine again, and on a phased basis to seek public acceptance of new safety products. Where possible, do not mandate. Do not presume that the government is the repository of all virtue and wisdom in the automotive industry. Trust, stimulate and use the capacity of American industry and the judgment of the American people. And if it does not coincide with your own, then go and re-examine your own.

"And if, as you have suggested, the law as it is currently written does not enable the DOT to behave in that manner, then concentrate your efforts and your talents on getting the law changed."

Sad to say, Secretary Adams paid no attention to that sound advice. He ordered passive restraints installed on all cars by 1985.

Congress has power to kill the mandate, to turn away from needless compulsion, and to let a free marketplace do its job.

WHAT WAS IT MADE GORDY BENSON RUN?

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. VENTO. Mr. Speaker, from time to time I have inserted into the RECORD the columns by one Oliver Towne—Gary Hiebert—which appear in the St. Paul, Minn., Dispatch Pioneer Press on a regular basis. Of course, Mr. Hiebert writes with unusual sensitivity and often seems to go to great lengths to tell stories that need telling; such as his article, "What Was It Made Gordy Benson Run?"

Gordy and his wife, Betty, have a small neighborhood tavern, which is equally well known for its fine food and sociability. As part of the neighborhood scene, they participated in activities of the area; especially kids' teams. As is indicated below, their generosity knew no bounds and it was always based on complete anonymity. In addition, Gordy dearly loved to fish and he was a proficient fisherman. He always tried to save a great part of his catch for some of the old folks who frequented Benson's place. Gordy often observed that good, fresh fish were mighty expensive and those on fixed incomes would enjoy such a treat.

Things haven't changed too much at Benson's since Gordy passed away, and Betty promised that the atmosphere and menu would stay the same—including their justly famous porkchop sandwich. As long as that is the case, we will always have Gordy there in a sense, smiling his little smile, asking his questions with just a hint of a twinkle, and doing his good works without fanfare or public notice; except, of course, for those of us who know him well:

[From the St. Paul Dispatch, Aug. 9, 1977]

WHAT WAS IT MADE GORDY BENSON RUN?

(By Oliver Towne)

After they're gone through the "stadium tax" on drinks, argued the energy crisis and prospects for a cold winter, the talk in Benson's bar inevitably gets around to Gordy Benson.

Just up the block from the bar, at Hazel and Stillwater Aves., on Hazel Park playground, when, the evening's games are finished, they sit around talking about Gordy Benson.

As they pack up their gear at the Little League field, the name Gordy Benson pops up, as it does when the business sessions in Hazel Park Commercial Club are over and the coffee is poured. And when the Hazel Park Boosters meet.

Not a few echo the obviously awed person who whispered to Betty Benson the afternoon of Gordy's funeral on Payne Avenue last June:

"Did anybody realize he knew all these people?"

Was the reference to the 57 floral pieces, the 983 "thank you" letters she sent to those who cared, or the longest funeral cortege in recent memory which moved up Payne Avenue that afternoon to Roselawn Cemetery?

It was much more than that and some of them in Benson's tried to explain to me how the aura and magnetism of Gordon Benson still fills the bar he ran these last eight years.

"I wonder how many playground football, softball, baseball and hockey teams that Big Swede sponsored nobody ever knew about?" said his widow.

"What I know it was a dozen and more . . . but that doesn't count the jackets he paid for, the buses he chartered to take the teams and parents places, the way he'd reach into the till and hand over a $50 bill when the kids came in with something that needed doing."

Mrs. Helen Emeott was talking. Waitress and member of the "family all these years at Benson's. Mother, too, of some who were touched by Gordy's munificence.

"He never let his name be used on anything he paid for . . . never on the jackets or the teams he sponsored," she said.

"I think he was a little sensitive about a bar owner doing all these things for kids," said one of the regulars, who had sidled over.

"He always said: 'How would it look to have playground teams wearing Benson's liquors on their jackets or shirts?"

But Gordon Benson wasn't shy. He was big and affable and liked to clown; but there was this other side to him that nobody knew. Well, those who were on the receiving end knew, but they never realized he was multiplying their help a thousandfold all over the Hazel Park neighborhood of the city.

"Like the visits he made, the cards he sent when customers got sick or were in trouble," said Helen. "Some days he spent most of his time going from hospital to hospital, cheering up customers or people in the area; he always left more than a good wish and a card . . ."

"Let's talk about those cards," said Betty Benson.

"He spent hours picking out exactly the cards that had the right message."

"You know of the Blue Knights Drum and Bugle Corps . . . the former Boy Scout A Corps . . . well, Gordy was one of the biggest silent, financial boosters they had," Helen remembered.

"And our playground hockey team went to the regionals in Faribault and we couldn't get a dime from the city for entry fees, even. Know who paid it all, hired the buses, got us there and back, Gordon Benson."

"But he would never let anybody know all that. He never wanted it mentioned," said Betty. "I didn't even know."

Gordy died in his role as Good Neighbor.

One minute he was smiling, talking, laughing at a high school graduation reception for a friend's daughter and the next moment he was dead from a heart attack at 58 on the floor of the Northwestern State Bank social rooms.

People come into Benson's and worry that Betty is going to change things. They want it like it was when Gordy was there.

"Listen," Betty said, "during the days before the funeral, we closed up here. And every morning there were two bunches of flowers pinned to the door.

"Do you think I'm going to change that feeling?"

"NEED FOR ACTION ON CLIMATE BILL"

HON. LARRY WINN, JR.

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 1977

Mr. WINN. Mr. Speaker, at the present time there is legislation on the Union Calendar, H.R. 6669, for establishing a national climate program. The Committee on Science and Technology unanimously voted the bill out of committee on May 6, 1977. Since that time the bill has languished. I bring this point up now because of two related issues. (1) the National Academy of Sciences study on carbon dioxide buildup in the atmosphere; and (2) President's Carter's energy plan to increase coal usage.

Regarding the first issue, the National Academy of Sciences (NAS) released the results of a 2-year study on the effects of a carbon dioxide buildup in the atmosphere. As you know, the carbon dioxide buildup is a result of the combustion of any kind of fossil fuel—coal, oil, or gas. This is important. In fact, it is terribly important because the carbon dioxide buildup, if it continues, will cause a major warming of the global climate; this is the so-called "greenhouse effect." The NAS study described how this warming in turn will have major impacts on several important aspects of our life: First, agriculture: Deserts may expand, replacing marginal cropland. The warming may move the "Corn Belt" north (for example, into Canada) away from the fertile soils of our Great Plains into poorer yielding subarctic soils. Second, fisheries: Such major changes in global temperature will change ocean circulation, probably generally reducing the amount of upwelling and thus the nutrients on which the marine food chain depends. Third, sealevel: Melting of polar ice will cause a rise in sealevel of as much as 15 feet which will have major impacts in many areas.

The arguments and predictions of the NAS study are corroborated in an article by C. F. Baes, Jr., H. E. Goeller, J. S. Olson, and R. M. Rotty entitled "Carbon Dioxide and Climate: The Uncontrolled Experiment," which appeared in the May/June 1977 issue of the American Scientist. As the title suggests, by burning fossil fuels and injecting CO_2 into the atmosphere, we are essentially conducting an uncontrolled experiment on ourselves. We are going to put the CO_2 into the air and see what happens. And what happens could be very bad if, for example, we should lose much of our food-growing capacity. Clearly, it is not wise to proceed blindly to carry out this experiment. The climate bill, H.R. 6669, will address this specific problem, the "greenhouse effect," and point out ways to mitigate its impact.

The second issue is the President's energy policy. As you know, President Carter has recommended that we burn more coal, and we are beginning to move down that path. But both the NAS study and the article by Baes, argue that we had better be very careful before we commit to such a path. We still have time because the expected impacts will not occur for 70 years. But we need to begin our studies now to confirm whether or not we can afford to burn coal for another 70 years. In other words, we need harder data and more data before we make such a major decision as deciding not to utilize our coal and oil reserves as fuels. If we find we really must not continue to burn fossil fuels, it will take decades first to develop and then to convert to alternate energy sources. And the conversion will have to be completed in much less than 70 years or we will have already begun to suffer most of the impacts. By looking at the necessary leadtimes, we see we really need to begin now to try to understand the "uncontrolled experiment" we are doing, and to get some control of it.

To make these long-term policy decisions, the Congress needs the legislation contained in H.R. 6669. Mr. Speaker, I know you recognize the importance of this bill, and I urge you to do all you can to expedite its consideration.

SENATE COMMITTEE MEETINGS

Title IV of the Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare this information for printing in the Extension of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, September 8, 1977, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

SEPTEMBER 9

8:00 a.m.
Energy and Natural Resources
Energy Conservation and Regulation Subcommittee
To hold hearings on part E, utility rate reform of S. 1469, National Energy Policy Act.
3110 Dirksen Building

8:30 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To continue hearings on automatic auto crash protection devices.
5110 Dirksen Building

9:00 a.m.
Human Resources
To hold hearings on the nominations of Joseph D. Duffy, of the District of Columbia, to be Chairman of the National Endowment of the Humanities, and Frank Jones, of Virginia, to be an Assistant Director of the Community Services Administration.
4232 Dirksen Building

9:30 a.m.
Judiciary
Antitrust and Monopoly Subcommittee
To continue hearings on S. 1874, to allow recovery for damages by direct or indirect purchasers of goods.
2228 Dirksen Building

SEPTEMBER 9

10:00 a.m.

Appropriations
District of Columbia Subcommittee
To mark up proposed appropriations for fiscal year 1978 for the District of Columbia.
S-146, Capitol

Banking, Housing, and Urban Affairs
To hold oversight hearings on the relationships between welfare reform and public housing programs.
5302 Dirksen Building

Energy and Natural Resources
To mark up part D, natural gas pricing, of S. 1469, National Energy Policy Act.
3110 Dirksen Building

Finance
To hold hearings on H.R. 9444, proposed Energy Tax Act of 1977
2221 Dirksen Building

Select Indian Affairs
To hold hearings on the nomination of Forrest J. Gerard, of Maryland, to be an Assistant Secretary of the Interior.
6202 Dirksen Building

SEPTEMBER 12

9:00 a.m.

Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To hold hearings on S. 418, to establish Multipurpose Service Centers for displaced homemakers.
Until 12:30 p.m.
4232 Dirksen Building

9:30 a.m.

Banking, Housing, and Urban Affairs
To hold hearings on S. 1710, proposed Federal Insurance Act of 1977.
5302 Dirksen Building

10:00 a.m.

Energy and Natural Resources
Business meeting on pending calendar business.
3110 Dirksen Building

Finance

HOUSE OF REPRESENTATIVES—*Thursday, September 8, 1977*

The House met at 10 o'clock a.m.

Dr. William R. Hintze, president, Grand Canyon College, Phoenix, Ariz., offered the following prayer:

Father God—

We praise Your holy name in deep gratitude for the creation and preservation of our world, and our Nation, and our Government.

We thank You for an abundant life with personal liberty and the promise that You hear and answer our prayers.

We ask that You would keep our country free, that You would help us to hold high the worth and dignity of each citizen and visitor in our blessed America.

We humbly request that Your Holy Spirit be present in this session of the House of Representatives, that Your Holy Spirit guide each deliberation and empower each correct decision so that beneficial government will be fact for the citizens of our dear land.

In Jesus' blessed name I pray. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 342. Concurrent resolution to correct technical errors in the enrollment of the bill S. 1153.

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 1752. An act to extend certain programs under the Elementary and Secondary Education Act of 1965 for one year, and for other purposes.

DEBT COLLECTION PRACTICES ACT

Mr. ANNUNZIO. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 5294) to amend the Consumer Credit Protection Act to prohibit abusive practices by debt collectors, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Strike out all after the enacting clause and insert: That the Consumer Credit Protection Act (15 U.S.C. 1601 et seq.) is amended by adding at the end thereof the following new title:

"TITLE VIII—DEBT COLLECTION PRACTICES

"Sec.
"801. Short title.
"802. Findings and purpose.
"803. Definitions.
"804. Acquisition of location information.
"805. Communication in connection with debt collection.
"806. Harassment or abuse.
"807. False or misleading representations.

"808. Unfair practices.
"809. Validation of debts.
"810. Multiple debts.
"811. Legal actions by debt collectors.
"812. Furnishing certain deceptive forms.
"813. Civil liability.
"814. Administrative enforcement.
"815. Reports to Congress by the Commission.
"816. Relation to State laws.
"817. Exemption for State regulation.
"818. Effective date.

"§ 801. Short title

"This title may be cited as the 'Fair Debt Collection Practices Act'.

"§ 802. Findings and purpose

"(a) There is abundant evidence of the use of abusive, deceptive, and unfair debt collection practices by many debt collectors. Abusive debt collection practices contribute to the number of personal bankruptcies, to marital instability, to the loss of jobs, and to invasions of individual privacy.

"(b) Existing laws and procedures for redressing these injuries are inadequate to protect consumers.

"(c) Means other than misrepresentation or other abusive debt collection practices are available for the effective collection of debts.

"(d) Abusive debt collection practices are carried on to a substantial extent in interstate commerce and through means and instrumentalities of such commerce. Even where abusive debt collection practices are purely intrastate in character, they nevertheless directly affect interstate commerce.

"(e) It is the purpose of this title to eliminate abusive debt collection practices by debt collectors, to insure that those debt collectors who refrain from using abusive debt collection practices are not competitively disadvantaged, and to promote consistent State action to protect consumers against debt collection abuses.

"§ 803. Definitions

"As used in this title—

"(1) The term 'Commission' means the Federal Trade Commission.

"(2) The term 'communication' means the conveying of information regarding a debt directly or indirectly to any person through any medium.

"(3) The term 'consumer' means any natural person obligated or allegedly obligated to pay any debt.

"(4) The term 'creditor' means any person who offers or extends credit creating a debt or to whom a debt is owed, but such term does not include any person to the extent that he receives an assignment or transfer of a debt in default solely for the purpose of facilitating collection of such debt for another.

"(5) The term 'debt' means any obligation or alleged obligation of a consumer to pay money arising out of a transaction in which the money, property, insurance, or services which are the subject of the transaction are primarily for personal, family, or household purposes, whether or not such obligation has been reduced to judgment.

"(6) The term 'debt collector' means any person who uses any instrumentality of interstate commerce or the mails in any business the principal purpose of which is the collection of any debts, or who regularly collects or attempts to collect, directly or indirectly, debts owed or due or asserted to be owed or due another. Notwithstanding the exclusion provided by clause (G) of the last sentence of this paragraph, the term includes any creditor who, in the process of collecting his own debts, uses any name other than his own which would indicate that a third person is collecting or attempting to collect such debts. For the purpose of section 808 (6), such term also includes any person who uses any instrumentality of interstate commerce or the mails in any business the principal purpose of which is the enforcement of security interests. The term does not include—

"(A) any officer or employee of a creditor while, in the name of the creditor, collecting debts for such creditor;

"(B) any person while acting as a debt collector for another person, both of whom are related by common ownership or affiliated by corporate control, if the person acting as a debt collector does so only for persons to whom it is so related or affiliated and if the principal business of such person is not the collection of debts;

"(C) any officer or employee of the United States or any State to the extent that collecting or attempting to collect any debt is in the performance of his official duties;

"(D) any person while serving or attempting to serve legal process on any other person in connection with the judicial enforcement of any debt;

"(E) any nonprofit organization which, at the request of consumers, performs bona fide consumer credit counseling and assists consumers in the liquidation of their debts by receiving payments from such consumers and distributing such amounts to creditors;

"(F) any attorney-at-law collecting a debt as an attorney on behalf of and in the name of a client; and

"(G) any person collecting or attempting to collect any debt owed or due or asserted to be owed or due another to the extent such activity (i) is incidental to a bona fide fiduciary obligation or a bona fide escrow arrangement; (ii) concerns a debt which was originated by such person; (iii) concerns a debt which was not in default at the time it was obtained by such person; or (iv) concerns a debt obtained by such person as a secured party in a commercial credit transaction involving the creditor.

"(7) The term 'location information' means a consumer's place of abode and his telephone number at such place, or his place of employment.

"(8) The term 'State' means any State, territory, or possession of the United States, the District of Columbia, the Commonwealth of Puerto Rico, or any political subdivision of any of the foregoing.

"§ 804. Acquisition of location information

"Any debt collector communicating with any person other than the consumer for the purpose of acquiring location information about the consumer shall—

"(1) identify himself, state that he is confirming or correcting location information concerning the consumer, and, only if expressly requested, identify his employer;

"(2) not state that such consumer owes any debt;

"(3) not communicate with any such person more than once unless requested to do so by such person or unless the debt collector reasonably believes that the earlier response of such person is erroneous or incomplete and that such person now has correct or complete location information;

"(4) not communicate by post card;

"(5) not use any language or symbol on any envelope or in the contents of any communication effected by the mails or telegram that indicates that the debt collector is in the debt collection business or that the communication relates to the collection of a debt; and

"(6) after the debt collector knows the consumer is represented by an attorney with regard to the subject debt and has knowledge of, or can readily ascertain, such attorney's name and address, not communicate with any person other than that attorney, unless the attorney fails to respond within a reasonable period of time to communication from the debt collector.

"§ 805. Communication in connection with debt collection

"(a) COMMUNICATION WITH THE CONSUMER GENERALLY.—Without the prior consent of the consumer given directly to the debt collector or the express permission of a court of competent jurisdiction, a debt collector may not communicate with a consumer in connection with the collection of any debt—

"(1) at any unusual time or place or a time or place known or which should be known to be inconvenient to the consumer. In the absence of knowledge of circumstances to the contrary, a debt collector shall assume that the convenient time for communicating with a consumer is after 8 o'clock antemeridian and before 9 o'clock postmeridian, local time at the consumer's location;

"(2) if the debt collector knows the consumer is represented by an attorney with respect to such debt and has knowledge of, or can readily ascertain, such attorney's name and address, unless the attorney fails to respond within a reasonable period of time to a communication from the debt collector or unless the attorney consents to direct communication with the consumer; or

"(3) at the consumer's place of employment if the debt collector knows or has reason to know that the consumer's employer prohibits the consumer from receiving such communication.

"(b) COMMUNICATIONS WITH THIRD PARTIES.—Except as provided in section 804, without the prior consent of the consumer given directly to the debt collector, or the express permission of a court of competent jurisdiction, or as reasonably necessary to effectuate a post judgment judicial remedy, a debt collector may not communicate, in connection with the collection of any debt, with any person other than the consumer, his attorney, a consumer reporting agency if otherwise permitted by law, the creditor, the attorney of the creditor, or the attorney of the debt collector.

"(c) CEASING COMMUNICATION.—If a consumer notifies a debt collector in writing that the consumer refuses to pay a debt or that the consumer wishes the debt collector to cease further communication with the consumer, the debt collector shall not communicate further with the consumer with respect to such debt, except—

"(1) to advise the consumer that the debt collector's further efforts are being terminated;

"(2) to notify the consumer that the debt collector or creditor may invoke specified remedies which are ordinarily invoked by such debt collector or creditor; or

"(3) where applicable, to notify the consumer that the debt collector or creditor intends to invoke a specified remedy.

If such notice from the consumer is made by mail, notification shall be complete upon receipt.

"(d) For the purpose of this section, the term 'consumer' includes the consumer's spouse, parent (if the consumer is a minor), guardian, executor, or administrator.

"§ 806. Harassment or abuse

"A debt collector may not engage in any conduct the natural consequence of which is to harass, oppress, or abuse any person in connection with the collection of a debt. Without limiting the general application of the foregoing, the following conduct is a violation of this section:

"(1) The use or threat of use of violence or other criminal means to harm the physical person, reputation, or property of any person.

"(2) The use of obscene or profane language or language the natural consequence of which is to abuse the hearer or reader.

"(3) The publication of a list of consumers who allegedly refuse to pay debts, except to a consumer reporting agency or to persons meeting the requirements of section 603(f) or 604(3) of this Act.

"(4) The advertisement for sale of any debt to coerce payment of the debt.

"(5) Causing a telephone to ring or engaging any person in telephone conversation repeatedly or continuously with intent to annoy, abuse, or harass any person at the called number.

"(6) Except as provided in section 804, the placement of telephone calls without meaningful disclosure of the caller's identity.

"§ 807. False or misleading representations

"A debt collector may not use any false, deceptive, or misleading representation or means in connection with the collection of any debt. Without limiting the general application of the foregoing, the following conduct is a violation of this section:

"(1) The false representation or implication that the debt collector is vouched for, bonded by, or affiliated with the United States or any State, including the use of any badge, uniform, or facsimile thereof.

"(2) The false representation of—

"(A) the character, amount, or legal status of any debt; or

"(B) any services rendered or compensation which may be lawfully received by any debt collector for the collection of a debt.

"(3) The false representation or implication that any individual is an attorney or that any communication is from an attorney.

"(4) The representation or implication that nonpayment of any debt will result in the arrest or imprisonment of any person or the seizure, garnishment, attachment, or sale of any property or wages of any person unless such action is lawful and the debt collector or creditor intends to take such action.

"(5) The threat to take any action that cannot legally be taken or that is not intended to be taken.

"(6) The false representation or implication that a sale, referral, or other transfer of any interest in a debt shall cause the consumer to—

"(A) lose any claim or defense to payment of the debt; or

"(B) become subject to any practice prohibited by this title.

"(7) The false representation or implication that the consumer committed any crime or other conduct in order to disgrace the consumer.

"(8) Communicating or threatening to communicate to any person credit information which is known or which should be known to be false, including the failure to communicate that a disputed debt is disputed.

"(9) The use or distribution of any written communication which simulates or is falsely represented to be a document authorized, issued, or approved by any court, official, or agency of the United States or any State, or which creates a false impression as to its source, authorization, or approval.

"(10) The use of any false representation or deceptive means to collect or attempt to collect any debt or to obtain information concerning a consumer.

"(11) Except as otherwise provided for communications to acquire location information under section 804, the failure to disclose clearly in all communications made to collect a debt or to obtain information about a consumer, that the debt collector is attempting to collect a debt and that any information obtained will be used for that purpose.

"(12) The false representation or implication that accounts have been turned over to innocent purchasers for value.

"(13) The false representation or implication that documents are legal process.

"(14) The use of any business, company, or organization name other than the true name of the debt collector's business, company, or organization.

"(15) The false representation or implication that documents are not legal process forms or do not require action by the consumer.

"(16) The false representation or implication that a debt collector operates or is employed by a consumer reporting agency as defined by section 603(f) of this Act.

"§ 808. Unfair practices

"A debt collector may not use unfair or unconscionable means to collect or attempt to collect any debt. Without limiting the general application of the foregoing, the following conduct is a violation of this section:

"(1) The collection of any amount (including any interest, fee, charge, or expense incidental to the principal obligation) unless such amount is expressly authorized by the agreement creating the debt or permitted by law.

"(2) The acceptance by a debt collector from any person of a check or other payment instrument postdated by more than five days unless such person is notified in writing of the debt collector's intent to deposit such check or instrument not more than ten nor less than three business days prior to such deposit.

"(3) The solicitation by a debt collector of any postdated check or other postdated payment instrument for the purpose of threatening or instituting criminal prosecution.

"(4) Depositing or threatening to deposit any postdated check or other postdated payment instrument prior to the date on such check or instrument.

"(5) Causing charges to be made to any person for communications by concealment of the true purpose of the communication. Such charges include, but are not limited to, collect telephone calls and telegram fees.

"(6) Taking or threatening to take any nonjudicial action to effect dispossession or disablement of property if—

"(A) there is no present right to possession of the property claimed as collateral through an enforceable security interest;

"(B) there is no present intention to take possession of the property; or

"(C) the property is exempt by law from such dispossession or disablement.

"(7) Communicating with a consumer regarding a debt by post card.

"(8) Using any language or symbol, other than the debt collector's address, on any envelope when communicating with a consumer by use of the mails or by telegram, except that a debt collector may use his business name if such name does not indicate that he is in the debt collection business.

"§ 809. Validation of debts

"(a) Within five days after the initial communication with a consumer in connection with the collection of any debt, a debt collector shall, unless the following information is contained in the initial communication or the consumer has paid the debt, send the consumer a written notice containing—

"(1) the amount of the debt;

"(2) the name of the creditor to whom the debt is owed;

"(3) a statement that unless the consumer, within thirty days after receipt of the notice, disputes the validity of the debt, or any portion thereof, the debt will be assumed to be valid by the debt collector;

"(4) a statement that if the consumer notifies the debt collector in writing within the thirty-day period that the debt, or any portion thereof, is disputed, the debt collector will obtain verification of the debt or a copy of a judgment against the consumer and a copy of such verification or judgment will be mailed to the consumer by the debt collector; and

"(5) a statement that, upon the consumer's written request within the thirty-day preiod, the debt collector will provide the consumer with the name and address of the original creditor, if different from the current creditor.

"(b) If the consumer notifies the debt collector in writing within the thirty-day period described in subsection (a) that the debt, or any portion thereof, is disputed, or that the consumer requests the name and address of the original creditor, the debt collector shall cease collection of the debt, or any disputed portion thereof, until the debt collector obtains verification of the debt or a copy of a judgment, or the name and address of the original creditor, and a copy of such verification or judgment, or name and address of the original creditor, is mailed to the consumer by the debt collector.

"(c) The failure of a consumer to dispute the validity of a debt under this section may not be construed by any court as an admission of liability by the consumer.

"§ 810. Multiple debts

"If any consumer owes multiple debts and makes any single payment to any debt collector with respect to such debts, such debt collector may not apply such payment to any debt which is disputed by the consumer and, where applicable, shall apply such payment in accordance with the consumer's directions.

"§ 811. Legal actions by debt collectors

"(a) Any debt collector who brings any legal action on a debt against any consumer shall—

"(1) in the case of an action to enforce an interest in real property securing the consumer's obligation, bring such action only in a judicial district or similar legal entity in which such real property is located; or

"(2) in the case of an action not described in paragraph (1), bring such action only in the judicial district or similar legal entity—

"(A) in which such consumer signed the contract sued upon; or

"(B) in which such consumer resides at the commencement of the action.

"(b) Nothing in this title shall be construed to authorize the bringing of legal actions by debt collectors.

"§ 812. Furnishing certain deceptive forms

"(a) It is unlawful to design, compile, and furnish any form knowing that such form would be used to create the false belief in a consumer that a person other than the creditor of such consumer is participating in the collection of or in an attempt to collect a debt such consumer allegedly owes such creditor, when in fact such person is not so participating.

"(b) Any person who violates this section shall be liable to the same extent and in the same manner as a debt collector is liable under section 813 for failure to comply with a provision of this title.

"§ 813. Civil liability

"(a) Except as otherwise provided by this section, any debt collector who fails to comply with any provision of this title with respect to any person is liable to such person in an amount equal to the sum of—

"(1) any actual damage sustained by such person as a result of such failure;

"(2)(A) in the case of any action by an individual, such additional damages as the court may allow, but not exceeding $1,000; or

"(B) in the case of a class action, (i) such amount for each named plaintiff as could be recovered under subparagraph (A), and (ii) such amount as the court may allow for all other class members, without regard to a minimum individual recovery, not to exceed the lesser of $500,000 or 1 per centum of the net worth of the debt collector; and

"(3) in the case of any successful action to enforce the foregoing liability, the costs of the action, together with a reasonable attorney's fee as determined by the court. On a finding by the court that an action under this section was brought in bad faith and for the purpose of harassment, the court may award to the defendant attorney's fees reasonable in relation to the work expended and costs.

"(b) In determining the amount of liability in any action under subsection (a), the court shall consider, among other relevant factors—

"(1) in any individual action under subsection (a)(2)(A), the frequency and persistence of noncompliance by the debt collector, the nature of such noncompliance, and the extent to which such noncompliance was intentional; or

"(2) in any class action under subsection (a)(2)(B), the frequency and persistence of noncompliance by the debt collector, the nature of such noncompliance, the resources of the debt collector, the number of persons adversely affected, and the extent to which the debt collector's noncompliance was intentional.

"(c) A debt collector may not be held liable in any action brought under this title if the debt collector shows by a preponderance of evidence that the violation was not intentional and resulted from a bona fide error notwithstanding the maintenance of procedures reasonably adapted to avoid any such error.

"(d) An action to enforce any liability created by this title may be brought in any appropriate United States district court without regard to the amount in controversy, or in any other court of competent jurisdiction, within one year from the date on which the violation occurs.

"(e) No provision of this section imposing any liability shall apply to any act done or omitted in good faith in conformity with any advisory opinion of the Commission, notwithstanding that after such act or omission has occurred, such opinion is amended, rescinded, or determined by judicial or other authority to be invalid for any reason.

"§ 814. Administrative enforcement

"(a) Compliance with this title shall be enforced by the Commission, except to the extent that enforcement of the requirements imposed under this title is specifically committed to another agency under subsection (b). For purpose of the exercise by the Commission of its functions and powers under the Federal Trade Commission Act, a violation of this title shall be deemed an unfair or deceptive act or practice in violation of that Act. All of the functions and powers of the Commission under the Federal Trade Commission Act are available to the Commission to enforce compliance by any person with this title, irrespective of whether that person is engaged in commerce or meets any other jurisdictional tests in the Federal Trade Commission Act, including the power to enforce the provisions of this title in the same manner as if the violation had been a violation of a Federal Trade Commission trade regulation rule.

"(b) Compliance with any requirements imposed under this title shall be enforced under—

"(1) section 8 of the Federal Deposit Insurance Act, in the case of—

"(A) national banks, by the Comptroller of the Currency;

"(B) member banks of the Federal Reserve System (other than national banks), by the Federal Reserve Board; and

"(C) banks the deposits or accounts of which are insured by the Federal Deposit Insurance Corporation (other than members of the Federal Reserve System), by the Board of Directors of the Federal Deposit Insurance Corporation;

"(2) section 5(d) of the Home Owners Loan Act of 1933, section 407 of the National Housing Act, and section 6(1) and 17 of the Federal Home Loan Bank Act, by the Federal Home Loan Bank Board (acting directly or through the Federal Savings and Loan Insurance Corporation), in the case of any institution subject to any of those provisions;

"(3) the Federal Credit Union Act, by the Administrator of the National Credit Union Administration with respect to any Federal credit union;

"(4) the Acts to regulate commerce, by the Interstate Commerce Commission with respect to any common carrier subject to those Acts;

"(5) the Federal Aviation Act of 1958, by the Civil Aeronautics Board with respect to any air carrier or any foreign air carrier subject to that Act; and

"(6) the Packers and Stockyards Act, 1921 (except as provided in section 406 of that Act), by the Secretary of Agriculture with respect to any activities subject to that Act.

"(c) For the purpose of the exercise by any agency referred to in subsection (b) of its powers under any Act referred to in that subsection, a violation of any requirement imposed under this title shall be deemed to be a violation of a requirement imposed under that Act. In addition to its powers under any provision of law specifically referred to in subsection (b), each of the agencies referred to in that subsection may exercise, for the purpose of enforcing compliance with any requirement imposed under this title any other authority conferred on it by law, except as provided in subsection (d).

"(d) Neither the Commission nor any other agency referred to in subsection (b) may promulgate trade regulation rules or other regulations with respect to the collection of debts by debt collectors as defined in this title.

"§ 815. Reports to Congress by the Commission

"(a) Not later than one year after the effective date of this title and at one-year intervals thereafter, the Commission shall make reports to the Congress concerning the administration of its functions under this title, including such recommendations as the Commission deems necessary or appropriate. In addition, each report of the Commission shall include its assessment of the extent to which compliance with this title is being achieved and a summary of the enforcement actions taken by the Commission under section 814 of this title.

"(b) In the exercise of its functions under this title, the Commission may obtain upon request the views of any other Federal agency which exercises enforcement functions under section 814 of this title.

"§ 816. Relation to State laws

"This title does not annul, alter, or affect, or exempt any person subject to the provisions of this title from complying with the laws of any State with respect to debt collection practices, except to the extent that those laws are inconsistent with any provision of this title, and then only to the extent of the inconsistency. For purposes of this section, a State law is not inconsistent with this title if the protection such law affords any consumer is greater than the protection provided by this title.

"§ 817. Exemption for State regulation

"The Commission shall by regulation exempt from the requirements of this title any class of debt collection practices within any State if the Commission determines that under the law of that State that class of debt collection practices is subject to requirements substantially similar to those imposed by this title, and that there is adequate provision for enforcement.

"§ 818. Effective date

"This title takes effect upon the expiration of six months after the date of its enactment, but section 809 shall apply only with respect to debts for which the initial attempt to collect occurs after such effective date.".

Mr. ANNUNZIO (during the reading). Mr. Speaker, I ask unanimous consent that the reading of the Senate amendment be dispensed with and that it be printed in the record.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

Mr. WYLIE. Mr. Speaker, reserving the right to object, and I do not intend to object, but I do so for the purpose of engaging the gentleman from Illinois (Mr. ANNUNZIO) in a colloquy in order to explain the bill before us today and how the Senate version differs from that which passed the House.

As I understand it, the bill, as it passed the House, provided for only two contacts at the home with the debtor during the week, and in this respect the Senate bill has no specific provision; is that correct?

Mr. ANNUNZIO. The gentleman is absolutely correct.

Mr. WYLIE. Further, the House bill provided for three contacts per month at the place of employment and the Senate bill has no provision in this regard except that it has to be with the permission of the employer, or with his knowledge. The employer could, in effect, say no. Is that correct?

Mr. ANNUNZIO. The gentleman is absolutely correct.

Mr. WYLIE. Mr. Speaker, I believe the most important provision of this bill which came over from the Senate is that there are no criminal sanctions in the debt collection bill, which was the provision that raised most of the objections in the House. As I say, the Senate version does not provide for criminal penalties, is that correct?

Mr. ANNUNZIO. The gentleman is correct, the section on criminal liability for violation of the act has been removed.

Mr. WYLIE. Also, the Senate version before us now permits the collection of postdated checks while the House bill barred the collection of such checks.

Mr. ANNUNZIO. That is absolutely correct.

Mr. WYLIE. Mr. Speaker, I would yield to the gentleman from Illinois (Mr. ANNUNZIO) for any further explanation that he would like to make.

Mr. ANNUNZIO. Mr. Speaker, I appreciate the gentleman from Ohio (Mr. WYLIE) yielding to me, and I want to commend him as the ranking Republican member of the subcommittee for the hard work he has done in bringing this legislation before the House.

Mr. Speaker, on August 5, 1977, the Senate unanimously passed with amendment H.R. 5294, the Fair Debt Collection Practices Act. This bill prohibits harassment, deception, and unfair practices by debt collectors in the collection of debts and is meant to assure that every individual, whether or not he actually owes a debt, is treated in a reasonable manner by debt collectors. I would like to congratulate the Senate, and in particular the chairman and members of the Senate Banking Subcommittee on Consumer Affairs, for the prompt and effective action which has been taken on this important piece of legislation.

The Senate amendment to H.R. 5294 closely follows the bill as passed by this body and contains only two changes of major significance. First, the section on criminal liability for violation of the act has been removed. When this legislation was considered by this body, one of the major objections to its passage was the inclusion in the bill of the section providing for criminal liability. It was felt by some that including criminal liability in this type of bill was extending criminal liability in the Federal area too far. Given that the chief means of obtaining compliance with the act has always been meant to be by way of the civil liability section, that is, by enabling the consumer to sue whenever there has been a viola-

tion of the act, I find no difficulty with the absence of criminal liability from the bill. The consumer's private cause of action, together with administrative enforcement of the act, will result in a well-enforced and effective law.

The second significant change contained in the Senate amendment is a modification of the section of civil liability dealing with the amount of statutory damages which may be awarded. H.R. 5294 as passed by the House required an award of statutory damages of between $100 and $1,000, while the Senate amendment would permit damages, in addition to actual damages, in an amount as the court may allow, up to a maximum of $1,000. In both cases, a consumer would be able to recover any actual damages he had suffered. Without weakening the substantive provisions of the bill, this modification by the Senate should help to meet the objections of those Members of this body who believed that setting a minimum of $100 on the amount of statutory damages to be awarded would encourage nuisance lawsuits by consumers. This modification is also an improvement in the bill.

Mr. Speaker, H.R. 5294 has had the express support of the two major debt collection trade associations, the Associated Credit Bureaus, Inc., and the American Collectors Association, while it was being considered by the House and by the Senate. Moreover, this bill has received the strong support of consumer groups, labor unions, and State and Federal law enforcement officials. Since H.R. 5294 was voted on by the Senate, the House Banking Subcommittee on Consumer Affairs has not received a single letter or telephone call objecting to the bill as passed by the Senate.

Mr. Speaker, H.R. 5294, the Fair Debt Collection Practices Act, is important consumer protection legislation. In view of the noncontroversial nature of the amendment of the Senate to H.R. 5294, I urge passage of this legislation.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. WYLIE. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, I wish to thank the gentleman for yielding to me.

Mr. Speaker, I would like to thank the gentleman from Illinois (Mr. ANNUNZIO) for postponing the consideration of this bill from yesterday to today so that the gentleman from Ohio (Mr. ASHBROOK) and I could both have time to look into the provisions of the legislation. Let me say that I do not think the legislation is necessary. I believe it is an intrusion on State's rights. I would also like to remind the Members that this bill originally passed the House by only 1 vote with nearly 400 Members voting.

Mr. Speaker, the only reason I do not object to the immediate consideration is that an objection would only force the bill to go to conference and it would probably pass eventually in some modified form and I do not think the delay is worth it. But again I would like to point out that there are still a great number of Members of the House who do not think this legislation is necessary.

Mr. ANNUNZIO. Mr. Speaker, if the gentleman will yield still further.

Mr. WYLIE. I yield to the gentleman from Illinois.

Mr. ANNUNZIO. Let me say that I appreciate the cooperation of the gentleman from Maryland (Mr. BAUMAN).

I would like to inform the Members also that in section 817 of the bill there is an exemption for State regulation. If a State has a debt collection law whose requirements are substantially similar to those imposed by this bill that then there is adequate provision for enforcement and an exemption will be granted.

I do appreciate the gentleman's efforts in helping us secure the passage of this legislation.

Mr. WYLIE. Mr. Speaker, I withdraw my reservation and urge passage of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ANNUNZIO. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on H.R. 5294.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks and include extraneous matter and tabulations on the conference report on H.R. 7933, making appropriations for the Department of Defense for the fiscal year 1978 ending September 30, 1978, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

CALL OF THE HOUSE

Mr. CEDERBERG. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 515]

Ambro	Crane	Koch
Anderson, Ill.	Dent	Lederer
Applegate	Dicks	Leggett
Archer	Dingell	Long, Md.
Ashley	Dodd	McCloskey
Aspin	Eckhardt	McEwen
Badillo	Erlenborn	Madigan
Bellenson	Evans, Colo.	Moss
Biaggi	Evans, Del.	Pettis
Boiling	Fascell	Pritchard
Bonker	Fish	Quillen
Brademas	Fithian	Rangel
Brinkley	Ford, Mich.	Rhodes
Brown, Ohio	Fraser	Roncalio
Burton, John	Gibbons	Rosenthal
Byron	Hamilton	Rostenkowski
Chappell	Harris	Roybal
Chisholm	Harsha	Scheuer
Clay	Heftel	Seiberling
Collins, Ill.	Johnson, Calif.	Shuster
Conable	Kemp	Simon
Cornwell	Ketchum	Sisk
St Germain	Udall	Young, Tex.
Stangeland	Ullman	Zeferetti
Thompson	Vanik	
Tucker	Young, Alaska	

The SPEAKER. On this rollcall 358 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

CONGRESS SHOULD DELIBERATE

Mrs. HOLT asked and was given permission to address the House for 1 minute and to revise and extend her remarks and include extraneous matter.)

Mrs. HOLT. Mr. Speaker, there is a petition being circulated to Speaker O'NEILL to keep Congress in session beyond the scheduled October adjournment until the Christmas holidays.

Upon reflection, I believe this is a very poor idea. It is an unfortunate fact of our times that the taxpayers are safer when the Congress is not in session.

It is an old axiom that work expands in proportion to the time allotted for it, and I hate to think of what new ways to regulate and tax the people would emerge from an extended session of this Congress.

The Congress should be a deliberative body, not legislating for the sake of legislating, but only after thorough research and study and consultation with constitutents. We should not be perpetually in session. We need more time for study and hearing our constituents.

I appeal to Members of this House not to sign the petition being circulated to extend the session.

PERMISSION FOR COMMITTEE ON APPROPRIATIONS TO FILE PRIVILEGED REPORT

Mr. NATCHER. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tonight to file a privileged report on the District of Columbia appropriation bill for fiscal year 1978.

Mr. BURGENER reserved a point of order on the bill.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

PERMISSION FOR COMMITTEE ON AGRICULTURE TO FILE CONFERENCE REPORT ON S. 275, FOOD AND AGRICULTURE ACT OF 1977

Mr. FOLEY. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture may have until midnight tonight to file a conference report on the bill S. 275, to provide price and income protection for farmers and assure consumers of an abundance of food and fiber at reasonable prices, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Washington?

There was no objection.

CONFERENCE REPORT ON H.R. 7933, DEPARTMENT OF DEFENSE APPROPRIATION ACT, 1978

Mr. MAHON. Mr. Speaker, I call up the conference report on the bill (H.R. 7933) making appropriations for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore (Mr. BROWN of California). Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of August 4, 1977.)

Mr. MAHON (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER pro tempore. The gentleman from Texas (Mr. MAHON) will be recognized for 30 minutes, and the gentleman from Alabama (Mr. EDWARDS) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Texas (Mr. MAHON).

Mr. MAHON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, we have disposed of in the House all of the appropriation bills except a general supplemental bill which will be required a little later, and a pay supplemental scheduled for early next year. There is also pending the appropriation bill for the District of Columbia which will be reported out later today. We move today to consider the conference report on the defense appropriation bill. Today we take an important step for this session of Congress, in that we will approve the conference report, I am sure, on the defense appropriation bill, which was sent to conference on July 21, of this year, and which had been settled after a very extended conference and is brought back to the Members today.

The agreement on the bill for fiscal year 1978, which is soon to begin, provides for $111,400,000,000. This figure includes about $1.4 billion for the production of five B–1 bombers.

The conference amount is $2.4 billion below the budget estimate. It is $1.1 billion above the House-passed bill and $1.4 billion more than the Senate-passed bill.

The conference resolved differences on several hundred individual line items. There were agreements in many areas. About 400 line items had to be settled in conference. It was a difficult conference, but the Senate conferees worked with the House conferees in a spirit of compromise, and I believe reasonably acceptable agreements have been reached. No Member of the House, in my judgment, will agree with every decision made, but overall we feel that the bill, as reflected in this conference report, will substantially increase the military strength of the Nation. Therefore, I urge adoption of the conference report.

MILITARY PERSONNEL

There were few substantive differences of opinion between the House and Senate in the military personnel areas. Most involved the level of funding rather than any policy differences.

The major difference the committee of conference addressed in the military personnel area involved the amount of training time that selected categories of reservists and guardsmen received annually to maintain their readiness. The conferees agreed with the Senate position that there be no change in reserve component training requirements. The conferees, however, required the Secretary of Defense to review reserve training and readiness needs and report to Congress at the time of the submission of the next budget.

OPERATION AND MAINTENANCE

The largest single issue in the operation and maintenance account in terms of dollars concerned the appropriation of funds for inflation that is expected to occur during fiscal year 1978. Current law requires the Department of Defense to budget for inflation in the operating accounts. Defense appropriation requests have included amounts for inflation on major procurement items for many years. Most other agencies of the Government are prohibited from budgeting for inflation.

The operation and maintenance request included over $1.2 billion for inflation. The House reduced this portion of the request by $47.3 million which was requested to provide funds to cover inflation on the inflation estimate. The Senate made a reduction of $498.6 million stipulating that inflation was not provided for items that did not impact on military readiness. Unfortunately, there is no easy way to distinguish these programs where not providing for inflation would not impact readiness. For example, the Senate position provided inflation for ships being overhauled at Navy—public—yards but did not provide inflation for ships being overhauled at private yards. Thus, the House conferees were successful in restoring $250.4 million of the Senate reduction in the O. & M. appropriations. In addition, the House conferees agreed to the establishment of a $100 million defense readiness fund which will ultimately be transferred back to the O. & M. appropriation for readiness items. Therefore, the total reduction to the $1.2 billion requested for inflation was less than $150 million.

The conferees also agreed to a civilian man-year reduction of 12,100 as proposed by the House. This reduction was made by the House to conform with the authorizing legislation. The Senate had proposed reductions in civilian man-years of nearly 15,000 most of which were allocated to base operating support.

The House bill proposed specific amounts for each of the various defense agencies funded from the appropriation operation and maintenance, defense agencies. The Senate bill made one lump sum appropriation for all of the defense agencies. The conferees agreed to a lump sum appropriation for all of the defense agencies except for the Defense Logistics Agency and the civilian health and medical program of the uniformed services, CHAMPUS.

In allocating some of the general reductions agreed to by the conference committee, the reduction for the defense agencies was allocated against the overall total with no specific amount allocated to the Defense Logistics Agency or the CHAMPUS program. I want to make it clear that the conferees did not intend to exclude the Defense Logistics Agency or the CHAMPUS program from any general reductions if the Secretary of Defense believes such reductions are appropriate.

PROCUREMENT

The conference agreement provides $31.3 billion in new budget authority for the procurement title of the bill. In addition, the agreement includes $258.5 million in transfers of prior year unobligated balances in lieu of new appropriations. Thus, the total funding available is $31.5 billion. This total is about $840 million less than the budget estimate, but $3.5 billion greater than the amount provided for fiscal year 1977.

The total funding available includes $1.4 billion for the B–1 program, which has been brought back in disagreement and which I shall discuss later.

Included in the Army portion of the bill is $461.6 million for about 780 M60A3 tanks and over $158 million in advance procurement funding for the new XM–1 tank.

The conferees agreed to provide initial construction funding of $8 million for the proposed Mississippi Army ammunition plant. This facility will be built to produce a new class of 155-millimeter artillery ammunition. The conferees agreed to delete without prejudice the $44,500,000 budgeted for the proposed RDX/HMX explosive manufacturing facility. The Department of Defense has not yet decided whether such a facility will be required and the Army currently has the capacity to meet peacetime requirements.

The conferees agreed to delete the requested appropriation of $14,500,000 for initial procurement of the ground laser locator designator, GLLD, but provided $16,800,000 for procurement of the less costly and less sophisticated target designator laser. The House report expressed concern over the weight and vulnerability of the GLLD and the proliferation of laser designators being developed by the Department of Defense. It concluded that procurement was not justified at this time.

With respect to the Navy, the conferees agreed to delete the unbudgeted $81,600,000 advance procurement funding proposed by the Senate for long leadtime components for a fourth CVN *Nimitz* class nuclear-powered aircraft carrier. The conferees also agreed to provide $310 million, above the budget, to fully fund the construction of one DD–96 class destroyer. The Senate had recommended $614 million for two DD–963 "air capable" ships, which would utilize the basic DD–963 design but provide additional

helicopter capability. The conferees agreed to give the Navy the option to buy an air capable DD–863 ship if it could be designed and built with the $310 million provided.

Two Trident submarines and 96 Trident I missiles were fully funded. In all, 18 new ships were funded at a total cost of about $5.8 billion.

For the Air Force, the conferees agreed to $1.5 billion for 97 F–15 aircraft, or nine more than the President had requested. We also agreed to $7.5 million for the Civil Reserve Airlift Fleet, CRAF, modification program. These funds will be used to modify one widebodied passenger aircraft owned by a commercial passenger air carrier to serve as a pilot model for this program.

We also agreed to fully fund the air launched cruise missile, the satellite data system, and the backup Titan III–D booster programs. The Navstar global positioning system was not funded.

In all, the conference agreement funds a total of 159 aircraft for the Army, 177 aircraft for the Navy, and 357 aircraft for the Air Force, excluding the five B–1 bombers on which we failed to agree.

RESEARCH, DEVELOPMENT, TEST, AND EVALUATION

The conference report provides a total of $11.1 billion for the research, development, test, and evaluation activities of the Department of Defense. This amount is $198 million more than the House bill and $61.7 million less than the Senate bill. The total recommended is $663 million more than that provided in fiscal year 1977.

Major items in conference for which the total amount requested was provided include the surface effects ship, ballistic missile defense technology, hispeed armament missile, and the defense satellite communications system. No funds were provided for the advanced concepts lab, interim scout helicopter, tactical airborne exploitation system, and the Satin IV Strategic Air Command communications system. Pages 41 through 49 of the statement of managers contain detailed schedules showing all conference actions.

COMMUNICATIONS, INTELLIGENCE AND INTELLIGENCE-RELATED ACTIVITIES

The conferees resolved many differences in communications, intelligence and intelligence-related activities. The conference agreement for these programs provides a sufficient level of activity while achieving significant savings.

The House proposed reductions of $299,055,000 in communications programs. The Senate proposed reductions of $62,258,000. The conferees agreed to reductions of $156,199,000. Among the more significant decisions in conference were the following:

Agreed to the House position providing for a single secure voice system, rather than a dual system as proposed by the budget and the Senate.

Agreed to provide $15 million to continue development of the Navy's Seafarer extremely low frequency communications system, rather than canceling the system as proposed by the House and providing $20,141,000 as proposed by the Senate. Agreement to continue the system was based upon assurances in writing by the President that he would personally review any request to locate Seafarer in Michigan.

Agreed to cancel the Fleetsat Navy communications program as proposed by the House.

Agreed to cancel the Satin IV communications program of the Strategic Air Command as proposed by the House.

Agreed to fully fund the Air Force defense satellite communications system III as proposed by the budget and the Senate instead of canceling the program as proposed by the House.

Agreed to a reduction of $6,340,000 from consolidation of communications centers as proposed by the Senate instead of a reduction of $9,055,000 as proposed by the House.

For intelligence and intelligence related activities, the conferees agreed to reductions of $222,038,000 instead of reductions of $422,216,000 as proposed by the House and reductions of $158,764,000 as proposed by the Senate. These reductions were the result of a very thorough review of intelligence and intelligence-related activities. The details of these reductions are explained in a classified annex to the conference report.

B–1 PROGRAM

Mr. Speaker, we did not reach agreement on the funding for the production of the B–1. I will discuss that in some more detail in a few moments. On amendment No. 41 we will have further discussion of this program and the funds at issue—the $1.4 billion for production of five B–1 bombers.

The House passed the bill prior to the President's decision to terminate B–1 production, and, we included the $1.4 billion for five production models of the B–1. The Senate acted after the President's action and decided to eliminate the funds for the B–1. Neither group of conferees felt that they could recede on this matter without further action by their respective Houses, and so we bring back the B–1 issue in disagreement, as had been promised by me as chairman of the committee when we sent the bill to conference on July 21. So after the adoption of the conference report, we will then proceed to consider the various issues in disagreement, principally the one involving the B–1.

I think it might be in order as a preliminary statement to make reference to the basic facts involving the B–1. The B–1 bomber has been on the drawing board or in production in one form or another over a period of years. Tremendous sums of money have been committed and expended for this purpose.

The B–1 is scheduled to cost, according to the latest estimates submitted earlier in the year, about $102 million a copy. Three prototype versions of these bombers are now flying, and the fourth prototype is about half completed. There are funds available in this bill for further research and development including fabrication of the fourth prototype bomber, and that, according to the plan of the administration, will be the end of the line since a rescission is pending affecting the three production models funded by Congress in fiscal year 1977. But it is not assumed that this will be the end of the B–1 program. The President has promised that we will continue to have a very aggressive research and development program for the B–1.

In the conference report on this bill, which we hope will soon become law, there is an item which is not in disagreement amounting to $442 million for continuation of research and development on the B–1 bomber. Just what the future holds with respect to the B–1 will no doubt be determined by international affairs and events of the future. This issue will be discussed in some additional detail when we get to amendment No. 41.

Mr. CHARLES H. WILSON of California. Mr. Speaker, will the gentleman yield so that he may respond to a question on that matter at this time, or would he prefer to wait until the end of his presentation?

Mr. MAHON. I will be glad to yield to my friend, the gentleman from California, at this time.

Mr. CHARLES H. WILSON of California. Mr. Speaker, the gentleman mentioned there were funds to complete the fourth B–1. Is there not sufficient R. & D. money to complete planes Nos. 5 and 6?

Mr. MAHON. There are not sufficient research and development funds to complete planes Nos. 5 and 6. Procurement funds were appropriated in 1977 for planes Nos. 5, 6, and 7, but a rescission is pending with respect to a large portion of the funds that have been appropriated for the additional three B–1 bombers.

Mr. CHARLES H. WILSON of California. The problem, of course, is that we talk about keeping research and development and waiting for future decisions on this. But, as the gentleman well knows, because of what happened to the FB–111, unless the line is kept open, it is pretty hard to do much of anything about any further testing.

There have been about 700 hours of testing already. Would it not seem reasonable that the production of planes 5 and 6 might guarantee keeping the line open so that we do have that option in the event of an emergency or in the event the SALT talks fall apart?

Mr. MAHON. There is a rescission pending in that regard.

Mr. CHARLES H. WILSON of California. Again, if the gentleman would prefer waiting until later, I would defer to him.

Mr. MAHON. No, that is all right. There is a rescission pending affecting the three fiscal year 1977 B–1 production models. The Committee on Appropriations of the House has not taken action on the rescission. It is the plan of the administration, as my friend, the gentleman from California, knows, that we will complete the fourth aircraft, and that will be the end of the line for the time being.

I realize that this is a very controversial matter, and that particular issue is really not involved in the conference report or in the amendment involving the B–1 bomber, which will come up later.

Mr. CHARLES H. WILSON of Cali-

fornia. If it is going to cost more to terminate the program than to complete the two planes or as much to terminate the program as it will to complete the two planes, I think that is something which the House should take into consideration.

I am sure that the chairman will let us know what the status of that is as the debate continues on this conference report.

Mr. MAHON. That is an issue which will be explored.

Mr. Speaker, I reserve the balance of my time.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the very distinguished chairman of the Defense Subcommittee and of the full Committee on Appropriations, the gentleman from Texas, has presented an excellent and complete review of the conference agreement on the Department of Defense appropriation bill for fiscal year 1978. I will therefore restrict my comments here on the floor today to just a few items and a few thoughts and will place some additional information in the record that will be helpful to the Members.

The bill before you is the product of 4 days of meetings with our Senate counterparts. Behind the able leadership of our chairman, we resolved some very complex and controversial issues in a most satisfactory manner.

There was give and take all the way through the conference, and I feel as though we reached an agreement that constitutes a good compromise. It is a long way from being perfect, and I have some concerns of my own but, overall, it was the best we could do under the circumstances.

We yielded on several controversial issues, such as the consolidation of undergraduate helicopter pilot training and the transfer of certain reserves to pay category D. On others, such as the assignment of military personnel to nonappropriated fund activities, Air Force data processing programs, Army tank programs, we succeeded in reaching a compromise agreement. Regardless of the outcome on some of these questions, however, we will, in all probability, be looking at them again next year.

Mr. Speaker, the $111.2 billion provided in this bill is adequate to fulfill our military commitments abroad and to maintain a strong national defense posture.

While the conferees agreed to cuts totaling $2.7 billion from the budget request, the amount provided is $6.1 billion more than we provided last year. That is a very substantial increase. As compared to last year's appropriation, the increases are distributed as follows: retired military personnel—$771.9 million; operation and maintenance—$1.4 billion; procurement—$3.3 billion; R.D.T. & E.—$663.3 million.

With the overall amount and the distribution of funds in this bill, I think we are headed down the road in the right direction. On the one hand, we are supporting force modernization by providing significant increases in funding for R. & D. and procurement of new weapons and equipment, and at the same time, we are trying to improve force readiness—an area neglected in the past—by providing additional O. & M. dollars. Those are the areas of emphasis in this bill.

The conference agreement contains a total of $42.4 billion for the acquisition of advanced weapons systems—$31.3 billion for procurement and $11.1 billion for R.D.T. & E. We went into the conference with some substantial dollar differences in these two accounts. Of greatest significance was the agreement to provide: First, $310 million for one DD–963 destroyer instead of the $614 million for two "air-capable" DD–963's as proposed by the Senate because design work on the latter was incomplete; and second, to delete $81.6 million proposed by the Senate to buy long leadtime components for a CVN *Nimitz*-class nuclear-powered aircraft carrier. We must proceed instead with the design and development of a smaller conventionally-powered carrier, known as the CVV.

Major weapons programs are funded as follows:

PROCUREMENT

Seven hundred and eighty M60A3 tanks—$461.6 million,

Eighteen ships—$5.8 billion,

Forty F–14 aircraft—$623.4 million,

Ninety-six Trident I missiles—$889.1 million,

Five B–1 bombers—$1.4 billion—reported in disagreement—subject to vote,

One hundred and forty-four A–10 aircraft—$741.8 million.

Ninety-seven F–15 aircraft—$1.5 billion,

One hundred and five F–16 aircraft—$1.3 billion.

RESEARCH AND DEVELOPMENT

Advanced attack helicopter—$165 million,

Patriot—SAM–D—missile—$214.6 million,

Ballistic missile defense—$213.5 million,

XM–1 tank—$117.7 million,

Trident missile—$332.7 million.

Strategic cruise missile, Navy—$210.3 million,

F–18 aircraft—$626.4 million,

Advanced ICBM technology (MX)—$134.4 million,

B–1 bomber—$442.5 million,

Air launched cruise missile—$120 million,

F–16 aircraft—$192.8 million.

These programs will ensure that our military forces are equipped with modern weapons for many years to come.

The conferees also agreed to provide an additional $250 million in O. & M. funds over-and-above the budget request to help eliminate the backlog of weapons, equipment, and ships awaiting overhaul and repair and to generally improve military readiness. These funds, in combination with the $4.3 billion provided for flying and steaming hours and near full funding of active duty military personnel levels and forces, should beef up our Armed Forces and provide greater force readiness than in years past.

The Soviet Union is continuing to expand and modernize its armed forces—air, ground, naval—across the board. That is the reason we are here talking in terms of $111.2 billion to support the Department of Defense for just 1 year.

I wish it were otherwise. I wish we could take this money and spend it on programs that would be more productive and benefit all Americans. But this cannot be because of the world we live in. Until some kind of peace and order is brought to this world, we must remain militarily strong. It is as simple as that.

We could argue all day long whether or not $111.2 billion is enough. I am quite sure if, in the scheme of things, we had more money, we would have appropriated it, but considering the priorities and available resources, we have brought you a conference agreement that we can justify and support.

Mr. Speaker, there are two issues that give me some concern. One is the decision taken by President Carter to terminate the B–1 production program. Since there will be more debate on this later, I will withhold further comment on that subject at this time.

The other is the refusal of the conference to support the consolidation of undergraduate helicopter pilot training.

For 2 years I have fought hard to bring this proposal to fruition. My position has been based on hard, cold facts. These facts were derived from study, after study, after study, showing that consolidation would yield equally effective or better training at much less cost.

This is a clear-cut case where money can be saved, and the Defense Department should be allowed to proceed with the plan.

Although the House has consistently supported the proposal, the House conferees made no effort to defend the House position on this controversial issue. The same thing happened last year. It was obvious from the start of both conferences that it would not be otherwise.

Now I have heard that the Department is giving serious consideration to offering up the proposal again next year in the fiscal year 1979 budget. I have no intention of leading the fight again next year unless I am given some assurance that the Senate would support the proposal. If the Senate cannot be persuaded to do so, then I think the plan should be dropped immediately so that steps can be taken to improve helicopter training at Pensacola. If we learned anything from this fight, it was that there are serious deficiencies in the helicopter training now given at Pensacola.

Mr. Speaker, although I am sorry that the House conferees failed to follow the direction of the House on the question of helicopter pilot training and while I am concerned over the President's decision to cancel B–1 production, I think on balance we have brought you a good conference report, and I strongly urge its adoption.

Mr. MAHON. Mr. Speaker, I yield such time as he may consume to the gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Speaker, the conference report on the Defense appropriations bill which is now before the House, represents a distinct improvement over the bills which passed the House and the Senate. The work of the conferees resolved in a reasonably satisfactory way many of the differences which had existed in the bills which were approved by the respective bodies of Congress. However, the bill in its entirety reflects a reduction below the budget submitted by President Carter and considerable lower than the budget submitted by President Ford. This is unfortunate. Cuts in Defense cannot be called sound economy. Stretch outs or cutbacks in procurement simply widen the lead which the Russians already enjoy in every field of modern weaponry. This bill does not provide a major improvement in national defense. The prospect that the Carter administration will propose even further cuts in Defense expenditures for fiscal 1979 is not a happy one.

One of the principal accomplishments of the conference was the partial restoration of O. & M. funds which had been severely reduced in the Senate version of the bill. Adequate operations and maintenance funding is essential for an effective military force. Year after year these funds have been reduced by Congress and the result in too many instances has been inadequate maintenance of weapons and equipment. This results in deadlining of ships, aircraft, and other essential elements of the defense forces. It means too many needed weapons are not available in an emergency. It is unfortunate that the zeal of Congress for Defense cuts so often zeroes in on this sensitive area.

There are a number of areas of significant importance in the conference report which I wish to discuss at this time.

This year the House committee recommended the transfer of many members of the Army, Navy, and Air Force Reserve who serve in chaplain, public affairs, civil affairs, law/legal, and research and development into pay category D from their present status in categories A and B. This would mean that these citizen-soldiers would then transfer from drilling and being paid for drills at either the 48- or 24-drills-per-year status, to that of drilling for only 2 weeks a year.

I opposed this action, for I am convinced the result would be to severely cripple and, in fact, virtually destroy the effectiveness of the programs affected.

While there may be a fraction of present Reservists who might be appropriately transferred into the D category, most of these particular functions contribute significantly to unit and mission effectiveness.

Proposals such as this one tend to undermine the essential support which our Reserve Forces provide, and generally to destroy the esprit de corps of these units. We should continue to give these Reservists and the Reserve Forces our full support.

I am very pleased to support the action of the conferees in refusing to approve consolidation of Navy undergraduate helicopter pilot training with the Army. For the second year now, the conferees have determined that the Congress should reject the Defense Department proposal to consolidate Navy undergraduate helicopter pilot training with the Army. The claims for savings advanced by the Department of Defense simply do not stand up under scrutiny. They are the product of think tank experts in the Pentagon; not supported by the experts in the field who conduct the programs. It is now clear that it is time for the Defense Department to move on to more pressing issues. The amount of time and effort expended by the Department on this issue is completely unwarranted.

In addition to the rejection of the consolidation proposal, the conferees agreed that the Department of the Navy should now move to expend previously appropriated funds for the enhancement of the Navy's helicopter training flight simulator capability. Such a recommendation is certainly in order. The only criticism directed at Navy helicopter training is the result of the lack of modern simulators. The blame for any deficiency in training rests squarely on the Department of Defense which has refused to allow funds to be expended to update simulator capabilities for the Navy.

Congressional action on this issue insures that the Navy and Marine Corps will continue to have the best and most effective helicopter pilot training available if we can have full cooperation from the Department of Defense.

The conferees have agreed to provide the necessary funding for the continuation of the Navy airlift capability for the upcoming fiscal year. Such action is consistent with the views of the House that there remains uncertainty as to the capability of the Military Airlift Command to meet the Navy's specific needs, as well as uncertainty on whether realistic savings could result from MAC providing such service to the Navy.

Hearings are scheduled by the House Armed Services Committee during September to fully discuss and assess the many nuances of this question. Until we have the results of that committee's findings, we should provide the Navy with this vital capability. This will insure that any decisions regarding the Navy airlift capability be made only after a complete review of the pertinent facts. To do less may hamstring an important link in the Navy's ability to respond to a challenge of any major proportion.

This bill provides for the procurement of the final increment of the Navy's new single-engine primary training aircraft, the Beechcraft T-34C. This increment is for 34 aircraft.

This turbo prop trainer is an excellent aircraft which has many advantages over the T-28 which it is replacing in the Naval Air Training Command. First, it saves a lot of fuel—1,300 gallons per student over the T-28. Fully integrated into the Navy's present pilot output this could account for a savings of 1.8 million gallons of fuel.

Second, this is a fully instrument training aircraft, and the result will be greater training efficiency and reduced maintenance costs.

We have already purchased 150 T-34C and the proposed buy of 34 additional aircraft will complete the buy. It is somewhat ironic that the Navy has not been allowed to procure an earlier replacement for the T-28, particularly since these aircraft are older than most of the students who train in them.

There was considerable discussion within the Congress this year concerning the program to equip the F-14 fighter aircraft with an engine of greater thrust. Finally, it was decided that $8.8 million would be provided for this program under research and development funds.

This is a vital program if we want the F-14 to maintain its superiority over the threat postulated for the late 1980's and 1990's. It has been the intent of the Navy since the inception of the F-14 to eventually replace the present thrust limited engine with one of higher thrust. Increasing costs and delays in development of a satisfactory engine have caused the Navy to place its reliance primarily on the improvements in the present engine. This, however, is contrary to the best interests of the Nation's defense. With a new engine the F-14 will be a better aircraft and we should proceed without further delay to develop the engine of the future.

The inclusion of this program in this bill, if implemented, will insure continued development of a superior fighter aircraft for the 1980's.

The conferees agreed on the House recommended amount for the procurement of 144 A-10 attack aircraft. The amount is $741.8 million. This is an outstanding aircraft that provides our military with much needed close air support for ground forces. It operates without a finished runway for takeoffs and landings if such a situation is necessary in warfare.

The Secretary of Defense, Mr. Brown, has recently described the A-10 in this way—

> The most important job for the A-10 is to destroy armored fighting vehicles in a WARSAW PACT versus NATO conventional war. Operational tests and analyses indicate the A-10 can do this job effectively and with tolerable loss rates.

This aircraft has demonstrated a survivability and effectiveness exceeded by none in the present inventory designed for the purpose of close air support.

This bill appropriates funds for 105 F-16 fighter aircraft. This is the number recommended by the House. The F-16 is considered one of the most advanced fighter aircraft in the world.

This aircraft has a background of more than 1,200 hours of successful flight and is a multinational aircraft. It is currently within the European participating governments—NATO program under the Air Force.

I am sure that we are all aware of the capabilities which this aircraft brings to the Air Force; and provides to our NATO arm at a time when improved capability for NATO is so vitally needed.

This bill provides $3.9 million for the R.D.T. & E. for the Navy's shipboard intermediate range combat system. This will continue the development of the SIRCS equipment which is intended to provide an advanced shipboard close-in air defense and fire control system for the 1980's and beyond. This system is intended to be a balanced and systematically engineered combat system, utilizing elements of current programs when they will meet the systems' needs, and with new development subsystems where there is a clear benefit therefrom.

As the Secretary of Defense stated in a July 20, 1977, letter to the chairman of the Appropriations Committee—

SIRCS represents a significant Navy long-term combat system development program.

This appropriation represents the House recommended level and should have your support.

The bill provides $15.7 million for the U.S. share of a possible R.D.T. & E. program for NATO required enhancements to the airborne warning and control system aircraft. The appropriation has the caveat that these funds are to be expended by the Air Force only in conjunction with a NATO purchase of this highly sophisticated and strategically valuable aircraft.

It is very proper that the Congress provides these funds at this time. By doing so, we clearly indicate to our allies that we will support their decision to purchase this aircraft. The E–3A AWACS aircraft an all-seeing airborne radar system which can track airborne targets at high and low altitudes over any terrain. It gives military commanders the ability to see beyond an adversary's borders and to view the battlefield "from above."

Our support of this program will encourage our allies to acquire the NATO AWACS aircraft with its greatly enhanced capability.

For many years now—actually since about 1972—the Congress has been steadily decreasing the number of enlisted aides for officers in the upper grades of the Armed Forces. In 1972 there were 1,722 aides assgined to such duties, presently there are some 300 or a little less who now volunteer for these duties of supporting officers in these high grades. The Congress has thus directed a decrease of 83 percent in the last 5 years.

Now, however, it is apparent that we have reduced these positions as far as it can properly be done. We have insured that these aides perform essential functions and that their assignment and allocation is at the discretion of the Secretary of Defense. We should not reduce this program further.

Under amendment 67, section 852 of the general provisions of this bill the House approved a general provision which limited funds available for contracting out. The conferees to the bill adopted subsection (a) of the House proposal without change. This subsection restricted the conversion of base operating support functions to contract operations.

Subsection (b), which covers weapons system engineering and logistical support, intermediate, and depot level maintenance and R.D.T. & E. was modified in conference. As a result of this modification, the maintenance of current civil service force levels is insured, as is the current staff level at affected facilities.

This is a sound modification of the former language of the subsection and deserves our support. The Department of Defense will now be able to place additional contract work in weapons systems, maintenance management, and R.D.T. & E., where this is the proper procedure, while at the same time we protect the continuation of our valuable civil service expertise in these areas.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield myself 2 minutes.

Mr. Speaker, I would like to call to the attention of the House a problem that is rather obvious in the Budget Control Act with which we have been concerned to some extent in our committee this year. I refer the House to a letter from our colleague, the gentleman from Connecticut, Mr. ROBERT N. GIAIMO, chairman of the House Committee on the Budget, dated August 26. I would like to read, Mr. Speaker, the paragraph on page 2 of that letter that I think puts this to some extent in perspective. He says:

The Administration has, in effect, terminated production of the B–1 bomber, Scram-B, and Minuteman III missiles by issuing stop-work and termination orders prior to the expiration of the authorized 45-day congressional review period. Such preemptive actions, while not direct violations of the Impoundment Control Act, may, nonetheless, compromise Congressional prerogatives and seriously jeopardize the possibility of restarting production should the Congress fail to approve the proposed rescissions. The General Accounting Office recently proposed discussions with the Office of Management and Budget with a view toward resolving the matter through appropriate administrative procedures.

Mr. Speaker, we find ourselves with some concern on this committee where the administration—and I am not arguing that they are violating the law—proceeds to terminate a program, issue stop-work orders, and then sends rescission proposals over to the Congress. If the Congress should in the case of the Minuteman III reverse the decision of the administration, then we find ourselves in the position of having to expend large additional sums of the taxpayers' money to restart the program.

So I think that the Congress needs to look closely at the Budget Control Act to determine whether in fact we should allow this action to take place in the future because we then are the ones who end up being the spenders if in fact we should reverse the decision of the administration. It would seem to me that the administration could very simply send its rescission proposal over, continue the program until the Congress acts, and then there is no waste of the taxpayers' money in the event the Congress should reverse that decision.

Mr. SIKES. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman from Florida.

Mr. SIKES. Mr. Speaker, I trust the Members of the House were listening carefully to the comments of the distinguished gentleman from Alabama. What he has said is one of the most significant things that has been brought to the House today. This is an important matter. I concur fully with the gentleman from Alabama in this matter.

Mr. EDWARDS of Alabama. I thank the gentleman from Florida.

Mr. MAHON. Mr. Chairman, I yield such time as he may consume to the gentleman from Georgia (Mr. FLYNT).

Mr. FLYNT. Mr. Speaker, in the beginning let me say I want to associate myself with the remarks of the chairman of the committee (Mr. MAHON) and the remarks of the gentleman from Alabama (Mr. EDWARDS) and the remarks of the gentleman from Florida (Mr. SIKES).

Naturally there are elements in this conference report about which I have reservations. On the other hand I think on balance the conference report which the managers on the part of the House have brought in is an excellent report, if I may say so an outstanding conference report on the bill making appropriations for the Department of Defense and related agencies.

Mr. Speaker, at the appropriate time I am informed the gentleman from Texas, the chairman of the committee, will offer a motion which will have the effect of funding the procurement of five aircraft of the B–1 category. At that time I will expand on the statement that I make now.

I support this motion. I think that it is imperative, I think that it is essential, I believe that it is mandatory that we proceed with the procurement of the B–1 aircraft, the objections of the executive branch notwithstanding.

In the area of manned aircraft, the Soviet Union appears to be ahead or at least on parity with the United States. I would certainly hope that as we look forward into the decades of the 1980's and 1990's and beyond, the House of Representatives at least will have the determination and the foresight to provide for a modern follow-on manned bomber aircraft to take the place of the aging and outdated B–52 fleet.

At the proper time I will expand my remarks upon this subject when the motion is made by the chairman of the committee.

Mr. MAHON. Mr. Speaker, I yield 5 minutes to the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Speaker, there is a matter in amendment No. 5 in the conference report which I would like to ask clarification of.

As I understand the language in the conference report concerning the recruiting incentives to be tested by the Reserves under the authority provided in this year's defense authorization bill, the conferees have agreed only to permit the $5 million appropriated to be used to test the reenlistment bonus, and this only in the Army Reserve and Army National Guard, but not permit any test of the educational assistance program which was to be used to assist in enlistments.

I do not intend to oppose the conference report on this point even though I feel strongly that a test of this educational assistance program—which was initiated in the Armed Services Subcommittee which I chair—should be permitted. However, I would like at this time to ask the distinguished chairman of the committee to comment after my remarks whether he will consider a reprograming request from the Department of Defense to use part of this $5 million to test the educational assistance concept in fiscal year 1978.

I would hope the chairman will indicate a willingness to consider such a request because a substantial amount of evidence appears to be accumulating to the effect that such an educational assistance program will be successful.

Specifically, I am advised that the Department of Defense is currently evaluating the results of a major survey intended to permit insight into how to resolve the recruiting difficulties which now exist in the Reserves. Some very early indications seem to suggest that an educational assistance program would be successful. During the past recess, the staff of the Military Personnel Subcommittee traveled to many military installations where Reserves were training and found that most of the Reserve personnel they spoke with, including personnel in all grades, believed that an educational assistance program would be the best incentive possible to assist in Reserve recruiting.

I am aware of the existing problem of retention in the Reserves and for this reason the reenlistment bonus should be tested. But, in my view, it is most important at this time to find a means of assisting in the enlistment of nonprior service personnel so that we can maintain a young, vigorous Reserve force.

I would appreciate the distinguished chairman's comments on this matter.

We have sent out by committee staff during the recess to various Reserve units and through their interrogations of the men on many aspects they have determined in fact that educational benefits would aid greatly in filling the ranks that are now depleted by the failure to attract young men for a vigorous Reserve.

Mr. Speaker, I would appreciate whatever comments the gentleman from Texas may have.

Mr. MAHON. Mr. Speaker, I would say to my friend that the conference report before us provides all the funds that are authorized for the reenlistment bonus. The $5 million ceiling imposed by the authorization action precluded our providing funding for the educational assistance program. Naturally, should the Secretary of Defense choose to submit a reprograming request for this program, the committee would consider it, but some modification of the authorizing legislation might first be required. We are aware of the problems of the Reserves and sympathetic to their problems and seek to be as helpful as possible in that connection.

Mr. WHITE. Mr. Speaker, I thank the chairman.

Mr. MAHON. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. ADDABBO).

Mr. ADDABBO. Mr. Speaker, I rise in support of the conference report. I have taken exception to certain amendments. I thought in certain instances the conferees had made a Public Works bill out of the defense appropriation. I hope that in the future we can cut out some of the "do good" amendments to help districts and look more at national defense.

I will speak more to the B–1 question when we get into the following this debate. At that point there will be a procedural move by the chairman to recede and concur and include the production money for the B–1. It will be my intention to offer a substitute amendment which would delete only the production money for the B–1, retaining all the R. & D. money for the B–1, as requested by the administration.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield such time as he may consume to the gentleman from Vermont (Mr. JEFFORDS).

Mr. JEFFORDS. Mr. Speaker, I would like to point out an area of some concern to me in this DOD appropriations bill, not only because it relates to the interests of some of my constituents, but also to me personally as a longtime Navy reservist.

The Navy requested some $5.402 million in fiscal year 1978 for the Naval photo center, and it was cut by $.450 million. The money which was cut was targeted for research into matters in the field of high photographic technology, for examples low light level photography and extremely high resolution recording. The House accepted the request for full funding, but the Senate made the cuts which the conference committee ultimately accepted.

The rationale for this cut, which no doubt the Senate made to conform to the dictates of the Budget Committee, was that, according to the Senate report, these functions are "routinely part of the commercial photographic industry's development program." I fail to understand what market would be met, outside the official community, for such sophisticated technology to take a routine place in the commercial sector. It is impossible to accept this reasoning.

It is true that there is no objection by the Senate for these funds to be reprogrammed by the Navy into its research and development account, as opposed to the operations and maintenance account from which it was removed. The Senate report—95–325—so much as says so on page 162. Nevertheless, the Navy has indicated to me that it does not intend to reprogram these funds. I assume the functions cut are not, therefore, of a critical nature. I therefore do not intend to press my point further, given the intent of the Navy not to pursue reprograming.

On the other hand, we all know that there are severe restraints on the reprogramming process, and only very high priority items will survive this process. I therefore still feel it necessary to register my concern on the rationale provided for the cut in these important photographic functions. I would hope that a more satisfactory explanation for such cuts would be made in future reports.

Mr. CEDERBERG. Mr. Speaker, section 852 of the House-passed version of H.R. 7933 contained in my view an unnecessarily restrictive approach to private contracts entered into by the Department of Defense. The conference agreement remedies this problem. Specifically, the bill earlier passed by the House would have prohibited DOD from converting certain base-operated functions to contractor operation and would have severely limited the use of certain commercial contracts to be physically performed at a Government installation.

In the form earlier passed by the House, section 852 was inconsistent with a policy which the Congress as a whole enunciated several weeks ago in the context of section 809 of the Defense authorization bill and would have introduced uncertainty and resulted in delays in necessary DOD maintenance. It could severely have hampered DOD's efforts to maintain its equipment in an emergency situation where adequate Government personnel were unavailable.

The conferees on H.R. 7933 substantially reduced the impact of section 852 by limiting the application of subsection (b) to those instances where a private contract would result in a reduction in force; that is, the dismissal of Government employees. Moreover, the statement of the managers on this bill makes clear that it applies only to conversions to private contract and does not have any practical effect on the letting of new private contracts for research and development.

I am hopeful that in the months ahead, the entire range of problems regarding the contracting out of Government services will be resolved to the satisfaction of the House and the Senate. In the meantime, I do not believe that section 852 will pose any insoluble problems for the administration.

I therefore support the conferees and I urge final passage of H.R. 7933.

Mr. GIAIMO. Mr. Speaker, on July 21, the House voted unanimously to have an open conference except when classified national security information was discussed. In the 4 days of meetings, we closed the session only once—for less than a half hour.

In spite of this unprecedented open conference committee, the American people learned little about what occurred during our sessions because with the exception of a brief period or two the press was conspicuously absent. I found this situation unfortunate for several reasons. First of all, the Defense appropriation bill is the largest appropriation bill that we consider. The American people have a right to know how we decide to spend their money in this area. Second the people lost the opportunity to learn an invaluable lesson on the operations of one of the least known but most important institutions of Government—the conference committee.

Perhaps the situation will improve next year.

Mr. Speaker, there were a number of amendments to which I took exception in the conference report, and I owe my colleagues an explanation of why I could not accept the decision of the conference committee on these items.

The House originally agreed to transfer from pay groups A and B to D about 11,000 reservists in the chaplain, legal, public, and civil affairs, and research and development categories. This would have meant reducing annual training from 48 and 24 paid drills respectively to only 2 weeks active duty annually. This recommendation would have saved about $20 million.

It is important to understand the rationale behind the House's original position. The Defense Appropriation Subcommittee found that these skills are not combat or combat-support requirements; that the personnel are not needed at mobilization; that programs exist to integrate rapidly civilians with similar skills into the armed forces in the event of a national emergency. On the basis of this examination, the committee believed that these reservists did not need the amount of training that combat troops require and that training could be given during annual active duty.

During the conference, we were advised that these reservists actually fall in two categories. Some of them are assigned to combat or support reserve units; lawyers spend their weekend drills on routine legal matters within the unit and chaplains provide needed counseling to other reservists. Others, however, are assigned to chaplain, legal, public, or civil affairs units. These latter units provide no useful service to other reserve units, and the Government is paying them to do nothing more than meet with their colleagues and talk shop.

Two possible compromises were discussed briefly. One would have transferred all of these slots of pay group B with its 24 paid drills annually. This would have been sufficient for both retirement credit and promotion points. The other alternative would have put into pay group D with 2 weeks active duty a year those reservists assigned to units composed exclusively of similar reservists, whether lawyers, chaplains, et cetera. Unfortunately, the position of the House was not supported in this area, and I took exception to those amendments which included these particular reservists.

Amendment No. 17 includes $18.5 million to continue the perimeter acquisition radar, PAR, system. Those of you who remember our debates on the old Safeguard ABM system will remember PAR. Each year the House deletes the funds, the other body restores them, and the House conferees recede.

The arguments in support of continued funding for PAR are not persuasive. PAR's supporters contend that it will provide us with warning of where incoming strategic reentry vehicles will hit. Yet, we already have sufficient early warning capability to advise us that ICBM's may be flying over the Pole. Besides, any additional warning that PAR might provide would be minimal. If we have already decided how we will respond to an attack when we learn that missiles are heading our way, the information that PAR might provide will be of little consolation. At best, PAR duplicates existing systems, and it is not worth its cost.

The conference committee also accepted $107.4 million for 12 A–7E's for the Navy. The budget had recommended only $21 million, but the House conferees receded to the higher figure of the other body. In this instance, some of the blame must fall on the Department of Defense. Its appeal sought the higher figure that the other body had appropriated. If the Department really wanted these aircraft, it should have pushed for them originally rather than waiting for its reclama.

In amendment No. 39, the conference committee included $310 million and told the Navy to use it to build a new destroyer. The conferees agreed that this money could build a new DD–963 *Spruance*-class destroyer, but the Navy was given an option to build something called an "air capable ship."

Many of you may not be familiar with the air capable ship. That is understandable, since the ship has not been designed. We were told that it would be a *Spruance* class destroyer with an extended hangar to accommodate three or maybe four LAMPS III helicopters.

I was shocked at the decision of the other body to include $600 million in the bill for two of these ships. In addition to the lack of a design, the ship was not requested by the Navy or DOD and was not included in the 5-year shipbuilding program. The Navy has not estimated the cost of this new ship, and no tradeoff studies on what additional capability it would provide were conducted. The difference between this ship and the DD–963 would be one or maybe two additional helicopters.

The inclusion of funds for these two ships would have thrown the Navy's shipbuilding budget into chaos. We should have zeroed the unbudgeted funds for the unrequested ships. Instead, we gave the Navy more than half of these funds and told it to build a new destroyer. Mr. Speaker, I know that the Navy needs ships, but this money will compound the current problems by budgeting construction funds before a decision has been made on what type of destroyer to build.

Next we come to amendment No. 41, aircraft procurement, Air Force. I opposed the decision of the House conferees to bring this amendment back in total disagreement. We should have eliminated the funds for the B–1 bomber in conference.

I have other objections to the action of the conferees, and they concern the Big 3 aircraft systems: A–10, F–15, and F–16. The budget had requested $3.34 billion for 327 of these planes, and the House appropriated approximately that amount. The other body, however, reduced the A–10 and F–16 funds and increased the number of F–15's. In the end, the conference adopted the higher figure in each instance. In other words, $3.54 billion was appropriated for 346 airplanes—$741.8 million for 144 A–10 attack aircraft, $1.5 billion for 97 F–15 attack aircraft, and $1.25 billion for 105 F–16's.

The House is being asked to accept a figure of $7.69 billion for Air Force aircraft—$1.35 billion more that DOD's appeal. If we eliminate the $1.4 billion for the B–1 bomber—as I hope we will—we will be below the Department's appeal. But, that is not the point. We must exercise some restraint, even insofar as the defense budget is concerned. Amendment No. 41 shows a lack of budgetary restraint or consideration.

Now we come to amendment No. 77. The House bill stated:

> None of the funds appropriated in this act may be obligated for the purpose of planning or executing any assassinations plots against any officials of any foreign governments or political parties of countries not at war with the United States.

The conference was told that this language should be eliminated and any further consideration of it left to the respective intelligence committees which are or will be working on charters for the CIA. I have a great deal of respect for the new chairman of the House Select Committee on Intelligence, the gentleman from Massachusetts (Mr. BOLAND), and the other members of that committee. But, I know that the drafting of a charter for the CIA will take time. In the interim, this bill is the only vehicle that we have for making our views on subjects such as this known to the world.

Critics of the amendment stated that its purpose would be misinterpreted. It might give the impression that the CIA currently is engaged in these activities. As a member of the old Select Intelligence Committee, I want the world to know emphatically that the Congress does not and will not tolerate such activities in the future. This amendment was a statement of policy—the only time we will have the opportunity to express ourselves on this subject until a charter for the CIA is considered by the House. Some of my colleagues may have found this language uncomfortable, but the subject of assassination plots in peacetime is uncomfortable, and the language of amendment No. 77 should have been left in the bill to show the world that we can face up to uncomfortable subjects.

Finally, Mr. Speaker, we come to amendment No. 79—nonappropriated fund activities. The GAO recently issued a lengthy report on these activities, and I hope that each of my colleagues will look at it.

Over the years, the military has established and operated recreational and entertainment facilities for its employees. The morale, welfare and recreation, MWR, programs include movie theaters, clubs, golf courses, and other recreational facilities. Each year they do over $5 billion in business.

We already hire about 189,000 civilians to help operate these programs. I wonder, however, how many of our constituents know that we have military personnel operating golf course pro-shops and military clubs? Well, about 12,000 do it on a full-time basis and another 2,800 do it part time. Some of these personnel even make a career of operating these clubs and programs around the world. The other body suggested transferring nearly all of these billets to regular combat and support activities and hiring civilians for these jobs.

The GAO report supports this proposal. A longstanding DOD directive states that civilians should be used to staff these activities to the maximum extent possible. Military personnel may be used, however, first, when civilians are not available; second, for executive control and essential command supervision; and, third, for purposes of military rotation, training, and career progression that cannot be provided elsewhere. This directive has resulted in the widespread assignment of military personnel to these activities. I know, because I have seen them on a number of bases.

The GAO noted that the Army and Air Force Exchange Service—the largest and probably the most sophisticated of all of them—operates very successfully with far fewer military members than the other services. The ratio of military to civilian employees is 1 to 460, while the other programs have ratios of from 1 to 5 to 1 to 58.

The better part of an hour was spent arguing the merits of this amendment, which the Senator from Missouri (Mr. EAGLETON) ably defended. Opponents of the amendment stated that its adoption would harm military morale, that the hiring of up to 15,000 additional civilians would cost too much, or that the military would consider this the elimination of another "perk." With great reluctance the conferees finally agreed to a reduction of 2,000 military personnel and directed DOD to emphasize the maximum use of civilians instead of military personnel in these programs.

This action, however, did not go far enough. Twenty years ago, it might have made sense to have military personnel operate these clubs and programs. It makes no sense today. Military pay is generally competitive with civilian pay, and military personnel can afford to assume the costs of these programs. More importantly, we need—and the American people expect us to have—fighting men and women in the Armed Forces. They do not expect—and they should not be forced to support—professional entrepreneurs in uniform.

I was pleased to learn that the GAO agrees with my conclusions, and I hope that the appropriate committees will accept GAO's recommendations on nonappropriated funds activities.

Mr. CEDERBERG. Mr. Speaker, the Department of Defense appropriations bill for fiscal year 1978 includes funds to complete the procurement of nonnuclear Lance missiles.

The administration, unwisely in my view, had neglected to request funds for this procurement, but the House included $65 million and the Senate $77.5 million for Lance missiles. The conference agreement reached is at the Senate figure.

Nonnuclear Lance missiles provided in this bill will enhance the war readiness of the United States in Europe where NATO forces face numerically superior Warsaw Pact forces.

The nonnuclear Lance has the range to reach essential targets. It is said by U.S. military commanders in Europe to be an extremely valuable weapon system and one which is needed by our forces if we are to hope to halt and turn back Communist aggression there.

The Congress has demonstrated its wisdom by including nonnuclear Lance funding to complete the procurement. The Department of Defense should now move forward with the procurement and deployment of the system.

Mr. MAHON. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. BAUMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 361, nays 36, not voting 37, as follows:

[Roll No. 516]

Burgener	Lederer	Teague
Chappell	Moss	Vanik
Clay	Murphy, N.Y.	Young, Alaska
Conable	Pettis	Zeferetti
Crane	Pritchard	
Dent	Quillen	

The Clerk announced the following pairs:

On this vote:

Mr. Chappell for, with Mr. Rangel against.
Mr. Teague for, with Mr. Badillo against.
Mr. Murphy of New York for, with Mr. Clay against.
Mr. Zeferetti for, with Mr. Koch against.
Mr. Rostenkowski for, with Mr. Roybal against.

Until further notice:

Mr. Dicks with Mr. Kemp.
Mr. Fascell with Mr. Aspin.
Mr. Sisk with Mr. Bonker.
Mr. St Germain with Mr. Ketchum.
Mr. Biaggi with Mrs. Pettis.
Mr. Brinkley with Mr. Young of Alaska.
Mr. Dent with Mr. Stangeland.
Mr. Johnson of California with Mr. Evans of Delaware.

Mr. Moss with Mr. Pritchard.
Mr. Vanik with Mr. Quillen.
Mr. Rosenthal with Mr. Crane.
Mr. Lederer with Mr. Conable.
Mr. Applegate with Mr. Burgener.

Mr. MILLER of California and Mr. STOKES changed their vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

AMENDMENTS IN DISAGREEMENT

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 20: Page 8, line 22, strike out: "*Provided further*, That the Secretary of Defense may transfer up to 3 per centum of the amount of any subdivision of this appropriation to any other subdivision of this appropriation, but no subdivision may hereby be increased by more than 5 per centum and the Secretary of Defense shall notify the Congress promptly of all transfers made pursuant to this authority" and insert: *Provided further*, That of this appropriation, not more than $350,000 may be obligated to support the personnel and activities of the Assistant Secretary of Defense for Health Affairs prior to February 1, 1978.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendments of the Senate numbered 20 and concur therein with an amendment, as follows: in lieu of the matter stricken, insert the following:

"*Provided further*, That $845,662,000 shall be available only for the Defense Logistics Agency and $614,583,000 shall be available only for the Civilian Health and Medical Program of the Uniformed Services: *Provided further*, That during fiscal year 1978 the Department of Defense may guarantee loans pursuant to Title III of the Defense Production Act of 1950 as amended (50 U.S.C., Appendix 2091, 64 Stat. 800) in an amount not to exced $5,000,000: *Provided further*, That of this appropriation, not more than $350,000 may be obligated to support the personnel and activities of the Assistant Secretary of Defense for Health Affairs prior to February 1, 1978."

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 30: Page 13, line 21, insert:

SECRETARY OF DEFENSE READINESS FUND

For transfer by the Secretary of Defense to any appropriation contained in title III of this Act, to be merged with and to be available for the same purpose as the appropriation to which transferred upon determination by the Secretary of Defense that funds are necessary for high priority items directly associated with maintaining or improving military readiness of the active forces or reserve components of the Department of Defense, and in no case for items or programs for which funds have been denied or reduced by the Congress; $300,000,000: *Provided*, That the Secretary of Defense shall notify the Congress promptly of all transfers made pursuant to this authority: *Provided further*, That transfer authority provided herein shall be in addition to that provided in section 833 of this Act.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 30 and concur therein with an amendment, as follows: In lieu of the sum named in said amendment insert: "$100,000,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 40: Page 24, line 3, strike out "$2,141,471,000" and insert "$2,150,600,000".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 40 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert the following: "$2,176,410,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 41: Page 25, line 12, strike out "$7,417,705,000" and insert "$6,111,600,000".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 41 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment insert: "$7,693,400,000".

The SPEAKER pro tempore. The gentleman from Texas (Mr. MAHON) is recognized for 30 minutes, and the gentleman from Alabama (Mr. EDWARDS) is recognized for 30 minutes.

The Chair recognizes the gentleman from Texas (Mr. MAHON).

Mr. MAHON. Mr. Speaker, this is amendment No. 41 and it relates to the B–1 bomber program. This is a very controversial program as the Members of the House know. As the Members also know, we will have a maximum of 1 hour of debate which will be equally divided between the gentleman from Alabama (Mr. EDWARDS) and myself, for the discussion of this motion. For a time I shall yield for debate only but at a later moment I will yield to the gentleman from New York (Mr. ADDABBO) to propose a substitute motion. I shall do that because I promised the House on July 21 when we sent the defense bill to conference that I would make sure, insofar as possible, that the House had an opportunity for an up or down vote on B–1 bomber production. I stated that we would not make an agreement with the Senate and wrap it up in the conference report but that the House would have a further say with regard to the B–1. We will have that clear-cut issue on the Addabbo motion.

The motion which I have made provides for $1.4 billion for the five additional B–1 bombers. It is a program that the House approved at an earlier date when we passed the defense bill. It will be recalled that on that vote in the House those favoring B–1 bomber production were 243 and those opposed were 178. There was a 65–vote margin.

Following the consideration by the House of the measure, the President, as the Members know, proposed the cancellation of B–1 bomber production. It was after that time that the other body took action with respect to the measure. The other body by a vote of 59 to 36 supported the President's recommendation that the B–1 bomber production program for fiscal year 1978 be canceled.

I think it important that Members understand what has been done with regard to the B–1 and what the status is. As I said earlier in the debate on the conference report, we have flying today three prototype B–1's and a fourth is about half completed and will be completed. It is the plan of the administration to use these four research and development aircraft for further testing. That is the administration's proposal. As mentioned in debate today, a rescission is pending which has been sent to the House and Senate with respect to the funds which have been previously provided for B–1 production in the fiscal year 1977 appropriation bill. It is the proposal of the administration, which I am sure most of us understand, that there will be an aggressive research and development program continued.

In the conference report which we have already voted on there were $442 million provided for continued research and development of the B–1. So the President would have the option at a later date to restart the production, which, of course, would be a very expensive operation.

It is also the proposal of the administration that we provide in a special supplemental appropriation bill this month or next month the sum of about $400 million associated with a plan to accelerate the cruise missile program and for other strategic force enhancements. In the conference report which has already been adopted there is about $400 million provided for the cruise missile program. And as I have indicated, under the supplemental request made by the President there is an additional $400 million, or a total of about $800 million, roughly speaking, for the cruise missile program and related projects involving the cruise missile. So that is where we stand today with respect to this matter. I take the position that I have always supported the B–1 myself and I shall continue to support the B–1. I recognize that there are two sides to the issue. I recognize that plans are being considered to use other aircraft as a vehicle to carry the cruise missile. I recognize the fact that considerable funds are being requested to further improve and modernize the B–52 for the purpose of employing the cruise missile. This seems to be about the situation, and Members of the House, of course, have the option of taking whatever steps they feel necessary in regard to the proposal.

It is true that the B–1 has cost us far more than we ever estimated it would cost. It is true that there are various reasons for differences of opinion, and every Member has the responsibility of casting his own vote on this issue. As for myself I support the production of the B–1.

Mr. WYLIE. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Ohio.

Mr. WYLIE. I thank the distinguished chairman for yielding.

I rise in support of the B–1 bomber, but I would like to refer back to June 28, 1977, when the gentleman now in the well said, and I quote:

I personally feel, as I know many of my colleagues do, that we must, in the interest of the security of this country, in the interest of having a well-balanced defense program, and in the interest of helping the President and others who are working toward some sort of accommodation with the Soviet Union with respect to the arms race, approve this amount for the B–1. I am convinced that we need to continue this program. I shall, as in previous years, vote to continue it, as I believe a majority of the Members of this House will.

I would like to ask the distinguished chairman of the Committee on Appropriations if that is still his position as I understand it is.

Mr. MAHON. That is still the position which I take.

Mr. WYLIE. Apparently, then, there was some misunderstanding with the President back on June 28, because it seems to me from the remarks of the gentleman from Texas that there was a clear signal to the gentleman from the White House at that time that the President would support continued funding of the B–1.

Mr. MAHON. Different Members had different views as to what the President would actually do about the B–1. I must agree I had originally thought the President would support the B–1 bomber. I was one of those who went to the White House and discussed the matter with the President and stated my continued support for the B–1.

Mr. WYLIE. So, apparently, as far as your understanding, the President had a change of mind shortly after the statement of the gentleman from Texas on June 28 and then 2 days later made his announcement that he would discontinue production of the B–1. Is that a fair appraisal or not?

Mr. MAHON. I am not clear as to what the gentleman is driving at.

Mr. WYLIE. On June 28 the gentleman from Texas indicated he was supporting the President in that he would favor the continuation of the B–1 program. That was on June 28. Two days thereafter the President announced he favored discontinuation of the B–1 program, so apparently the President changed his mind between June 28 and June 30. Is that a fair analysis of the situation?

Mr. MAHON. The President never did say that he would support the B–1. He had indicated he would not support the B–1 at an earlier date, as I understand it, but I was one of those who thought he would go along with the B–1 program at that time. He did not. But the important point is that my position has nothing to do with the position of the President. My point is I am in support of the B–1 program.

Mr. WYLIE. That was not my understanding. I thank the gentleman.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield myself such time as I may consume.

Mr. FLYNT. Mr. Speaker, I make the point of order a quorum is not present.

The SPEAKER pro tempore (Mr. BROWN of California). That point of order is not in order in the House at this time.

The gentleman from Alabama is recognized.

POINT OF ORDER

Mr. BAUMAN. Mr. Speaker, a point of order.

The SPEAKER pro tempore. The gentleman will state it.

Mr. BAUMAN. Mr. Speaker, the Constitution of the United States requires that a quorum be present at all times to conduct business in the House of Representatives. We are sitting in the House and at this time there is a pending motion on an appropriations conference report being debated, and I can count. Obviously there are not 218 Members present. We have no quorum. I make a point of order that under the Constitution, article I, section 5, the House cannot continue to conduct its business in this way without a quorum and I move a call of the House.

The SPEAKER pro tempore. The Chair has discretion to entertain a motion for a call of the House but he cannot entertain a point of order at this time.

Mr. BAUMAN. A parliamentary inquiry. Under what authority does the Chair not entertain a point of no quorum when a quorum is not present?

CALL OF THE HOUSE

Mr. BRADEMAS. Mr. Chairman, I move a call of the House.

The SPEAKER pro tempore. The gentleman from Indiana moves a call of the House.

Under rule XV clause 6(e) the Chair cannot entertain a point of no quorum at this time.

Mr. BAUMAN. A parliamentary inquiry. Does rule XV allow discretion in the Chair whether or not a point of no quorum will be permitted? There is not a quorum present.

The SPEAKER pro tempore. The only discretion the Chair would have under clause 6(e)(2) of rule XV is whether to entertain a motion for a call of the House. The Chair has entertained such a motion.

Without objection, a call of the House is ordered.

There was no objection.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 517]

Archer	English	Murphy, N.Y.
Armstrong	Erlenborn	Pepper
Ashley	Evans, Del.	Pettis
Aspin	Evans, Ga.	Pritchard
Badillo	Fascell	Quillen
Biaggi	Fish	Rahall
Bolling	Flood	Rangel
Bonker	Flowers	Rosenthal
Brinkley	Ford, Mich.	Rostenkowski
Brown, Mich.	Frey	Roybal
Burgener	Gibbons	Santini
Burton, John	Hagedorn	Scheuer
Burton, Phillip	Harsha	Simon
Cederberg	Heckler	Sisk
Chappell	Ichord	St Germain
Clay	Johnson, Calif.	Stangeland
Cleveland	Kemp	Teague
Conable	Ketchum	Thompson
Conyers	Koch	Tucker
Coughlin	Lehman	Udall
Crane	Mathis	Ullman
Davis	Michel	Vanik
Dent	Miller, Calif.	Vento
Dicks	Mitchell, Md.	Waxman
Diggs	Moffett	Wiggins
Drinan	Montgomery	Young, Alaska
Eckhardt	Moss	Zeferetti

The SPEAKER pro tempore. On this rollcall 353 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

The Chair wishes to clarify the point which was raised by the gentleman from Maryland (Mr. BAUMAN) prior to the quorum call, and since the gentleman is perhaps much more familiar with the rules than is the Chair, the Chair wishes to quote clause 6 of rule XV which deals with quorum calls in the House. The provision of the rules which the Chair wishes to cite is specifically clause 6(e)(1), which reads as follows:

Except as provided by subparagraph (2), it shall not be in order to make or entertain a point of order that a quorum is not present unless the Speaker has put the pending motion or proposition to a vote.

In this instance the Speaker pro tempore had not put the pending motion or proposition to a vote to make it possible for a quorum call to qualify under the rules. It is, of course, imperative that the Chair follow the rules in a matter of this sort.

This point has been further stressed by Speaker O'NEILL when the matter has been brought up on previous occasions.

PARLIAMENTARY INQUIRY

Mr. BAUMAN. Mr. Speaker, I have a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state his parliamentary inquiry.

Mr. BAUMAN. Mr. Speaker, not that I wish to belabor the point, but the Constitution of the United States, article I, section 5, requires that at all times a majority of the House be present for the conduct of business. The point that I made prior to the quorum call was that there was not a majority of the House present, and in the absence of a majority, any business that would be conducted would not be legally or constitutionally conducted, the rules of the House notwithstanding.

The SPEAKER pro tempore. The gentleman from Maryland (Mr. BAUMAN) is perhaps more familiar with the Constitution than is the Chair, who is not in a position to rule upon the constitutionality of the rule, but the new rule

does not anticipate, according to the understanding of the Chair, that the mere conduct of debate would constitute business in the sense as contemplated by the Constitution, and the rule does provide that a point of order is in order if a question has been put to a vote.

CONFERENCE REPORT ON H.R. 7933, DEPARTMENT OF DEFENSE APPROPRIATION ACT, 1978

The SPEAKER pro tempore. The Chair recognizes the gentleman from Alabama (Mr. EDWARDS).

Mr. EDWARDS of Alabama. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, President Carter's decision to terminate the production of the B–1 bomber was a mistake.

It just makes no sense whatsoever to cancel production of the B–1 at this particular time—a time when we are involved in sensitive SALT negotiations with the Soviet Union and at a time when most would agree that we need to maintain some kind of strategic bomber force. This program is now pretty far down the road. In the 7 years since the program's inception, we have spent more than $3 billion.

From this perspective, I would say that this was the wrong decision at the wrong time.

The controversy over the B–1 bomber has raged for many years, and I think it is most unfortunate that we now find ourselves actually debating the demise of this much needed weapons system.

The President's decision, according to many, was based primarily on economic considerations. While I am just as concerned as he is about Federal spending, I do not believe that such considerations should be paramount in decisions affecting national security.

The need for the B–1 is clear and simple. We must continue to maintain the strategic triad, consisting of manned bombers, land-based ICBM's, and submarine-launched ballistic missiles. The time has come to replace the aging B–52's if we are to maintain the triad, the foundation of our nuclear strategy.

President Carter is going to place increasing emphasis on the cruise missile in our strategic force planning. The present plan is to improve the B–52's and equip them with air launched cruise missiles. Some of these aircraft would be designated to penetrate Soviet defenses while the remainder of the force would "standoff" outside Soviet defenses and launch their cruise missiles from there. This kind of posture could force the Soviet Union to reorient its massive air defense system, as it is presently structured to cope with penetrating bombers.

This decision is certainly not the end of the world so far as our defenses are concerned. The cruise missile could prove to be very effective in defeating Soviet air defenses and could be the precursor of a new age in strategic systems. But I still believe the President was wrong in terminating the B–1 production, and by doing so, he is seriously shortchanging our defense effort.

Mr. LATTA. Mr. Speaker, will the gentleman yield at this point?

Mr. EDWARDS of Alabama. Yes, I yield to the gentleman from Ohio.

Mr. LATTA. Mr. Speaker, I thank the gentleman for yielding.

It seems to me that there has been some misinformation supplied the American people by the White House on this issue or, at least, contrary to the information that was given to me as a member of the Committee on the Budget during the last few years.

Mr. Speaker, during this time we had voluminous testimony from the people in the Pentagon who know something about the need for both the cruise missile and the B–1 bomber. We are now being led to believe that these are alternative weapons systems and that we have a choice between the B–1 bomber and the cruise missile. We were informed, when we were studying this matter the past couple of years, that one system would complement the other and that both were essential to our defenses.

I wonder whether the gentleman would address himself to this matter or does he intend to address himself to this matter.

Mr. EDWARDS of Alabama. Mr. Speaker, I think most assuredly that the B–1 bomber and the cruise missile complement each other. There is no question in my mind about that.

The President has obviously made this choice of the cruise missile instead of the B–1 bomber; and he has made it on the basis of upgrading the B–52 at a tremendous cost.

Thinking that we are going to save $20 billion by terminating the B–1 bomber is sheer folly. The money we are going to spend on upgrading the B–52 to try to make it do, at least in part, the job the B–1 would have done is going to be massive.

I do not think that anybody fully knows how much will be spent to upgrade the B–52, but it will be many billions of dollars. Therefore, we are kidding ourselves if we think we are necessarily saving these great amounts of money by terminating the B–1 bomber.

Mr. LATTA. Mr. Speaker, I want to thank the gentleman for clarifying this point because I think it needs clarifying. It needs reemphasizing to the American people that these are not alternative weapon systems but one complements the other and both of them are needed.

If the gentleman will yield further, another matter which is now surfacing in the press in the discussions on these two systems that scares me no end is the fact that we may end up with neither.

Mr. Speaker, may we have order?

The SPEAKER pro tempore. The House will be in order.

Mr. EDWARDS of Alabama. Mr. Speaker, may I say that I appreciate the Speaker getting order. Members have been coming up to me all day long asking when the B–1 issue was going to come up, because they want to hear the debate, then we have the B–1 issue up on the floor and the Members seem to want to enter into little private conversations instead of listening to the debate.

Mr. Speaker, this is an extremely important issue. Whether the Members agree with my position or disagree with it, they need to hear what is being said about the B–1 because we are being literally asked to preside over the demise of the B–1. That is the issue facing us right now.

Mr. LATTA. Mr. Speaker, if the gentleman will yield further, I was about to say that I have heard and read various statements about the matters to be taken up during the SALT II talks and that the cruise missile may now be on the table or will be on the table for negotiation. If this is true, a little further down the road I can see the United States of America not having either of these weapons systems as a result of the administration's unilateral action on the B–1 and the SALT II negotiations. It would be tragic to lose the cruise missile in the SALT II talks and lose the B–1 bomber by a decision of a new, uninformed administration. I do not believe this ought to happen.

Mr. EDWARDS of Alabama. I want to agree with the gentleman from Ohio (Mr. LATTA).

The most distressing thing of all is that the President just unilaterally terminated the B–1 right in the middle of the SALT negotiations. It was the old theory that if we would do that we would be showing such good faith to the Russians that they would also be good guys as well. Mr. Speaker, the Russians just do not play the game that way.

With the SALT talks going on, we had a marvelous opportunity to receive some concessions from the Russians in exchange for termination of the B–1 program.

Mr. Speaker, in my opinion, President Carter really dropped the ball on this one. I urge the House to vote against the termination of the B–1 bomber program.

The primary vote will come on an amendment to be offered by the gentleman from New York (Mr. ADDABBO) and I urge a no vote on the Addabbo amendment.

The B–1 bomber should not be terminated, but even if you believe it should be terminated, we should get something for it at the SALT talks and not do it unilaterally.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of Alabama. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I appreciate my colleague, the gentleman from Alabama (Mr. EDWARDS), yielding to me.

Mr. Speaker, when we had the debate on this issue originally in the House, and then when the President announced that he was going to terminate the production of the B–1 bomber, he indicated at that time that the B–52 could be upgraded and serve as a substitute weapon vehicle. The President then suggested that the B–52 would then be the delivery vehicle for delivering the cruise missiles, is that correct?

Mr. EDWARDS of Alabama. That is correct.

Mr. ROUSSELOT. Is the gentleman telling us today that the cost of upgrading the B–52 is far more expensive than we have been led to believe and that it, in fact, may not be available to provide the total delivery capability if the B–52 is not upgraded?

Mr. EDWARDS of Alabama. I think the B–52 is available to deliver the cruise missile. I would not make an argument that it is not. But, in order to do the job it is going to have to be redesigned, a number of them will have to be redesigned for the purpose of penetrating Soviet Union space and others will be redesigned to stand off and handle the cruise missiles. That is going to be a massive expenditure. As I said earlier, I do not think anybody really knows what the cost will be.

Mr. ROUSSELOT. What estimates have been given to you as to what would be the cost of upgrading the B–52's?

Mr. EDWARDS of Alabama. I have heard numbers up to $13 billion, but I cannot give the gentleman any number. We have not been given any number.

Mr. ROUSSELOT. So the committee has not had a chance to review what the costs will really be?

Mr. EDWARDS of Alabama. The answer to that is "no."

Mr. Speaker, I yield back the remainder of my time.

Mr. MAHON. Mr. Speaker, I yield 4 minutes for purposes of debate only to the gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Speaker, by this date, it is apparent that most, if not all, of the pros and cons concerning the production of and the need for the B–1 bomber has been discussed in this Chamber. The need for development of a replacement for the 20-year-old B–52 has been recognized for a long time. It has been a great aircraft, but it has achieved the maximum possible in modernization. As defense weapons improve, the B–52 will have diminishing value as an attack weapon. Unfortunately, the cost of the replacement for the B–52 has escalated to the point that it has been under heavy attack in and out of Congress. Nevertheless, the need has been so obvious that the Ford administration recommended the procurement of eight of the B–1 aircraft in the fiscal year 1978 budget.

Upon assuming office, Mr. Carter proposed a cutback to five production models in the first procurement buy of the B–1.

Recognizing the essentiality of the aircraft, the Congress consistently voted for the B–1 during its developmental stages and the House approved the proposed buy of five aircraft in this year's Defense Appropriations bill by a margin of 65 votes. Almost immediately thereafter, the President cancelled the procurement plans for the B–1. The Senate accepted the President's proposed cancellation but the Conferees voted to bring the item back in disagreement. The House today will decide whether or not there is to be any possibility of procurement of this important aircraft in the foreseeable future.

There is not on the drawing boards another weapons systems to replace the aging B–52. We are told that the cruise missiles can provide a satisfactory alternative, but not a replacement. The promise of an alternative is, at least for the time being, illusory. The cruise missile on which we place such great hopes should prove to be a superior weapon for its purposes when available, but it is not yet in production. It may be years before we have cruise missiles in adequate numbers to be effective. We need both, and we need them as quickly as they can be made available.

I think it is unsound to cancel the B–1 procurement. Undoubtedly, it would be an important deterrent to war. It would provide another needed program for maintaining equivalence between the U.S. and Soviet military strength. I think it folly to say to the American people that we cannot afford five B–1 bombers a year, when the Soviets are building five Backfire bombers a month. The Backfire is a more modern bomber than the B–52. It does not possess the capabilities of the B–1, but the number of Backfires to be procured provide the Soviets with additional security in a major area in which we will be lacking. It should now be clear that the Soviets are not merely seeking parity, but outright "strategic superiority." This is within their reach.

The B–1 should continue to have the support of Congress before the scales are irreparably tipped against us in defense. The proper vote for the B–1 is No on the Addabbo substitute which would strike the B–1 funds.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield 3 minutes to the minority leader for the purpose of debate only.

Mr. RHODES. Mr. Speaker, the B–1 bomber should be built. I do not think that there is any doubt—at least, there is no doubt in my mind—about it. In the first place, I think the concept that we can take a B–52 and modify it and put a cruise missile anywhere near a target is erroneous. The B–52 is a subsonic bomber. It is 25 years old. A cruise missile is only as good as its capability of getting to a target.

In order to get to a target, it has to have a vehicle from which it can be launched. Launching this from a B–52 in my opinion would be just about as effective as trying to launch the latest, most sophisticated surface-to-surface missile from a horse and buggy.

In order to make sure a cruise missile can get to its target we need an airplane which can stand far enough off the borders of the hostile nation and launch missiles which have enough range to get to the target. This just cannot be done in my opinion with the B–52, no matter how we modify it.

So the idea that we have a cruise missile—and we do not have it yet—which is a sufficient substitute for the B–1 is a misconception. We have to have the B–1 and the cruise missile. We cannot have the effectiveness of one without the effectiveness of the other.

Also it is important for us to understand that the 707 aircraft, which is still the work horse of our commercial fleet, was a direct outgrowth of the construction of the KC–135, which was an air tanker. It was a maximum move forward in the construction of fast jet airplanes.

Some years ago the House voted—and I joined in that vote—to kill the SST. I think we were right at that time, but I think the time is coming when we are going to know what it is like to have a big supersonic aircraft. This is just one of the things which a B–1 will give us.

So on balance and for every reason I can think of it is important for us to go ahead with this right now.

Certainly it is also important to understand that we have given it up without any quid pro quo. And the gentleman from Alabama made a very important point when he said that the Russians just do not understand that kind of thing. They do not understand why anyone would give up something without getting something in return. Well, I do not understand it either. It seems to me if we are going to give up the B–1 we ought to do it only in connection with the SALT talk negotiations in which they give up something too. Here we are, giving up the garrison of the 2d Infantry Division in Korea without getting anything back and we are giving up the B–1 bomber without getting anything back in the hope that the Russians will be good guys and understand that maybe they ought to give up something too. Anyone who believes that just does not understand the Russians. They do not understand this type of thing. They do not play by our rule book. I wish they did. If they would play by our rule book maybe they would understand this and some day maybe we would get peace, but they do not.

We want to have a SALT agreement. In order to get some SALT agreement we have to have some bargaining power. So if we do not fund the B–1 for any other reason than to have a trading chip—and I suggest there are many other good reasons—that would be a good enough reason to go ahead with the B–1 bomber.

So I hope we vote against the Addabbo substitute and vote for the motion offered by the gentleman from Texas (Mr. MAHON), my good and longtime friend.

Mr. MAHON. Mr. Speaker, I yield 4 minutes to the gentleman from Georgia (Mr. FLYNT) for purposes of debate only.

Mr. FLYNT. Mr. Speaker, I rise in strong support of the motion offered by the chairman of the Appropriations Committee. I rise in equally strong opposition to the substitute amendment which will be offered to strike all funds for production of the B–1 bomber.

Mr. Speaker, we have put hundreds of millions of dollars into this program, over $3 billion to date. In my opinion we have developed the finest bomber aircraft ever devised by the brain and power of man. We need the B–1. We need the B–1 as the follow-on to the magnificent B–52, but the B–52 is an older aircraft and it cannot serve the defense of this country adequately. Indeed it can not serve the interest of the free world in the out years, the decades which lie ahead of us. It cannot adequately serve the needs of the Air Force, nor can it provide the necessary safety and protection to the men who fly.

Let me briefly in the time allowed try to bring into perspective where we are and where we stand regarding the B–1. First of all, the House of Representatives has consistently, on every occasion on which the issue has arisen, struck down amendments offered to destroy the B–1 program. Beginning in 1971 we defeated an amendment to H.R. 8687, Defense procurement authorization, which proposed to strike $370.2 million for the B–1 long-range bomber by a recorded vote of 97 yeas to 307 nays. In 1972 by a vote of 94 yeas to 279 nays, the House again defeated an amendment to the Defense

procurement authorization bill which proposed to delete the entire $445 million recommended in the bill for research and development of the B–1 bomber. In 1973 an amendment to H.R. 9286 was defeated by a vote of 96 to 313 which proposed to delete $473.5 million for research and development of the B–1. Again in 1974, the House rejected an amendment to the Defense procurement authorization bill, H.R. 14592, which would have deleted $499 million for the continued development of the B–1 manned bomber.

From the period 1975 to 1977, there were four amendments offered to Defense bills to destory the B–1 program which were rejected by the House of Representatives. The amendment to H.R. 6674, Defense procurement authorization, which proposed to delete a $1.89 billion authorization in the bill for initial procurement of the B–1 bomber, was defeated on the floor on May 19, 1975, by a vote of 164 yeas to 227 nays. Last year, we defeated two amendments—to defer expenditure of $960 million recommended in the bill for purchase of three B–1 bombers until the President certified that the purchase was in the national interest and Congress approved the purchase by concurrent resolution, and an amendment to H.R. 14262—Defense appropriations fiscal year 1977—to defer until February 1, 1977, the obligation of funds appropriated for procurement of the first three regular-production B–1 bombers.

That brings us up to the 95th Congress when on June 28, 1977, the House again defeated the amendment to H.R. 7933 which proposed to delete $1.5 billion for the procurement of five B–1 bombers. The Congress thus far in what I believe is its wisdom has funded three B–1 R. & D. aircraft, Nos. 1, 2, and 3. These three are in the flight test stage at the present time. Aircraft No. 4, an additional research and development aircraft, has not only been funded, but is half completed.

Preparation for the B–1 production program began in fiscal year 1976 with the procurement of long lead materials and production engineering. On December 2, 1976, after an intensive review of the need for the B–1, the development program and the production readiness status by senior officials of the Secretary of Defense, Air Force and outside experts, the Secretary of Defense authorized the Air Force to begin production of the first three production aircraft, Nos. 5, 6, and 7.

In February 1977, the Secretary of Defense changed the planned fiscal year 1978 B–1 procurement quantity from eight to five aircraft and reduced procurement quantities in fiscal years 1979 through 1981.

The fiscal year 1978 bill with which we are concerned here today has funds for these five production B–1 aircraft, which we refer to as aircraft Nos. 8, 9, 10, 11, and 12. These are the ones which are primarily involved in the debate here now and in the motion offered by the chairman of the Committee on Appropriations. The first three production aircraft, Nos. 5, 6, and 7 are at the present time subject to a rescission which has been pending since July 19, 1977, and will be addressed by the House of Representatives later this month.

Mr. Speaker, it will cost, according to the best figures that I have, over $790 million to terminate the B–1 program, due to the fact that a lot of the money which has heretofore been appropriated and obligated is for long leadtime requirements for components. Without exaggerating too much, it would take nearly all the storage facility at a large Air Force base to store these aircraft component parts which are already in production and which are going to be paid for regardless of the outcome of this vote which will come up shortly.

Mr. Speaker, I think that it would be the most shortsighted act that this House could participate in to kill this program in its entirety. All of the opponents of the B–1 program say we are going to keep R. & D. alive, but do not be misled, Mr. Speaker, by any such facetious argument as that.

The B–1 was designed to provide the needed modernization for the strategic bomber forces of the United States. Deletion of production funds would eventually serve to eliminate the bomber as an effective element of our TRIAD of deterrent forces. Failure to maintain a bomber force would simplify the enemy targeting problem should he attempt a disarming first strike blow against our strategic forces, simplify his defensive problem against the low altitude penetrating threat, release some of the resources currently committed to bomber defense for the solution of the antisubmarine and ballistic missile defensive problem, remove half of the strategic megatonnage from our force, remove the only recoverable and reuseable strategic weapon from our inventory and remove the unique non-nuclear options provided by the strategic bomber; for example, conventional bombing, ocean surveillance, mining and antishipping.

The B–52, our current heavy strategic bomber, was first flown in the early 1950's and became operational in 1955. The newest B–52 will be 20 years old at the time of the planned B–1 Initial Operational Capability. The Air Force has maintained the B–52 effectiveness through modification; however, further modification efforts are constrained by the B–52 physical age and by technological constraints in its basic aircraft design. Against the increasingly capable and sophisticated defensive system of the Soviet Union, the B–52 is becoming less effective. We have not built a B–52 since 1962.

The B–52 in combination with the cruise missile cannot penetrate Russian defenses. Operationally, against the Russians, the B–52 must launch the cruise missiles at high altitudes. The Russians can easily detect the launching of the cruise missiles at high altitude and defend themselves by destroying them miles before they reach their target. Russian high speed fighters have the capability to intercept our cruise missiles. They can overtake, track, and destroy the subsonic cruise missile launched at altitude.

The B–1 will overcome the projected defenses through higher speed, lower altitude penetration; a lower radar cross section with better electronic countermeasures; additional payload capacity; increased flexibility; hardening against nuclear effects; and a higher alert rate. Without the B–1, the capability and credibility of our bomber force and thus its deterrent value against nuclear war, would be seriously reduced.

Continued funding of the B–1 program is essential to maintaining our strategic forces at the current level of effectiveness. No other bomber modernization alternative provides the capability, flexibility, and growth potential to maintain bomber force effectiveness into the 21st century.

Vote down the Addabbo substitute and vote for the motion offered by the chairman of the Committee on Appropriations.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio (Mr. DEVINE).

Mr. DEVINE. Mr. Speaker, I do not think there are very many of us in this body that would go home to our districts and say, "Let's clean out the firehouses, get rid of our firefighting equipment, because maybe we won't have any more fires."

It is a lot better to have the fire equipment, just as it is with the B–1 bomber, to have it and not need it, than to need it and not have it.

I do not have any sons, I have three daughters, but those of you with sons if you are going to have them drive in the Indianapolis 500, you would not want them to drive a model T Ford; but you are asking the people in the Air Force to fly the old B–52 bomber and junk the B–1. Those B–52 bombers were designed 30 years ago. The last one came off the production line in 1962. We talk about carrying the cruise missile on the B–52 bombers. They are not equipped to do so. They have to build them up to take care of the stress and it will cost millions of dollars.

What about the B–52's? They were shot down like flies in Vietnam. We had 750. I guess we have about 260 left. It is not equipped to handle the problems that we are facing today.

The President's decision to discontinue the B–1 bomber, I think, did great violence to our traditional concept in America of peace through strength. We hope to heaven we will never have to use the B–1 bomber, but if we need it, we ought to have it.

The B–1 is about a third smaller than the B–52. The configuration is such that they can approach a target without being readily detected on radar, contrary to the B–52 which when it comes over the horizon looks like a hangar coming in. They can easily pick it up on radar. That is what we are talking about today.

So, it seems to me that the Addabbo amendment is begging the question that we put just a little money in for R. & D., for research and development. Many of us were at the White House about 4 weeks ago and asked the President specifically, when he said he was not going to discontinue R. & D. but discontinue the B–1 program—I asked him specifically, "Does that mean that we are going to produce planes 5, 6 and 7?"

The answer was, no, just R. & D. for plane 4. That will not do the job. And

at the same time the Soviets are producing Backfire bombers at the rate of four or five per month.

Worse than this, President Carter got absolutely nothing in return from the Russians. It looks like unilateral disarmament when the Commander in Chief wipes out the B–1, cancels Minuteman III as well as SRAM—so, let us keep the B–1 in our inventory and have a posture of peace through strength.

Another area not mentioned is the fact President Carter is compounding unemployment by his ill-advised decision. Rockwell in my district laid off 1,000 persons and at least 10,000 across the Nation. You just cannot break up a team of experts and readily put it back together at some remote time in the future.

Vote for the B–1 and against the Addabbo amendment.

Mr. MAHON. Mr. Speaker, I yield 4 minutes for debate only to the gentleman from New York (Mr. ADDABBO).

Mr. EDWARDS of Alabama. Mr. Speaker, I yield 5 additional minutes to the gentleman from New York (Mr. ADDABBO) for purposes of debate only.

The SPEAKER pro tempore. The gentleman from New York is recognized for 9 minutes.

Mr. ADDABBO. I thank the gentleman from Alabama.

Mr. Speaker, with regard to begging the question of the ineffectiveness of the B–1, as far as I am concerned this Congress, or the last Congress actually, in the 1977 appropriation bill saw the possible cost in effectiveness of the B–1, because when we appropriated $1 billion in the 1977 appropriation bill for three B–1's, we also said that the President, whoever the President shall be in January 1977, will make the decision as to whether to go ahead with the B–1 or not. That was the decision of the Congress. That was in the conference report adopted by the Congress.

The President of the United States, during the campaign, said that the B–1 was not an effective weapon. All he has done has been to reaffirm that by his decision of last July. He has stopped the production; the contract is cancelled.

If we reverse that action by voting against my amendment, this conference report will have to go back to conference with the Senate. They have already approved a production stop. They have cut out the $1 billion for production and have used a good part of that billion dollars to purchase other weapons; more planes, more money for cruise missiles and ships. They have done that, and we have by adoption of the conference report today accepted that fact. We will use that $1 billion for other, more cost effective, weapons.

If we vote down my amendment, we are adding an additional $1 billion, and that $1 billion more could possibly come out of other domestic programs. That is because the figure we are trying to save, or that $1 billion, as I said, has already been used. We would have to have an additional $1 billion if we are to recommence the construction or production of the B–1 bomber.

Today, we have heard talk about the fifth and sixth and seventh B–1 bombers. Those planes, the fifth, the sixth, and the seventh planes, have already been funded in this 1977 appropriation bill. If those funds are to be rescinded, the Congress will have to act again. That is not at issue today. The issue today is whether or not we shall continue with the research and development on the B–1 and support the President's position in the cancellation, which has already been done, in the cancellation of the B–1 bomber contract.

Mr. BURLISON of Missouri. Mr. Speaker, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from Missouri.

Mr. BURLISON of Missouri. Mr. Speaker, I appreciate the gentleman yielding to me. I would like to commend the gentleman on his statement. As the gentleman knows, I have been a supporter in recent years of the B–1 bomber, but I have never felt that all of the truth was on that side of the issue.

I think that the President has taken a reasonable position in building a rationale around the cruise missile. It will be counterproductive, in my mind, for the House to try to take a position in opposition to what the President has decided and what the Senate has decided on this issue. It is not realistic to contend that the decision can now be turned around.

So I expect to support the gentleman's amendment.

Mr. ADDABBO. I thank the gentleman for his support.

Mr. RYAN. Mr. Speaker, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from California.

Mr. RYAN. I thank the gentleman for yielding.

Mr. Speaker, I would like to support the Addabbo amendment for a reason, perhaps, which is a little bit different from what I have heard here so far.

We are in the process, apparently, of debating whether or not we should have the B–1 bomber. In fact, the Commander in Chief of the Armed Services of the United States of America has said that we will not spend money in this particular direction any longer. That is his judgment. I recognize that this House has a sovereign right, and I would defend that right to the last, to defend any particular Member who chose to debate. But it seems to me we are somewhat futile in our efforts to debate a decision which has already been made. It seems to me that the only thing this House has to do is to decide in what manner we will conclude the debate on the B–1 bomber, and I would suggest to the Members that the only logical place to go with that kind of conclusion is to support the Addabbo amendment.

Mr. ADDABBO. Mr. Speaker, I thank the gentleman for his remarks.

Mr. DOWNEY. Mr. Speaker, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from New York.

Mr. DOWNEY. I thank the gentleman for yielding.

Mr. Speaker, I do not think there is anybody in this Chamber who has not made up his or her mind on this particular issue. I would like to go over a little history, if I might, on this decision which the President has already made. I was as surprised as anyone, being an opponent of the B–1 bomber by the President's action. But the President really did not do anything that historically has not been done before. In the 1960's, in the mid-1960's, when the Air Force was worried that the B–52's were getting old, they said that what we needed was a plane that flew higher and faster. They proposed that the B–70 be built. The gentleman from New York (Mr. STRATTON), and some other Members thought a high-flying aircraft would not be able to penetrate the Soviet air defenses. It was wisely scrapped by the President and Congress. Low-level penetration became the tactic for the manned bomber, as wisely it should have been. During that period of time, in the late 1960's and early 1970's, when we debated to build the low-level penetrator that improved upon the B–52, we did not know about the future of the cruise missile.

We knew about it historically. The Germans had it first; it was called the buzz bomb. But we really did not know until TERCOM, with the miniaturization of engines and new fuel mixtures, exactly how strong, useful, and capable a cruise missile could be. The advances of the cruise missile is what allowed the President to halt the B–1 bomber. The President does not want to scrap the Triad because the bomber wing is necessary—but there is a more cost-effective alternative and a better military alternative. With the B–52 and the F–111, with cruise missiles, you can have a standoff capability even with some of the range limitations that have been talked about. And, by the way, no range limitation has been at issue formally at the SALT talks. There has been some talk about a 2,500-kilometer-range limitation, but even if that is agreed to, we will find that we have more than sufficient target coverage with the 2,500-kilometer range with our present cruise missile, the Tomahawk.

The President has decided that this is more effective militarily, that the cruise missile, when we talk about radar cross sections, is infinitely smaller than the B–1, and that it would be definitely more effective, not only now but in the future. That is the issue on which the President based his decision.

So when we talk about the Triad system of nuclear defense, the fact is that we are keeping that system and improving it with the cruise missile. When we talk about our having an adequate deterrent that will be not only effective but in the force early, we will have that because we will have an updated system with the cruise missile. The cruise missile will be ready before the B–1's would be operational.

The B–52's are getting old, no one quarrels with that statement, but the requirements for the B–52's through the 1980's and possibly the 1990's will be such that they will be able to do the job. We will have a penetrating capability with the B–52, and a standoff capability.

The President made a wise decision, and it is justified. The President has made his decision, the Senate concurred with it, and the House should not try and negate their decisions now that we know what is going on with these systems.

Mr. Speaker, I think the President has made a wise decision and that the Addabbo amendment should be supported.

Mr. ADDABBO. Mr. Speaker, I thank the gentleman for his comments.

Mr. Speaker, let us review this matter again and reflect on what the B–1 will cost. One of the main reasons the President has decided against the B–1 is that the B–1 is over $100 million a copy.

Not only that, but the B–1 is not coming into the inventory today or tomorrow; it is due to come into the inventory perhaps in 8, 9, or 10 years. We know what the state of the art in defense is in our defense system, and the Russians have one which is just as good. Which makes the B–1 almost obsolete before it is even put into inventory. What is needed is a platform for our missiles and bombs and that platform can be provided by more cost-effective means.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield 1 minute to the gentleman from Arizona (Mr. RUDD).

Mr. RUDD. Mr. Speaker, I rise in strong support of the B–1 bomber and in opposition to the proposed amendment.

I wish to compliment the distinguished gentleman from Florida (Mr. SIKES) for making the telling arguments he presented with regard to the B–1 bomber and the cruise missile. I wish also to compliment the minority leader for the statements he made.

We should be aware of one thing, and that is that the cruise missile as designed is still on the drawing board. It is still in an experimental stage and will not be ready for at least 5 years. The B–1 bomber is the only instrument we may have in our arsenal to protect ourselves and in defense against the comparable Backfire bomber.

The Russians have 250 Backfire bombers which are in operation today. That is a comparable bomber to the B–1. We have only 3 experimental B–1 bombers.

The subsonic, 400-knot cruise missile when developed will need a supersonic near ground level penetration platform for its delivery. A platform which has a nuclear hardened hull to guard it against heat, after blast and ray penetration which would destroy its avionics. This is the B–1 bomber. The obsolete B–52 cannot meet these vital needs.

Mr. Speaker, we need the B–1 for our defense, and I urge we fund the B–1 bomber and vote down the Addabbo amendment.

Mr. MAHON. Mr. Speaker, I yield 2 minutes to the gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. Mr. Speaker. I rise in support of the amendment to delete $1,431 million in budget authority for production of the B–1 bomber. This amendment supports the President's decision to cancel production of the B–1 bomber. The Senate has already taken action to support the President and has deleted production funding for the B–1.

I will not dwell on the pros and cons of the capabilities of the B–1 bomber. This issue has been discussed ad nauseam over the last few years. Rather I would like to concentrate on what the real production situation is today.

The fact is production of the B–1 bomber has stopped. On July 6, 1977 the Air Force issued a termination of work order to the contractors carrying out the President's decision. Restarting at this time would be very expensive. In fact the Air Force indicates that to restart work on aircraft 5, 6, and 7 funded in the fiscal year 1977 program would cost $1,350 million as compared to the $1,073 million which was funded in fiscal year 1977, an increase of $277 million. While no estimate of the cost of producing the five aircraft funded in fiscal year 1978 is available, you can be sure it would be a greater increase than the additional $277 million which would be required in fiscal year 1977.

The President canceled the production of this aircraft because it was too expensive for the improvement in capability provided. To restart production at this time would be even more expensive.

I think we all should remember that the President only canceled production of the B–1 bomber. He did not curtail the research and development funding or program.

Three R. & D. aircraft have been built and are flying. As of August 15, 1977, aircraft No. 1 had flown over 288 hours; aircraft No. 2 had flown over 134 hours; aircraft No. 3 had flown over 275 hours. Aircraft No. 4 is over 50 percent complete, is starting major assembly and is on schedule for a first flight in February, 1979; $442 million in R. & D. funding is approved in this bill for the B–1 program.

My purpose in citing these facts is to emphasize that while production has stopped, a major research and development program goes on and the so-called "B–1 technology" is not being lost or dissipated. The action of the President when confirmed by this amendment, will in fact "keep our options open" to reconsider our action if there is a dramatic change in our need for the B–1 bomber.

In making the decision, the President requested an additional $449 million to accelerate research and development on cruise missiles including a new cruise missile carrier airplane and to modify existing B–52 bombers to enhance their capabilities to meet the projected threat well into the 1980's. This request is now being carefully considered by the Armed Services Committee and is expected to be reported out soon.

I think that this combination of efforts will utlimately provide us with a much stronger defense at a much lower cost.

I urge adoption of the amendment.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield 2 minutes for purposes of debate only to the gentleman from California (Mr. DORNAN).

Mr. DORNAN. Mr. Speaker, I rise against the Addabbo amendment. Particularly because of what I have learned in the last few weeks. It is frustrating to deal with this problem of secrecy and classified information because of what is kept from the American people but is not kept from us or the Soviets through their excellent intelligence. What reaches the Soviets on a regular basis through our technical journals and leaks takes care of about 90 percent of their intelligence-collecting problem. But how do we share properly with our free, intelligent citizens information that they need as voters to make intelligent decisions.

Over this last district work period I used my particularly valuable congressional district as a base for assimilating as much defense knowledge as I could. My district is a research base in the defense field unlike any other in this country. In it are foundations such as RAND Inc., Research & Development Associates, TRW, Rockwell, Systems Development Corp., Hughes Space & Communication Division, and other incredibly staffed organizations entrusted with our Nation's defense.

I visited many of these places last month. I also visited Los Alamos Nuclear Laboratory, Sandia Laboratories, Lawrence-Livermore Laboratory, Kirkland Air Force Base, and other critically important scientific locations.

Mr. Speaker and my colleagues, those of us who are sick at what is happening to the defense structure of our United States of America are not alone in our fears. The scientific community has been shaken to its very foundations with respect to lack of planning by this administration especially with a decision such as the cancellation of the B–1.

Mr. Speaker, I wish to quote a brilliant scientist—and I will not name him or even his firm because some scientists fear the vengeance of the White House, particularly in California—they fear the cutting of other necessary contracts. Further, people who used to work in the Pentagon are afraid to speak out and express their concern about what is being done to our defense structure, because ugly attacks using buzz words like "military-industrial complex," military mentality, et cetera. But I quote a man who spent almost a decade in one of the top scientist/engineer positions in the Defense Department.

He said:

I do not care if they want to go cruising.

I had never heard that clever expression before.

He said:

But what basing structure are we going to use? How in blazes are we going to base these cruise missiles? What are we talking about in real dollars to convert a C–5 or a 747 or a DC–10, this will definitely cost as much as a B–1 before we are through, particularly with the inflation that this House insists on causing year in and year out.

He added:

I do not care whether the B–1 is dumped if * * * if Carter has a plan. But what is the plan for canceling it? There is no plan expressed by the White House. None. Nothing.

He said:

We are probing in the dark here and the Soviets laugh at us.

My colleagues, I wish we had the time to really discuss this critical matter in the frame of just what has come to my attention during the last 30 days.

But I just do not have the time. I am sick over what is happening to our defenses. The B–1 disaster decision is a disgrace. No master plan at all. Everybody just winning it. Please vote no on this amendment.

Mr. MAHON. Mr. Speaker, I yield 2 minutes to the gentleman from Arkansas (Mr. ALEXANDER).

Mr. ALEXANDER. Mr. Speaker, since June I have taken the time to look behind the President's decision, and I am not persuaded that our Nation has the technical capability that would successfully substitute an air-launched cruise missile for a manned bomber. A case has not been made. I have heard the arguments here in this chamber. I have heard the arguments within the defense industry. I have talked with the experts; but until a case is made that we do have these capabilities, I will support production of a new manned bomber that will give us the defensive capability that is designed to meet current and future needs.

Mr. Speaker, on Armed Forces Day I had the opportunity to visit a SAC base in my district and to climb aboard a B–52. On the panel of the B–52, on the copilot side, was written in pencil, "Manufactured by Krupp Iron Works, 1939."

This, I think, illustrates the low morale of our pilots and crews who have the job of flying this obsolete aircraft. The B–52 was grand in its day but it is 20 years old.

I am very disturbed about the remarks by the gentleman from New York that we are going to try not only to modernize the B–52, but we are going to try to resurrect the TFX. I imagine that if the TFX is resurrected, the copilots will write on the panel, "Manufactured by McNamara Iron Works, 1962."

Mr. Speaker, I cannot vote for a made over bomber for American pilots and crews nor am I willing to gamble our defense on the hope that a cruise missile will be developed.

The current combination of bombers, land-based missiles, and submarine-based missiles is a proven credible deterrent and should remain so. It is successful because it cannot be destroyed, not even by a surprise attack; it can penetrate against the most sophisticated defenses known today; it maintains a hedge against uncertainties or temporary weaknesses in individual weapon system performance; and it denies an adversary the opportunity to concentrate his defensive resources against any one type of system.

If these diverse capabilities are to continue to underwrite our national security strategy, then new weapon systems must be developed—within the framework of current and future arms limitations. The B–1 is such a weapon system.

It is the product of over 10 years of thought, study, design and testing. It embodies all the lessons learned from past weapons programs. The B–1 is designed to survive the enemy's future defenses and has designed-in-growth to cope with the unknowns of the future.

The strength of this Nation's strategic deterrence is in the combination of forces that constitute the Triad. We cannot defend the freedom of Americans on the hope of developing a weapon system that does not exist. We need a new offensive manned bomber. I support the Mahon motion to insist on the House position for production of the B–1 bomber, and oppose the Addabbo substitute.

Mr. EDWARDS of Alabama. Mr. Speaker, for the purpose of debate only, I yield 2 minutes to the gentleman from California (Mr. BADHAM).

Mr. BADHAM. Mr. Speaker and Members of the House, article I, section 8 of the U.S. Constitution makes it very clear as to congressional responsibility to provide for the common defense, to raise and maintain armies, etc.—not the President of the United States, not the Commander in Chief. So we must ask ourselves: Why not the best? And I repeat, why not the best weapons system? The paradox in defensive weapons facing us today is simply this: That the very best weapons system is the best if you never have to use it. That is what we are talking about when we talk about the B–1 bomber. With the B–1 bomber we have the best. We have the best technology available to mankind anywhere on earth today.

The name of the game that no one has brought up today is targeting. With the Soviet Union's buildup, that we all know about, we have a situation of expanding numbers of targets, and with the strategic arms limitations we have a relatively declining number of warheads. The question is, How do we use the warheads that we have and can produce within the limitations, and target them to where we want them to go to our best advantage?

My good friend and colleague, the gentleman from New York (Mr. DOWNEY) made the comment about 2,500 nautical miles as a guideline figure for the distance limitation of cruise missile, but it is not; it is 2,500 kilometers—1,500 nautical miles—and that is critical.

The B–52, if you have visited SAC—and I am sure the gentleman has—is scheduled as a penetrator for delivery of strategic nuclear weapons. Friends, the B–52 as a penetrator delivery system does not have it now and will not have any kind of capability after the mid-1980's because it will be dying of old age.

With strategic arms limits on warheads, the President apparently wants to substitute cruise missile for B–1. This cannot be done, and it was never the argument or the intent until the "post justification" by Secretary of Defense Brown; but look at the record: B–52-delivered SRAM A—short-range attack missile—has been discontinued; B–1-carried SRAM B has been terminated; Minuteman III—with multiple warheads—has been terminated.

And, as a matter of fact, cruise missile is not on line; it is not operational, and the tests thus far are not even very good. We have more available racks to carry SRAM A than we have SRAM A inventory, and we are not building any more.

We have nothing to follow, and there is no strategic bomber production line anywhere in the free world. We have not made the best use of targetable warheads or penetrator technology. I must ask the Commander in Chief when it comes to targeting: Why not the best, Mr. Carter? And in aircraft systems technology: Why not the best, Mr. Carter?

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield 1 additional minute to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. BADHAM. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, what the gentleman in the well is saying, then, is that we do need the B–1 delivery system and that we cannot rely, as has been implied, upon the B–52 or the upgrading of it, and that it will be very expensive to even try to bring it up to speed. So this is an essential part of our weapons systems and we need it now.

Mr. BADHAM. I thank the gentleman from California (Mr. ROUSSELOT) for his question. To put it very simply, we have targets that, in a defensive exchange, we cannot hit unless we have a follow on delivery system capable of both stand-off and penetration and the B–52 does not have that capability.

Mr. ROUSSELOT. So our vote today is for a highly essential and needed weapons system for the protection of this country?

Mr. BADHAM. For the protection of this country, its citizens and the people that we send out to fly our weapons systems.

Mr. MAHON. Mr. Speaker, I yield 2 minutes to the gentleman from New York (Mr. STRATTON) for the purpose of debate only.

(Mr. STRATTON asked and was given permission to revise and extend his remarks.)

Mr. STRATTON. Mr. Speaker, the administration has tried to confuse the issue that is before us by suggesting that we have to make a choice between the cruise missile or the B–1. But that, as the gentleman from Florida (Mr. SIKES) has pointed out, is a non sequitur. The real issue has never been between the B–1 and the cruise missile. We have always counted on a cruise missile sooner or later. That was even part of the Vladivostok discussions. The real question is whether we are going to use the cruise missile in the B–1 or in the B–52.

Secretary Brown has been suggesting that we ought to go to the B–52; but back in 1966 he told the Air Force Association a different story:

> But an even more effective bomber would be needed to replace the B–52 . . . in the mid-1966 mid-1970's if a replacement is needed, and I think it is.

And testifying before our Armed Services Committee in 1966 Secretary Brown said:

> I also want to emphasize that I personally believe that the B–52 G and H when it becomes obsolescent sometime in the mid-1970's ought probably to be replaced by some other bomber, such as the AMSA.

So that is what he thought about the B–52 when he was Secretary of the Air Force.

And once again, here is what the President was told by his own experts when he was considering the B–1 matter, speaking of the B–52:

> The growth potential [of the B–52] to economically and effectively offset future threats is constrained by a physically and technologically aging airframe. Additionally, there is uncertainty in the confidence we would place in the continued safe and efficient operation of an airframe * * * over 25 years old.

And that is the plane that we would have to put our cruise missiles in if we accept the Addabbo substitute.

Members of our committee went out to Strategic Air Command headquarters

the other day, and the commander of the Strategic Air Command made it clear to us that if he has to operate with B–52's and cruise missiles we are going to degrade very substantially our capability to retaliate against the Soviet Union, and would not be able to do as much as we would need to do.

So let us vote down the Addabbo substitute.

Mr. EDWARDS of Alabama. Mr. Speaker, for purposes of debate only, I yield 1 minute to the gentleman from Pennsylvania (Mr. GARY A. MYERS).

Mr. GARY A. MYERS. Mr. Speaker, I rise in support of the continued funding of the B–1 bomber. I would like to bring to the floor a concern that I have. I read a press account not too long ago that much of the President's decision was swayed by two young Congressmen, the gentleman from New York (Mr. DOWNEY) and the gentleman from Michigan (Mr. CARR) by the fact that they went to the President with some highly secret information that the two obtained in a private briefing on the cruise missile, and the President made his decision on the B–1 bomber on the basis of that information which they brought to light.

I would like to ask the two gentlemen if they feel the press account was accurate and if they feel that the information was so swaying that we should now have a closed session of Congress and have this same information given to us so that we can make our decision in the same light that the President did.

Mr. DOWNEY. Mr. Speaker, will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from New York.

Mr. DOWNEY. I thank the gentleman for yielding.

Let me respond to the gentleman by simply saying that we have learned something in the committee which was privy to all members of the House Committee on Armed Services that we thought should be brought to the attention of the administration, and that is all we did. We did not speak to the President; we spoke to Secretary Brzezinski.

Mr. GARY A. MYERS. Then the gentleman will not agree with the accuracy of the press account. He appears to say that there was no highly specialized information given to the President which other members of the committee did not have.

Mr. GLICKMAN. Mr. Speaker, I would like to take this opportunity to explain to my colleagues here in the House my decision to vote for the substitute motion to eliminate funds for production of five B–1 bombers which had been included in the earlier House-passed version of this legislation.

Both during floor consideration of the Department of Defense authorization bill and initial House action on the B–1 measure I supported funding for five B–1's. This was in accord with President Carter's advocacy at that time of reducing the B–1 development program to serve research purposes and also was made pending his decision regarding the building of the B–1 bomber.

Though I have always had serious reservations about B–1 production both in terms of principle and the sizable expense involved, for several reasons I felt, and still do that the President's lead should be followed on this sensitive matter. I am very concerned that nothing hinder progress in reducing the amount of arms, particularly nuclear, in the ongoing SALT talks. Coupled with the fact that the President and I share the same basic view on the B–1, I feel that support for his position could be instrumental in assuring the success of those arms control efforts. Hence, I feel that my decision to support him in opposition to continuation of the B–1 program, after he has clearly indicated his own position, is in the national interest, is sound in economic terms, and is defensible in terms of our national security.

Mr. CUNNINGHAM. Mr. Speaker, since the President's decision to unilaterally terminate the B–1 bomber program, I have examined the facts and my conscience. I have talked to the people at home. And I remain convinced that both the decision and the reasons for making it are wrong.

This administration, Mr. Speaker, has been characterized by an apparent willingness to upbraid and insult allies while coddling traditional opponents in the international field, particularly the Soviet Union. The list of such actions is long and I will mention only a few things. The President announced that he was holding up the sale of AWACS surveillance aircraft to Iran because a House subcommittee narrowly voted for a disapproval resolution. He then claimed that the A–7E light attack aircraft was obsolete for our own Navy but too dangerous to sell to Pakistan. Later, he terminated the Minuteman III program—again without getting a thing from the Soviets. And then the B–1 was scrapped.

The Soviets, in the meantime, maintain a tough private and public stance. They can afford to—considering the huge sums that are being poured into the production and research and development of very sophisticated and deadly Soviet weapons systems, many of which have no American opposite number.

Mr. Speaker, during the consideration of the Department of Defense appropriations bill, many careful people argued against the B–1. They voted their conscience, but the House overwhelmingly approved continued B–1 funding.

Two days later, our President who had moralized about never being imperial, slammed that congressional intent down by canceling the B–1. His reason: It cost too much. His secondary reason: A retrofitting of B–52's would cause the Soviets more terror than the B–1, would be more effective, and would cost less. At the same time, the President refused to request significant sums to retrofit the B–52's or to counter statements of the Secretary of Defense that he did not want and would not use retrofitted B–52's.

I cannot appeal to the B–1 opponents.

I can only ask those of you who supported the B–1 earlier not to cave in to the President's whim. This House must be independent of the White House. That is the message that the people have sent to us as a mandate.

To those of you thinking of changing positions, the President offers a promise. That is all—just words. He says that he knows best and that we should trust his judgment in giving up this major weapons system in trade for nothing from the Soviets.

To those of you concerned about our economy, of course, there is another benefit for continuing to support the House's earlier resounding endorsement of the B–1.

The issue is jobs. We now have an unemployment rate of more than 7 percent. The President's actions on the B–1, AWACS, and A–7E and other retreats from defense and technology are costing or promise to cost at least 100,000 jobs to American workers.

Mr. Speaker, to cancel existing bomber contracts will cost nearly as much, in dollars, as building these presently proposed aircraft.

The best defense is ownership of a strong capability. Weapons are only a part of that capability.

For the United States to continue to submit to second class citizenship in international affairs is absolutely abhorrent to all of the things that America has traditionally stood for—and on which our continuing capacity to lead the Western World depends.

Mr. EDWARDS of Alabama. Mr. Speaker, I yield myself 1 minute.

Mr. Speaker, if we believe in the TRIAD, then the B–52 in my humble opinion cannot uphold its part of that strategy. This plane is old. It is not going to make it, in my view, without the expenditure of billions of dollars, into the 1990's and the year 2000. I believe we need a last manned bomber, and I believe that if we build the B–1, it will in fact be the last manned bomber, because I think out in the years 2000 and beyond we will in fact be looking at entirely different systems. I think we need a manned bomber to take us into the year 2000, and the B–1 is the one.

As I stated in my earlier remarks, even if we believe that it ought to be terminated, do not, for goodness sake, take away from us this one tremendous bargaining chip that we have got in SALT. It ought not to be terminated unilaterally. We ought to get something for it, if we are in fact going to terminate the B–1. We can throw that on the table and get some thing for it, but if we kiss it off unilaterally, then we have not gained one thing by giving up the B–1. So I urge the Members to vote against the Addabbo amendment and support the chairman's motion.

Mr. MAHON. Mr. Speaker, I hope we have had a fair debate on the issues. My motion provides for the continuation of the B–1 program, and I rise in further support of my motion and in opposition to the Addabbo amendment.

By previous arrangement, in order to be absolutely fair with the House and give the House an opportunity to work its will, I yield to the gentleman from New York (Mr. ADDABBO) for the purpose of offering an amendment.

AMENDMENT OFFERED BY MR. ADDABBO TO THE MOTION OFFERED BY MR. MAHON

Mr. ADDABBO. Mr. Speaker, I offer an amendment to the motion offered by the gentleman from Texas (Mr. MAHON).

The Clerk read as follows:

Amendment offered by Mr. ADDABBO to the motion offered by Mr. MAHON: In lieu of the sum proposed to be inserted by said motion insert: "$6,262,000,000".

Mr. ADDABBO. Mr. Speaker, I will not take the hour. By previous arrangement and agreement with the chairman of the full committee, the gentleman from Texas (Mr. MAHON), who has been kind enough to recognize me at this time for the purpose of offering this amendment, the agreement was that I would after offering the substitute move the previous question so that we would have a clear vote on the question of whether or not to fund the B–1.

My amendment reduces the figure to the Senate figure. It includes additional funds for the A–10 and includes additional funds for the F–15 and many other planes. In other words, the Senate has taken the $1 billion and has used part of those funds in this amendment to build other needed weapons. My amendment strikes only the production funds in the 1978 defense appropriation bill for the B–1. It continues all the R. & D. funds.

Mr. GIAIMO. Mr. Speaker, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from Connecticut (Mr. GIAIMO) for purposes of debate only.

Mr. GIAIMO. Mr. Speaker, I rise in support of the amendment offered by the gentleman from New York (Mr. ADDABBO).

I speak as one who until this year has supported the B–1 bomber. This year I have changed my mind and, let me note quickly, I changed my mind before I knew what the President was going to do: I now oppose the B–1 bomber because of its excessive cost and because new technology for the cruise missile has been developed.

We are talking about a $100 million airplane, $100 million a plane to deliver nuclear weapons including SRAM missiles for strategic nuclear warfare.

The cruise missile, which can do the job much better, has now been successfully developed. Also now look-down-type radar has been developed and installed in our operating aircraft. Undoubtedly other adversary nations will soon have the same capability. In my opinion and in the opinion of many others look-down radar will destroy the capability of the low-flying B–1 airplane to penetrate enemy airspace and to deliver its bomb on target.

I think that the President has acted wisely and courageously in making his decision.

His decision is: "Do not go into production. Continue research and development of the technology for a new low-flying bomber, but hold up on production particularly when we are talking about such an expensive piece of hardware as the B–1 bomber. It is a $100 million airplane with a highly questionable capability as to whether it will be able to do the job."

I submit that the security of the United States is not jeopardized. The Triad concept is still in existence. We will have B–52 aircraft into the 1980's. What will replace the B–52 which is the third portion of the Triad? We can continue our research and development on that. We can continue developing and improving our cruise missile. But let us hold up on this very expensive and probably wasteful airplane known as the B–1.

That is what the President of the United States is saying. That is what caused me to change my mind this year after voting for several years for the B–1 bomber. If I thought it was absolutely necessary to the security of this country I would still be supporting it. But I think it is not, and I have confidence that the President's decision will not adversely affect our national security.

Let us hold up on wasteful spending on armaments that will not accomplish the job we want them to do. Our security will be preserved.

I commend the gentleman from New York for his courage in offering the amendment, and I urge its adoption.

Mr. ALEXANDER. Mr. Speaker, will the gentleman yield for one question?

Mr. ADDABBO. Yes.

Mr. ALEXANDER. I would like to ask the gentleman from Connecticut (Mr. GIAIMO) one question, if I may.

First, let me pay my respects for the gentleman's judgment that I value. The gentleman made the statement that along has come the cruise missile. The question is, Is the gentleman from Connecticut convinced in the gentleman's own mind that we have the present technological capability to substitute a cruise missile with a guidance system that will target an offensive weapon to its designed destination that will effectively replace a manned bomber?

Mr. GIAIMO. Mr. Speaker, if the gentleman will yield, first of all, we are talking about two weapons systems, neither of which is in production. However, we have had great success in the development of the cruise missile. As a matter of fact, by checking with people on the Committee on Armed Services, on the Committee on Appropriations, and elsewhere, I am informed that we do have the technology now, that we can develop it further, and that we can have that cruise missile capability before we would have the B–1 bomber capability.

Mr. ALEXANDER. Mr. Speaker, I thank the gentleman and I urge every Member to examine the question carefully.

Mr. ADDABBO. Mr. Speaker, I move the previous question on the amendment to the motion.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from New York (Mr. ADDABBO) to the motion offered by the gentleman from Texas (Mr. MAHON).

The question was taken; and the Speaker pro tempore announced that the noes appeared to have it.

Mr. ADDABBO. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 202, nays 199, not voting 33, as follows:

NOT VOTING—33

Ambro	Dicks	Quillen
Aspin	Erlenborn	Rangel
AuCoin	Fascell	Rostenkowski
Badillo	Johnson, Calif.	Roybal
Biaggi	Kemp	Sisk
Bolling	Ketchum	Stangeland
Bonker	Koch	Symms
Chappell	Moss	Vanik
Clay	Murphy, N.Y.	Wolff
Conable	Pettis	Young, Alaska
Dent	Pritchard	Zeferetti

The Clerk announced the following pairs:

On this vote:

Mr. Biaggi for, with Mr. Chappell against.

Mr. Dicks for, with Mr. Murphy of New York against.

Mr. Badillo for, with Mr. Kemp against.

Mr. Pitchard for, with Mr. Sisk against.

Mr. Koch for, with Mr. Stangeland against.

Mr. Clay for, with Mr. Symms against.

Mr. Wolff for, with Mr. Quillen against.

Mr. Rangel for, with Mr. Zeferetti against.

Mr. AuCoin for, with Mr. Young of Alaska against.

Mr. Bonker for, with Mr. Erlenborn against.

Mr. Vanik for, with Mr. Rostenkowski against.

Mr. Ambro for, with Mr. Johnson of California against.

Until further notice:

Mr. Fascell with Mr. Roybal.

Mr. Aspin with Mr. Moss.

Mr. MINISH and Mr. PEPPER changed their vote from "nay" to "yea."

Mr. YOUNG of Missouri changed his vote from "yea" to "nay."

So the amendment to the motion was agreed to.

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. MAHON), as amended.

The motion, as amended, was agreed to.

PERSONAL EXPLANATION

Mr. AMBRO. Mr. Speaker, at 1:04 p.m. this afternoon, the bells rang for a vote on the Addabbo amendment to the conference report on H.R. 7933, the Department of Defense appropriation bill. Four minutes earlier, I had entered a shielded, soundproof room in the House recording studio to make a radio tape with my colleague from Long Island, LESTER WOLFF.

Unfortunately, neither the bells which the House recording studio director admits failed nor my backup page system penetrated the shielding of this room, and neither Representative WOLFF nor I had any awareness that this vote was in progress. We both missed the vote. If I had been present, I would have voted with the majority to approve the Addabbo amendment to delete funds for production of the B–1 bomber, and I appreciate the courtesy of a live pair.

Mr. Speaker, I am appending hereto a letter from William C. Moody, Director of House Recording Studio, which further attests to the comedy of errors.

The letter follows:

OFFICE OF THE CLERK,
Washington, D.C., September 9, 1977.

Honorable JEROME A. AMBRO,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN AMBRO: In response to your request of yesterday, this letter is to explain the circumstances which caused you to miss the vote on the Amendment to the Conference Report which would have struck funding for the B–1 Bomber.

As you know, yesterday, Thursday, September 8, 1977, between approximately 1:00 and 1:30 p.m., you were in the Studio recording a radio program. During this period of time, the above mentioned vote was taken.

Whenever a vote is in progress, it is Studio procedure to notify a Representative who is recording. Through human error, we failed to so notify you yesterday.

I sincerely regret any inconvenience this may have caused you and fully accept the responsibility. I would like to assure you that our notification system is now under review so that this situation may never again recur.

Sincerely,

WILLIAM C. MOODY,
Studio Director.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 46: Page 28, line 9, strike out "$2,394,108,000" and insert "$2,402,758,000,".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 46 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert the following: "$2,417,882,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 47: Page 25, line 17, strike out "$3,895,517,000" and insert "$4,032,214,000,".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 47 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert the following: "$3,991,791,000: *Provided*, That none of the funds appropriated for the Shipboard Intermediate Range Combat System program shall be available unless extended in compliance with existing acquisition policies and procedures prescribed in Office of Management and Budget Circular A–109".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate Amendment No. 54: Page 51, line 5, insert:

SEC. 836. (a) The Secretary of Defense shall require all prime contractors receiving contract awards of $10,000 or more from the Department of Defense to file a report with the Secretary at the end of the year showing the amount of Department of Defense work (in terms of dollars) each such contractor had performed by subcontractors during such year and to identify the State or States in which each subcontractor performed the work subcontracted to it.

(b) The Secretary of Defense shall submit a report annually to the Congress showing, on a State-by-State basis, the total amount of Department of Defense funds paid to subcontractors, during the year for which the report is submitted, by the prime contractors described in subsection (a).

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 54 and concur therein with an amendment, as follows: In lieu of the sum named in said amendment insert: "$500,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 63: Page 54, line 12, insert: "changes; (f) reimbursement of any physician or other authorized individual provider of medical care in excess of the seventy-fifth percentile of the customary charges made for similar services in the same locality where the medical care was furnished; (g) payment of any type of health service (other than emergency physician or emergency hospital service) unless—

(1) it is authorized to be made on the basis of reasonable charge, the amount of the payment therefor is established on the basis of reasonable charge, as determined in accordance with the criteria employed under title XVIII of the Social Security Act, or

(2) it is authorized to be made on the basis of reasonable cost, the amount of the payment therefor is established on the basis of reasonable cost, as determined in accordance with the criteria employed under title XVIII of the Social Security Act:

Provided, That, notwithstanding any other provision of law, medical facilities participating in Medicare programs under title XVIII and title XIX of the Social Security Act, except medical facilities with annual CHAMPUS payments of under $50,000, shall be required to accept CHAMPUS payments under the charge described in this paragraph as payment in full for services rendered; (h) payment to a provider or to reimburse a sponsor or beneficiary for the first $60 of the charges for each admission as an inpatient in a hospital, other than a hospital operated by the Uniformed Services, for the care provided dependents of active duty members: *Provided*, That in connection with this section multiple admissions during the course of a pregnancy shall be deemed to be a single admission; or (i) any service or supply which is not medically necessary to diagnose and treat a mental or physical illness, injury, or bodily malfunction as diagnosed by a physician, dentist, or a clinical psychologist, as appropriate.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 63 and concur therein with an amendment, as follows: In lieu of the matter inserted by said amendment insert: "changes; (f) reimbursement of any physician or other authorized individual provider of medical care in excess of the seventy-fifth percentile of the customary charges made for similar services in the same locality where the medical care was furnished; or (g) any service or supply which is not medically or psychologically necessary to diagnose and treat a mental or physical illness, injury, or bodily malfunction as diagnosed by a physician, dentist, or a clinical psychologist, as appropriate, except as authorized by section 1079(a)(4) of title 10, United States Code."

The SPEAKER pro tempore. The gentleman from Texas (Mr. MAHON) and the gentleman from Alabama (Mr. EDWARDS) are recognized for 30 minutes each.

The Chair recognizes the gentleman from Texas (Mr. MAHON).

Mr. MAHON. Mr. Speaker, I yield such time as he may consume to the gentleman from Indiana (Mr. HILLIS).

Mr. HILLIS. Mr. Speaker, on July 29, 1977 I introduced H.R. 8647, a bill which would establish a ceiling for payments to physicians under CHAMPUS not in excess of the 90th percentile. In essence, that means that reimbursement for physicians or other authorized providers of medical care could be paid to a limit of the 90th percentile of the customary charges for those services in the locality where the medical care was furnished.

Further, that measure would require updating the fee schedules on a yearly basis.

As a member of the Military Personnel Subcommittee of the House Armed Services Committee, I became convinced during recent hearings on health care for military personnel and their dependents that the basic problem among physicians and among beneficiaries rested with outdated fee schedules and payments to physicians below what was considered to be a fair and reasonable fee in the geographical area where the service was rendered.

Time after time the representatives of service organizations and individuals who communicated with the Armed Services Committee made it abundantly clear that CHAMPUS was much more effective and responsive to health care needs where fee schedules were set at the 90th percentile and were updated more frequently than every 18 months or 2 years.

Accordingly, Mr. Speaker, while I oppose the provision of amendment No. 63 which would set a limit on schedules at the 75th percentile, I will not attempt to block approval of the conference report, knowing the necessity to have the fiscal year 1978 defense appropriations bill enacted into law. But, I will press vigorously for the enactment of H.R. 8647 with regard to the 90th percentile and urge my colleagues on the Appropriations Committee to recognize the practicalities of the situation and the absolute need to improve the responsiveness of CHAMPUS. This urgent need comes at a time when health care delivery in military facilities requires that beneficiaries, particularly in the retired community, must depend more and more on CHAMPUS, even though their ability to finance civilian health care is increasingly restrained by spiraling costs. Your support of H.R. 8647 at such time as it reaches the floor will be appreciated.

I might in closing say to the Chairman of the Appropriations Committee that it seems to me that as we stress and strain to make the volunteer system work, the more we take back and hold back what used to be accepted such as the 90 percentile by regulation—that was in place previously by regulation of DOD—the harder it becomes to attract and keep people in the service.

The other thing that is going on is there is a shortage of physicians in the armed services, and because of this, hospitals are being closed at various bases. In the last 18 months or 2 years the last two remaining military hospitals in the State of Indiana have been converted or down-phased to more or less outpatient emergency facilities. This places the military dependents, and retirees for most of their medical care on the civilian community and upon reliance on CHAMPUS. If CHAMPUS is going to be outdated or down-phased where many physicians in some States will not even accept payment from them, telling the dependents or the military family, "You pay my bill; you file for a refund," we just are not doing the job that should be done. For our people in service.

I know that this has been a very hard fought issue in the conference, and I salute the House Members of the conferees for standing firm because I know the Senate version was considerably more short shrift than this. But I did want my colleagues to be aware of the problem and the fact that there is legislation pending, and I hope hearings will be forthcoming soon when authorization legislation can come forward to raise this appropriation bill from the 75 percentile to the 90 percentile for payments to physicians and other authorized providers of medical care to members of the armed services, their dependents and to eligible retirees from the uniform services.

Mr. MAHON. Mr. Speaker, I yield such time as he may require to the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Speaker, amendment No. 63 to the defense appropriations bill for fiscal year 1978 is reported in technical disagreement but with a motion to recede to concur in the Senate amendment with an amendment which would include a prohibition against providing payments for medical care to physicians on a scale in excess of the 75th percentile of the customary charges made for similar services in the same locality. There are other provisions of the amendment which are not pertinent to my comments.

Mr. Speaker, I strongly oppose the language of the amendment regarding the 75th percentile, since the problems created by such a restraint lie at the root of the difficulties thousands of patients are having in receiving care under CHAMPUS. For those who may be strangers to that acronym, CHAMPUS stands for the civilian health and medical program of the uniformed services.

That program is intended to be an extension of military medical care through services in the civilian community on a cost-sharing basis. It is not a health insurance program. The restriction of payments to health care providers at the 75th percentile has caused a large number of responsible physicians to abandon the program and to require patients to pay an additional amount not intended by the Congress.

Current hearings in the Armed Services Military Personnel Subcommittee, of which I am chairman, have convinced me beyond reasonable doubt that setting payments at the 90th percentile and to require upgraded physicians fee schedules at least on a 12-month basis would cure most of the ills regarding health care delivery under CHAMPUS. The subcommittee is currently conducting an inquiry into the entire question of military health care, including CHAMPUS, and among other bills, has before it H.R. 8647, which would limit customary charges at the 90th percentile and provide for upgraded fee schedules every 12 months.

We expect to report favorably on H.R. 8647 and obviously oppose the provision of Senate amendment No. 63 with the amendment which would set the fee schedule limit at the 75th percentile. However, Mr. Speaker, in the interest of not obstructing enactment of the appropriations bill, I will not oppose the report, but wish to make it clear on the record that the Military Personnel Subcommittee will be moving forward on CHAMPUS matters, and we trust that the membership will support these initiatives in the interest of improving medical care for the hundreds of thousands of eligible CHAMPUS beneficiaries.

I might say in addition to that, one of the big problems in military hospitals is the inability to get the doctors we need in many of the specialties. This is forcing military personnel dependents to go into the CHAMPUS programs. Because they are forced by lack of doctors to go into the CHAMPUS programs and because of the 75th percentile now under

the program, these people are now unable to afford proper medical care.

It is important that we up this percentile to the 90th percentile, especially since this Congress and the services of this Nation have been unable to provide adequate, necessary medical care for retirees and military personnel dependents.

Mr. EDWARDS of Alabama. Mr. Speaker, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Alabama.

Mr. EDWARDS of Alabama. Mr. Speaker, is the gentleman saying in substance he supports the Hillis bill or the Hillis approach to this matter?

Mr. WHITE. I just walked in from the telephones. If the gentleman from Alabama will give me a brief résumé of the Hillis approach, I will be glad to answer.

Mr. EDWARDS of Alabama. If the gentleman will yield to the gentleman from Indiana (Mr. HILLIS), perhaps he can answer.

Mr. HILLIS. Mr. Speaker, if the gentleman will yield, my bill is the bill which the gentleman referred to in his statement—H.R. 8647.

Mr. WHITE. That is H.R. 8647. That is the bill we support. Absolutely. I hope soon we will get this bill out. Perhaps in the next 3 weeks we can have adequate hearings and then report this bill out for the House to consider at the appropriate time under the rules.

Mr. KAZEN. Mr. Speaker, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Texas (Mr. KAZEN).

Mr. KAZEN. Mr. Speaker, I associate myself with the remarks of the gentleman from Texas (Mr. WHITE). I ask the gentleman whether or not when our bill is presented, the bill the gentleman from Texas has been talking about and in which the gentleman from Indiana (Mr. HILLIS) has an interest, when that comes out of our subcommittee, will the situation be cured?

Mr. WHITE. I think in great measure the situation will be cured. But there is one other adjunct we have to have and that is to bring the fees of the doctors to a more current level. Now they are tied to a social security lag which of course makes their fee schedule unrealistic. That upgrading plus the 90 percentile I think will cure a great many of our present problems.

Mr. KAZEN. I agree with the gentleman. I do not think there is a single Member of this House who has not heard from his constituents about the hardships they are going through under this CHAMPUS program at this time. Certainly we do not want to reduce medical care to those people to whom we promised to give it.

Mr. WHITE. We cannot if we want the volunteer program to continue to be a viable factor in our defense.

Mr. MAHON. Mr. Speaker, a large number of items related to the CHAMPUS program had to be resolved by the conferees. The Senate added provisions to section 843 of the bill that established in law the 75th percentile as the highest rate that CHAMPUS will reimburse a physician. This means that CHAMPUS will not pay more than what 75 percent of the physicians in the same locality charge for a similar type of health service. This rate has already been established by the DOD through administrative directives.

The Senate version also would have required that hospital costs be reimbursed at the same rates as established for medicare programs under titles XVIII and XIX of the Social Security Act. Hospital payments for CHAMPUS users are currently higher than those allowed under medicare.

The Senate version of the bill would also have required that the beneficiary pay the first $60 of each hospital admission instead of the current $25 charge.

While the majority of the House conferees were not in favor of any of these provisions, it was necessary to recede to the Senate on the 75 percentile payment for physician services. This was the least controversial of the items since the DOD already uses the 75 percentile criteria. The Senate in return receded with respect to using medicare rates for reimbursement to hospitals and to the $60 admission charge.

In addition, the Senate report suggested that CHAMPUS pay for medical related services such as "biofeedback," clinical psychologists, and nurse midwives. The conferees agreed to allow payments for clinical psychologists and nurse midwives provided that a physician has determined the services to be medically necessary. Payments for biofeedback procedures and diagnosis are not permitted.

Mr. MAHON. Mr. Speaker, I ask for a vote on the motion.

The SPEAKER pro tempore. Without objection, the previous question is ordered on the motion.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. MAHON).

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 67, page 57, line 18, strike out:

SEC. 852. (a) None of the funds appropriated by this Act may be used to (1) convert base operating support functions, excluding real property maintenance and repair, to commercial contract during the period October 1, 1977, through September 30, 1978, or (2) to fund continued performance during fiscal year 1978 of base operating support contracts, excluding real property maintenance and repair, awarded between the date of enactment of this Act and September 30, 1977, which convert base operating support activities performed by employees of the Government of the United States to commercial contract.

(b) None of the funds appropriated by this Act may be obligated for commercial contracts to be physically performed at an installation or facility including leased facilities for the following types of work: (1) weapons system engineering and logistical support; (2) ship, aircraft, missile, automotive and tracked vehicle intermediate level maintenance or depot maintenance; or (3) research, development, test, and evaluation, if the percentage of such type of work to be physically performed at an installation or facility during fiscal year 1978 by commercial contract would exceed the percentage of such type of work physically performed at that installation or facility by commercial contract during fiscal year 1977.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 67 and concur therein with an amendment, as follows: In lieu of the matter stricken by said amendment, insert:

"SEC. 852. (a) None of the funds appropriated by this Act may be used to (1) convert base operating support functions, excluding real property maintenance and repair, to commercial contract during the period October 1, 1977, through September 30, 1978, or (2) to fund continued performance during fiscal year 1978 of base operating support contracts, excluding real property maintenance and repair, awarded between the date of enactment of this Act and September 30, 1977, which convert base operating support activities performed by employees of the Government of the United States to commercial contract.

(b) None of the funds appropriated by this Act may be obligated for commercial contracts to be physically performed at an installation or facility including leased facilities for the following types of work: (1) weapons system engineering and logistical support; (2) ship, aircraft, missile, automotive and tracked vehicle intermediate level maintenance or depot maintenance; or (3) research, development, test, and evaluation, if the work to be physically performed at an installation or facility during fiscal year 1978 by commercial contracts would result in a reduction of employees of the Government of the United States at that installation or facility."

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 71: Page 59, line 22, insert:

SEC. 855. Effective October 1, 1977, no appropriation contained in this Act shall be available to fund any costs of a Senior Reserve Officers' Training Corps unit—except to complete training of personnel enrolled in Military Science 4—which in its junior year class (Military Science 3) has for the four preceding academic years, and as of September 30, 1977, enrolled less than (a) seventeen students where the institution prescribes a four-year or a combination four- and two-year program; or (b) twelve students where the institution prescribes a two-year program: *Provided*, That, notwithstanding the foregoing limitation, funds shall be available to maintain one Senator Reserve Officers' Training Corps unit in each State.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 71 and concur therein with an amendment, as follows:

Restore the matter stricken, delete the period at the end of the section and insert the following: "and at each State-operated maritime academy: *Provided further*, That units under the consortium system shall be considered as a single unit for purposes of evaluation of productivity under this provision."

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 76: Page 62, line 12, insert:

SEC. 856. The appropriation, "Shipbuilding and Conversion, Navy", which would expire for obligation on September 30, 1977, shall remain available for obligation until September 30, 1979.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 76 and concur therein with an amendment, as follows: In lieu of the section number proposed in said number, insert: "860".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the last amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 82: Page 64, line 12, insert:

OFFICE OF FEDERAL PROCUREMENT POLICY

For expenses of the Office of Federal Procurement Policy, $2,000,000: *Provided*, That upon enactment of this Act, this amount shall be transferred to and merged with appropriations provided under the same head in the Treasury, Postal Service and General Government Appropriations Act, 1978.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 82 and concur therein with an amendment, as follows: In lieu of the sum named in said amendment insert: "$1,000,000".

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the several motions was laid on the table.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may be permitted to revise and extend their remarks in regard to the conference report just considered and the various amendments which have been before the House this afternoon.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

SECOND CONCURRENT RESOLUTION ON THE BUDGET—FISCAL YEAR 1978

Mr. GIAIMO. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the concurrent resolution (H. Con. Res. 341) revising the congressional budget for the U.S. Government for the fiscal year 1978.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Connecticut (Mr. GIAIMO).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the concurrent resolution (H. Con. Res. 341), with Mr. NEDZI in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Wednesday, September 7, 1977, all time for general debate on the concurrent resolution had expired.

Pursuant to clause 8 of rule XXIII, the concurrent resolution is considered as having been read for amendment and open to amendment at any point.

Are there any amendments?

AMENDMENT OFFERED BY MR. GIAIMO

Mr. GIAIMO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GIAIMO: In the matter relating to the recommended level of Federal revenues strike out "$399,900,000,000" and insert in lieu thereof "$398,108,000,000";

In the matter relating to the amount by which the aggregate level of Federal revenues should be increased strike out the word "increased" and insert in lieu thereof "decreased" and strike out "$891,000,000" and insert in lieu thereof "$901,000,000";

In the matter relating to the appropriate level of total new budget authority strike out "$509,806,000,000" and insert in lieu thereof "$507,343,000,000";

In the matter relating to the appropriate level of total budget outlays strike out "$458,503,000,000" and insert in lieu thereof "$458,676,000,000";

In the matter relating to the amount of the deficit strike out "$58,603,000,000" and insert in lieu thereof "$60,568,000,000";

In the matter relating to the appropriate level of the public debt strike out "$778,900,000,000" and insert in lieu thereof "$780,865,000,000";

In the matter relating to the amount by which the statutory limit on the public debt should accordingly be increased, strike out "$78,900,000,000" and insert in lieu thereof "$80,865,000,000".

In the matter relating to function 050: National Defense strike out "$115,787,000,000" in budget authority and insert in lieu thereof "$116,324,000,000"; and strike out "$110,165,000,000" in outlays and insert in lieu thereof "$110,338,000,000".

In the matter relating to function 400: Commerce and Transportation strike out "$25,445,000,000" in budget authority and insert in lieu thereof "$22,445,000,000".

Mr. GIAIMO (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. GIAIMO. Mr. Chairman, on behalf of the Budget Committee, I offer a committee amendment which revises House Concurrent Resolution 341 in three respects:

First, it reduces revenues by approximately $1.8 billion to reflect the House's action on the National Energy Act to eliminate proposed increases in the gasoline tax and the general aviation fuel tax;

Second, it increases budget authority by $537 million and outlays by $173 million in the national defense function to conform the amount in the resolution to the conference agreement on the defense appropriation bill just adopted by the House; and

Third, it reduces budget authority by $3 billion in the commerce and transportation function to reduce the amount of Government National Mortgage Association purchases of weatherization loans in fiscal year 1978 from $5 billion to $2 billion.

The first two of these amendments are made necessary by the House's actions on energy and defense legislation after the Budget Committee marked up the budget resolution. With respect to GNMA weatherization loans, after reconsideration the committee believes that there is little likelihood the $3 billion in loan purchase authority, designed for market-rate loans, will be needed in the coming fiscal year.

The result of the amendment is to establish the following new budget aggregates:

(In billions)

Revenues	$398.180
Budget authority	$507.343
Outlays	$458.676
Deficit	$ 60.568

Despite the $2-billion increase in the deficit resulting from the committee amendment, however, the deficit is still approximately $4 billion below the amount projected in the first budget resolution.

I urge adoption of the committee amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Connecticut (Mr. GIAIMO).

The amendment was agreed to.

AMENDMENT IN THE NATURE OF A SUBSTITUTE OFFERED BY MR. ROUSSELOT

Mr. ROUSSELOT. Mr. Chairman, I offer an amendment in the nature of a substitute.

The Clerk read as follows:

Amendment in the nature of a substitute offered by Mr. ROUSSELOT: Strike all after the resolving clause and insert in lieu thereof the following:

That the Congress hereby determines and declares, pursuant to section 310(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1977—

(1) the recommended level of Federal revenues is $406,571,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $18,000,000,000;

(2) the appropriate level of total new budget authority is $446,824,000,000;

(3) the appropriate level of total budget outlays is $406,571,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $0; and

(5) the appropriate level of the public debt is $700,000,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares pursuant to section 310(a) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1977, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):

(A) New budget authority, $116,324,000,000.

(B) Outlays, $110,338,000,000.

(2) International Affairs (150):

(A) New budget authority, $7,000,000,000.

(B) Outlays, $3,800,000,000.

(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,600,000,000.
(B) Outlays, $4,400,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $20,000,000,000.
(B) Outlays, $16,500,000,000.
(5) Agriculture (350):
(A) New budget authority, $2,100,000,000.
(B) Outlays, $2,333,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $18,000,000,000.
(B) Outlays, $16,000,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $6,200,000,000.
(B) Outlays, $7,200,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $17,900,000,000.
(B) Outlays, $19,000,000,000.
(9) Health (550):
(A) New budget authority, $41,000,000,000.
(B) Outlays, $39,500,000,000.
(10) Income Security (600):
(A) New budget authority, $159,000,000,000.
(B) Outlays, $134,000,000,000.
(11) Veterans Benefits and Services (700):
(A) New budget authority, $19,600,000,000.
(B) Outlays, $19,600,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,100,000,000.
(B) Outlays, $3,000,000,000.
(13) General Government (800):
(A) New budget authority, $3,000,000,000.
(B) Outlays, $2,900,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $7,000,000,000.
(B) Outlays, $6,000,000,000.
(15) Interest (900):
(A) New budget authority, $37,000,000,000.
(B) Outlays, $37,000,000,000.
(16) Allowances:
(A) New budget authority, $1,000,000,000.
(B) Outlays, $1,000,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority, —$16,000,000,000.
(B) Outlays, —$16,000,000,000.

SEC. 3. Pursuant to section 310 of the Congressional Budget and Impoundment Control Act of 1974, the House Committee on Ways and Means and the Senate Committee on Finance shall submit promptly to the Budget Committee in their respective Houses reconciliation legislation to decrease Federal revenues by approximately $18 billion; the Appropriations Committee of both Houses shall submit promptly to the Budget Committee in their respective Houses, reconciliation legislation to decrease budget authority by approximately $32.18 billion and outlays by approximately $43.635 billion.

Mr. ROUSSELOT (during the reading). Mr. Chairman, I ask unanimous consent that the amendment in the nature of a substitute be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

(By unanimous consent, Mr. ROUSSELOT was allowed to proceed for 5 additional minutes.)

Mr. ROUSSELOT. Mr. Chairman, this amendment is similar to a substitute resolution I offered when we discussed the first budget resolution in the spring, except that we have tried to update the figures on the basis of what the Treasury has told us in relation to expenditures so far in 1977. I tried to update the substitute resolution calculations on the basis of the changes that the Budget Committee itself has made in some instances.

The substitute resolution has two basic concepts. It basically includes the idea of a 10-percent across-the-board tax cut for all Federal income tax payers, which would mean a reduction in the estimated committee revenues of about $18 billion.

The purpose of the 10-percent across-the-board tax cut is to reduce the tax bias against work, saving and investment; that is to increase the reward to work, save and invest and to make it more desirable for people to invest and to hire the unemployed and produce real long-term jobs. All of these activities will serve to greatly boost growth and GNP. It is my belief that a 10-percent reduction in personal income tax rates—given the high level at which rates presently are in the United States—will actually increase Government revenues by expanding the tax base. Lower tax rates on a larger base can generate more tax revenue than higher tax rates on a smaller base. This has been established conclusively many times in the last 50 years, most notably in the early 1960's when the Kennedy tax cuts were put in place. Many were concerned that the large tax reductions which Kennedy proposed would result in massive revenue losses. The U.S. Treasury, for example, argued that 6-year revenue losses would total $89 billion. In fact, there were revenue gains of $54 billion realized for a 6-year period as the following table, which many of my colleagues have already seen, illustrates:

EFFECT OF 1962-64 TAX CUTS ON REVENUES, 1963-68

[In billions of dollars]

	1963	1964	1965	1966	1967	1968	Total
Revenue losses estimated in 1963 by U.S. Treasury	2.4	5.2	13.3	20	29.7	24.4	89
Actual revenue gains	7.0	6.0	4.0	14	19.0	4.0	54
Difference in estimates	9.4	11.2	17.3	34	48.7	28.4	143

Source: U.S. Department of Treasury.

There can be little doubt, then, that reductions in taxable income rates do not result in higher deficits, but rather they expand the tax base, increase revenues, boost GNP, increase employment, reduce unemployment, stimulate housing, and increase available funds for capital expansion.

The amendment which I am proposing today gives the Members of this House the opportunity to not only vote for a balanced budget—a goal which is commonly held by all of us—but also to give the 90 million working people of this country a tax break by permitting them to keep a greater amount of the income they earn. I urge my colleagues to reject bigger government, higher deficits, and less economic freedom of choice by joining me in restoring fiscal sanity to our Government and hard-earned tax dollars to American citizens.

In addition, this amendment contemplates a balanced Federal budget for fiscal 1978 by having the Congress recommend, through this resolution, that we live within our means of $406 billion; that is, the expenditures will be $406 billion and the anticipated revenues would be $406 billion.

The arguments that were made in the spring are similar, except we now have a longer time frame of experience with which to judge the present administration's desire to trim expenditures since even with the moneys that the Congress has appropriated for some of the so-called emergency programs, has not been spent, especially where not needed. Therefore, it was my feeling that we should carry this administrative practice over into the 1978 budget resolution for the coming fiscal year beginning October 1.

There is some concern that we would not be able to regenerate the revenues on the basis of a 10 percent across-the-board tax cut. I do not believe that is true, on the basis of the information we received from the Congressional Budget Office. I am not saying that the E.B.O. endorsed that concept. I am saying that when these assumptions of a 10-percent across-the-board tax cut and a balanced budget where introduced into various economistric models. The end-results show that these actions generate more stimulus than the method that is contemplated in the committee resolution where we are going into heavy deficit financing and high Federal spending to generate various sectors of the economy.

Housing starts for instance would go up substantially more under our plan than under the majority plan. The revenues for the Federal Government would be improved in many respects, including receipts from Federal income tax, on the basis that the individual citizen taxpayer would have more money to spend on his own and would probably generate more sales, more purchases, more investment et cetera. Consequently, I think it can be shown that this resolution would give us better targets for generating and stimulating the economy than would the one contemplated by the committee.

In testimony last year before the Senate Subcomittee on Employment, Dr. Arthur Laffer, professor of economics at the University of Southern California, made the following observation:

> By increasing spending during a recession, the government reduces the incentive to produce and work. Far from stabilizing the economy, such counter-cyclical spending will, in fact, accentuate the cyclical aspects of the economy. The greater government spending is, and the more closely tied to the level of unemployment it is, the more cyclical will be the economy . . . I doubt very much whether the United States can maintain peacetime full employment without a substantial reduction in the level of government spending as a share of GNP.

It is clear to see, then, that rather than boosting Federal spending to reduce unemployment, which is a rationale for the majority of the Budget Committee, Gov-

ernment expenditures should actually be reduced in order to provide the private sector the capital resources it needs to expand and create jobs.

Deficits, which need to be financed in the private marketplace, do not aid in creating such an atmosphere. Over the last 10 years, the Federal Government will have borrowed in the private capital markets a total of nearly one-third of a trillion dollars on a net basis. In 1976 alone, the U.S. Treasury was responsible for absorbing over 70 percent of all moneys in the securities market, while government at all levels claimed in the neighborhood of 80 percent. The private sector clearly cannot survive in an atmosphere which is so dominated by the Federal Government.

The now familiar argument that this substitute resolution requires a drastic change is no longer valid. The Rousselot resolution calls for an expenditure level about the same as fiscal year 1977—$406 billion. Rather than drastically meat-axing many areas of the budget, the resolution merely requires a restraint on increases for fiscal year 1978.

As I have mentioned before on previous occasions before this body, there is precedence available for reducing Federal expenditures by large amounts on the part of the Federal Government.

As the following chart shows, between 1945 and 1948, during the Truman administration and while we had a Republican Congress, Federal spending dropped over $60 billion—the current equivalent of $250 billion—yet national income charged ahead.

Federal receipts and outlays from 1945–48

[In billions]

Year	Receipts	Outlays	Surplus or deficit
1945	45.2	92.7	−47.8
1946	39.3	55.2	−15.8
1947	38.4	34.5	+3.9
1948	41.8	29.8	+12.0

The private sector smoothly converted from a wartime to a peacetime economy, provided jobs for millions of veterans, while defying the warnings of the Keynesians who said that unemployment would hit the 10 million mark unless Government jobs programs were increased. This remarkable transition took place because the Federal Government did not preempt the needs of the private sector, and the free market system was left to operate without massive Government interference. Adequate money was available in the capital markets to supply the expansion needs of private industry because the Treasury was not crowding out the private sector and confiscating the lifeblood of free enterprise.

I have accepted under the functional categories (for instance, national defense) many of the same targets that we set in the regular committee resolution. But in most cases, especially as it relates to functional outlays, what I have done is this: I have merely said, "Let us spend for outlays only what we did in 1977." I have tried to put a restraint on the substantial increases in expenditures that are contemplated by the Committee on the Budget or by some of the authorizing committees. I have tried not to increase the expenditures to the excessive degree that the Congress has already authorized in many cases.

So my belief is—and some of the Members share my belief—that we could achieve a balanced budget in 1978 by living within contemplated revenues of $406 billion. Additionally we believe a tremendous stimulus would occur in the private sector as well as the Federal sector, and that the Federal Government would not need to be spending any more in some cases than we did in fiscal year 1977, which ends at the end of September (this month).

Mr. ASHBROOK. Mr. Chairman, will my colleague yield?

Mr. ROUSSELOT. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Chairman, I certainly want to commend my colleague, the gentleman from California (Mr. ROUSSELOT), for introducing this amendment.

I travel over this country quite a bit, and I feel that I can probably say without fear of equivocation that in at least 400 of the 435 districts, at one time or another during the past 2 years either candidates for Congress or incumbent Congressmen have made speeches about holding the line, cutting the growth of Government, and balancing the budget. They have supplied all the rhetoric that the beleaguered taxpayer back home listens to and believes.

Now we have a kind of an accounting where some of those 400 Members from those districts can cast a vote. Clearly there are several on the other side who do not think we should balance the budget, but clearly a majority of those 400 Members of whom I speak now have an opportunity, while they are out of sight of their constituents, to put themselves on record. Their constituents have been subjected to the rhetoric that has been escalated increasingly over the years as balanced budgets seem to get more popular. Now we have a vote, and I am very glad the gentleman from California has given us this opportunity.

I hope the American people will look at this vote and determine how many Members are committed to the concept of a balanced budget.

As I understand it, the gentleman is only talking about a cut of less than 5 percent; is that not true?

Mr. ROUSSELOT. That depends on the functional categories concerned. In foreign aid cut of outlays it is more substantial than that of the committee's.

Mr. ASHBROOK. My guess would be that the American people would agree to that also.

Mr. ROUSSELOT. In the amendment we have cut that item back to $3.8 billion. The reason I believe that is possible is because there is more than enough in what we call uncommitted funds or so-called in-the-pipeline funds for that purpose. I believe there is roughly $12 billion in that category. So there is more than enough already appropriated to cover any so-called emergencies or contingencies that might suddenly come up.

Mr. ASHBROOK. Mr. Chairman, I thank the gentleman for offering this amendment, and I certainly will support it. I hope the majority of the 400 Members who talk about cutting the growth of Government and holding the line will vote for the amendment.

Mr. ROUSSELOT. Mr. Chairman, I thank my friend, the gentleman from Ohio (Mr. ASHBROOK).

I think there are some Members who doubt that a balanced budget can be achieved in fiscal year 1978. I believe it can be achieved, on the basis of the vast amount of testimony we have had before both the Committee on the Budget and the Joint Economic Committee. I believe that this time has arrived. I believe that this is a rational approach and a goal that can be achieved this coming fiscal year of 1978 beginning in October.

Mr. GIAIMO. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the substitute amendment of the gentleman from California is a familiar one, following along the lines of previous amendments that he and other Members of the minority have offered on other budget resolutions. It would—

First. Reduce taxes by $18 billion, and

Second. Reduce spending by $60.5 billion in budget authority and $52.1 billion in outlays.

The result, according to the amendment, would be to reduce the deficit from the $60.6 billion projected in the resolution to zero; in other words, a balanced budget.

This substitute amendment should be rejected on several grounds:

First, it is extremely unrealistic to expect an $18 billion tax cut to be considered and agreed upon by the House and Senate by September 25, the deadline for reconciliation actions set by the Budget Act. The Senate Finance Committee will be fully occupied this month with energy legislation, and our own Ways and Means Committee has a full agenda, which includes hospital cost control and social security financing, both very high priorities.

Furthermore, it is unrealistic to expect a major tax reduction before the President submits his tax reform legislation next month. That legislation is expected to involve major reforms in many areas, including capital investment, which I am sure no one would want to jeopardize. An $18 billion tax cut now would end chances of any major tax reform during the 95th Congress.

Second, the substitute amendment proposes a spending policy which the Congress has rejected during the summer months in its actions on appropriations legislation, and which would reverse the spending priorities agreed to in the first budget resolution.

Income security would be cut $27.8 billion, making it necessary to reduce entitlements under the unemployment compensation, food stamps, AFDC, and perhaps social security programs as well.

Health would be cut $6.7 billion, making it necessary to eliminate funding for such Public Health Service programs as biomedical research, manpower training, mental health services, and services to Indians, migrants, moth-

ers, and young children. Or, medicare and medicaid payments would have to be reduced.

Education and manpower programs would be cut $8.8 billion in B.A., reducing funds for various aid to education programs, jobs and job training programs, and social services grants to States.

And community and regional development and general revenue sharing programs would be cut by $4.4 billion, sharply curtailing funding for countercyclical assistance, community development funding, EDA and Farmers' Home Administration development programs, and the general revenue sharing program.

At the same time, national defense funding would remain intact, at $116.3 billion.

These cuts in spending would completely reverse the priorities agreed to in the first budget resolution and nullify the work of the Appropriations Committees which have nearly completed action on the fiscal year 1978 budget. It is simply inconceivable that the House would undo in 2 weeks the patient and careful work of several months.

And finally, the substitute amendment assumes an economic result which is simply impossible.

Just as the economy would suffer severely if private sector spending were cut back by more than $50 billion, a cut in Federal spending of similar dimensions would produce the same result. In fact, the result may well be even more disastrous, since a great deal of Federal spending requires State and local government contributions. According to the DRI economic model used by the Budget Committee, a $52.1 billion reduction in spending would result in:

Real growth during 1978 of 2 percent, rather than 5 percent;

A rise in the unemployment rate to 7.5 percent, rather than a decline to 6.2 percent by the end of 1978; and

A loss in revenues of $13 billion, rather than an increase of $6 billion.

I want to point out also the fallacy in thinking that his amendment is similar to the 1964 Kennedy tax cuts. It is not, for one basic reason: Those tax cuts were accompanied by steady increases in Federal spending through the early and mid-1960's; this amendment proposes only a modest tax cut—$18 billion—when we consider it as a percentage of total GNP, accompanied by the largest spending cuts in history—$52.1 billion.

I urge defeat of this amendment.

Mr. LEGGETT. Mr. Chairman, I move to strike the last word, and I rise in opposition to the amendment in the nature of a substitute.

Mr. Chairman, certainly the amendment in the nature of a substitute offered by my colleague, the gentleman from California (Mr. ROUSSELOT), is extremely ambitious in that it would cut some $52 billion in outlays and would cut income taxes by $17 billion. Mr. ROUSSELOT expects that that would stimulate new and additional income in the very year that income tax is cut. If I understand, the gentleman from California (Mr. ROUSSELOT) would reduce budget authority by $27.8 billion in function 600, income security and outlays by $13.9 billion below the levels assumed by our resolution.

If we close down entirely the civil service retirement system, we could save $18 billion in budget authority and $11.2 billion in outlays. This would come within about $2 billion of the target of my colleague.

Additionally, we could totally close down the unemployment compensation system and that would save $14.6 billion in budget authority and $11.5 billion in outlays. Again, that would not get down to the target of my colleague.

A third approach would be to terminate the food stamp and AFDC programs. This would yield savings of about $12.2 billion in budget authority and $11.6 billion in outlays, but we would have 10.8 million recipients of AFDC benefits that we have to feed in some way. Under the civil service alternative, we would have 1.6 million Federal annuitants that we would have to feed in some way. Obviously the targets that are suggested could not be achieved.

In addition, it is suggested that we cut interest by $4.7 billion in fiscal year 1978. We could do that only if by some magic way we could cut the national debt by $160 billion. Again, there is no readily available way for us to achieve this goal.

While the objective is certainly laudable—to achieve a balanced budget—which I certainly support, I think we would have to search even further for vehicles and methodology to reach this conclusion. I do not think the numbers that are currently under review will achieve the desired result.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, let me take the last item first, and that is the interest charge.

The reason the interest would be reduced that much is because we would not be increasing the deficit as we do under the position of the majority when the Government does not go into the private money market to borrow funds to pay for its deficit, the demand for money goes down and so does the interest rate. That is the way we would have an interest charge of $37 billion. I remind my colleague that at an average cost of 5.3 percent the total interest on a debt of $700 billion is around $37 billion.

Mr. LEGGETT. I understand that 5.8 percent is the number we have to use.

Mr. ROUSSELOT. It is not, as the gentleman knows, because the Treasury would not be required to go out and look for new debt securities, the present debt securities would stay in place. And, assuming they would turn some of those over at new interest rates, the belief is that you can achieve the $37 billion.

What I want to tell the gentleman is that it would not require, as the gentleman suggests, a reduction in the present debt of $160 billion. That is just the gentleman's assumption, and it is certainly not mine.

Mr. LEGGETT. If possible, I would like to recapture a portion of my time.

I would like to stay on that one thing, the interest rate the gentleman uses of 5.3 percent whereas the realistic interest rate we are currently using is not that rate.

Mr. ROUSSELOT. It is for short-term debts.

Mr. LEGGETT. Our information is that the average interest rate which is used is that taken on the average.

Mr. ROUSSELOT. I do not follow that, and that is not what they stated to us when we tried to pull the information out of the Treasury as to a reasonable average interest, if we have no new debt. Under the committee resolution we are calling for an add-on deficit of almost $60 billion. That is a lot of add-on. But what the difference is is that the marketplace would not be as flooded and would not increase demand for money as would be required under the committee resolution.

Let me also suggest in reference to the other reductions, as the gentleman calls them, in outlays, it is not a reduction, in most cases it is a restraint on increases. That is the issue that I have tried to draw for the House on previous occasions. We are basically in this resolution, except in a few cases—income security is one where this does not apply—going on the expenditures made in fiscal year 1977. So what I am trying to say is that if we try to live on the same expenditure level that we lived on in 1977, the fiscal year that will be concluded at the end of September, I believe we could achieve the purposes and goals outlined in this resolution.

Mr. BAUMAN. Mr. Crairman, I rise in support of the amendment.

Mr. Chairman, I want to commend the gentleman from California for offering this balanced budget amendment. It shows his basic revolutionary character, because, obviously, what he is proposing is revolutionary in this day and age. Heavens, how could we ever balance the Federal budget? What is the gentleman asking of this Congress? This is just absolutely unheard of, that any Member would stand up and say that the U.S. Government has to live within its means. That is all right for the average wage earner. The wife and husband have to go out and both work. Maybe they work two shifts. They have got the kid working at a minimum wage so they can cover the price of groceries. We all, as individuals, have to live within our personal budgets, but to ask the U.S. Government to face the probability that it would have either to raise taxes to cover its expenses or reduce those expenses and live within its means is truly revolutionary. I would say that the gentleman from California is acting in the spirit of our Founding Fathers who also revolted against those who would have eaten our substance and taken our wealth—but, of course, in those quaint days, they used force and violence. I am not sure whether the American taxpayers have quite risen to that level of forceful resistance, although after a month at home during the in-district work period, not on a junket abroad, I found that my people are close to that

breaking point. So I commend the gentleman.

If a balanced budget is so good for 1981, as the President says and Mr. Lance says—and we all know Mr. Lance is a great authority on money—then we ought to balance it right here and now. Who knows, a balanced budget might even bring a return to the basic prosperity that once this country knew, in lieu of the funny-money policies of the liberals who control this House.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. BAUMAN. I yield to my distinguished colleague, the gentleman from California, a revolutionary.

Mr. ROUSSELOT. I appreciate the gentleman's yielding.

I appreciate my colleague's comments. I felt, as a member of the Committee on the Budget, that we—the Federal Government—ought to be able to make ends meet on a cash flow of $406 billion. That certainly ought to be a reasonable amount to get along on.

Mr. BAUMAN. Billion, did the gentleman say?

Mr. ROUSSELOT. Four hundred six billion dollars.

Mr. BAUMAN. Billion, not million.

Mr. ROUSSELOT. That is what the committee resolution proposes, so I appreciate my colleague's clarification. It is true that the overwhelming majority of the American people, especially the 90 million working people of this country, believe that Congress should be more responsible, balance the budget, and get the Federal Government to live within its means. But, of course, we were awfully anxious to get that pay increase this year.

Mr. BAUMAN. Many Members do not think we should bring that subject up. It makes many Members nervous, though the gentleman from Maryland would be glad to oppose the pay raise again.

Mr. ROUSSELOT. I know mentioning our pay raise makes many Members uncomfortable. But there should not be any great difficulty in making ends meet on $406 billion.

I would like to make this point, if the gentleman will yield further.

Mr. BAUMAN. I have a few more pearls of wisdom, but I will yield to the gentleman since his wisdom exceeds mine.

Mr. ROUSSELOT. A provision of this resolution mandates a 10-percent cut across the board for the Federal income tax. I feel that, if suddenly the 90 million working Americans found this reduced Federal income tax bite in their paychecks, they would spend it and the economy would grow.

Mr. BAUMAN. The gentleman means to say he actually is advocating that the American people should be permitted to retain their own money and spend it the way they want, rather than paying out 40 percent of their incomes in State, local, and Federal taxes so that some bureaucrat, who does not even know their names, to whom they are only numbers, can spend it for them?

Mr. ROUSSELOT. Yes. I think that is a fair position.

Mr. BAUMAN. Again, that is a revolutionary concept in this age.

Mr. ROUSSELOT. I suppose it is to some, especially those who continually advocate deficit financing.

Mr. BAUMAN. A majority of this House would find it very repulsive to let the American people spend their own money.

Mr. ROUSSELOT. I would just like to see us try. Of course, a portion of my proposed resolution would be an admonition to the Committee on Ways and Means and to the Committee on Appropriations to comply with this resolution.

It would require a little effort on their part to return a portion of the earnings to the American workingman.

Mr. BAUMAN. I compliment the gentleman on the approach he is taking. But he shows a basic misunderstanding of the congressional budget system by offering this amendment, just as I had a misunderstanding. When this budget process was adopted a few years ago, and I voted for it, I remember my colleague from Iowa, H. R. Gross said:

> Don't let them fool you. They do not mean what they are saying.

I actually thought the budget process was to allow us to reduce the national debt, to hold down spending, to allow tax reductions instead of increases. That is what the budget process was supposed to do. But no, the process has become a license to spend. Now the Congress can know just how much it is ripping off the taxpayers. You can take glory and credit for taxing the people. How much did the gentleman say was the total of the national debt?

Mr. ROUSSELOT. The add-on would be roughly $60 billion, making the total national debt $761 billion.

Mr. BAUMAN. Is that not just great? My goodness, you liberals spill a billion each day sometimes when you are legislating and now you can take credit for the biggest national debt in history. Whoopee. I urge the passage of the pending amendment.

Mr. LAGOMARSINO. I rise in support of the amendment offered by my colleague from California (Mr. ROUSSELOT) as a substitute for House Concurrent Resolution 341, the second concurrent budget resolution.

This substitute proposes $448.6 billion in budget authority for 1978, with actual outlays, and estimated revenues, both set at $406.6 billion—in other words. It calls for a balanced budget.

I think it is important that we set the stage for what is happening here today. The budget proposed by the majority calls for outlays of $458.7 billion, paid for out of revenues estimated at $398.1 billion. That would create a deficit of $60.6 billion. This is on top of a deficit for the current year estimated at about $48 billion.

There has been a lot of talk today about the need to stimulate the economy. Mr. Chairman, I would ask how a 2-year deficit of $100 billion, and climbing, can be viewed by anyone as a rational way to stimulate the economy. One of the reasons for the high spending figures proposed by the majority is inflation. Yet what is this budget resolution but a blueprint for even more inflation? Deficit spending, the underlying cause of inflation, is a two-edged sword. Not only does it cut into the real income of the taxpayer by increasing the cost of living, but whenever he gets a raise to make up for the difference, he finds himself in a higher tax bracket. This hidden tax increase, which amounts to a windfall for the Federal Government, is what the budget planners on the majority side are counting on to finance their goal of a "balanced" budget by 1982. They balance the budget, not by reducing spending or even by holding the line, but by the very simple expedient of raising taxes.

In contrast, the substitute resolution now before us, provides for an across-the-board tax cut of 10 percent in personal income taxes. It also proposes to hold the line on Federal spending to current year levels. How can this be done? I believe that by leaving more money in the pockets of the people, we will stimulate the economy more effectively and more directly than by increased Government spending. Part of the reason, in fact, for the $12 billion increase in the deficit proposed for next year over the current year, is due to the so-called stimulus programs, public works and public service jobs, enacted by Congress at the end of the last session and the beginning of this session. In contrast, studies by the Congressional Budget Office show that a 10 percent tax cut would create 1 million new jobs in 1978, and stimulate $8 billion in new—private—capital investment. This is a much more rational, and simple, way to cure our economic ills than by simply throwing money at the problem, as we have done for the past decade. Certainly, it is worth a try, in view of the total failure of the current effort.

The CHAIRMAN. The question is on the amendment in the nature of a substitute offered by the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

The CHAIRMAN. A quorum of the Committee of the Whole has not appeared.

The Chair announces that a regular quorum call will now commence.

Members who have not already responded under the noticed quorum call will have a minimum of 15 minutes to record their presence. The call will be taken by electronic device.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 519]

Andrews, N.C.	Diggs	Quillen
Archer	Dingell	Rangel
Armstrong	Drinan	Rodino
Ashley	Fascell	Roncalio
Aspin	Gammage	Rostenkowski
Badillo	Gephardt	Roybal

Dickinson	Pettis	Zeferetti
Dicks	Pritchard	
	Quie	

Accordingly the Committee rose; and the Speaker pro tempore, Mr. WRIGHT, having assumed the Chair, Mr. NEDZI, Chairman of the Committee of the Whole House on the State of the Union, reported that that committee, having had under consideration the concurrent resolution (H. Con. Res. 341), and finding itself without a quorum, he had directed the Members to record their presence by electronic device, whereupon 365 Members recorded their presence, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

RECORDED VOTE

The CHAIRMAN. The pending business is the demand of the gentleman from California (Mr. ROUSSELOT) for a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 169, noes 230, not voting 35, as follows:

[Roll No. 520]

NOT VOTING—35

Andrews, N.C.	Dent	Johnson, Calif.
Aspin	Dickinson	Kemp
Badillo	Dicks	Ketchum
Biaggi	Diggs	Koch
Bolling	Fascell	Moss
Bonker	Gammage	Murphy, N.Y.
Chappell	Hammer-schmidt	Nowak
Clay		Pettis
Pritchard	Roybal	Teague
Quillen	Sisk	Vanik
Rangel	Stangeland	Young, Alaska
Rostenkowski	Symms	Zeferetti

The Clerk announced the following pairs:

On this vote:

Mr. Chappell for, with Mr. Zeferetti against.

Mr. Dickinson for, with Mr. Dicks against.

Mr. Kemp for, with Mr. Rangel against.

Mr. Quillen for, with Mr. Rostenkowski against.

Mr. Stangeland for, with Mr. Murphy of New York against.

Mr. Symms for, with Mr. Biaggi against.

Mr. Young of Alaska for, with Mr. Teague against.

Mr. ASHLEY changed his vote from "aye" to "no."

So the amendment was rejected.

The result of the vote was announced as above recorded.

Mr. HOWARD. Mr. Chairman, I rise in strong support of House Concurrent Resolution 341, the second budget resolution for fiscal year 1978, which establishes expenditure ceilings and a revenue floor.

Since the inception of the budget process, a matter of major concern to many Members of Congress, including myself, has been how we could balance the difficult roles of the Budget Committtee, on the one hand, which is charged with the overall responsibility for establishing budget priorities and expenditure ceilings, and the program decisionmaking responsibilities of the Authorizing and Appropriations Committees. No one ever assumed that it would be possible to set national priorities without incurring differences of opinion among those charged with making program decisions. Under the able leadership of Chairman GIAIMO, however, we can see in this budget resolution that it is possible for all of us to reconcile a realistic appraisal of our total economy with individual program decisions.

Specifically, I note that in areas of concern to me, the allocations for surface and air transportation programs, within the overall expenditure ceilings, are consistent with the recommendations made by the Public Works Committee. The resolution also provides for a level of activity for highway programs—obligations—consistent with the limitations set in House Concurrent Resolution 282, which establishes a $7.5 billion limitation; and includes the necessary flexibility for anticipated supplemental appropriations in the general transportation area in the amount of $100 million.

With regard to the Public Works Committee, I am pleased to note that accelerated public works programs are fully funded, with $6 billion in budget authority and outlays of approximately $2.9 billion. With unemployment going up to approximately 7.1 percent, it is crucial that we fund programs such as this because this program alone is estimated to create over 225,000 individual jobs and 116,000 man-years of employment.

The evidence is substantial that the Budget Committee, when it set its target resolution this spring, was cognizant of

the program responsibilities of the standing committees. And I am pleased to note, as I examine the entire resolution, that the spending decisions of other committees are in basic conformity with the target resolution.

This is the way the process is supposed to work. It gives the Congress the capacity to establish national priorities that take into account current economic conditions, such as the unemployment rate, while preserving the individual program review and assessment responsibilities of the other committees. I commend Chairman GIAIMO and the members of the Budget Committee for the outstanding job they have done this year. I urge my colleagues to support this resolution.

AMENDMENT OFFERED BY MR. ANDERSON OF CALIFORNIA

Mr. ANDERSON of California. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ANDERSON of California: On page 4, line 6, strike out "$19,655 million" and insert in lieu thereof "$20,355 million".

On page 4, line 7, strike out "$19,667 million" and insert in lieu thereof "$20,367 million".

Mr. ANDERSON of California. Mr. Chairman, I am today introducing an amendment to the veterans section of this budget resolution which provides for an increased budget authority and outlay of $700 million. It is my strong hope that this increase will allow our Veterans' Affairs Committee to pass authorizing legislation for a pension for veterans of World War I.

Nearly 190 Members of this House and several of the other body have joined in cosponsorship of a bill to provide this much needed pension.

The original bill, H.R. 55, calls for a $150 monthly pension to veterans of World War I, their widows, and surviving children. The chairman of our Veterans' Affairs Committee (RAY ROBERTS), requested the comments of the Veterans' Administration on the cost of this bill. We were informed that the first-year cost would be $2.4 billion.

In recognition of the severe fiscal condition of the budget, I have redrafted this H.R. 55 and hope that the cost will now be more in line with this amendment I offer today.

In all my years in public service, I have never seen a year in which the budget was in good shape. This revised bill has been fine-tuned to provide pension to those in need with no fat and no waste.

I am pleased to report that 13 of the 28 members of the Veterans' Affairs Committee have joined in cosponsorship as have 5 of our full committee chairmen and 3 of our distinguished senior members of the Rules Committee. Chairman ROBERTS has assured me that he will hold hearings on this bill in January.

H.R. 55—REVISED

This revised version calls for a $150 monthly pension for veterans of World War I, for any minor/dependent children, and for certain widows. This fine-tuning that was done will save $1.4 billion.

Also, I would like to point out to the Members that this amendment is similar to one we passed during the consideration of the first budget resolution in which 329 Members voted "aye" and only 73 voted "nay."

Both the bill and this amendment have the support of the National Veterans of World War I, the National Veterans of Foreign Wars—VFW—and 23 of the individual States that comprise the American Legion.

When we note that nearly 190 Members have sponsored this legislation and that it enjoys such support among the various veterans groups, it becomes adamantly clear that we must act with all deliberate speed to set up the mechanism to get this pension working.

THE WORLD WAR I VETERAN

Let me spend a minute refreshing our memories on who we are talking about when we use the term "veteran of World War I."

We are talking about 600,000 men and women who are in their eighties.

We are talking about 400,000 senior citizens with incomes of less than $5,000 a year,

About 300,000 veterans who cannot qualify for any monthly assistance from the VA.

About men and women who served their country in its time of need and of whom many are now forced to eat dog food to survive,

About veterans who did not qualify for home loan mortgage guarantees and GI educational assistance and veterans preferences, because at that time there were not any.

THE PLIGHT OF THE WORLD WAR I VETERAN

I wonder how many of us can imagine what it was like in 1917 when these men and women marched off to war. They did not know when or if they would ever return.

Nevertheless, they answered their nation's call and on November 11, 1918, they were our triumphant heroes. They had saved the free world from outside aggression.

What did a grateful Nation provide these valient men and women? On the day of discharge we provided them with $60 cash and train fare home!

We veterans of World War II, Korea, and Vietnam were treated somewhat differently than those of World War I. We came back to educational assistance, home loan mortgage guarantees, and veterans' hospitals.

We came back to an economy that was not about to fall into one of the worst depressions in history. Those of us who were wounded were able to receive assistance aimed at helping us back to recovery. Many of the veterans of World War I had no one to come back to.

THE ECONOMIC STATUS OF WORLD WAR I VETERANS

Over 400,000 of these veterans make less than $5,000 annually.

Another 231,000 make from $5,000 to $10,000 and only 64,000 make over $10,000. Yet less than 300,000 can qualify for any veterans monthly payment.

Please do not misunderstand me. I realize how much our Veterans' Affairs Committee has done to improve the plight of these veterans.

Under the leadership of the chairman from Texas, my distinguished friend RAY ROBERTS, much fine legislation has been enacted into law.

But when the committee speaks of percentage increases passed for veterans, I hope the members present realize that any percentage, be it 5, 10, or even 50, when multiplied by zero must equal zero.

And if increases in social security have eliminated a veteran's monthly VA payment or reduced it to $5 monthly, then even a 50-percent increase times zero is of no help. And as I said earlier, less than 300,000 of the 600,000 World War I veterans are receiving any monthly VA payment, even though over 400,000 earn less than $5,000 annually.

SUMMARY

The last time this amendment came to the floor, 329 Members supported our efforts to answer the urgent need of these men and women; 190 Members have sponsored the legislation that this amendment today seeks to fund.

The membership of the American Legion in 23 States have gone on record as favoring this pension—I will gladly tell a Member if his was one of the States.

Let us help these senior citizens pay for their medicines, their bills, and their homes and then allow them to go shopping in the "human food" aisles of our supermarkets for a change.

They deserve no less and ask for only equity. Each year we delay, over 100,000 more veterans die. Of the nearly 4,750,000 men and women who served in World War I, less than 600,000 remain.

How many more must die thinking that no one cares?

If any Member here can justify accepting an increase in his salary of nearly $250 per week and then deny these senior citizen veterans an assurance of an income of at least $37.50 a week, then he should vote against this amendment.

I urge my colleagues to join with me in support of this urgently needed amendment.

Mr. HAGEDORN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I just want to commend the gentleman from California (Mr. ANDERSON) for offering this amendment. I think this gives us the opportunity to indicate to the Veterans' Committee that we want to eliminate the practice of taking away with the left hand what the right hand has given to pensioners and widows of the First World War.

Mr. Chairman, I urge the House to adopt this amendment.

Mr. GIAIMO. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from California (Mr. ANDERSON).

Mr. Chairman, I do so in full awareness of the sentiments in this House for this amendment. The amendment passed in the springtime when we took up the first budget resolution. At that time the amendment offered by the gentleman from California (Mr. ANDERSON) provided for $300 million.

We went to conference with the other body, and that $300 million remained in the first budget resolution, which means that that money could have been used for whatever purposes the legislating committees and the Appropriations Committee determined. It could have been used for a pension for the World War I veterans, as the gentleman from California (Mr. ANDERSON) still would like. It could have been used for general pension reform, as some other Members have suggested.

The fact of the matter is that this is the Committee on the Budget. We do not prescribe what the money is going to be used for. That is not our function. By adopting this amendment today we are not going to be mandating this money for the World War I veterans, and we are not going to be fooling anyone. All we can do is make a budget provision for a sufficient amount of money which could be used for World War I veterans, for general pension reform, or for anything else, provided we could get the legislation through the Congress. I submit that the Members have not been able to do that, nor is it likely that they are going to be able to do that this year.

The gentleman from California (Mr. ANDERSON) suggests he is going to get hearings held by the committee after the first of the year. That means we are not going to get this entitlement legislation enacted in time to be effective before October 1, 1978, which is for fiscal year 1979, not the fiscal year we are discussing here today.

So we are going through a charade here, albeit one that I am sure will be successful. If we want to make the people back home think we are getting them a bonus for World War I veterans, we should vote for this amendment, but we should also tell them that this vote will not get them that bonus, because we will have to get that legislation through the Committee on Veterans' Affairs, which committee has not seen fit to pass this legislation. If that legislation were brought out of the committee, it would have to go through the Committee on Appropriations thereafter.

So what will we have accomplished? Let me tell the Members what we will have done. We will have added $700 million, which will not be spent and which will not be appropriated, and our action will have resulted in adding $700 million to a $60 billion deficit, which is already too high. And we will have done that in what I consider to be an irresponsible fashion, because we will, in fact, be saying to the American people that we have made a provision for increasing the deficit by $700 million, even though the legislative committee has the good sense not to come out with this legislation.

Mr. EDGAR. Mr. Chairman, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Pennsylvania.

Mr. EDGAR. Mr. Chairman, I thank the gentleman for yielding.

The gentleman in the well is a cosponsor of one of the many bills to provide a World War I pension, and I appreciate the gentleman's comments. I think, however, the gentleman would recognize and admit that this is the very process by which we are setting a budget, and if in fact we are to set a budget and budget priorities, we in the House ought to have this opportunity. On the authorizing committee, as the gentleman is aware, more than half the members of that committee are cosigners of legislation to do this very thing.

I believe it is important that we recognize the need for World War pensions, that we move by placing the money in the budget at this time, and that we nudge the authorizing committee to move not only expeditiously in having hearings but in reporting out legislation.

Mr. Chairman, I feel that as we wait—and we have waited for many years for this type of legislation—more and more World War I pensioners die and pass on. It seems to me it is only fitting, since so many Members here support this legislation, that we move as quickly as possible in this matter.

Mr. GIAIMO. Mr. Chairman, I thank the gentleman from Pennsylvania (Mr. EDGAR).

I will say that I have cosponsored that legislation in the past, but since those days we have done a great deal for the older veterans, the veterans of World War I and their widows and dependents. The gentleman from Mississippi (Mr. MONTGOMERY), who is an outstanding spokesman for veterans at all times, will explain, I am sure, some of the things that we have done in lieu of a bonus for World War I veterans.

Mr. HANNAFORD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment offered by my colleague from California. The overwhelming majority of the Members of this House recognized the need for a pension for the veterans of World War I in the first budget resolution earlier this year. Unfortunately, the estimated cost of the legislation at that time was unrealistically high. Thus, the final amount allocated in the Budget for this pension was a mere $300 million—a figure more symbolic than useful.

On July 12 the Veterans' Administration reported its opposition to H.R. 55, the World War I Pension Act of 1977. This report estimated that implementation of H.R. 55 would amount to almost $2.5 billion in the first year. The VA also charged that this kind of pension would be "discriminatory towards veterans of later wars," and that World War I veterans already receive practically all the benefits accorded other veterans.

Consequently, a new World War I Pension was drafted with more rigid eigibiity requirements. This bill will be introduced today. The cost of this bill is estimated to be $1 billion for its first year of implementation, a considerably more realistic figure than that of H.R. 55.

The VA's claim that World War I veterans' benefits are commensurate to those received by veterans of later wars is illusory. Veterans of World War I did not receive the readjustment benefits that we extended to veterans of later wars. They received no housing assistance and they received no educational entitlement—perhaps the single greatest assistance we have provided our veterans. What is more, our World War I veterans now entitled to a pension because of need or service-connected injuries frequently have their benefits reduced to a ridiculous amount because the VA deducts their social security entitlement from their VA pension entitlement. As a result, many World War I veterans receive monthly checks of $10 or less from the VA, and many of them are rightfully insulted.

Mr. Chairman, Mr. ANDERSON and I represent an area of California that enjoys a large veteran constituency and an especially high concentration of World War I veterans. I have received literally hundreds of letters over the last few months from World War I vets and their spouses who are angry, distressed, and almost driven to the wall by their financial straits—despite the fact that they are supposed to be receiving a veteran's pension. When these checks do not amount to more than a few dollars each month, it appears to be much less an entitlement or even assistance and much more like charity. These older patriots should not be made to feel like beggars; they should not be forsaken.

Mr. Chairman, the need for a World War I veterans' pension is real and urgent. I hope all of the Members of this House will agree and will take this opportunity to demonstrate their support for these deserving veterans.

Mrs. HECKLER. Mr. Chairman, I move to strike the requisite number of words, and I rise in strong support of the Anderson amendment.

Mr. MONTGOMERY. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

As chairman of the Subcommittee on Compensation, Pension, and Insurance of the Committee on Veterans' Affairs, I will state that this legislation will go through our veterans committee. As chairman of that subcommittee, I do think I have some knowledge of the situation in which we find ourselves today. The chairman of the Committee on the Budget has explained the procedure that would take place, and I would like to mention what we have tried to do for the veterans of World War I and their dependents.

The Anderson amendment says that without regard to other income, a veteran of World War I or his dependents would receive $150 a month if he or she received an income of less than $15,000 a year. This is much better than the legislation that the gentleman from California (Mr. ANDERSON) offered last year, which had no ceiling on income.

On the Anderson amendment I wish we could give $300 a month to the veterans of World War I; but we have financial restraints on us.

Mr. Chairman, what this legislation would be is special legislation for one set of veterans and their dependents.

We on the Veterans' Affairs Committee try to represent all the veterans; we would like to have special legislation for the paralyzed veterans of this country or other special groups; but on the committee we have tried to do the best we could for all veterans within the restraints of our allotted budget.

Again, Mr. Chairman, this amendment is special legislation, and it will cost over $1 billion to implement the amendment which the gentleman from California (Mr. ANDERSON) has put before us.

We have a number of veterans who do not get anything like $15,000 a year or anything near it who fought in other wars. Some are near or at the poverty level drawing veterans pension checks. Whether they served in the Vietnam War, the Korean war, or in World War II or World War I, we would like to bring those limits up with respect to those veterans.

Our committee has done something for the World War I veteran and his dependents. Last year everyone in this room voted for a 7-percent cost-of-living increase for veterans of World War I who reached the age of 78. We voted 7 percent plus a 25-percent add-on, a 32-percent increase for veterans who still are alive and over 78 years of age. That gave them a 32-percent increase starting in 1977.

Widows of World War I veterans who reach the age of 78 on January 1, 1978, will receive a 7-percent cost-of-living increase plus a 25-percent add-on, which is a 32-percent increase on their pension checks starting in 1978. This legislation was passed by this House less than 2 months ago and by a unanimous vote.

Again, Mr. Chairman, we have done the best we could within the restraints of the funds that we have had.

By the direction of this Congress, on October 1 the Director of the Veterans' Administration will submit to the Congress proposals and recommendations to improve the veterans pension programs, which includes what we are talking about today. This will be submitted on October 1.

The veterans organizations, including the American Legion, the Paralyzed Veterans, the DAV, the Amvets, and also the VFW, have said, in effect, that before we start enacting special legislation for different groups, we should see what this October report says.

In that report we think we can come back and clear up some of the problems of the veteran plan the Members of the Congress have had by veterans, and/or their dependents coming into them and saying:

I draw a pension check and I received a Social Security raise. Then on January 1st I also will draw a veteran's pension cost of living increase. But when I get the Social Security check my veteran's check will be reduced because my income limitation was reached and I will be over the income limitation.

In effect, what we have been doing is give the raise in social security and then take it away in the veteran's check.

We are going to try to correct that through recommendations by the Veteran's Administration. This is going to cost a lot of money but it should be done and it should take priority over the Anderson amendment.

So I would hope that we would go slow in adopting these amendments.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. MONTGOMERY was allowed to proceed for 2 additional minutes.)

Mr. MONTGOMERY. Mr. Chairman, I would like to point out that we have many matters that face us in the Veterans' Administration and in the Congress. We have the World War II boys and girls coming along now and we are going to have to make provision for the World War II veterans.

We have over 2 million World War II veterans who have reached the ages between 60 and 64 who are going to start drawing more pension checks. They are going to be using the Veterans' Administration hospital facilities more.

We have 1 million veterans who fought in World War II who are between the ages of 65 and 69. We have 300,000 World War II veterans who have reached the ages of 70 to 74. We have 100,000 veterans who fought in World War II who have reached the ages of 75 to 79 and we have 12,000 veterans of World War II who are over 80 years of age.

So I would point out that we have many problems before us. Our committee is doing the best job we can.

I hope the Members will vote down the amendment.

Mr. ANDERSON of California. Mr. Chairman, will the gentleman yield?

Mr. MONTGOMERY. I yield to the gentleman from California.

Mr. ANDERSON of California. Mr. Chairman, I want to make it clear that I agree that the Committee on Veterans' Affairs has done a great job in many of these across-the-board benefits for veterns. I have supported them.

But, is it not true that today there are almost 400,000 World War I veterans who are not getting any payments at all? And is it not also true that of the 300,000 who are receiving veterans assistance, that some are getting as little as $5 a month? If they receive a 25-percent increase, they will only be receiving an increase of $1.25 a month.

Mr. MONTGOMERY. I also could add on to that of the World War II and Korean veterans we probably have 3 or 4 million who are drawing that same amount that the gentleman mentioned.

Also as to the World War I veterans, the gentleman's figures are correct. About 270,000 World War I veterans out of the 760,000 World War I veterans who are still alive, are drawing some type of nonservice-connected pension.

The CHAIRMAN. The time of the gentleman has again expired.

(On request of Mr. EDGAR, and by unanimous consent, Mr. MONTGOMERY was allowed to proceed for 2 additional minutes.)

Mr. MONTGOMERY. Mr. Chairman, I thank the gentleman for securing me the additional time and I would just like to finish my statement.

What I am saying is that we have a number of World War I veterans who have reasonably good incomes, and are not eligible for veterans pensions. I am glad they have enough money to take care of themselves in their later years.

Mr. EDGAR. Mr. Chairman, will the gentleman yield?

Mr. MONTGOMERY. I yield to the gentleman from Pennsylvania.

Mr. EDGAR. Mr. Chairman, I thank the gentleman for yielding to me.

The first thing I would like to do is to commend the gentleman in the well, Mr. MONTGOMERY, from Mississippi, who is the chairman of the subcommittee on which I serve, for his statement about the differences in social security and veterans pensions. I think this is a situation that we must look into very carefully. I hope after the commencement of the next session of this Congress, after we receive the report of the Veterans' Administration, that we may act expeditiously on that issue.

Mr. MONTGOMERY. I would like to commend the gentleman from Pennsylvania (Mr. EDGAR) who, as a member of the subcommittee, has been pushing for legislation such as this, and I hope that we will be able to correct the situation and solve the problem.

Mr. EDGAR. Mr. Chairman, if the gentleman will yield just briefly, let me say that I support the amendment offered by the gentleman from California (Mr. ANDERSON) in large part because it does set a limit of $15,000.

It takes out of the category of compensation for pensions those persons who would be making excessive sums. I think we have got to focus our attention on those World War I veterans who have not been given those benefits and who are in desperate need, who have to go to the grocery store and buy their goods and services and keep themselves alive in an economy that is very difficult.

I would hope that while the gentleman in the well disagrees with the approach that is taken, he will join with us in the development of this legislation once the amendment is accepted.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. ANDERSON).

The amendment was agreed to.

TECHNICAL AMENDMENT OFFERED BY MR. ANDERSON OF CALIFORNIA

Mr. ANDERSON of California. Mr. Chairman, I offer a technical amendment. Mr. Chairman, I offer this as a substitute for my amendment, which the committee has asked me to do. It is the same as mine with different words. It is a technical amendment.

The Clerk read as follows:

Technical amendment offered by Mr. ANDERSON of California: In the matter relating to the appropriate level of total new budget authority strike out "$507,343,000,000" and insert in lieu their "$508,043,000,000";

In the matter relating to the appropriate level of total budget outlays strike out "$458,676,000,000" and insert in lieu thereof "$459,376,000,000";

In the matter relating to the amount of the deficit strike out "$60,568,000,000" and insert in lieu thereof "$61,268,000,000";

In the matter relating to the appropriate level of the public debt strike out "$780,865,000,000" and insert in lieu thereof "$781,565,000,000";

In the matter relating to the amount by which the statutory limit on the public debt should accordingly be increased, strike out "$80,865,000,000" and insert in lieu thereof "$81,565,000,000".

In the matter relating to Veterans' Affairs strike out "$19,655,000,000" in budget authority and insert in lieu thereof "$20,355,000,000"; and strike out "$19,667,000,000" in outlays and insert in lieu thereof "$20,367,000,000".

Mr. ANDERSON of California (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ANDERSON of California. Mr. Chairman, I am informed by the staff of the committee that this is a technical, conforming amendment so that they will not have to do a lot of revising. Perhaps the chairman of the committee can substantiate that. At this time I yield to the chairman of the committee, the gentleman from Connecticut (Mr. GIAIMO).

Mr. GIAIMO. Mr. Chairman, I urge that the gentleman's request be granted. What this does is it perfects the original amendment which he had sent to the desk, which merely had the dollar change. This includes the aggregates as required under the act and conforms the amendment to the requirements of the Budget Act, and this will eliminate the need for a perfecting amendment later on.

The CHAIRMAN. The question is on the technical amendment offered by the gentleman from California (Mr. ANDERSON).

The technical amendment was agreed to.

AMENDMENT OFFERED BY MR. FOLEY

Mr. FOLEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FOLEY: In the matter relating to the appropriate level of total budget outlays strike out "$458,676,000,000" and insert in lieu thereof "$458,876,000,000";

In the matter relating to the amount of the deficit strike out "$60,568,000,000" and insert in lieu thereof "$60,768,000,000";

In the matter relating to the appropriate level of the public debt strike out "$780,865,000,000" and insert in lieu thereof "$781,065,000,000";

In the matter relating to the amount by which the statutory limit on the public debt should accordingly be increased, strike out "$80,865,000,000" and insert in lieu thereof "$81,065,000,000".

In the matter relating to Function 350: Agriculture strike out "$6,102,000,000" in outlays and insert in lieu thereof "$6,302,000,000".

Mr. CONTE. Mr. Chairman, I rise in opposition to the committee amendment now before us, which will result in a giveaway of $200 million of the taxpayers money for another boondoggle. This payment to farmers, whether it goes by the name of critical lands resource conservation program, or the wheat set-aside program is still the payment-not-to-grow program that we finally rejected several years ago. This proposal is nothing more than a ripoff of the taxpayer and the consumer. The effect of this program is to reward farmers for not being productive—for not providing the essential elements of the human diet.

The program calls for the Government to pay farmers for setting aside a portion of their lands rather than to plant wheat. However, the program does not take into consideration the fact that farmers already voluntarily place less productive lands aside. Thus, the taxpayer will be rewarding the farmer for the actions he has already taken over the past years. The figures for this boondoggle are also appalling. The estimates for the first year alone, are $200 million, which is expected to increase in the future as farmers get smart and sit back, not plant, and just pick up their Government check. However, the taxpayer is not the only one who will be forced to carry the heavy financial burden. The diminished supplies of this staple will be reflected in increased consumer costs for every product utilizing wheat. This too, will increase over the years as the production decreases. With these odds, one must ask who is left to benefit? The answer is the select farmers, who will receive a double financial reward.

First, they are paid by the Government not to grow wheat. Second, the wheat they do produce will receive a higher price on the market, due to the diminished supply. Thus, this amounts to another boondoggle for the farmer, at the expense of the American taxpayer and the consumer.

I submit the taxpayer and consumers are sick and tired of supporting such ridiculous schemes of nonproductivity which coincidentally seem to benefit a select few. With the high demand for this nutritious commodity throughout the country, I submit that we should devise a better program. I, therefore, urge my colleagues to defeat this special interest amendment.

Thank you, Mr. Chairman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. FOLEY).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. COUGHLIN

Mr. COUGHLIN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. COUGHLIN: In the matter relating to the recommended level of Federal revenues, decrease the amount by $175,000,000;

In the matter relating to the amount by which the aggregate level of Federal revenues should be decreased, increase the amount by $175,000,000;

In the matter relating to the amount of the deficit, increase the amount by $175,000,000;

In the matter relating to the appropriate level of the public debt, increase the amount by $175,000,000;

In the matter relating to the amount by which the statutory limit on the public debt should accordingly be increased, increase the amount by $175,000,000.

Mr. COUGHLIN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. COUGHLIN. Mr. Chairman, this amendment is intended to assure the availability of $175 million for tax credits for higher education and vocational education. The $175 million is the amount estimated by the Joint Committee on Taxation to be needed for the first year's cost of a tax credit program. That program would permit each full-time college or vocational education student a credit of $250 in the first year and that would be graduated up to maximum of $500 when the program is fully phased in.

This tax credit for higher education has had a very interesting history. It has passed the Senate in four out of the last five Congresses. Four times has it been passed by the Senate. But we in this House of Representatives have never been permitted a vote on this program. We were promised at the end of the last term of Congress that this would be brought for a vote in this House. It has yet to come in.

At the same time, 209 Members—209 Members—of this House of Representatives have sponsored some form of tax credit for education legislation. Almost half the entire House are cosponsors of legislation that has yet to be brought before this House for a vote.

I think all of us know the circumstances in which low- and middle-income families find themselves when they attempt to send children to college. In fact, with the increase in inflation and the increase in higher education costs many people are finding the higher education simply unaffordable. It is forcing schools to increase tuitions and fees while they have dwindling resources for loans and scholarships. If this trend is allowed to continue, our institutions of higher learning will be comprised only of the very rich and the very poor, who can either afford the education or who are the prime beneficiaries of our financial aid programs as presently constructed.

Such a state of affairs would be a tragedy to the majority of American taxpayers and to our Nation itself.

I point out that this kind of a credit is for a limited period of time. It helps the family in that period of time in their lives when they are the most strapped financially and when they are in the most need of some consideration and some relief in the tax field.

It is interesting to me that we allow tax advantages to businesses, and financially support the advanced training of their employees. While that is recognized by Congress as a sound investment, and businesses can get a tax credit, the individual family trying to send a young person to college or vocational school cannot get the same benefit. The family

cannot get that same writeoff against their taxes.

Some will say this is going to produce a revenue loss, but it is a fraction of one percent of our budget.

Even more interesting is the fact that college graduates earn an average of over $5,000 per year more in taxable income than noncollege graduates. It may actually pay off in the long run and not result in a revenue loss.

The average college graduate has over $200,000 more in lifetime earnings than those who have only a high school education. The taxes paid on those earnings all contribute to the revenue of the United States.

Mr. Chairman, I hope that we will support this amendment so that provision will be made in the budget and I also hope that this kind of credit will be voted on soon by the House of Representatives.

Mr. GIAIMO. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I think clearly this is not the proper vehicle for new legislation such as a college tuition tax credit.

We can stay here all afternoon and merrily add to the Federal budget and the Federal deficit. In the last half hour we have added $700 million to the veterans functions and $200 million in outlays for agriculture. This is $900 million that we have added in estimated outlays; that means $900 million added to the deficit, which is already at $60 billion.

That may not bother some people, but it surely bothers me, and it bothers many others in this chamber and in the country at large.

Now, here is a piece of legislation, a proposed college tuition tax credit. It may or may not have merit; but it certainly ought to go through the proper committee, which is the Committee on Ways and Means—the tax-writing committee. It certainly ought not to be added here today when we have no idea as to whether or not it is a high priority item, whether there is great support for it, or what the pros and cons of it are.

I know it sounds good. I know there is nothing finer than for a Member of Congress to go back home and tell middle-income taxpayers, "I know the troubles you are having paying tuition for your children, putting them through college, and I voted for a tax benefit for you," without taking into consideration the effectiveness of it, without taking into consideration the cost of it, without comparing it with so many of the other good programs that we have to take care of the needs of college students.

Instead of that, what happens? We are not able to get this type of legislation through the Committee on Ways and Means or through the Senate Finance Committee. We are not able to get it through any of the other committees of the House, but some think it is a good idea to tack it on to the budget of the United States. As I said, we have already increased the budget by $900 million this afternoon on legislation involving World War I veterans, which most likely will not be passed by the Congress, and by $200 million more on agricultural estimates.

We already had put $6.1 billion in this budget for price supports to agriculture, and now we are told that the estimates show that we will need an additional $200 million.

We are talking about next year's crops. I submit to the Members that if we are that good at estimating what price support payments are going to be next year, we all ought to go out and play the futures market. I submit that we do not have any exact idea as to what will happen, what the prices of commodities will be, and yet we put in the high figures when we get to the budget. The result is that we will be creating havoc with the budget of this country. I think all of us should concern ourselves with that.

Getting back to college tuition tax credit, it should be taken to the proper legislating committees of the Congress. If it passes there, then it can be included in the budget. But we should not start in the reverse manner of getting it passed through the budget with the hope that putting it in this budget will act as some sort of priority incentive toward getting those committees to act on it. They have been aware of the tax credits for tuition for years, and they do not need incentive from the Budget Committee to get them to move.

Mr. Chairman, I urge the defeat of this amendment.

Mr. CORCORAN of Illinois. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the Coughlin amendment to House Concurrent Resolution 341, the second concurrent resolution on the budget for fiscal year 1978.

First of all I want to express my disagreement with the gentleman from Connecticut (Mr. GIAIMO) regarding the timing of the consideration of this amendment. We are not—in this pending amendment—trying to enact a specific legislative program of tax credits for college education. That, hopefully, will come later when the appropriate standing committees of the House take up this legislation.

This, I submit, is the appropriate time and place to consider this matter because what we are trying to do in the budget process under which Congress now operates is to make allowance for the fiscal impact of the college tax credit bill.

The Carter administration has already announced its intention to send Congress its tax reform proposals later this year. The Ways and Means Committee will be holding hearings and in the course of the normal legislative process I believe the tax credit idea will be seriously, and I hope favorably, considered by the House. And according to our budget process now is precisely the time to make allowance for the fiscal impact of this legislation.

As the prime sponsor of H.R. 5313, the College Tuition Tax Relief Act of 1977, I have been concerned for a long time with the costs of a college education which have been rising at a terrifying rate. Many able and eager young students are being priced out of school. They are being denied what most Americans have always considered a basic right—the right to better themselves through education.

The idea of tax credits for higher and vocational educational expenses is not a new one. Twice during 1976, the Senate passed such legislation. The House has never permitted a vote on a tax credit for higher educational expenses. During this Congress, nearly 210 Members have either sponsored or cosponsored legislation which calls for tax credits and/or deductions for educational expenses.

Consider for a moment these facts, supplied to me by the House Education and Labor Committee. The cost of 1 year in a public college will be 4-percent higher in the 1977–78 school year than it was in the 1976–77 school year. At private schools, the increase will be 5.2 percent. This is not an isolated case. The trend of higher and higher college costs is persistent. In the years between 1970 and 1977, the cost of tuition alone increased 57.2 percent at public colleges. If you have an 18-year-old child who plans to enter college next year, it will cost you, on the average, $17,500 for 4 years at a public university. If, on the other hand, your child is in the first grade this year, you can plan to spend $35,420 for his or her bachelor's degree. Finally, if your child is born this year, college costs will be $47,330 for 4 years when the child enters college. In addition, if you want your child to attend a private college, and about one-fourth of our college students do go to private institutions, the cost for a baby today will be $82,830 by the time he or she reaches college age.

The Coughlin amendment to House Concurrent Resolution 341 contains a similar formula for tax credits to that embodied in my bill, H.R. 5313 and its counterpart in the other body, S. 311, which is sponsored by Senators ROTH and RIBICOFF. The formula calls for a tax credit for each full-time college or vocational student of $250 for the first year, graduated to a maximum of $500 when fully phased in by 1980.

Finally, the income tax credit concept has three basic advantages. First and foremost, it is aid directly to those who bear the brunt of college costs, especially the middle class, which has financed most student aid programs while being denied the benefits of those programs. Every student or the parent of a student who is not self-supporting can take advantage of the credit. It is a form of aid with few strings attached. Second, the tax credit is simple and inexpensive from an administrative point of view. Finally, the cost of the program would not be prohibitive.

I believe that it is time, Mr. Chairman, for the House to go on record in support of this indirect assistance program for higher education. A vote for this amendment would make provisions in the budget resolution for this tax credit legislation which I believe should be enacted by this Congress.

Mr. FISHER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I am not so much concerned with the substance of this particular amendment as I am with what it

seems to be doing with the budget process. Comes along a worthy program—education, World War I veterans, agriculture, whatever it is—and it has not gone through the process of the budget resolution properly, and, therefore, the item is not accommodated in the budget ceiling for authorizations and outlays. But the champions of these particular programs, each one of which may be quite worthy, want there to be a reserved space inside the budget tent for the program or for the expansion of the program. And this is a terrible upward pressure on the outlay ceilings or the authorization ceilings, or both. It is a one-way kind of pressure, and it pushes that ceiling up, up, up, until practically anybody, however tall he is, can fit in that room and not bump his head on the ceiling.

See what this does. It brings us forward with a budget resolution, this time binding, mind you, with very, very, high ceilings, made high to accommodate the unprepared, unprocessed requests, however worthy, of lots of different Members.

We then find ourselves saying to the country, "We give you a budget ceiling for next year very, very high, to accommodate almost any worthy cause that a Member can think of and can generate a little support for."

This means our deficit is going to be very, very high. And we come before the country then with an inflated budget ceiling, an inflated deficit, and we deserve to suffer the consequences of public criticism if we do that. And believe me, we will get it.

The whole thing is made so obvious in yet another sense. Just recently some reestimates of the amount of spending for this fiscal year indicate that the spending is going to fall short by $4 billion of what we thought a few months ago it would be. Four months ago the same story was told, to the extent of $3 billion. This is what happens later on in a fiscal year when ambitions that people have cannot be fulfilled.

The whole thing makes a mockery, at least to some extent, of our budget process. I hate to be cast in the role of opposing this, that, or the other program, which might be quite good if it were properly brought forward through relevant committees and then into the budget, but to have it come in in this way seems to me to be quite the wrong way to do it.

That only makes us look—I will not say it makes us look ridiculous, but it does make us look irresponsible in the eyes of the citizens to come in with these great, high figures for outlays and great, high figures for deficits and then later on next year, in the reestimating, bring them back down again.

Maybe we would be better off, Mr. Chairman, to deflate some of these things here and now since we know they are not all going to go through and actually result in higher outlays.

Mr. BRADEMAS. Mr. Chairman, will the gentleman yield?

Mr. FISHER. I yield to the gentleman from Indiana.

Mr. BRADEMAS. Mr. Chairman, I thank the gentleman for yielding.

I simply want to associate myself with the criticism the gentleman from Virginia (Mr. FISHER) has made with respect to this amendment, because we would really, in agreeing to this amendment, be holding out a false promise, in that neither of the committees with policymaking responsibilities for higher education legislation—the Committee on Ways and Means, with respect to this particular proposal, and the Committee on Education and Labor, with respect to student financial assistance legislation—has considered or has acted on proposals of this nature.

We would simply be misleading the American people were we to agree to this amendment, and it seems to me to be a corruption of the purpose of the budget process.

Moreover, President Carter and his economic advisers are presently shaping a major tax reform proposal, and it would seem to me to be more responsible to direct this particular proposal to the attention of those who are shaping that measure. That is the appropriate place for it to be considered.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. COUGHLIN).

The question was taken; and on a division (demanded by Mr. COUGHLIN) there were—ayes 15, noes 26.

Mr. COUGHLIN. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. Seventy-eight Members are present, not a quorum.

The Chair announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

The CHAIRMAN. A quorum of the Committee of the Whole has not appeared.

The Chair announces that a regular quorum call will now commence.

Members who have not already responded under the noticed quorum call will have a minimum of 15 minutes to record their presence. The call will be taken by electronic device.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 521]

Andrews, N.C.	Diggs	Mitchell, Md.
Archer	Dingell	Moakley
Ashley	Dornan	Moss
Aspin	Drinan	Murphy, N.Y.
Badillo	Edwards, Calif.	Myers, Michael
Biaggi	Fascell	Patterson
Blanchard	Fish	Pettis
Bolling	Ford, Mich.	Pritchard
Bonior	Fountain	Quillen
Bonker	Fraser	Railsback

Symms	Waxman	Zeferetti
Tucker	Wiggins	

Accordingly the Committee rose; and the Speaker pro tempore, Mr. WRIGHT, having assumed the chair, Mr. NEDZI, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the concurrent resolution (H. Con. Res. 341), and finding itself without a quorum, he had directed the Members to record their presence by electronic device, whereupon 348 Members recorded their presence, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

RECORDED VOTE

The CHAIRMAN. The pending business is the demand of the gentleman from Pennsylvania (Mr. COUGHLIN) for a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 311, noes 76, answered "present" 1, not voting 46, as follows:

[Roll No. 522]

So the amendment was agreed to.

The result of the vote was announced as above recorded:

AMENDMENT OFFERED BY MR. CAPUTO

Mr. CAPUTO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CAPUTO: On page 1, line 11, strike out "$507,343,000,000" and insert in lieu thereof "$507,233,700,000";

On page 2, line 2, strike out "$458,676,000,000" and insert in lieu thereof "$458,568,000,000";

On page 2, line 5, strike out "$60,568,000,000" and insert in lieu thereof "$60,460,000,000";

On page 2, line 7, strike out "$780,865,000,000" and insert in lieu thereof "$780,757,000,000";

On page 2, line 9, strike out "$80,865,000,000" and insert in lieu thereof "80,757,000,000";

On page 2, line 23, strike out "$7,933,000,000" and insert in lieu thereof "$7,823,700,000";

On page 2, line 24, strike out "$6,579,000,000" and insert in lieu thereof "$6,471,000,000".

Mr. CAPUTO (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. CAPUTO. Mr. Chairman, in order to induce reasonable cooperation from the Korean Government with the ongoing investigations of the House and the Department of Justice, I am proposing to reduce budget authority by approximately $110 billion with the guidance and recommendation that those reductions be made in Korean commodity support programs run by the U.S. Government.

I want to emphasize that there is no change in the military spending under this proposal such as the $750 million in this budget for support of the U.S. Air Force and Army combat and combat support forces in Korea. These would not be affected.

The $275 million in military credit sales would not be affected, nor would the $4 million in the military assistance program grants and the $1.4 million in military training, they would not be affected, nor would troop withdrawals be raised by this proposal. This is concentrated specifically on commodities, wheat, rice, and cotton. I want to share with the Members my reasons for concentrating solely on this form of aid to Korea as a way to try to induce reasonable cooperation from the Korean Government in all of our investigations.

First, the Korean economy is robust. Korea is now one of the most wealthy countries per capita in Southeast Asia. Their per capita GNP was $600 in 1975, double that of the Philippines, and about four times that of India. In the scheme of things, Korea is no longer a poor country. Its GNP is growing rapidly, about 15 percent a year in real terms, more rapidly than ours. In short, their formerly acute need for our commodity assistance has been sharply reduced, if not eliminated. Indeed, Korea set a target for kilograms of rice consumption per capita in Korea, and that target was 102 kilograms for the year 1975. Their actual consumption in that year was 113 kilograms, meaning their diet and nutrition has reached desired levels. For wheat Korea is within 5 percent of the desired per capita consumption per year. Again, their diet and nutrition seems to have reached adequate levels. Production and demand for rice in Korea is about in balance, so that Korea is really self-sufficient in rice, raising questions in my mind why we have to use U.S. taxpayers' dollars to support Korea in this particular dimension.

The South Koreans' need for commodity assistance is minor in a worldwide spectrum. South Korean nutrition and diet is adequate. They have a high per capita income. They are self-sufficient in these very commodities.

It seems to me extraordinary that we use U.S. taxpayers' dollars to help this country when there are so many others far more needy in this respect. The Koreans continue to have, depending on one's point of view, military requirements that we need to meet, but it seems to me we can all agree that with respect to these particular commodities Korea has met its own requirements, and that there are other more needy countries.

More importantly, there is a second reason to single out commodities. It was through this commodity program that Tongsun Park perpetrated his frauds against this very Congress. That is not my conclusion; that is the conclusion of a U.S. grand jury pursuant to an indictment brought by the U.S. Department of Justice. Let me read selectively from that indictment, which was unsealed 3 days ago.

The Korean Government did cause the Office of Supply of the Republic of Korea Government to designate Tongsun Park as the seller's agent for the purchase of all rice by the Republic of Korea from the U.S. Government, and then as compensation for acting as that seller's agent, Mr. Tongsun Park received substantial compensation.

The indictment stipulates it was part of the conspiracy that the defendant, Tongsun Park, with the knowledge and under the direction of the Korean Government, would corruptly provide a part of the commissions on the sale of that rice to various Congressmen and Senators.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. CAPUTO was allowed to proceed for 2 additional minutes.)

Mr. CAPUTO. The program I am seeking to delete with respect to this particular country was precisely the program that according to the Department of Justice and the U.S. grand jury was the vehicle for defrauding this body and, hence, the U.S. Government. I encourage the Members to think about the wisdom of continuing that program another year in the light of this statement, not by CAPUTO but by the Department of Justice. As the Members have undoubtedly read, nearly everyone connected with either the Justice or the Ethics Committee investigations considers Tongsun Park critical in this investigation. There is a trail of currency, U.S. currency, leading to Tonsun Park's control. Only he is likely to be able to tell us what was done with that cash. As the Department

of Justice claims, that was the source of bribery, of corruption of U.S. policy, and of corruption of this Government. As the Members know and as has been explained in the context of other amendments this evening, this amendment would not directly cut spending to Korea. It is merely advisory and a guidance to the administrative agency.

The State Department could choose to reject our advice, and that is in my mind an advantage. If there are overriding circumstances that I do not understand and that other Members of the House who choose to vote for this do not understand, the State Department could continue the program. We are not mandating or forcing a change in diplomacy. Instead we are rendering an opinion, an opinion that this country was abused by the Korean Government, and that this particular form of aid ought to stop for this year, to this one country, in these amounts for those commodities.

I am mindful that there are ongoing efforts by the State Department, by the Office of the President, by the Ethics Committee and indeed by our own Speaker who addressed this question only yesterday.

The CHAIRMAN. The time of the gentleman from New York has expired.

(By unanimous consent, Mr. CAPUTO was allowed to proceed for 2 additional minutes.)

Mr. CAPUTO. Mr. Chairman, I considered carefully whether this would frustrate those efforts. My decision to go ahead with this amendment was fortified by reading today's accounts of the statements by a Minister of the Republic of Korea sharply rejecting any suggestion that his Government was at fault. He said there was no reason for Korea to cooperate in this investigation. He said it was none of our business. Now, that is a translation and maybe an unfair one, but that is the one that came out. He said the Korean Government was not connected with this scandal.

I would say the overtures by the President and by the State Department and by others have been firmly rejected, and there are few cards left to play, and this is one of them. We could act tonight.

Let me say that as a member of the Ethics Committee I have had several opportunities to register my displeasure with the failure of the Korean Government to cooperate in this investigation, but most of the Members here are not members of that committee and have had few opportunities to register themselves in any way on this important matter.

The House voted unanimously to start the investigation. This is another opportunity, and one of the few the full membership will have, to indicate how it feels about the progress of the investigation and about the importance of cooperation by the Korean Government.

Let me close with one final thought. I considered carefully whether this amendment would hold an innocent country responsible for the unauthorized acts of an outrageous felon who happens to be a national of that country. I would not move this amendment if I thought that. I think the Justice Department indictment makes it absolutely clear that the Korean Government launched a specific plan to subvert our independence and our integrity. They cooperated, indeed they directed the commission of these felonies. The Korean Government is not an innocent bystander. I am holding them responsible because they are indeed responsible.

I hope I can find some support.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. CAPUTO).

The question was taken; and on a division (demanded by CAPUTO) there were—ayes 50, noes 56.

RECORDED VOTE

Mr. CAPUTO. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 181, noes 205, not voting 48, as follows:

[Roll No. 523]

Dornan	Quillen	Young, Alaska
Fascell	Rangel	Young, Mo.
Fountain	Rose	Zeferetti

The Clerk announced the following pairs:

On this vote:

Mr. Fountain for, with Ms. Mikulski against.

Mr. Wirth for, with Mr. Dicks against.

Mr. Symms for, with Mr. Teague against.

Mr. Dornan for, with Mr. Chappell against.

Mr. Sarasin for, with Mr. Rangel against.

Mr. Badillo for, with Mr. Young of Missouri against.

Mr. Stangeland for, with Mr. Zeferetti against.

Mr. Young of Alaska for, with Mr. Rostenkowski against.

Messrs. BURKE of Florida, MOLLOHAN, MARRIOTT, and LUNDINE changed their vote from "aye" to "no."

Mr. ARCHER, Mrs. LLOYD of Tennessee, and Messrs. BLANCHARD, JONES of Tennessee, and WAXMAN changed their vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. JACOBS

Mr. JACOBS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. JACOBS: On page 2, line 20, strike out "$115,787,000,000" and insert in lieu thereof "$115,754,000,000";

On page 2, line 23, strike out "$7,933,000,000" and insert in lieu thereof "$7,822,000,000";

On page 2, line 24, strike out "$6,579,000,000" and insert in lieu thereof "$6,469,000,000."

Mr. JACOBS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. JACOBS. Mr. Chairman, this amendment is the same as the previous amendment. The only difference is that rather than just striking out some funds for the State of Korea, it strikes out all funds for the State of Korea if they do not return this fugitive from justice from the United States.

Mr. Chairman, I might add that I am just as puzzled as some of the other Members in this Chamber as to why we never had an extradition treaty with South Korea in the first place.

They got 10 percent of my leg over there, and I do not think they deserve anything more from us if they do not at least return a person charged with a serious crime in this country.

Mr. Chairman, I hope my amendment is approved.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana (Mr. JACOBS).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. JACOBS. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 120, noes 268, not voting 46, as follows:

[Roll No. 524]

Mr. MOTTL and Mr. BRINKLEY changed their vote from "aye" to "no."

Mrs. SPELLMAN and Mr. PRESSLER changed their vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. GIAIMO

Mr. GIAIMO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GIAIMO: In the matter relating to the recommended level of Federal revenues strike out "the amounts" and insert in lieu thereof "$397,933,000,000";

In the matter relating to the amount by which the aggregate level of Federal revenues should be decreased strike out "the amounts" and insert in lieu thereof "$1,076,000,000";

In the matter relating to the appropriate level of total new budget authority strike out "the amounts" and insert in lieu thereof "$508,043,000,000";

In the matter relating to the appropriate level of total budget outlays strike out "the amounts" and insert in lieu thereof "$459,576,000,000";

In the matter relating to the amount of the deficit strike out "the amounts" and insert in lieu thereof "$61,643,000,000";

In the matter relating to the appropriate level of the public debt strike out "the amounts" and insert in lieu thereof "$781,940,000,000";

In the matter relating to the amount by which the statutory limit on the public debt should accordingly be increased, strike out "the amounts" and insert in lieu thereof "$81,940,000,000".

Mr. GIAIMO (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD. It is an amendment merely technical in nature.

The CHAIRMAN. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. GIAIMO. Mr. Chairman, this is merely a conforming amendment making in order the changes that have been taking place in adopting the amendments. It will conform the various figures accurately and we will have mathematical accuracy.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr GIAIMO I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, how much is the deficit up now?

Mr. GIAIMO. The deficit is up $1,065 million to $61 billion.

Mr. ROUSSELOT. $61 billion added on to the deficit?

Mr. GIAIMO. Mr. Chairman, I urge adoption of the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Connecticut.

The amendment was agreed to.

Mr. ASHBROOK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in strong opposition to House Concurrent Resolution 341, the second concurrent resolution on the budget. I am deeply disturbed by the tremendous spending and deficit levels proposed in this resolution. Such irresponsible budgetary practices will fan the fires of inflation, drive up interest rates and result in higher taxes.

Perhaps the hardest thing for me to understand is the astronomical deficit figure. The committee recommends that we approve a budget deficit in excess of $58.6 billion. I repeat, $58.6 billion.

In a time of economic recovery such as we are experiencing, one would naturally expect the deficit to decrease. This is not the case, however. It now looks like the deficit for fiscal year 1978 will be $10 to $15 billion higher than for fiscal year 1977.

This is bad news for our Nation. If we cannot start reducing the size of the deficit during a time when our economy is improving, how are we ever going to achieve a balanced budget? The dismal prospect for the future is continued high deficits in both good years and bad.

Such a deficit does not square with the feelings of the American people. The vast majority understand the importance of balancing the Federal budget. According to a recent Gallup poll, almost 2 in every 3 Americans, 65 percent, believe that it is very important to balance the budget. Another 24 percent think it is fairly important. Only 7 percent view it as not so important.

Nor is this a partisan issue. Fully 61 percent of the Democrats and 67 percent of the Independents joined 7 percent of the Republicans in stating their belief in the importance of a balanced budget.

The chief cause of the higher deficit for fiscal year 1978 is the majoritys' stimulus programs. Billions and billions of dollars are allocated for public works projects and public service jobs. This is very difficult to justify.

It is ridiculous to be spending billions of dollars to stimulate the economy when our Nation is experiencing an economic upsurge. During the first two quarters of this fiscal year the gross national product grew at a 7-percent rate. Millions of meaningful jobs have been created in the private sector without the aid of governmental funds.

Further stimulus at a time of economic recovery is inappropriate and should be brought to an immediate halt. This would allow for a substantial reduction in Federal spending and move us a step closer to a balanced budget.

I am also deeply concerned over the tremendous tax burden that this resolution places on the shoulders of the average American citizen. The increased burden will be the result of primarily two factors, an inflation tax and additional new taxes.

Inflation, created and fueled by massive deficit spending, pushes people into higher tax brackets. It results in a hidden tax. Although salaries and wages rise, the Government walks away with a bigger and bigger slice of the paycheck. An individual may well find that he or she is making more money but is in a worse economic position than before. Only the Government is coming out ahead.

The second concurrent resolution on the budget will continue this trend. The excessive spending and huge deficit will add to the inflationary pressures in our economy and ultimately raise the tax burden by driving workers into higher tax brackets. As much as $20 billion of tax revenues in fiscal year 1978 will be the result of the inflation tax.

In addition, the second concurrent resolution provides for billions of dollars in new taxes. The amount of these taxes is estimated to be around $100 billion over the next 5 years. The Carter energy package alone could reach a cumulative total of $59.6 billion in new taxes through 1982.

Our citizens are already carrying a crushing tax burden. They should not have an even heavier load thrust upon them. They desperately need tax relief. Congress should be working on ways to provide them with some relief rather than adding to the burden.

I strongly urge the defeat of this ill-conceived resolution. Let us give the taxpayers of our Nation a break for a change.

Mr. SARASIN. Mr. Chairman, I strongly support the effort that was made to convey to the Government of South Korea the seriousness with which we view the tampering with our Government by agents of the Korean Central Intelligence Agency.

If anyone had any doubts about the need for a thorough and objective investigation of all aspects of the allegations of influence buying and other improprieties, I would hope they were dispelled by the Justice Department's actions indicting Tongsun Park earlier this week.

That indictment, however, will do little more than raise additional questions unless we can confront Tongsun Park directly. Under the circumstances, only the Government of the Republic of Korea seems to be in a position to compel Mr. Park's cooperation. I certainly have no desire to see the Korean people suffer for the misdeeds of some in their government, but there is a very important principle involved here, the integrity of the U.S. Government.

The amendment offered by Mr. CAPUTO offered us the opportunity to impress upon the South Korean Government the importance of cooperating in this matter and I would hope that every Member of this body concerned with a full investigation would support this amendment.

Mr. ICHORD. Mr. Chairman, on May 5 during the debate on the first budget resolution, I introduced an amendment making adjustments to increase the amount of revenue, to raise the target for national defense to the level requested by the President, and to lower the amount of interest on the national debt.

On that occasion, I was admonished in Latin by my esteemed colleague, the distinguished chairman of the Budget Committee for abusing the patience of this body. I was told that the figures signified real estimates by the competent staff of the Budget Committee, that interest on the national debt was needed and was not even subject to debate. The gentlemen concluded by categorizing my amendment as capricious.

Today as we consider the second budget resolution, I would like to reflect on the adjustments being recommended by the Budget Committee in relation to those I proposed on the 5th of May.

First on the subject of revenue it should be noted that my amended level of $401.4 billion is closer to that now recommended by the Budget Committee than was their original estimate of $398.1 billion.

Second, in the case of interest you will note that this item, not subject to debate, has been adjusted downward to $41.7 billion and is now closer to my recommended level of $40 billion than to the committee's recommended $43 billion.

Likewise, my amended figures for budget authority, for outlays, for the deficit and for the public debt are all closer to the current recommendation of the Budget Committee than their own estimates at the time of the first budget resolution.

Regrettably, the only area where I am far from the mark is in national defense where the recommended figures are now $5.1 billion below the original Carter request and even $1.4 below the amount recommended by the Budget Committee. It is of course interesting to note that while defense was being reduced, the remainder of the budget increased by $9.1 billion in budget authority. Whatever happened to our overwhelming concern for deficit spending that kept us from restoring the target for national defense to the level requested?

I make these points today to show the arbitrary manner in which these figures can be juggled, juggled to the detriment of our national security it would seem. I would only add that it is readily apparent that the estimates of a one time accountant can be as valid and in some instances even more valid than those proposed by our Budget Committee.

Mr. MICHEL. Mr. Chairman, there are several noteworthy items which the majority members on the Budget Committee have discussed and have omitted in their report which warrant mention.

For instance, the report states that:

> The task of providing jobs to seven million unemployed is exacerbated by two factors: First, the extraordinary number of new entrants into the labor force, particularly youth and women; and second, the widespread problem of structural unemployment.

This of course is something many of us have been talking about for quite some time, but this is the first time I can recall the majority party blaming unemployment on anything other than a slug-

gish economy. I am sure this has nothing to do with the change in administration.

More significantly, this altered view of unemployment seems to imply that solving the unemployment problem is not going to be solved by major Federal stimulants to the economy. Yet, in the next breath, the report turns around and says that Federal budget policy "must apply fiscal stimulus as needed on a continuing basis." This leaves one perplexed as to where the majority really stands in this regard.

I also find it interesting that the substantial economic growth we have experienced during the first half of this year has occurred during a year in which the budget deficit has declined by $18 billion from the level during the previous year. This seems to indicate that economic growth is not directly related to the size of the budget deficit and so-called Federal stimulants. Yet the majority turns around and approves a deficit for 1978 that is some $10 billion higher than the current figure. Why? I asked myself that question and then looked for an explanation in the committee report, but could find none. Perhaps the chairman of the Budget Committee could provide us with an answer?

I also have to ask the question as to whether the majority party in this body believes there is ever a point where we should balance the budget, or whether our budget policy ought to be one of perpetual deficits? President Carter has called for a balanced budget by 1981 and the committee report makes a fleeting reference to it. But I cannot imagine how that end is to be achieved when this resolution heads in exactly the opposite direction and provides for a substantial increase in the deficit during a time of significant economic growth. It leads me to believe that the majority is simply paying lipservice to the idea of a balanced budget in an effort to please their President, but without any conviction in their hearts.

Finally, Mr. Chairman, it should be pointed out that the $58.6 billion deficit in this resolution would be substantially higher were it not for the increased tax burden being imposed on the American people. If that burden were to remain at the current level of 19 percent of GNP, rather than increase to a projected 19.4 percent next year, the deficit would be $66 billion. Furthrmore, the deficit would zoom upward another $8 billion, to $74 billion, if the tax burden were to stay at the 1976 level of 18.6 percent.

What this tells us is that the majority is relying on tax increases, rather than spending reductions, to keep the deficit even as low as $58 billion, which, of course is not a low figure at all, but a shockingly high amount, particularly with a prosperous economy.

A Gallup poll last week revealed that 65 percent of the American people favor a balanced Federal budget. I suspect that the percentage would be substantially higher if the people realized that nearly 25 percent of their individual income tax payments is being used solely to pay the interest on the national debt.

The problem with massive and persistant deficit spending is not so much the principle of it as it is the burden being placed on the American people simply to pay the interest. Yet this resolution would continue that burden onward and upward.

The essential problem is that this resolution, like the first one, makes no effort to place any significant limitations on Federal expenditures. The resolution provides nearly a 13-percent increase in spending in 1978 over the current level, at a time when the projected inflation rate is about 6 percent. Expenditures are climbing at a rate over twice that of inflation, and when an increase of that size takes place, you know very little effort is being made to control expenditures. The only concern the report expresses over excessive spending is aimed at agriculture. It is, of course, easy for those living in the urban Northeast to pick on our Nation's farmers, but I would suggest that their concern would have a more honest ring to it if it also addressed the excesses in the Labor, HEW, and housing fields.

The real losers in this failure to limit spending are the American people, who are paying the bill in the form of higher taxes, higher inflation, and the ever-increasing use of their hard-earned tax dollars simply to pay the interest obligations of the Federal Government.

It is time we start thinking of the burdens we are imposing on our people, and I suggest that a good first step in this regard would be the development of a leaner, less burdensome budget resolution.

Mr. PEPPER. Mr. Chairman, as a member of the Rules Committee, which helped to shape the congressional budget process, I am pleased to express my support for House Concurrent Resolution 341, the second concurrent budget resolution for fiscal year 1978.

This resolution embodies the willingness of the legislative branch to come to grips with the hard decisions on aggregate Federal spending and revenues, and to set priorities among the various categories of expenditures.

The Budget Committee is to be commended for its continued efforts to bring a rational, timely resolution before the House.

At the same time, Mr. Chairman, in my role as chairman of the Select Committee on Aging, I believe it is important to view the Federal budget outlined in the pending resolution in light of its probable impact on those for whom Congress professes special concern—among them, the 23 million senior citizens of this Nation.

I fully understand that the resolution before us represents more a review of decisions taken by Congress over the past few months, than it does a new policy initiative in itself. The resolution, for example, assumes a $100-million higher total for the budget category including social services, reflecting the decision by Congress in the Labor-HEW appropriations bill to provide that much more funding for aging and vocational rehabilitation programs.

However, I believe that now is an appropriate time for all of us in the House to consider what the first budget resolution for fiscal year 1979 ought to look like for America's elderly.

Improvements are desperately needed in health care for older Americans. I will be proposing next year, as this, a greater emphasis on home health care, to prevent costly, demoralizing, and often avoidable institutionalization.

Immediate improvements are necessary in the coverage under medicare, particularly in the area of medical appliances and prescription drugs.

Greater recognition must be given to the need for productive employment for older workers. Both authorizing and appropriations committees should factor into their plans next year the need for greatly expanded job opportunities for these men and women, for many of whom a decent job means avoiding indignity, infirmity and loss of self-respect. In this connection, volunteer opportunities need to be greatly expanded.

Social services programs under the Older Americans Act should be funded at levels more closely alined with authorization levels. The section 202 housing program for the elderly and handicapped is funded at grossly inadequate levels to meet current needs.

The tangible, realistic goal of the Select Committee on Aging under my chairmanship will be to assure that these needs are met in the coming year's budget.

Congress is already performing the difficult task of setting budget priorities. I trust that, with assistance from my committee and other concerned Members, Congress will include, within those priorities, resources sufficient to assure a measure of decency and security to older Americans.

Mr. FRASER. Mr. Chairman, we are now debating the second concurrent resolution for fiscal 1978. The Congressional Budget and Impoundment Control Act does not go into great detail with respect to the nature of the second budget resolution. To my reading of the act it appears that there may be, roughly speaking, two kinds of second resolution.

The first kind of resolution is basically a summary of what the Congress has already decided. It does not lay out new national priorities or new fiscal policies. Coming after we have completed work on most of the appropriations bills, it reveals to us the policy and priority decisions that we have already made. The resolution before us is of this sort. It is a messenger which carries the news of what we have done. It gives us an opportunity to look at the total picture that we have constructed through our separate actions on appropriation and revenue measures. While it does not endorse everything the Congress has done, it puts its general stamp of approval on the broad fiscal policies and priorities that have evolved during the session.

The second kind of resolution represents a rejection of what the Congress has implicitly decided. Drawing on section 310 of the Congressional Budget Act, it directs appropriate committees to report legislation changing budget authority or revenue levels for the fiscal year

in question. The resolution might call for an increased appropriation in one function and a decrease in another function. A resolution of this sort is Congress's way of saying to itself that it has made an important mistake or oversight, or that there has been a sudden change in conditions which necessitates special action.

As I have indicated, the resolution before us is of the first sort. However, it should not be thought that it represents a complacent congressional pat on the back. While I supported the resolution in committee, and support it here on the floor, I am greatly concerned that we are not doing enough to solve our No. 1 national problem: inequality and unemployment.

I speak of these two issues: inequality and unemployment as a single problem because they are inextricably tied together. Our unemployment pattern reflects the past inequalities and inequities of American life. Our present unemployment creates and perpetuates our social inequalities. The statistics speak for themselves:

The overall unemployment rate for August was 7.1 percent. However, the rate for white collar workers was 4.2 percent, broken down as follows:

[In percent]

Professional and technical	3.0
Managers and administrators, except farm	2.5
Sales workers	5.3
Clerical workers	5.8

On the other hand, blue collar unemployment was 8.4 percent, for black males over 20 years the rate was 11.7 percent.

While we had on overall teenage unemployment rate of 17.5 percent, for white teenagers the rate was 14.7 percent. This contrasts with the phenomenal 40.4 percent unemployment rate among black teenagers.

Similarly, for white adult males the unemployment rate was 4.5 percent. For black adult males the rate was 11.7 percent. For adult men the unemployment rate was 5.2 percent; for adult women the rate was 7.1 percent.

The implications of these statistics are clear. It does not make sense to speak of unemployment in the United States as a homogenous concept. There are groups of occupations, those of a professional, technical, or managerial sort where the unemployment level is well below the rate some would define as "full employment." Whenever we look at a group, be they blacks, women, or blue collar workers, which has not had the advantages, education, or absence of discrimination that characterizes white middle class life, we find high unemployment rates. The unpleasant truth is that our unemployment statistics suggest a society with deep social inequalities. The longer we allow these patterns to continue, the more totally will we perpetuate these inequalities to succeeding generations.

While the second budget resolution does not contain enough to do the job, it does make an appreciable start at attacking our unemployment/inequality problems. The resolution contains funding for a variety of jobs programs including the CETA titles, the new youth programs, and counter cyclical fiscal assistance. In addition, it contains outlays for accelerated public works programs whose budget authority was contained in the third resolution for fiscal 1977. In total, the resolution contains $14.6 billion in job creating or training outlays for fiscal 1978. This is $6.7 billion more in outlays for the coming fiscal year than is estimated for similar programs in the current fiscal year.

As I have said, it will not do the job, but it is a beginning. In a few months the Budget Committee will be marking up the first resolution for fiscal 1979. The important thing is to carry through on our efforts to eliminate this problem of unemployment and inequality. In that regard, I should note that the current resolution contains budget authority for the forward funding of the CETA public service jobs into fiscal 1979. In addition, the committee report notes that some governmental actions, such as the new energy legislation, may cause increased unemployment and that it may be necessary to expand our job creation programs merely to offset Government induced unemployment. It is my expectation that our first resolution for 1979 will reflect this determination to follow through on our efforts to eliminate unemployment. We have no higher priority, and we will not be meeting our responsibility for setting national priorities if we fail to do so.

Mr. DON H. CLAUSEN. Mr. Chairman, I want to associate myself with the gentleman from California (Mr. ANDERSON) and rise in support of his amendment to the budget resolution which provides for an increase in budget authority and outlay of $700 million. The amendment will clear the way for passage of our bill which authorizes the creation of a World War I pension program.

I am a cosponsor of the original legislation and am joining with my colleague (Mr. ANDERSON) in cosponsoring his bill. I commend my colleague for his diligent work in perfecting the proposal and I am pleased to learn that the chairman of the House Veterans Affairs Committee, our distinguished colleague from Texas (Mr. ROBERTS), has agreed to hold hearings on the new bill.

I am hopeful that we can move ahead quickly on our legislation. It is imperative that we avoid any unnecessary delay. There are currently less than 600,000 veterans of World War I most of whom are in their eighties. Approximately 82,000 live in California and a great many in my congressional district. Unfortunately, their ranks are thinning at a rate of 10 percent a year.

Inflation is continuing to erode their existing benefits and medical costs, housing costs and food prices are rising sharply. A pension of approximately $150 a month will provide the recognition these men and women deserve for their service to the country and will also provide them with the additional purchasing power they need to live a meaningful life.

Mr. GIAIMO. Mr. Chairman, I move that the Committee do now rise and report the concurrent resolution back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the concurrent resolution, as amended, be agreed to.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. NEDZI, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the concurrent resolution (H. Con. Res. 341) revising the congressional budget for the U.S. Government for the fiscal year 1978, had directed him to report the concurrent resolution back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the concurrent resolution, as amended, be agreed to.

The SPEAKER. Under the statute, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the concurrent resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. LATTA. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 199, nays 188, not voting 47, as follows:

[Roll No. 525]

YEAS—199

Addabbo	Dingell	Kildee

Delaney	Moss	Vander Jagt
Dent	Murphy, N.Y.	Vanik
Dickinson	Patterson	Wilson, Tex.
Dicks	Pettis	Wirth
Dornan	Pritchard	Young, Alaska
Edgar	Quillen	Young, Mo.
Fascell	Rangel	Zeferetti
Fountain	Rose	

The Clerk announced the following pairs:

On this vote:

Mr. Delaney for, with Mr. Chappell against.

Mr. Young of Missouri for, with Mr. Fountain against.

Mr. Zeferetti for, with Mr. Dickinson against.

Mr. Biaggi for, with Mr. Dornan against.

Mr. Murphy of New York for, with Mr. Kemp against.

Mr. Dicks for, with Mr. Quillen against.

Ms. Mikulski for, with Mr. Sarasin against.

Mr. Rostenkowski for, with Mr. Stangeland against.

Mr. Leggett for, with Mr. Symms against.

Mr. Rangel for, with Mr. Vander Jagt against.

Mr. Wirth for, with Mr. Young of Alaska against.

Until further notice:

Mr. Aspin with Mr. Bonker.

Mr. Clay with Mr. Dent.

Mr. Edgar with Mr. Harris.

Mr. Fascell with Mr. Johnson of California.

Mr. Howard with Mr. Patterson of California.

Mr. Moss with Mr. Rose.

Mr. Roybal with Mr. Simon.

Mr. Sisk with Mr. Vanik.

Mr. Badillo with Mr. Charles Wilson of Texas.

Mr. Koch with Mr. Teague.

So the concurrent resolution was agreed to.

The result of the vote was announced as above recorded.

RE-REFERRAL OF H.R. 4066 TO COMMITTEE ON ARMED SERVICES

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that the Committee on Veterans' Affairs be discharged from the further consideration of the bill H.R. 4066, to entitle veterans with service-connected disabilities rated as total to domestic and overseas travel on military aircraft on a space-available basis, and that the bill be re-referred to the Committee on Armed Services.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

JUSTICE DEPARTMENT SAYS THE BELL SYSTEM USES UNFAIR TRADE PRACTICES

The SPEAKER pro tempore (Mr. ROBERTS). Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 10 minutes.

Mr. WHALEN. Mr. Speaker, you may recall that on March 24 I placed a statement in the CONGRESSIONAL RECORD, entitled "Rebutting deButts." The purpose of that article was to compensate for what I called "several examples of questionable reasoning" contained in statements made by Mr. John D. deButts, the chairman of the board of the American Telephone & Telegraph Co., in testimony before the Senate Subcommittee on Communications.

Today I would like to return to a further discussion of statements made at the Senate hearings, which were ably chaired by Senator ERNEST F. HOLLINGS.

Testimony was heard from Mr. Herbert N. Jasper, executive vice president of the Ad Hoc Committee for Competitive Telecommunications—ACCT. That organization represents a number of firms which provide commercial and data communications services. ACCT is part of a broad coalition representing the various companies that have been struggling to gain entrance into the telecommunications marketplace, which has been an almost exclusive preserve of A.T. & T. and the independent telephone companies until quite recently.

A portion of Mr. Jasper's remarks dealt with the fact that many ACCT contributors feel threatened by Bell and believe that the telephone company has taken unfair advantage of its unique position in the telecommunications marketplace. He asserted that Bell's competitors have a far different view of the Bell Telephone corporate image than that which is projected to the public.

Specifically, Jasper told the Senate Subcommittee on Communications:

> The modern A.T. & T. has achieved a somewhat benevolent reputation. However, another image is slowly emerging.

Jasper also told the panel that this change in attitude toward Bell is not unique to Bell's competitors but is shared by the Justice Department.

In response to an inquiry from Subcommittee Chairman HOLLINGS, ACCT went to work compiling a brief sampling of relevant comments contained in a massive statement filed with the U.S. district court by the Justice Department in connection with the Government's antitrust suit against A.T. & T. Here is how Herb Jasper summarizes the Justice Department's position:

> The Justice Department asserts that Bell employs a vast program of propaganda and an extensive lobbying effort, as well as contributions to political campaigns and political pressures, and that it exploits its immense purchasing power and that of Bell employees to make consumers hesitate before buying from anyone other than the Bell System. The Department says that the Bell System controls Yellow Page advertising to create barriers to competitive entry.
>
> Justice also contends that A.T. & T. and its codefendants have engaged in surreptitious intelligence gathering in order to improve their competitive position. Furthermore, the Department alleges that A. T. & T. abused its monopoly status by making anti-competitive use of information which it acquired thereby. Justice also states that A. T. & T., Western Electric, and Bell Laboratories have made use of numerous anti-competitive practices, such as exclusionary market practices, predatory pricing schedules, interconnection restrictions, and the use of the regulatory process to delay entry of competitors and create federal-state conflicts.
>
> Bell has also pressured its employees by telling them that competition could cost them their jobs, and has threatened firms wishing to do business with competitors with the loss of Bell business and with boycotts by Bell employees. Finally, Justice believes that Bell has caused delays in providing service to competitors in order to give itself time to formulate a competitive response and to restrict the competitors' ability to obtain financing or customers.

Mr. Speaker, at this point in the RECORD, I wish to insert the contents of a new brochure published by ACCT, pre-

senting quotations excerpted from the submission of the Justice Department in its case against A. T. & T. The text follows:

HERE'S WHAT THE JUSTICE DEPARTMENT SAYS ABOUT THE BELL SYSTEM

The following quotes are excerpted from the United States Department of Justice Response to Defendants' First Set of Interrogatories in the case of the United States of America, Plaintiff, vs. American Telephone and Telegraph Company; Western Electric Company, Inc.; Bell Telephone Laboratories, Inc., Defendants, dated December 15, 1976. [Civil Action No. 74–1968 before the United States District Court for the District of Columbia]

AT&T, Western Electric, Bell Labs and the Bell operating companies repeatedly extol the virtues of one system, universal service and the advantages of vertical integration, while emphasizing their collective abhorrence of competition in telecommunications. Extensive lobbying activities, contributions to political campaigns, the actual and potential use of their purchasing power and that of their employees are employed both directly and indirectly to make consumers hesitate before purchasing from competitors. All such activities serve as barriers to entry and competition. Page 46.

Plaintiff [United States of America] believes that defendants and co-conspirators [American Telephone and Telegraph Company; Western Electric Company, Inc.; and Bell Telephone Laboratories, Inc.] have engaged in extensive lobbying, participation in legislative hearings and other legislative activity at the federal, state and local levels as part of their combination and conspiracy to monopolize, attempt to monopolize and monopolization of telecommunications services and equipment. These activities were intended to protect defendants' private ownership, rates, profits, and other elements of their business. Defendants have sought to prevent the introduction and passage of legislation adversely affecting their interests and to encourage the introduction and passage of legislation designed to affirmatively protect their current monopolies and to overturn administrative and judicial decisions adverse to them.

Plaintiff believes that the campaign to influence legislative activity includes political pressure on legislative bodies and municipalities, entertainment of public officials and systematic political contributions. Page 257.

Plaintiff [U.S.A.] also believes that defendants and co-conspirators [AT&T, Western Electric and Bell Labs] to protect their interests, have engaged in extensive lobbying of state utility commissions. The campaign to influence these bodies has included, in part, political pressure and contributions, entertainment of public officials, and free telephone service. Page 256.

Plaintiff [U.S.A.] further contends that defendants and co-conspirators [AT&T, Western Electric and Bell Labs] use their public relations activities to affect indirectly the activities of the Federal Communications Commission, even where they have already lost issues in that forum, and to indoctrinate the public to their point of view. Page 251.

Plaintiff [U.S.A.] contends that defendants and co-conspirators [AT&T, Western Electric and Bell Labs] have engaged in extensive advertising and public relations activities in furtherance of their conspiracy to monopolize, monopolization and attempt to monopolize telecommunications service and telecommunications equipment. These activities are intended to cultivate public sympathy and diminish public criticism and thereby increase the social, economic and political stability of defendants and co-conspirators. These activities also serve to protect their investment, increase their revenues, and foreclose and impair competition. Plaintiff believes that the campaign to sell defendants and co-conspirators to the public has been based on a vast program of propaganda directed to dissemination of the idea that the organization of AT&T, Western Electric, Bell Labs and the Bell operating companies gives the most efficient and inexpensive service in the world. Plaintiff believes this propaganda campaign has been conducted to reinforce, secure and expand their monopolies by cultivating, on an ongoing and national basis, public support for their structure and conduct and subvert those who threaten them. This proselytizing is pervasive and is directed to all institutions and individuals having responsibility for and interest in any phase of the telecommunications industry. Page 250.

Defendants' and co-conspirators' [AT&T, Western Electric and Bell Labs] control over Yellow Page advertising has created further barriers to entry and competition where they have refused to accept advertising from competitors, or where accepted, have refused to place it under the headings requested. Page 47.

Plaintiff [U.S.A.] further contends that defendants and co-conspirators [AT&T, Western Electric and Bell Labs] have controlled, or exercised a significant influence over, the terms and conditions under which independent telephone companies provide service to their subscribers. This is done by determining the term under which such independent telephone companies will be allowed the status of concurring or connecting carrier, necessary for such companies to provide access for their subscribers to the nationwide toll network.

In addition, plaintiff believes that defendants and coconspirators refuse to compete with independent telephone companies and use their control over the division of revenues process with independent telephone companies to influence the activities of these companies. Pages 261–262.

AT&T and its co-conspirators engaged in extensive and surreptitious intelligence gathering and analysis directed at improving their competitive position vis a vis their common carrier competitors. Although part of the intelligence was gathered from public sources, critical elements were obtained from internal records, available only because defendant AT&T and the co-conspirators had pre-existing monopolies. Plaintiff [U.S.A.] alleges this use of internal information constitutes an abuse of AT&T's monopoly position because it regularly provided its own Long Lines Department with information not available to other intercity carriers, and thus put them at a severe competitive disadvantage. The Bell operating companies obtained such information as non-competing local franchise holders. They regularly forwarded it to AT&T and Long Lines for its competitive import.

From 1970 through 1973 several refinements and additions were made to the program at the direction of AT&T, but the basic thrust of the program remained the same. By using data available only to them as holders of monopolies in local service and providers of intercity private line, WATS, and MTS services, AT&T and the co-conspirators sought an advantage over their common carrier competitors. Page 141.

As these new competitors [common carriers] began service, AT&T began a comprehensive and expensive program of surveillance, tracking the activities of its competitors and surreptitiously interviewing each and every customer of the new private line companies. It established a competitive information center and directed the operating companies to forward lists of all private line customers potentially vulnerable to competition. All WATS customers and customers with message toll billings above a certain amount between the cities where the new entrants proposed to offer private line service were identified. Thus defendants abused their knowledge of local loop interconnections and customer billing, information obtained only as a result of their monopoly over local exchange service, to protect their monopoly of intercity service. Page 18.

Plaintiff [U.S.A.] contends that the general methods employed by defendants and co-conspirators [AT&T, Western Electric and Bell Labs] designed to further their attempt to prevent, restrict and eliminate competition include: (1) restrictions on interconnection with these carriers; (2) restricting the manner in which interconnected circuits could be used; (3) exclusionary unfair marketing practices, including preannouncement of new prices and services well before their availability; (4) predatory and exclusionary pricing schedules; and (5) use of the regulatory process to both delay entry of competitors and create and exploit the conflict between state and federal jurisdiction to harass them.

. . . plaintiff believes that AT&T and the Bell operating companies engaged in unjustified delays in affording their unique facilities to these other common carriers. Plaintiff contends these delays were designed to afford defendants and co-conspirators an opportunity to formulate their competitive response while developing competitive products and services, restrict their competitors' ability to obtain financing and inhibit market acceptance of their competitors' service offerings. Plaintiff contends that these restrictive and anticompetitive actions were imposed with the knowledge and intent of AT&T and the Bell operating companies that continuation of such practices would prevent, restrict and eliminate competition from these other common carriers. Page 73.

. . . defendants AT&T. Western Electric and Bell Labs have engaged in a systematic effort to exclude, restrict and eliminate competition for intercity data transmission. Page 125.

. . . AT&T invoked a number of pricing schemes for its own private line services to exclude, restrict and eliminate competition from other common carriers for private line services. Plaintiff [U.S.A.] believes that these various pricing plans were predatory and exclusionary. They were hurried into use without adequate knowledge by defendants [AT&T, Western Electric and Bell Labs] of true costs, and were therefore underpriced to the detriment of the competition. Page 120.

Defendants' and co-conspirators' [AT&T, Western Electric and Bell Labs] requirement that only they supply the connecting arrangement for customer provided terminal equipment provided further opportunity for abuse of their monopoly of local distribution facilities. Plaintiff [U.S.A.] believes that orders or inquiries for these devices were transmitted to the marketing departments of the Bell operating companies, immediately alerting salesmen to the existence of competitive activity. Salesmen then contacted these customers in an attempt to sell Bell services. Page 226b.

Throughout the Bell System, management briefed all employees on the possible effects of competition. In no uncertain terms, employees have been told, and retold, that the loss in sales and revenues by the companies could result in the loss of jobs to employees. Page 229.

Pennsylvania Bell began a Bulletin Board Poster campaign to "relate effects of the erosion of the Common Carrier Principle on individual employees." Charles Brown, then President of Illinois Bell, urged employees to

use even their social contacts to let their "marketing people know about anything that smells like competition." And IBT employees were informed of the identity of firms which had purchased interconnect equipment from competitors.

. . . The purchasing power of other parts of the Bell System was enlisted. Western Electric cumulates, alphabetically by cities for each state served by the Bell operating companies, lists of its suppliers and the dollar amounts of Western's purchases from them each year. These lists are distribtued to AT&T and the Bell operating companies. The suppliers are virtually all customers of the Bell operating companies and potential customers of the interconnect industry.

Plaintiff [U.S.A.] believes this information is used to pressure customers into purchasing service from defendants and coconspirators [AT&T, Western Electric and Bell Labs], or at least remind them of the business they get from defendants and co-conspirators. Pages 229–230.

. . . Plaintiff [U.S.A.] believes that firms considering purchasing their own terminal equipment from interconnect companies have been threatened with the loss of Bell business or with boycotts by Bell employees. Page 230.

Defendants and co-conspirators [AT&T, Western Electric and Bell Labs] have also attempted to create and have created conflicts between state and federal regulatory jurisdictions as a barrier to entry and competition. AT&T and the Bell operating companies have deliberately attempted to channel regulatory disputes with competitors to the numerous state forums, as opposed to the single federal forum, in part to obtain more sympathetic decision makers and in part to cause would-be competitors the additional expense of lengthy and expensive legal proceedings in many places at once. Page 45.

In 1971, AT&T and the Bell operating companies recognized the value of competition generally . . . admitting that competition had "triggered creativity" and "dramatic new approaches" to services . . . But on April 1, 1972, a new management team was elected to head the Bell System. John D. deButts became Chairman of the Board of AT&T. . . . Page 217.

Prepared by the Ad Hoc Committee for Competitive Telecommunications (ACCT), 520 North Capitol Street NW., Suite 800, Washington, D.C. 20001, (202) 347–8424.

VOTING RECORD

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. McKINNEY) is recognized for 20 minutes.

Mr. McKINNEY. Mr. Speaker, due to my recent absence, I was unable to cast my vote with the House on many important issues. In order that my positions on these vital legislative matters will be a part of the public record, I insert the following voting record in today's RECORD.

The voting record follows:

VOTING RECORD

Recorded vote number, description, and McKinney vote

293. H.R. 6970, Tuna-Dolphin Protection. Amendment by Mr. McCloskey as amended by Mr. Bonker to reduce to 69,910 the total number of dolphins which could be taken during fishing operations in 1977 and to further reduce the quota after 1977. Passed 244–109.

Yes. A reduction in the kill quota is essential to protect the dolphin, particularly the Eastern Spinner.

294. H.R. 6970, Tuna-Dolphin Protection. Amendment by Mr. Pritchard to levy a $32 fee for each dolphin killed incidental to commercial fishing operations. Rejected 158–194.

Yes. This amendment provides a greater incentive for individual fishing boats to lower their "take" of dolphins and increases the penalties for failing to do so.

295. Final passage of H.R. 6970, the Marine Mammal Protection Act Amendments. Passed 334–20.

Yes. I strongly support this compromise legislation because it provides essential protection for the dolphin without being overly harsh to the commercial tuna industry.

296. Passage of H.R. 6967, authorizing $81 million in FY 78 for activities of the Peace Corps. Passed 305–43.

Yes. This increase in appropriations is the first step toward the President's goal to "revitalize" the Peace Corps. Along with providing employment for our youth, this funding will help in restoring the Peace Corps' role as an aggressive and innovative part of U.S. development programs abroad.

298. H.R. 6804, Federal Energy Department. Amendment by Mr. Conyers to establish an independent regulatory board, the National Energy Board, to assume the functions and powers of the FPC, FEA, and ERDA, as a substitute for the Committee-endorsed Federal Energy Regulatory Commission within the Department of Energy. Rejected 83–277.

No. The purpose of the Department of Energy is to coordinate and centralize the fragmented and overlapping jurisdictions of our resource regulators. This amendment, in my view, is not consistent with that purpose.

299. H.R. 6804, Federal Energy Department. Amendment by Mr. Moss to strike the Secretary of Energy's authority to regulate the wellhead price of natural gas and to give that power to the Federal Energy Regulatory Commission. Also, to limit the Secretary's power to issue regulations of general applicability. Passed 236–119.

Yes. Despite the need for centralized regulatory authority, too much power has been vested by the bill in one individual—the Secretary of Energy. With a keen eye to the future, the bill should contain general regulatory authorities within a singular but representative body.

300. H.R. 6804, Federal Energy Department. Amendment by Mr. Udall to delete the language giving the Secretary veto power over the economic terms of leasing energy resources on federal lands. Rejected 170–180.

No. The amendment would perpetuate an old problem by fragmenting the authority for control and operation of federal leases between the Department of Energy and the Department of Interior. I believe the result of this amendment would prove contrary to the general purpose of the bill.

301. H.R. 6804, Federal Energy Department. Amendment by Mr. Levitas to provide that any rule or regulation promulgated by the Secretary of the Department of Energy or an independent regulatory commission would be subject to 90 day Congressional disapproval. Passed 200–125.

Yes. Such provisions are a logical and necessary extension of Congressional oversight responsibilities and should be applicable to the regulations of any federal agency or Department.

303. H.R. 6804, Federal Energy Department. Amendment by Mr. Hughes to prohibit high-level regulatory officials in the new Department from accepting jobs or compensation for two years after leaving the agency from any person or company regulated by the agency. Rejected 146–184.

Yes. This amendment, recognizing the important decision-making powers of non-supergrade personnel within the D.O.E., would bring such personnel under the scope of the conflict-of-interest provisions in the bill. Such provisions are designed to insure that regulatory decisions and rule-making are in no way influenced by the potential personal gain of a Department employee.

304. H.R. 6804, Federal Energy Department. Amendment by Mr. Broyhill to make the authorities of D.O.E. subject to sunset provisions, whereby they would expire December 31, 1982, unless extended by Congress. Passed 202–126.

Yes. A period of assessment for each federal agency should be undertaken both to rate its past performance and to elicit a continuing responsiveness from its operation.

305. Final passage of H.R. 6804, a bill creating a cabinet level Department of Energy combining the regulatory functions and rule-making powers of the FPC, FEA and ERDA and other agencies with authority over energy matters. Passed 310–20.

Yes. The creation of a centralized department, to coordinate and regulate the development of this country's energy resources, is essential if we are to achieve a successful national energy plan.

306. A motion by Mr. Jones to suspend the rules and pass S 955, a bill to raise the capital stock of the Federal Crop Insurance Corporation to $150 million from $100 million. Passed 377–5.

Yes. Due to generally unfavorable weather conditions, including the severe drought being experienced in the farm belt states this year, and the increasing petroleum related costs of farming I support this measure.

307. A motion by Mr. Jones to suspend the rules and pass H.R. 75, a bill requiring the Secretary of Agriculture to appraise the nation's soil, water and related resources every five years and to develop a national soil and water conservation program. Passed 365–16.

Yes. Greater demands on our soil and water resources have highlighted the need for long-term, comprehensive resource planning. I am committed to new efforts in the areas of soil and water conservation, and this bill's mechanism for appraising our present and future resource needs will provide us with the information we need to make wise and effective decisions.

308. A motion by Mr. Dingell to suspend the rules and pass H.R. 6794, a bill to extend the Federal Energy Administration through FY 1978. Passed 272–111.

Yes. The extension of the F.E.A. is necessary to insure the smooth transition of the agency's power and personnel to the new Department of Energy, a transition that should be completed before the end of FY 1978.

309. A motion by Mr. Danielson to suspend the rules and pass H.R. 6893, a bill to exempt members of Congress from any state income taxation except that of their home states. Passed 294–83.

No. I firmly believe in the principle that all who draw on public services, despite their reason for doing so, should in some measure pay for those services. Inasmuch as this bill abrogates that principle by carving out one classification of taxpayer who uses state and urban services but is exempt from taxation to pay for those same services, I oppose it.

311. H.R. 6990, Military Construction Authorization. Amendment by Mr. Hagedorn to exempt certain Defense Department construction contracts authorized in the bill from the provisions of the Davis-Bacon Act. Rejected 76–298.

No. The Hagedorn amendment is "the wrong fight in the wrong place at the wrong time". Rather than totally abandon the philosophy of the Davis-Bacon Act, we should

seek to improve the Secretary of Labor's method of establishing wage standards.

312. Passage of H.R. 6990, a bill to authorize $3.5 billion for military construction projects of the Defense Department for FY 1978. Passed 351–24.

Yes. This bill not only will provide necessary military construction at home and abroad, but it also will stimulate local economic recovery by providing construction jobs. Moreover, it recognizes the need to reduce the Federal Budget, reducing by nearly $68 million the amount requested by the Department of Defense. This legislation also establishes a comprehensive energy conservation program for military family housing and upgrades security systems at chemical weapons storage sites in the United States.

314. H.R. 10, Hatch Act Amendments. Amendment by Mr. Rousselot to delete language from the Clay amendment so that union activities previously lawful could now be unlawful. Rejected 131–277.

Yes. I voted for the Rousselot amendment during initial House consideration of H.R. 10 and I remain opposed to a politicized federal work force.

315. H.R. 10, Hatch Act Amendments. Amendment by Mr. Clay to clarify the Rousselot amendment. Passed 266–139.

No. The Rousselot amendment for which I voted during the House's first consideration of H.R. 10 needs no clarification.

316. H.R. 10, Hatch Act Amendments. Amendment by Mr. Allen to eliminate the exceptions under which certain restricted government personnel might run for political office. Rejected 56–344.

No. While I strongly support restrictions on the political activity of certain government personnel, such as FBI agents, these exceptions do not violate that principle.

317. H.R. 10, Hatch Act Amendments. Amendment by Mr. Kindness to expand the definition of "extortion" in the bill. Rejected 190–219.

Yes. I believe federal employees will be subject to new pressures without the protections of the present law. This amendment offers added protection by more broadly defining prohibited activity.

318. H.R. 10, Hatch Act Amendments. Amendment by Mr. Bauman to prohibit federal employees from soliciting political contributions from any other federal employee regardless of relative rank. Rejected 156–251.

Yes. Pressure, even when not from a supervisor, can be subtle yet undeniable. I think federal employees should be free from such pressure.

319. Final passage of H.R. 10, the Hatch Act Amendments. Passed 244–164.

No. I remain opposed to legislation which removes longstanding and employee-supported protections from politicization in the federal workforce.

320. Pasage of S. 521, authorizing $4.7 million to repair and renovate the Kennedy Center to correct leaks in the building. Passed 291–90.

Yes. As in the past, I feel it is essential that the Kennedy Center repairs be made as expeditiously as possible. The monies provided for in this conference report will arrest further deterioration and correct existing damage. In addition, it allows for better oversight on the contracts that are executed.

321. Passage of H.R. 7552, a bill to appropriate $7.5 billion for the operations of the Treasury Department, Postal Service, Executive Office of the President and eleven other independent agencies. Passed 359–45.

Yes. Careful consideration was given by the committee regarding the number of permanent employee positions that should be funded under this bill. Where possible, reductions were made, resulting in an appropriation approximately $21 million below the Administration's request.

322. H.R. 7557. Transportation Appropriations. Amendment by Mr. Koch to prohibit the use of funds for air traffic control of supersonic aircraft at JFK unless the aircraft comply with FAR noise standards for subsonic aircraft. Rejected 128–274.

No. This amendment clearly discriminates arbitrarily against the Concorde. It would apply the FAR 36 noise standard to the Concorde despite the fact that as of last January, fully 74 percent of the U.S. commercial fleet did not meet this standard. I would consider supporting such an amendment only if subsonic noise standards were presently met by a majority of the U.S. commercial fleet.

323. Final Passage of H.R. 7557, a bill appropriating $14 billion for the operation and programs of the Department of Transportation and related agencies. Passed 391–11.

Yes. The total funding in this bill, used for such programs as Urban Mass Transit, the Rail Service Administration, and the Federal Highway Administration, represents a reduction in the FY 1977 appropriations of approximately $700 million. The essential cuts were made in AMTRACK expenditures and in the F.A.A. budget authority.

326. H.R. 7636, Interior Department Appropriations. An amendment by Mr. McCormack to add $38.8 million for research and development relating to energy conservation programs of the E.R.D.A. Rejected 145–251.

Yes. The increase contained in this amendment will assist E.R.D.A. in meeting financial obligations for R&D of many technologies promoted in the Carter energy program. The additional funding will assist in the development of cogeneration technology and energy-conserving transportation systems. My colleague, Rep. Barry Goldwater, has submitted a more detailed analysis of the expenditures and I wish to be associated with his remarks.

327. Final Passage of H.R. 7636, a bill to appropriate $9,545 million for FY 1978 for the Interior Department. Passed 395–7.

Yes. While this authorization is $485 million below the budget request, it contains a significant improvement in funding for the Forest Service, and provides $60 million for the Youth Conservation Corps, an amount which will provide some 40,000 summer jobs for youth next year.

329. H.R. 6666, Legal Services Corporation. Amendment by Mr. Butler to prohibit legal services attorneys from taking active part in either partisan or nonpartisan political activities. Rejected 178–198.

No. One of the reasons for the establishment of this independent corporation was to de-politicize the process of dispensing legal assistance, not to de-politicize the individual legal services attorneys.

331. Adoption of the conference report to accompany H.R. 5840, a bill which extends the 1969 Export Administration Act and prohibits American firms from complying with the Arab trade embargo against Israel. Passed 306–41.

Yes. Although displeased with the conference committee's "compromise" on my amendment to ban the export of Alaskan oil, I support adoption of this report, not wishing to jeopordize the anti-embargo provisions.

332. H.R. 7556 State, Justice, Commerce and Judiciary Appropriations Amendment by Mr. Burgener to prohibit the use of any funds for salaries or expenses of any diplomatic personnel assigned to Cuba. Rejected 139–206.

No. Since 1973, I have supported the gradual normalization of relations with Cuba. I felt then and still believe that its time for a more positive foreign policy toward that country.

334. H.R. 7556, State, Justice, Commerce and Judiciary Appropriations Amendment by Ms. Holtzman to increase the appropriation for the LEAA by $104.5 million. Rejected 172–210.

Yes. While we are all aware of incidents of misuse and abuse of LEAA funds, there are communities that have demonstrated a high degree of success in combating crime with the help of LEAA-financed programs. This pattern of success cannot be continued if, for the third consecutive year, the LEAA budget is cut.

335. Final passage of H.R. 7556, a bill to appropriate funds for the State, Justice, and Commerce Departments and the Judiciary for FY 1978. Passed 353–42.

Yes. While this appropriation is less than the previous year's, there is an increase in funding for controlling the entry of illegal aliens, and for the Coastal Zone Management and the Coastal Energy Impact Fund.

336. A motion by Mr. Bolling to suspend the rules and adopt H. Con. Res. 248, to authorize $900,000 for the Joint Economic Committee to undertake a study of employment and economic policy toward a comprehensive economic policy for the Congress. Passed 324–79.

Yes. To date, Congressional economic and fiscal policy lacks depth. This study will provide the data necessary to add scope and vision to our economic legislation to more ably deal with inflation and unemployment concurrently.

337. A motion by Mr. Corman to suspend the rules and pass H.R. 7200, a bill to amend the Social Security Act to make changes in the programs of SSI benefits, AFDC, child welfare services and day care services. Passed 335–64.

Yes. Although I generally oppose major legislation being considered under suspension, I support this bill because it initiates vital changes in SSI, child welfare and protective services, and social services programs. Administrative nightmares would ensue if certain deadlines were not extended and any delay in passage would cause serious problems for our constituencies.

338. H.R. 7553, Public Works-ERDA Appropriations. Amendment by Messrs. Conte and Derrick to delete funding for 16 water projects and reduce funding for one more project. Rejected 194–218.

Yes. Many of the projects were started over 30 years ago, are less than half completed, and no longer reflect our realistic attitudes and pragmatic priorities. Others are of dubious need, or are environmentally and economically questionable. Also, for many of these projects there is a sound, sensible alternative plan for the project area which would protect the environment for this and future generations and which would cost far less while providing water.

339. Final passage of H.R. 7553, the Public Works-ERDA Appropriations bill. Passed 356–54.

Yes. While I oppose the funding for some of the water resources projects, several hundred beneficial projects are given funding. In addition the bill provides $9 million for federal agencies to relocate endangered species, in response to cases in which they have blocked or delayed construction of water projects, and responds to our present energy crisis by containing the largest appropriation for energy research ($6 billion) that the Congress has ever appropriated.

342. H.R. 7554, HUD, Independent Agencies Appropriations. Amendment by Mr. Coughlin to earmark 75% of the public housing funded in the bill for the elderly and handicapped. Rejected 183–214.

No. While intended to address the severe lack of elderly and handicapped housing, this amendment in effect damages an existing program contained in the HUD appropriations which would provide funding for that very purpose. As my colleague Mr. Boland pointed

out in the debate, Section 202 of the bill provides a comprehensive program of housing for both the elderly and handicapped and provides for 26,000 additional housing units in 1978. The well-intentioned amendment by Mr. Coughlin would not only duplicate the efforts of Sec. 202 but would severely hinder the success of that program.

343. H.R. 7554, HUD, Independent Agencies Appropriations. An amendment by Ms. Burke to restore comprehensive planning grant funds for cities over 50,000 and for urban counties. Rejected 156–248.

Yes. Funds for comprehensive planning will insure that urban community development complements transportation, energy and other socio-economic needs of the community. This money should not be drawn from the already obligated community development block grants intended for low and moderate income housing.

344. H.R. 7554, HUD, Independent Agencies Appropriations. Amendment by Mr. Beard to withhold veterans benefits from Vietnam era servicemen who received upgraded discharges from President Carter's review program. Passed 273–136.

No. The purpose of both the amnesty and discharge review programs is to put the pains and injustices of the Vietnam war behind us. The upgraded discharges of Vietnam servicemen entitle those vets to the benefits of their service and I intend to see that they receive them.

345. H.R. 7554, HUD, Independent Agencies Appropriations. Amendment by Mr. Miller to withhold 1% of the non-mandatory spending in the bill from obligation and expenditure. Rejected 169–237.

No. This amendment would reduce community development block grant funds by nearly $40 million and veterans medical care by nearly $50 million. In light of the dramatic rise in veterans medical costs and the defeat of Ms. Burke's amendment to restore comprehensive planning funds, which now must come from community development block grants, the measure offered by Mr. Miller is inadvisable.

346. Final passage of H.R. 7554, bill to appropriate $70 billion for FY 1978 operations and programs of the Department of HUD and various independent agencies, including the Veterans Administration. Passed 374–32.

Yes. Although I would have preferred to retain funds for comprehensive community planning, I feel the bill strikes a sound balance between the needs of the elderly, handicapped and indigent as well as the struggling communities of the Northeast.

348. H.R. 7555, Labor/HEW Appropriations. Amendment by Mr. Symms to reduce the appropriations for the Occupational Safety and Health Administration (OSHA) in the Department of Labor by $6.3 million. Rejected 162–231.

No. OSHA has been the whipping boy of many criticizing the incompetence of the federal bureaucracy—a role which is unfortunately sometimes deserved. Reducing OSHA's appropriation, however, will preclude the agency from successfully carrying out its work, thereby jeopardizing the safety of employees and employers.

349. H.R. 7555, Labor/HEW Appropriations. Amendment by Mr. Michel to reduce total appropriations by $563.3 million affecting all health, education and elderly programs. Rejected 72–334.

No. I vigorously oppose cuts in these vital educational and social programs. The result would be a severe curtailment of compensatory programs for educationally and economically disadvantaged school children and reductions in student assistance programs for higher education. Our goal of fiscal economy should not and will not be accomplished by reducing educational and social programs assisting those persons most in need and who suffered the most from rising costs and spiraling inflation.

350. H.R. 7555, Labor/HEW Appropriations. Amendment by Mr. Mottl to prohibit the use of federal funds for busing students beyond the schools nearest to their homes and to prevent HEW from requiring local school districts to merge, pair or cluster schools to foster integration. Passed 255–157.

No. Busing is the least desirable means to accomplish the important goal of providing equal educational opportunity for all. Yet, I oppose this amendment because it effectively denies HEW the power to enforce the Civil Rights Act. Tying HEW's hands in its enforcement of civil rights will not only lead to the further deterioration of education programs for disadvantaged and minority groups but will also lead inevitably to an increase in court-ordered busing plans and a redistricting of schools in the most volatile neighborhoods.

351. A motion by Mr. Rousselot to instruct conferees on H.R. 5262, the International Lending Institutions bill, to insist on the human rights provision. Rejected 161–200.

No. In that the sponsor of the amendment, Mr. Badillo, is a member of the conference, I'm sure the House will receive proper representation in conference, without the House having to reaffirm its strong feelings about this provision.

352. H.R. 7555, Labor/HEW Appropriations. Amendment by Mr. Hyde prohibiting the use of federal funds to finance or encourage abortions. Passed 201–155.

No. The strength of my personal opposition to the practice of abortion is equalled only by my total opposition to the involvement of the State in the personal moral decisions of individuals throughout the country. To deny women in this country a readily available and legal medical service merely because they cannot afford it constitutes an invidious discrimination against the poor—denying them equal protection of the law.

354. H.R. 7559, Agriculture Department Appropriations. Amendment by Mr. Michel to prohibit the use of funds to pay the salaries of any employee who formulated or carried out a program to make payments to sugar processors. Rejected 119–272.

Yes. The payment of subsidies to processors of sugar is an inadvisable expenditure. Not only would this subsidy cost the federal government $240 million, but the recipients of the funds would be in large part corporations. Further, it is the processors themselves who would retain 38% of the payments. While I am concerned about the possibility of a foreign sugar cartel being created, I don't believe the American taxpayer should pay approximately $50 million to each of the five largest sugar processors in the country.

355. Preferential motion by Mr. Broyhill that the House conferees on S. 826, a bill to create a new Federal Energy Department, insist on sunset provisions which would require the expiration of the new Department on Dec. 31, 1982 unless extended by Congress. Passed 228–179.

Yes. As I said in the explanation of my support for the sunset provisions in H.R. 6804, I am in total support of such provisions regarding each federal agency.

356. H.R. 7558, Agriculture Department Appropriations. Amendment by Mr. Rousselot to reduce the appropriation for the food stamp program to $5 billion from $5.7 billion. Rejected 154–262.

No. Major committees have spent weeks in hearings on food stamp funding and reform. When these committees offer comprehensive legislation addressing reform of the program, we can then consider Mr. Rousselot's proposal. It would be unwise to attempt to reconstruct a major program through manipulation of the appropriations process.

357. Final passage of H.R. 7558, a bill to appropriate $12.6 billion for the operation of the Department of Agriculture and related agencies. Passed 380–35.

Yes. While I disagree with parts of this appropriation, such as the subsidy payments to sugar producers, the bill strikes a reasonable balance between the need to reduce the federal budget and concern for the uncertain future of American agriculture. While this $12.7 billion appropriation is $258 million less than the administration's budget request, there is an increase in funding for conservation, research and nutrition programs and increased levels for loans available through the Farmers Home Administration.

359. Passage of H.R. 7589, a bill to appropriate $2.8 billion for FY 1978 military construction programs of the Department of Defense. Passed 391–16.

Yes. This legislation funds essential projects and facilities which are of major importance to the defense preparedness of our nation. It also represents a reasonable budget request, a significant reduction in expenditures as compared to past years.

361. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Young to cut $31 million from the UN Development Program Rejected 182–232.

No. I support President Carter's decision to renew our commitment to the United Nations as a major vehicle for attacking a multitude of global political, economic, and social problems. Emphasizing multilateral programs reduces the U.S. annual contribution substantially and encourages contributions from other nations.

362. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Young to delete the entire $50 million for development aid in the Sahel region of Africa. Rejected 160–255.

No. The Sahel region, a drought-stricken area covering eight northwest African countries, presently lacks long-term development programs to deal with the region's fundamental problems. The Club des Amis du Sahel, a multilateral organization formed to develop such a program, needs our support, which would be limited to a 15% share of the total contribution. Having initiated the creation of this group, the U.S. should continue to contribute to its support, especially in view of the need to ameliorate the drought conditions.

363. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Ichord to delete the $100 million for the Southern African Special Requirements Fund. Rejected 199–209.

No. I support the new emphasis the Carter Administration is placing on developing favorable relations with the African nations. For too long an aggressive African policy has not been pursued, even though the continent of Africa is of increasing significance to the U.S. Adoption of this amendment would signal a retreat from this policy.

364. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Roybal to prohibit the use of $700,000 for training military forces in Argentina. Passed 223–180.

Yes. Unfortunately, military education and training programs sometimes contribute to a politicized, institutionalized and oppressive military force. Such is the case in Argentina.

365. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Young to prohibit funds from being used directly or indirectly through multilateral lending institutions in Uganda, Cambodia, Laos, or Vietnam. Passed 295–115.

No. The charters of multilateral lending institutions prohibit unilateral restrictions so as to prevent the chaos that would result from attaching political conditions to con-

tributions. If we take the lead in violating these charters, we are inviting other countries to make similar restrictions, thus destroying the ability of these institutions to function.

366. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Wolff to prohibit the payment of reparations to Vietnam. Passed 359–33.

Yes. As a result of President Nixon's fateful letter to the Vietnamese in 1973, that country anticipated a postwar reconstruction contribution in the range of $3.25 billion over five years. This amendment will put to rest expectations for such a sum and serve as a warning that such pledges are subject to Congressional approval.

369. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Young to reduce the U.S. contribution to the International Development Association by $477 million. Rejected 175–233.

No. The $950 million appropriation for the International Development Association is $250 million less than the President's request but $520 million over FY 1977. While this amount may appear excessive, we are behind in our past contributions and have committed ourselves to provide at least $800 million to meet our new obligation. An important point to remember is that we have continued to reduce the percentage of our contribution to this Association, and the additional $520 million still keeps our percentage lower than last year.

371. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Wilson to reinstate funds for military assistance, military training and education or for military credit sales to Nicaragua. Passed 225–180.

No. There is ample documentation to support the charge that the Nicaraguan National Guard, helped by U.S. military assistance, has brutally mistreated citizens of their country. The State Department has communicated its concern to the Nicaraguan Government, and is withholding FY 1977 military assistance funds until there is an improvement in the human rights situation.

372. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Moore to prohibit any funds from being used for loans establishing or expanding production of sugar, palm oil or citrus crops if the U.S. is a producer of the same or similar commodities. Passed 209–179.

No. As I stated previously, we should not place political restrictions on our contributions to multilateral lending institutions. This amendment deals with commerce of the most ordinary type, and clearly sets a dangerous precedent.

373. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Ashbrook to prohibit the use of any appropriations from being used for any form of trade or assistance to Cuba through international financial institutions. Passed 274–112.

No. As with the previous amendment offered by Mr. Young and Mr. Moore, this provision attaches political conditions to contributions in direct violation of the charters of multilateral lending institutions.

374. H.R. 7797, Foreign Aid Appropriations. Amendment by Mr. Miller to cut 5% overall from the $7 billion recommended by the Appropriations Committee. Passed 214–168.

No. The Appropriations Committee has already cut the Administration request by 7%. In view of the importance of our foreign aid programs, any further reductions should be carefully pinpointed rather than having the total indiscriminately slashed.

375. Final passage of H.R. 7797, the Foreign Aid Appropriations. Passed 208–174.

Yes. I continue my support of foreign aid as a vital component of our foreign policy. However, I am disappointed in some of the provisions in this year's bill: human rights is handled in an inconsistent manner; unilateral restrictions are placed upon international lending institutions; and the recommended funding has been cut without proper deliberation.

378. H.R. 7933, Defense Department Appropriations. Amendment by Mr. Addabbo to delete funds for the purchase of the nonnuclear-armed Lance missile. Rejected 123–226.

Yes. I believe the nonnuclear-armed Lance missile is of questionable value. Other missile systems under development are far better buys while doing the job as well, or even better, than the Lance. The Lance should be used for the purpose for which it was originally developed, the nuclear role.

380. H.R. 6666, Legal Services Corporation. Amendment by Mr. Kindness to maintain the authorization at the existing $175 million level for both fiscal years 1978 and 1979 pending a July 1977 report to the Congress assessing the corporation. Rejected 158–221.

No. Such authorization reductions would prevent LSC from achieving its goal of providing legal assistance to the poor who have been denied access to justice because of their poverty.

381. H.R. 6666, Legal Services Corporation. Amendment by Mr. Kindness to require all Legal Services Corporation (LSC) funding requests to be submitted for approval by the Office of Management and Budget (OMB) prior to submission to Congress. Rejected 160–223.

No. This amendment is unnecessary and undermines the basic purpose of the Legal Services Corporation Act and the statutory scheme for the delivery of legal assistance to the poor. The OMB already has the authority to and does comment on the LSC budget through the regular budgetary process.

382. H.R. 6666, Legal Services Corporation. Amendment by Mr. Wylie restricting the use of LSC funds to pay for legal assistance in cases involving school desegregation. Passed 208–174.

No. The Legal Services Corporation was established to provide legal assistance to those in need and I strongly oppose restrictions on the type of legal assistance available. Such restrictions hamper the quality of legal assistance LSC offers and are inimical to the exercise of independent professional judgment by program attorneys.

383. H.R. 6666, Legal Services Corporation. Amendment by Mr. Ashbrook to terminate the Legal Services Corporation on September 30, 1979. Rejected 166–214.

No. To quote my colleague, Mr. Kastenmeier, this amendment would make the legislation "The Legal Services Liquidation Act of 1977."

384. H.R. 6666, Legal Services Corporation. Amendment by Mr. McDonald to prohibit legal assistance in cases arising over the issue of homosexuality or gay rights. Passed 230–133.

No. As with the previous amendments offered by Mr. Wylie, I oppose restricting the type of legal assistance available to the poor. Moreover, this amendment effectively denies individuals legal assistance because of their sexual preference.

385. A motion by Mr. Kindness to recommit H.R. 6666 to the Judiciary Committee with instructions to report it back to the House with an amendment restoring a prohibition on grants or contracts to outside "backup" support centers for research and training. Rejected 154–213.

No. The "backup" support centers for the Legal Services program provide the necessary research and training for an analysis of the legal problems of the poor and facilitates a comprehensive and unified approach to dispensing justice to all.

386. Final passage of H.R. 6666, to extend the Legal Services Corporation for two years with authorization of $217 for fiscal year 1978 and $275 for fiscal year 1979. Passed 267–103.

Yes. Since its inception in 1974, the Legal Services Corporation has been effective in making justice accessible to those disadvantaged persons who are unable to absorb the customary legal fees. I am confident LSC will continue its success in placing our legal system within the reach of all.

388. A motion by Mr. Solarz to suspend the rules and pass S. 964, to deny October cost-of-living raises to federal supergrades. Passed 397–20.

Yes. The recently enacted pay raise is enough. There is no need to have federal judges, executives and congressmen participate in a cost-of-living increase. Such indexing should be provided to those on a fixed income whose real buying power is diminished by inflation.

389. H.R. 7933, Defense Department Appropriations. Amendment by Mr. Addabbo to delete $1.5 billion for production of five B–1 bombers. Rejected 178–243.

Yes. The B–1 is of dubious military value while being so excessively expensive as to reduce the Air Force's ability to procure the planes and equipment it will need the most for many years to come. Moreover, its production would necessitate trade-offs in other spending areas, diminishing our capacity to meet other important national requirements. Research and development on the B–1 can go forward satisfactorily with the planes already built.

390. H.R. 7933, Defense Department Appropriations. Amendment by Mr. Lloyd to procure 96 rather than the 144 A–10 attack planes recommended by the administration and approved by the Appropriations Committee. Rejected 122–299.

No. While the desirability of the total A–10 program remains questionable, there is no way to make a final determination of its feasibility at this time and the amendment would slow A–10 production to a most uneconomical rate, significantly increasing the unit flyaway cost of each aircraft.

393. H.R. 7932, Legislative Branch Appropriations. Amendment by Mr. Grassley to prohibit the use of legislative appropriations to fund the 29% pay increase to Members of Congress. Rejected 181–241.

No. My position on the pay raise is well known. The new ethics code reduces the possibility of abuses while the first pay raise in years allows rich and poor alike to seek public office. The pay should be, and now is, commensurate with the responsibilities of the job.

394. H.R. 7932, Legislative Branch Appropriations. Amendment by Mr. Mitchell to authorize and appropriate $225,000 to operate the Joint Committee on Defense Production. Rejected 172–244.

No. Despite the potential for such a committee, its past record does not justify further funding. Defense production and procurement issues need attention but that needed oversight, it appears, must be performed by the standing committee(s) with proper jurisdiction in each house.

395. H.R. 7932, Legislative Branch Appropriations. Amendment by Mr. Stratton to delete $55 million for the 22 ft. extension of the Capitol West Front. Rejected 204–212.

Yes. The original West Front should be restored, not housed in any new structure for only office-workers to see.

396. Final passage of H.R. 7932, the Legislative Branch Appropriations. Passed 250–166.

Yes. It must be remembered that this seemingly excessive sum covers not only congressional operations but the Library of Congress, the Botanical Gardens, and other important government functions.

398. H.R. 7933, Defense Department Appropriations. Amendment by Mr. Edwards to delete $26 million for the development of a new engine for the Navy's F–14 fighter plane. Rejected 122–282.

No. Modernization of all weapons systems is an ongoing process. I believe the F–14 has a proven capability and it would be false economy to abandon this weapons system when the technology of a new engine not only would save the plane but also could be utilized in other aircraft.

399. H.R. 7933, Defense Department Appropriations. Amendment by Mr. Jenrette to delete language phasing out the use of Civil Service technicians in military reserve units. Passed 288–119.

No. Dual-status technicians perform no unique tasks, are more expensive, and introduce unionization into the military. Moreover, the bill follows the recommendations of the Defense Manpower Commission and has no effect on current technicians.

400. H.R. 7933, Defense Department Appropriations. Amendment by Mr. Gilman to prohibit use of funds appropriated in the bill to conduct a review of the status of those U.S. military personnel still missing-in-action in Southeast Asia. Rejected 160–246.

No. I believe it is cruel to require the families of MIAs to continue to live in a limbo or to have to "execute a death warrant" by requesting a status-change review. Moreover, the law is now being properly administered; we are not terminating the status by resuming with a case-by-case review.

401. H.R. 7933, Defense Department Appropriations. Amendment by Mr. Wilson to delete the language requiring military retirees to forfeit their military pensions if they were hired during FY 1978 to work for the federal government. Passed 219–174.

No. While I generally concur that an appropriations bill is no place to legislate on a complicated and controversial issue and indeed this bill's language does not fully address the dual compensation complexities, I oppose the amendment in view of my concern over rising costs of military retirement. Prompt comprehensive Congressional review of the program is essential.

402. Final passage of H.R. 7933, a bill to appropriate $113 billion for programs and operations of the Defense Department for FY 1978. Passed 333–54.

Yes. On balance, it is a responsible measure, nearly $3.8 billion less than the amended Administration request.

AGE DISCRIMINATION IN EMPLOYMENT ENDS AT CONNECTICUT GENERAL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. FINDLEY) is recognized for 5 minutes.

Mr. FINDLEY. Mr. Speaker, legislation reported by the Education and Labor Committee would raise the age prior to which mandatory retirement would be illegal from 65 to 70. I am happy to report that at least one corporation is not waiting for the law to be changed. Connecticut General Insurance Corp. has voluntarily eliminated mandatory retirement for all employees who are not officers or field managers. I would like to insert into the CONGRESSIOAL RECORD a letter I received from Robert D. Kilpatrick, president of Connecticut General, explaining why.

JULY 29, 1977.

HON. PAUL FINDLEY,
Rayburn House Office Building,
Washington, D.C.

In light of your leadership in the Congress on legislation dealing with the inequities of mandatory retirement, Congressman Findley, I'm pleased to tell you about the decisive step Connecticut General Insurance Corporation has taken on the issue.

Beginning August 1, we are eliminating mandatory retirement for all of our employees who are not officers or field managers. This move affects some 7,600 salaried and hourly employees of Connecticut General Life Insurance Company around the nation and 4,300 employees of the Aetna Insurance Company, our property and casualty affiliate.

The trend toward liberalized retirement has generally emphasized leaving a career at earlier ages. We feel that emphasis overlooks a very important group of people: the employees who want to continue working beyond age 65. Some of our employees want to continue their careers with the company beyond what used to be considered "normal" retirement age and we recognize what a valuable resource they are.

Hence, our retirement range continues to begin at age 55, but now extends for as long as the employee wants to continue working and maintains fully satisfactory performance. By eliminating mandatory retirement I believe we offer the individual employee a greater freedom of career choice . . . because other career opportunities are always open, irrespective of age. At the same time we retain experience and knowledge that would otherwise be lost. We strengthen our organization and ourselves as individuals when the interests of employees and the corporation work in support of each other. In this case, as long as performance is satisfactory, retirement is open-ended and the choice is entirely the employee's.

Knowing of your special interest in this area, I wanted to personally acquaint you with this major shift in our company's retirement policy.

R. D. KILPATRICK,
President.

PANAMA CANAL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. BURKE) is recognized for 10 minutes.

Mr. BURKE of Florida. Mr. Speaker, the matter of revising our treaty with Panama concerning the canal is extremely complicated, but not beyond understanding. Let me say that I am unhappy that we are in essence being blackmailed into revising a situation which has been constructive and mutually beneficial to the United States, Panama, and most world users, for decades. Our presence in Panama has been in the main a constructive presence.

Consider the question of operating the canal. We have done that efficiently and honestly, seeing millions of tons of shipping transit the isthmus without incident and very few accidents. At the same time we have not attempted to run the affairs of the Republic of Panama. They came up with General Torrijos themselves.

There are those who remember how we obtained rights to an isthmian canal route and in the same sort of spirit which says we should give North America back to the Indians, say we should turn the canal back to the Panamanians. By the same sort of reasoning, the Panamanians should abrogate their independence and rejoin Colombia. I have not noticed many Panamanians insisting on this step.

The United States, in my opinion, has a vital interest in seeing stability and order in the Caribbean, and in view of our hemispheric responsibilities, we have an enduring need to be present in the isthmus. Even if we could safely believe that we have a two-ocean Navy, we would need to have immediate and quick access to the isthmian area. In one sense, the canal is less important than that point—that we need to retain our interest in and responsibility for the security of the Caribbean. I am not advocating an argument which justifies interference in internal affairs of our Central or Latin American neighbors. The United States by its nature as a great power retains a vital concern for the security of the isthmian area and the Caribbean as vital to its own security.

Mr. Speaker, a treaty revision may be necessary at this point, in order to pursue this concern. But Congress is not obliged to approve either a treaty or associated legislation without very careful and painstaking consideration. The administration unfortunately has omitted to mention, the House has a responsibility to pass on transfer of land title. I hope we in the House will get all the facts so as to look at any such arrangements very thoroughly.

Finally, Mr. Speaker, there are those who say that after all the Panamanians are entitled to exercise their sovereign rights as a nation. Even if I favored the President's position on the treaty it still seems to me that the Panamanians are acting as if their sovereign rights are more like newly discovered mineral rights. Now that they have discovered them, all they have to do is mine them from what you can bet will be the American taxpayers' pockets. In this case they do so by saying to the United States, "You have something that is really ours by virtue of its location on our soil. Therefore either you give it back or we will destroy it."

Of course, not only are we giving it back but we are paying the Panamanians for our ability in building the canal in the first place. I am willing to bet that we will watch the tolls go up as the Government of Panama from time to time needs more income, and we will watch the adjoining nations come to say to us, "give us a concession for the use of the canal," since much of the shipping which transits the canal is vital to the economies of Brazil, Argentina, and others.

The United States cannot abrogate its interests in the security of the Caribbean simply because the Third World nations say it is no longer acceptable for the United States to have an interest in world stability. We may well revise our position in the Caribbean, but if we continue to apologize for the good we have done then the threat of violence will become a way of diplomacy for other pro-Communist or left wing dictators to use on us.

Mr. Speaker, the thing that bothers me most about President Carter's foreign policy is his voiced concern for human rights and self-determination of people which contradict his actions. The first

initiatives in our hemisphere by the Carter administration have been toward governments headed by unelected leaders who achieved their status by force. Castro took over Cuba in a coup and has since become the greatest dictator in the Western Hemisphere. General Torrijos also came to power in Panama by a coup. Neither of these leaders with whom Carter is dealing are governing with the consent of the people under their power. It would seem to me that if Carter is serious about extending human rights throughout the world that he would seek to deal with elected leaders rather than those who achieve their office through force and who threaten force against us if we refuse to come to terms with them.

OPPOSING THE DISMANTLING OF THE OFFICE OF DRUG ABUSE POLICY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. GILMAN) is recognized for 60 minutes.

Mr. GILMAN. Mr. Speaker, the President's recent proposal to reorganize his Executive Office under the Reorganization Plan No. 1 of 1977—July 15, 1977—calls for the dismantling of the Office of Drug Abuse Policy, ODAP, the principal unit within the Executive Office of the President, EOP, responsible for formulating a comprehensive national drug strategy and for coordinating the functions of the more than 50 departments, bureaus, agencies, and administrations having jurisdiction over narcotics programs.

Unless the President amends his reorganization plans by Thursday, September 15, or unless either the House or the Senate disapproves the proposal, Reorganization Plan No. 1 will become effective on October 15, 1977.

Nearly 100 Members have joined with me and my distinguished colleague, the gentleman from New York (Mr. RANGEL) in urging you, Mr. Speaker, to use your good office to request the President to reconsider his decision to abolish ODAP. Many colleagues from the House and the Senate have joined with me in writing to the President to restore ODAP to its original objectives when Congress created ODAP in 1976; namely, to provide highly visible, Federal leadership in formulating and executing a comprehensive, coordinated national drug abuse program.

Many of our colleagues regard the President's decision to abolish ODAP—a decision that was recommended by the Office of Management and Budget, OMB, without consulting Members of Congress or with the administration's top narcotic policymakers—as an ill-advised and regrettable decision.

Mr. Speaker, it became apparent from testimony of the administration's narcotic experts before the House Select Committee on Narcotics Abuse and Control, of which I am a member, that these experts, Dr. Bourne of ODAP, Mathea Falco, Narcotics Adviser to the Secretary of State, Dr. Robert DuPont of NIDA, and Peter Bensinger of DEA, were unaware that ODAP was about to be dismantled. The select committee heard from these narcotic administrators on July 12 and 13, literally hours before the President issued his July 15 reorganization plan abolishing ODAP.

As recent as March of this year, the President activated ODAP. Under the leadership of Dr. Bourne, this office was beginning to fulfill its congressional mandate when, this past July, the President changed his position and abruptly decided to abolish this unit from his Executive Office and redelegate some drug abuse functions to OMB. Under the President's reorganization proposal, the redelegation of drug abuse functions to OMB is contrary to ODAP's charter as stipulated in Public Law 94–237, for it creates in OMB a policymaking role in the drug abuse field for this managerial consulting agency.

Today, I, along with the distinguished chairman of the House Select Committee on Narcotics Abuse and Control, testified before the Subcommittee on Legislation and National Security which is holding hearings on the President's reorganization proposal.

Mr. Speaker, in the interest of stressing to my colleagues the September 15 deadline and alerting them to the importance and urgency for the President to reconsider his decision scrapping ODAP, I include the full text of my statement, together with appendix A, at this point in the RECORD and will welcome the support of my colleagues on this vital issue:

STATEMENT BY REPRESENTATIVE BENJAMIN A. GILMAN BEFORE THE SUBCOMMITTEE ON LEGISLATION AND NATIONAL SECURITY OF THE HOUSE COMMITTEE ON GOVERNMENT OPERATIONS ON SEPTEMBER 8, 1977

Mr. Chairman, I commend you and the distinguished members of the Subcommittee on Legislation and National Security for so expeditiously holding these hearings on the President's proposal to reorganize his Executive Office and for affording me this opportunity to testify before you on Reorganization Plan No. 1 of 1977 (July 15, 1977).

I shall confine my remarks to the President's decision to abolish the Office of Drug Abuse Policy (ODAP), the principal unit within the Executive Office of the President (EOP) responsible for formulating a comprehensive national drug strategy program and for coordinating the functions of more than 50 departments, bureaus, agencies and administrations having jurisdiction over drug abuse prevention and control programs.

ODAP was created last year under Public Law 94–237 (March 19, 1976) to provide "for effective, ongoing, and a highly visible Federal leadership in the formulation and execution of a comprehensive, coordinated drug abuse policy." On March 14th of this year, President Carter activated ODAP, which was dormant under the previous administration, and revitalized the Strategy Council, which was created under the Drug Abuse Office and Treatment Act of 1972. This past May, the Senate confirmed Dr. Peter Bourne and Lee Dogoloff as Director and Deputy Director, respectively, of ODAP. ODAP's authorized appropriations expire next year, on September 30th, 1978.

In activating ODAP and revitalizing the Strategy Council, the President, on March 14th, stated: "Drug abuse continues to drain human resources, especially from our youth, with no end in sight. I am determined that we make every effort to reverse this trend . . ." On July 15th, four months after its activation and without consulting Congress or his narcotic administrators, the President abruptly terminated the one unit within EOP that has begun to fulfill its Congressional mandate, namely: to provide highly visible Federal leadership in formulating and executing a comprehensive, coordinated national drug abuse policy.

Mr. Chairman, along with many of my colleagues in both the House and the Senate, I oppose the President's decision to terminate ODAP. Nearly 100 members have joined with me and my distinguished colleague, the gentleman from New York (Mr. Rangel) in urging the Speaker to use his good office in opposition to this matter. Many colleagues from the House and the Senate have joined with me in writing to the President urging him to reconsider his decision abolishing ODAP.

As the distinguished committee members are aware, unless the President amends his proposal within the permitted 30 days, ODAP will be scrapped and the momentum developed during its brief tenure will soon be terminated. ODAP's expiration date is September 15, one week from today. Unless the House or the Senate disapproves Reorganization Plan No. 1 within 60 days, the plan takes effect on October 15th.

The President's efforts to cut governmental costs by abolishing numerous Federal advisory boards and commissions that have outlived their usefulness in the Executive Branch is commendable and I fully support that endeavor.

I also support the President's thesis that "Drug abuse continues to drain our human resources, especially from our youth, with no end in sight" and his "effort to reverse this trend." But as a member of the House Select Committee on Narcotics Abuse and Control, I cannot support any decentralized approach toward managing our nation's drug abuse problems . . . a critical problem requiring a concerted national effort if this Nation is to effectively wage "war" on narcotics and if we are to develop a comprehensive, coordinated national drug strategy. In my opinion, the President has been ill-advised in his decision to scrap ODAP . . . a setback in formulating an urgently needed national drug strategy out of the fragmented, leaderless Federal drug programs.

Under the President's reorganization proposal (pursuant to the testimony of Bert Lance, Director of the Office of Management and Budget (OMB) before this subcommittee on August 3rd and other OMB statements) not only would ODAP be abolished but its functions would be performed by "a small staff reporting to a Presidential advisor in the EOP," the Domestic Policy Staff (formerly the Domestic Council), the OMB President's Reorganization Project, and a revitalized Strategy Council on Drug Abuse. ODAP's functions and its Director would be transferred to the President for redelegation. But redelegated to whom? To the OMB President's Reorganization Project? To an undisclosed entity in the EOP? The details of this subsequent redelegation are not stated in the Reorganization Plan, the transmittal message or the White House press release.

Redelegation of drug-related functions would constitute nearly unlimited authority to restructure the drug abuse field in the EOP without any review or approval by the Congress, thereby impairing and probably eliminating all Congressional oversight. The President's Redelegation plan is contrary to the intent of P.L. 94–237, which created ODAP and provided that its Director and Deputy Director be appointed by the President, by and with the advice and consent of the Senate. It is also contrary to the statutory directive that ODAP be the Executive

Agency for formulating and recommending to the President policies, objectives, and priorities for Federal drug abuse functions and for coordinating the performance of drug related Federal agencies.

On March 14th of this year, when the President activated ODAP to carry out "the Congressional mandate specified in the law," and when he revitalized the Strategy Council and directed the Director of ODAP to serve as the Executive Director of the Council, the President directed the ODAP Director to assume the following responsibilities "to the maximum extent permitted by law":

(1) "Recommend government-wide improvements in the organization and management of Federal drug abuse prevention and control functions, and recommend a plan to implement the recommended changes;

(2) "Study and recommend changes in the resource and program priorities among all agencies concerned with drug abuse prevention and control;

(3) "Assume the lead role in studying and proposing changes in the organization and management of Federal drug abuse prevention and control functions, as part of my promise to reorganize and strengthen government operations; and

(4) "Provide policy direction and coordination among the law enforcement, international and treatment/prevention programs to assure a cohesive and effective strategy that both responds to immediate issues and provides a framework for longer term resolution of problems."

Mr. Chairman, why has the President, in these few months, changed his mind and now seeks to abolish ODAP without first giving it a fair chance to fulfill the Congressional mandate specified in P.L. 94–237 as well as his directive?

Since its activation last March, under the leadership of Dr. Peter Bourne, ODAP has initiated a series of comprehensive policy review studies in the areas of drug law enforcement, narcotics intelligence, and drug treatment and rehabilitation. A draft of its border management study was circulated recently to the appropriate Federal agencies for their comments.

With this significant work under way, it is difficult to comprehend why the President is now seeking to dismantle a unit that has just started to fulfill its mission in providing Federal leadership in formulating a comprehensive national drug strategy and in coordinating our Nation's efforts in interdicting narcotics trafficking and in eradicating narcotics supply at its source. Why must this Nation start from scratch once again in formulating a mechanism to develop a comprehensive, coordinated drug strategy program? Mr. Chairman, Congress and the American people are in the dark with regard to the rationale for the President's decision to abolish ODAP and the need to start all over again in finding a vehicle for fulfilling ODAP's mission.

On July 12th and 13th of this year, literally hours before the President issued his July 15th Reorganization Plan abolishing ODAP, the House Select Committee on Narcotics Abuse and Controls heard testimony from the Administration's top narcotic administrators who informed us that a "Working Group" consisting of Dr. Bourne of ODAP, Peter Bensinger, Administrator of the Drug Enforcement Administration, Mathea Falco, Senior Advisor to the Secretary of State and Coordinator for International Narcotics matters, and Dr. Robert DuPont, Director of the National Institute of Drug Abuse, met "periodically and informally" in the absence of the Strategy Council, which has yet to hold its first meeting. From their testimony it became apparent that this group constituted the Presidential narcotic policy making and yet none of these narcotic administrators were aware that ODAP was about to be dismantled.

Further revelations indicate that OMB, which was instrumental in recommending the dismantling of ODAP, neither consulted the President's narcotic policymakers before recommending the termination of ODAP nor did OMB approach these experts for their opinions concerning the possibility of eliminating ODAP.

At an OMB briefing on August 24th, it became obvious that this office was acting as a policymaker in the drug abuse field, rather than as a management consulting agency. A Question and Answer sheet prepared by the President's OMB Reorganization Project, a copy of which is attached to this statement as "Appendix A" for your review, suggests that, under the reorganization proposal, OMB would become a policymaker in the drug abuse field by acquiring functions presently authorized to ODAP under P.L. 94–237. For example, on page 6 of the Question and Answer sheet, OMB would "review regulations, guidelines, requirements, criteria and procedures regarding above functions within Federal agencies," a function currently being performed by ODAP under Public Law 94–237. The four "above functions" referred to on page 6, and subject to OMB's review, would include (1) strategy regarding policy direction and coordination of the law enforcement, international and treatment/prevention programs, (2) coordinating the interagency/interdepartmental performance of drug abuse functions and the implementation of Presidentially approved drug abuse strategies, (3) recommending to the President certain changes in organization, management, and personnel of relevant Federal agencies, and (4) representing the United States in international negotiations related to drug abuse functions. The President's OMB Reorganization Project and the National Institute on Drug Administration (NIDA) would also evaluate the performance of Federal drug abuse programs.

Mr. Chairman, what happens after OMB reviews these regulations, guidelines, requirements, criteria and procedures? Will it recommend policy changes to the President? The power to evaluate the performance of programs includes the power to recommend policy changes. Did Congress intend OMB to fulfill this role when it created ODAP and stipulated in Section 221 of P.L. 94–237 the responsibility of ODAP's Director:

"(a) The Director shall make recommendations to the President with respect to policies for, objectives of, and establishment of priorities for, Federal drug abuse functions and shall coordinate the performance of such functions by Federal departments and agencies. Recommendations under this subsection shall include recommendations for changes in the organization, management, and personnel of Federal departments and agencies performing drug abuse functions to implement the policies, priorities, and objectives recommended under this subsection."

Mr. Chairman, I submit that OMB has arbitrarily arrived at its recommendation to abolish ODAP. It failed to consult Members of Congress, it failed to confer with narcotics administrators and it failed to provide the President with options derived from experts involved in the narcotics abuse and control effort. Only two options were offered to the President: either (1) eliminate ODAP entirely or (2) allow it to continue until its funding expires on September 30, 1978, or until its projects begun this past May are completed.

According to OMB's Question and Answer sheet, under the reorganization proposal, Dr. Bourne would advise the President on drug-related matters. His staff would be reduced to two individuals, and he would also be responsible for health issues. "At least four individuals on the Domestic Policy Staff (DPS)," a proposed unit within the EOP that would be responsible primarily for domestic and some economic policy, would also work on drug-related matters. Dr. Bourne, his "staff", the DPS, the revitalized Strategy Council, and the OMB Reorganization Project would be responsible for formulating and coordinating this Nation's drug strategy program.

Obviously, the visibility and Federal leadership that Congress sought when it created ODAP last year will be lost in this reorganization shuffle. Dr. Bourne, whose unit in the EOP would be dismantled, can not even be located on the President's reorganization chart. With a two-person staff and additional responsibilities, how much time will Dr. Bourne have to devote to the pressing problems of narcotics abuse and control? How much time will he have to develop any comprehensive, coordinated national drug strategy? The answer is obvious. He will not have the time nor the staff to devote extensive effort to the pressing problems of drug abuse.

Drug abuse in this nation and throughout the world is much too important to be left to any part time drug advisor with a minuscule staff. Between 700,000 and 800,000 hard core addicts support the illicit drug traffickers and this does not include those individuals who are emotionally dependent upon prescribed and over-the-counter drugs and who suffer from the debilitating effects of stimulants, depressants and hallucinogens. Nearly 5,000 of our Nation's young people last year succumbed to heroin overdosages. Drug-related crimes cost our nation over $20 billion annually.

More than 50 departments, bureaus, agencies and administrations have jurisdiction over drug abuse programs. It is unrealistic to expect that the Strategy Council would be able to coordinate the activity of the fragmented agencies. The Strategy Council, composed of Cabinet-level departments in the drug abuse field, can only advise; it can not provide the necessary day-to-day coordination to develop a comprehensive national drug policy. And there is no assurance that the Strategy Council will ever meet. President Carter revitalized the Council last March, but the Council has yet to hold its first meeting. Will the "revitalized" Strategy Council suffer the same fate as ODAP, being activated only to be abolished a few months later?

An underlying premise of the President's reorganization proposal is that the drug abuse problem is a specialized problem that does not require any permanent office in the EOP. Yet, under the reorganization proposal, the Office of Wage and Price Stability and the Bureau of Environmental Quality will be retained in the President's Executive Office. At a recent briefing conducted by OMB representatives, there was not any clear rationale expressed as to why these agencies merited retention while ODAP was being abolished. I am not opposed to retaining these units in the EOP, but there was no indication that the tasks of these agencies could not be performed by the Domestic Policy Staff. The Office of the Special Representative for Trade Negotiations, a specialized field, is also being retained in the EOP. The President's proposal to abolish ODAP and establish a part time Presidential drug advisor, with a two-person staff, working with a few members from the Domestic Policy Staff, an uncertain "revitalized" Strategy Council, and with OMB acting as a drug policymaker constitutes a serious disruption of the forces waging "war" on narcotics. It is a setback for the Congress, for law enforcement officers and for the narcotics administrators who have sought to develop a coordinated national drug policy.

The President's decentralized approach towards managing drug abuse programs within the EOP is the antithesis of the attempt by Congress to create a leadership role within the Executive Office. It further embraces and endorses the fragmentation that now exists among the Federal agencies. This proposal is contrary to any of the President's statements asserting his deep commitment to fighting drug abuse. Under the reorganization proposal, there is every reason to believe that drug-related issues will be downgraded among the President's priorities and within the decision making process of the EOP.

The estimated $300,000 that may be saved by dismantling ODAP is minuscule compared to the savings that could result . . . and the momentum that would otherwise be lost . . . from restoring this unit to the role that Congress intended when it initially created ODAP.

At a time when other nations are intensifying their efforts to interdict narcotics trafficking and to eradicate the illicit supply of opium production, the proposed dismantling of ODAP could be perceived by the world as a deliberate deemphasis of our Nation's commitment in waging "war" on this scourge of mankind.

Mr. Chairman, I urge this distinguished subcommittee to take a close, hard look at the President's inconsistent proposal to dismantle ODAP. I hope that the President will amend his reorganization proposal by restoring ODAP to its original purpose of providing strong Federal leadership in formulating and coordinating a comprehensive drug abuse policy. In the event that the President does not amend this proposal, then I urge my colleagues to support H. Res. 688, disapproving Reorganization Plan No. 1 of 1977.

Thank you, Mr. Chairman, for focusing the Committee's attention on this vital issue.

APPENDIX A

PRESIDENT'S REORGANIZATION PROJECT

(Questions and answers about ODAP and the EOP Reorganization Study)

1. Conduct of the Executive Office Reorganization Study—

Question: How was this study conducted?

Answer: Soon after assuming office, the President requested OMB to perform a comprehensive management assessment of the White House and the Executive Office of the President (EOP). This study would be built on preliminary work performed during transition. On March 7, 1977, the Director of OMB sent a memorandum to the President outlining such a management study with the following goals:

Improve advisory, decisionmaking, management, coordinating and follow-up capabilities.

Streamline the advisory, coordinating and administrative support functions.

Minimize duplication and overlap of mission by combining or eliminating functions and improving processes.

Install zero-based budgeting.

An advisory committee of senior Presidential advisers was established to provide overall guidance. A. D. Frazier, Jr. was named project leader with the ability to form study teams and use outside resource people. A work plan was prepared as a guide to managing a comprehensive study.

The President approved the plan and work began to recruit an interdisciplinary team of analysts. We also asked each office to detail a professional staff member to work with us to assist in the fact-finding, to review our work and to serve as a daily contact point to provide substantive input on policy matters handled by each office.

Our work was divided into three major studies:

a. A fact-finding and functional analysis of each EOP office.

b. A study of the decisionmaking process in the EOP.

c. A study of EOP administrative support services.

In addition, plans for discussions with Congress and public awareness were developed and administered.

The study was conducted from March 22 through July 1, 1977, when a report was presented to the President. Background information included: the legislative history and related congressional testimony; previous drug strategy reports, other agency reports; information on planned ODAP studies; program and budget information; information on the purpose and objectives of ODAP; its organization and structure; functions and activities; decisionmaking role and requirements; external and internal relationships; and results of interviews with ODAP professional staff then on-board; and other cognizant agency and congressional staff was reviewed. This information was weighed against the general findings for other EOP offices, the results of our decision analysis and administrative support studies.

The study was conducted with the full knowledge and cooperation of Dr. Peter Bourne of ODAP and his staff. They provided useful comment to the team at regular intervals and on the results of the study.

2. Presidential Decisionmaking—

Question: How did the President make his decision on ODAP?

Answer: On July 1, 1977, the President received our final report on the EOP reorganization study. The report covered major structural options for reorganization of the EOP, options for each office, options for improving the decision process and channels by which the President receives advice and implements decisions, and options for integrating administrative support functions. Because of concern of the President and the Congress for the drug issue, all information developed on ODAP was provided to him.

The President reviewed the information over the July 4th holiday. On July 7 we met with the President for an hour and-a-half to discuss the report. He requested that the Vice President review the report and provide him with his assessment. He asked his staff and EOP office heads to provide him with final comments which they did. He received and reviewed communications from several Members of Congress on various aspects of the reorganization.

We met again with the President on July 11 for an hour to further discuss EOP reorganization proposals.

It was his view that:

A forthcoming message on drug abuse demonstrated his commitment to act.

Significant work by ODAP could be completed by the end of the year.

The retention of a high visibility Adviser to the President on drug matters was important and that the Adviser should be made available to Congress as the Administration's chief drug abuse spokesperson.

The policy management system be adopted and the Strategy Council on Drug Abuse be revitalized to handle policy and strategy development and interagency coordinating problems. The Strategy Council on Drug Abuse is a working group composed of government agencies and other units with interest in drug abuse.

The President's staff would act quickly on forthcoming reorganization studies in the drug area.

The President's Reorganization Project should handle additional drug abuse reorganization issue problems.

Operational functions should be handled in line agencies and agency officials should participate in policy development and be held accountable for acting.

3. Change of Priority on Drug Abuse—

Question: In view of the seriousness of the drug problem and the commensurate high level of public and congressional concern, does elimination of ODAP at this time signal the Carter Administration's disinterest in this problem?

Answer:

a. When the President activated ODAP, he did not have the benefit of a comprehensive study of his office with alternate means of handling important issues like drug abuse. With the adoption of the policy management system there is a better means for handling such issues rather than creating a separate office for every serious problem.

b. Significant work of ODAP will be completed by the end of the year and the President has indicated he will act quickly on its recommendations.

c. The President's commitment to fighting drug abuse can hardly be doubted. His message to the Congress of August 2, 1977, and the establishment of an Adviser to the President on drug matters will signal the Administration's continued commitment to resolution of drug abuse problems. Replacing ODAP with an Adviser to the President plus support from the President's Domestic Policy Staff, OMB's President's Reorganization Project and a revitalized Strategy Council on Drug Abuse reflects a different process approach rather than a change in objectives. We think this approach can be more effective.

d. The presence of an Assistant and a revitalized Strategy Council on Drug Abuse provides the visible focus for the national drug abuse effort. Plus, the comprehensive reorganization effort will, we believe, result in a renewed organizational commitment within the Federal Government to combat drug abuse. It cannot be assumed that in order to focus attention on a problem and mobilize resources, an EOP office must be established. Alternative ways of solving problems can be found and we feel that enlisting the resources of the agencies and departments involved is the best way. We feel a separate office is not necessary to do this.

e. The discontinuation of ODAP will not result in other resource reductions or program reallocations. The President's August 2 message provides additional priorities and direction.

Additional reorganization work can best be handled by the President's Reorganization Project which has the resources to do an effective job. Leadership, policy development and resolution of interagency disputes and coordination problems can best be handled by Dr. Bourne and the Domestic Policy Staff working together with the agencies through a Strategy Council on Drug Abuse. Unless a Federal drug abuse strategy is developed with the participation of the agencies charged with its implementation, it will be difficult to carry out. This cooperation and participation can be gained through the policy management system, the Strategy Council and interagency mechanisms.

4. Functions of ODAP—

Question: What functions does ODAP currently perform and who will carry them out after reorganization?

ANSWER

Current function

a. Recommend to the President, policies, objectives, and priorities of Federal drug abuse functions.

After reorganization disposition

Special Assistant to the President and Domestic Policy Staff.

Comment

The Special Assistant will also handle international health matters.

Current function

b. Provide strategy in terms of policy direction and coordination of the law enforcement, international and treatment/prevention programs (written strategy).

After reorganization disposition

Special Assistant, Domestic Policy Staff and Strategy Council on Drug Abuse.

Comment

None.

Current function

c. Coordinate the interagency/interdepartmental performance of drug abuse functions and the implementation of Presidentially approved drug abuse strategies.

After reorganization disposition

Special Assistant working with the Domestic Policy Staff through the Strategy Council on Drug Abuse.

Comment

None.

Current function

d. Recommend to the President changes in organization, management, and personnel of relevant Federal agencies as necessary to implement Function 1.

After reorganization disposition

OMB's President's Reorganization Project.

Comment

Part of normal reorganization responsibility of OMB. Several reorganization studies are nearly complete in this area.

Current function

e. Represent the United States, at the President's discretion, in international discussions and negotiations related to drug abuse functions.

After reorganization disposition

Department of State.

Comment

No formal transfer of functions nor positions to State required since this is their normal responsibility.

Current function

f. Review regulations, guidelines, requirements, criteria and procedures regarding above functions within Federal agencies.

After reorganization disposition

OMB President's Reorganization Project.

Comment

None.

Current function

g. Evaluate performance and results of drug abuse programs in Federal agencies.

After reorganization disposition

OMB President's Reorganization Project and NIDA.

Comment

This must be done as part of the reorganization but ongoing work should be done in an agency.

5. Establishing Policy—

Question: How will drug abuse prevention policy be set in the absence of ODAP?

Answer: Drug abuse policy should be set with the responsible agencies. The President has asked Dr. Bourne to begin formulating a comprehensive drug abuse policy. This will be done in cooperation with the Domestic Policy Staff and with relevant agencies through the Strategy Council on Drug Abuse. The President will expect his Adivser on drug-related matters to advise him if the responsible agencies' policies are deficient in any way. The Domestic Policy Staff, through any necessary Cabinet working groups, will bring the President's perspective to bear upon agency program information to maintain needed, ongoing drug abuse prevention policy for the several Federal agencies involved.

6. Interagency Coordination and Reorganization—

a. Question: You have stressed that the policy formulation functions will be retained in the EOP but how about the coordination function? With many Federal entities involved in drug abuse, how can they be effectively coordinated without an ODAP in the Executive Office?

Answer: Even for serious and complicated national problems such as drug abuse, the Carter Administration expects appropriate Cabinet Secretaries or agency heads working with the Domestic Policy Staff to assume full responsibility. The Drug Adviser working with the Domestic Policy Staff through the Strategy Council will be the main mechanism for coordination. Since drug abuse prevention programs are so fragmented as to preclude effective assignment of responsibility to Federal executives, the appropriate course of action is reorganization of the drug abuse programs rather than maintenance of ODAP. Several reorganization studies will be submitted to the President shortly that will deal with organization of the Federal effort to combat drug abuse. The OMB reorganization effort will continue thereafter as needed to examine the fragmentation of drug abuse prevention programs. Indeed, the legislative history (Senate Report No. 94–218) shows that the Labor and Public Welfare Committee recognized that ODAP's functions might be effectively carried out in other parts of the executive branch. That Committee anticipated Reorganization Plan as the vehicle for any such changes. We agree with their general assessment.

b. Question: Reorganization has been tried on previous occasions as a solution to the drug abuse coordination problem. What if it fails again?

Answer: Several reorganization studies are nearly complete. In addition, no previous governmental reorganization efforts have been as comprehensive as the ones currently under way. We are optimistic that this time real improvement will be made. However, to the degree that coordination (beyond the policy development already discussed) is required, the Strategy Council and sub-Cabinet working groups will be used by the Drug Adviser and the Domestic Policy Staff.

c. Question: How can the proper budgetary balance in the various Federal drug abuse prevention programs be maintained without ODAP?

Answer: Examination of program budgets for similar functions across organizational lines for compliance with overall Administration priorities and policy is a normal Office of Management and Budget function. Uusing zero-based program information, we have every reason to believe OMB will effectively carry out this responsibility.

7. Staffing of Drug Issues in the Executive Office—

a. Question: What Executive Office staff will work specifically on drug abuse problems?

Answer: Two persons on Dr. Bourne's staff and at least four people on the Domestic Policy Staff will work on drug-related matters. Personnel from the Office of Management and Budget's President's Reorganization Project will be assigned to work on any unfinished reorganization efforts and any new drug agency projects. On the budget side, OMB examiners, using zero-based program information, will be able to provide better program data for decisionmaking. Experts from the agencies will be used in the policy management system and as representatives on ad hoc interagency working groups to solve specific problems as they arise. This is more effective and economical than maintaining a full-time office staff.

b. Question: Why eliminate ODAP to achieve a mere $500,000 saving?

Answer: Cost savings were secondary to the goal of an improved capability within the bureaucracy to address drug problems.

8. Continuation of a Specialized Office—

Question: Only last March ODAP was established by the President in recognition of the seriousness of the drug problem. Now you are abolishing it. What has changed in such a short time to cause this reversal?

Answer: Three things have changed. First, we think that through the Domestic Policy Staff and the new policy management system, Presidential level policy development and interagency coordination can be better handled than through separate organizational entities like ODAP. Second, we have gotten an OMB reorganization staff up and running to address the excessive fragmentation of drug abuse programs that has led to a need for an ODAP-like approach. This OMB reorganization effort will pick up where ODAP leaves off using results of ODAP's reorganization studies. Third, ODAP has already achieved momentum in studying drug abuse problems; sustaining that momentum can be done by Dr. Bourne as Presidential adviser and by the Domestic Policy Staff.

The new policy management process is one in which Domestic Policy Staff personnel function as facilitators in bringing agency expertise to bear on a coordination or policy development problem. That is, the Domestic Policy staffer's role is to bring experts together in addressing a problem. Our studies have shown that agency and departmental personnel do provide sound, expert analysis and input if only that input is properly coordinated. That coordination is the Domestic Policy Staff's role in domestic issues.

Coincidentally, ODAP has been functioning in this mode. They have set up working groups of agency and departmental personnel which have efficiently carried out several studies in just a few months. Therefore, we feel confident that Dr. Bourne and the Domestic Policy Staff will be very successful in maintaining this momentum through this new policy management process.

Finally, we have indicated in testimony, that ODAP will not be precipitously terminated. Its present agenda can be complete by January 1978. The ongoing concerns should be phased into the management system described above between the time Congress approves Plan No. 1 and that time so that there will be no loss in continuity.

9. Congressional Testimony and Access of Congress to Information—

Question: In years prior to ODAP's existence, Congress experienced problems in getting testimony from the Administration on drug abuse problems. That is, testimony from the many agencies involved in drug programs resulted in duplicative testimony in some areas, and gaps in others—all at a cost in hearing time. Aren't we right back where we started from with the abolition of ODAP?

Answer: Dr. Peter Bourne will continue to serve as the Administration's chief spokesperson on drug abuse issues. The President has indicated that Dr. Bourne will be available to the Congress for testimony.

Furthermore, a comprehensive drug abuse policy and strategy will be maintained by Dr. Bourne and the Domestic Policy Staff through the Strategy Council, unlike the pre-ODAP era. This policy will serve to focus testimony of the agency personnel and alleviate the problems you have cited.

Additional reorganization studies will be carried out by OMB. Other studies will be carried out by interagency working groups and the cognizant agencies as is essentially the case now. Results of these studies will be made available through regular channels and discussions with congressional staff.

10. Effectiveness of This Arrangement—

Question: How about the adequacy of this arrangement, the ability of Dr. Bourne to continue to provide leadership in the drug abuse area, and the adequacy of staff to support his ability to respond to Congress and other entities?

Answer: Plan No. 1 and the other actions the President has taken are an attempt to find meaningful ways to carry out his and your mutual policy concerns in this and other important problem areas. It is not necessarily a corollary that every significant problem requires an additional specialized office and more staff resources to resolve the problem. Improvement of the processes by which policy is made and carried out, placing the burden of resolving such problems in the mainstream of the President's work through such processes, a more active role for the Cabinet and line agencies, and the use of specialist expertise that exists in the agencies represents a unique approach to problem-solving.

It is the base on which this plan is founded and is responsive to the President's desire to involve his Cabinet and line agencies and to hold them responsible for acting. The proposed staffing arrangement after the work of ODAP is completed is in concert with the plan and the President's desire to have a lean, effective staff. We believe it is sufficient to meet your concerns and will be an effective arrangement.

Once again, the important point is the backing the President gives to Dr. Bourne. The effectiveness of any Adviser or Office Director in the Executive Office is directly related to both access to the President and the confidence the President has in the individual. Dr. Bourne clearly has both. The President has given him sufficient authority to maintain continuity in policy formulation and interagency coordination.

Mr. WOLFF. Mr. Speaker, will the gentleman yield?

Mr. GILMAN. I yield to the gentleman from New York.

Mr. WOLFF. I thank the gentleman from New York (Mr. GILMAN) for yielding and I wish to associate myself with his remarks.

Along with several members of the Select Committee on Narcotics Abuse and Control, of which I am privileged to be the chairman, my distinguished colleague from New York has been instrumental in focusing attention on the urgency for the President to reconsider his decision to abolish the Office of Drug Abuse Policy, ODAP, and I commend him for his efforts.

Today, I, along with the gentleman from New York, testified before the House Subcommittee on Legislation and National Security which is holding hearings on the President's proposal to reorganize his Executive Office—Reorganization Plan No. 1 of 1977, July 15, 1977— and I stated·

Our select committee has undertaken a most difficult and far-reaching assignment—the development of a rational drug abuse policy for the United States. Without a focal office in the White House to give flesh to the policy recommended by Congress, we will find it difficult indeed to provide the kind of innovative items that are required to make a dent in drug abuse.

Mr. Speaker, in the interest of bringing to the attention of my colleagues the importance of the President's reorganization plan, I include at this point in the RECORD the full text of my statement.

STATEMENT BY REP. LESTER L. WOLFF (6TH DIST., N.Y.) BEFORE THE SUBCOMMITTEE ON LEGISLATION AND NATIONAL SECURITY OF THE HOUSE COMMITTEE ON GOVERNMENT OPERATIONS ON SEPTEMBER 8, 1977

Mr. Chairman, I appreciate the opportunity you have given me to testify here today and also want to express the thanks of the Members of the Select Committee on Narcotics Abuse and Control for the Opportunity you gave them to participate in this important hearing.

As you and your colleagues know, on July 15, 1977, the President submitted a message transmitting his Reorganization Plan No. 1 recommending reorganizaion of the Executive Office of the President, pursuant to Title V of the U.S. Code, Chapter 9. I wish to address myself to the effect of that message on a specific office, the Office of Drug Abuse Policy. The President's message states the functions of the Office of Drug Abuse Policy (ODAP) can be performed by a smaller staff reporting to a presidential adviser in the Executive Office of the President. The office itself will be discontinued.

Unless either house of Congress acts to reverse the President's recommendation, the Office of Drug Abuse Policy will terminate at the end of the year and the recommendation will become effective September 5, 1977.

While various White House officials have been quick to say that the demise of ODAP does not signal a lack of interest in the drug abuse problems by either the President or Dr. Bourne, it does seem to some of us in Congress that there are some serious consequences to be faced as a result of this action.

As you will recall, Mr. Chairman, the creation of ODAP was a legislative "first" organized largely through the efforts of Chairman Rodino and Chairman Rogers. The former President of the United States, Mr. Ford, declined to activate this office in response to many demands for a policy organism in the White House that would direct drug abuse programs and stop the fragmentation caused by the extensive number of executive agencies that were involved in the problem, both on the demand and the supply side. Mr. Carter came to office and worked very hard to create ODAP. All of us remember the difficult job faced by the White House in securing confirmation for the Director and the Deputy Director only three short months ago. Moreover, as Dr. Bourne and Mathea Falco, the Senior Narcotics Adviser to the Secretary of State, have often testified before my Committee, ODAP not only represented the determination of President Carter to give direction to the drug abuse policy effort, but also constituted a central policy-making * * *

Mr. GILMAN. Mr. Speaker, I thank the gentleman from New York for his comments and for having taken the time in stressing the adverse effect of the President's reorganization plan on this Nation's efforts to develop a comprehensive coordinated national drug abuse policy.

THE IMPACT OF A WATERWAY USER TAX ON THE PITTSBURGH AREA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. MURPHY) is recognized for 15 minutes.

Mr. MURPHY of Pennsylvania. Mr. Speaker, soon the House will consider H.R. 8309, which will impose a waterway user tax for the first time in the history of our country. This action will alter the practice set out in the Northwest ordinance, that our Nation's waterways would remain free. I am presenting to my colleagues today, my testimony before the Ways and Means Committee concerning the impact of these fees on the Pittsburgh area, so that they will consider the full impact of this issue before making a final decision.

Mr. Speaker, in the Northeastern and Midwestern parts of this country our industries have been greatly distressed in recent years. This story is not new to members of this committee. The imposition of a waterway user tax would only add to this decline.

As you know, river transportation is extremely slow. If we add the burden of an increase in costs to this already slow method of transportation, I fear many industries may revert to shipping by a more expeditious manner on highways and by rail. This is an undesirable alternative for transporting bulk goods when river transportation is accessible.

In this time of energy shortages and crisis it would behoove us to do everything we can to increase river transportation rather than decrease it. I would like to point out that 20 percent of the Nation's coal is shipped by river, almost 20 percent of the Nation's petroleum is shipped by river, and 4 percent of the Nation's basic minerals are shipped by river. Imposition of a user fee may severely hamper the distribution of these energy resources.

The 22d district of Pennsylvania, which I represent, relies heavily upon the Monongahela, the Ohio, and the Allegheny Rivers for transporting both the raw materials and the finshed products which keep our industries operating. In fact, the Monongahela River, along which I reside and into which I can throw a stone from my home, has a greater gross tonnage of commerce each year than the Panama Canal. Some of us in the United States seem almost willing to fight a war over the Panama Canal. All I am saying is let us save the Monongahela River. All through the history of this country we have seen the wisdom of aiding water projects: dams, irrigation, recreation, flood control, and I think it would be a total lack of wisdom if we would now turn our backs on the inland waterways and start charging for their use.

As you know, the Pittsburgh area is one of the Nation's leading steel producing areas, producing in excess of 20 million tons annually. The steel industry directly provides more than 70,000 jobs in the area and tens of thousands more in support and related industries. The steel industry grew up in this area because of the available river transportation and remains totally dependent on it. Coal, one of the basic materials in the steel process, moves up the Monongahela River from West Virginia and the 22d district at a rate of almost 50,000 tons per year.

The Army Corps of Engineers Study estimated that there would be an average cost increase near 18 percent on the Monongahela River. The same study estimates diversion of 98 percent of river traffic on the nearby Allegheny River. A cost increase such as this would be

devastating to the steel industry which is already in a depressed state.

Besides the increase in costs, the steel industry would face the burden of the user fee when they ship their finished products. Approximately 3 million tons of steel from the Pittsburgh area is shipped to the South and Southwest via the inland waterway system. The majority of this steel is in direct competition in the gulf coast area with imported steel.

Steel imports now make up 14 percent of all U.S. steel consumption. The imposition of user fees could by some estimates raise this to 30 percent by 1980. Due to Pittsburgh's location at the end of the inland system, the majority of losses would be suffered there.

In effect by imposing waterway user fees the Congress will be imposing a tariff on domestic products and subsidizing foreign steel imports because the deep water facilities they use are not subject to these fees. This would increase our dependence on foreign steel as one of the basic materials in our economy, a situation which proved unhealthy in the case of oil.

In conclusion, I urge this committee, or if this committee would recommend, I would urge Congress or the Departments of Commerce and Transportation to undertake an economic feasibility study to determine the effects of a user charge on industry as well as the regions most affected by the charge.

LEGISLATION TO AMEND FEDERAL ADVISORY COMMITTEE ACT TO ABOLISH CERTAIN COMMITTEES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. PREYER) is recognized for 5 minutes.

Mr. PREYER. Mr. Speaker, last February the President ordered a government-wide, zero-based review of all advisory committees, which at that time numbered 1,189. Subsequent announcements on May 25 and August 22 proposed eliminations and consolidations which would result in a 40 percent reduction in the number of such committees.

Among those advisory committees for which the President proposed elimination are a number whose existence is mandated by statute. The bill I am introducing today would rescind the authorization for these committees through an amendment to the Federal Advisory Committee Act.

H.R. 8979

A bill to amend the Federal Advisory Committee Act to abolish certain specified advisory committees

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Federal Advisory Committee Act is amended by adding at the end thereof the following new section:

"Abolition of Specified Advisory Committees

SEC. 16. (a) The following advisory committees are hereby abolished:

(1) the Advisory Council on Environmental Education, authorized by section 3(c) of the Environmental Education Act (84 Stat. 1312, 20 U.S.C. 1532(c));

(2) the Board of Tea Experts, authorized by the Tea Importation Act (29 Stat. 605, 21 U.S.C. 42);

(3) the Federal Hospital Council, authorized by section 641 of the Public Health Service Act (84 Stat. 344, 42 U.S.C. 1320a-1(1));

(4) the Health Insurance Benefits Advisory Council, authorized by section 1867 of the Social Security Act (79 Stat. 329, 42 U.S.C. 1395dd);

(5) the National Advisory Council on Nurse Training, authorized by section 851 of the Public Health Service Act (89 Stat. 366, 42 U.S.C. 298);

(6) the Program Review Teams for the States of Arkansas, California, Florida, Kansas, Massachusetts, Michigan, New York, Pennsylvania, Utah, and Washington, authorized by section 1862(d)(4) of the Social Security Act (66 Stat. 1408, 1409; 42 U.S.C. 1395y(d)(4));

(7) the Rape Prevention and Control Advisory Committee, authorized by section 231 (c) of the Public Health Service Act (89 Stat. 328; 42 U.S.C. 2689q(c));

(8) the National Insurance Development Program Advisory Board, authorized by section 1202(a) of the National Housing Act (81 Stat. 556; 12 U.S.C. 1749bbb-1);

(9) the Advisory Committee to the Export-Import Bank of the United States, authorized by section 3(d) of the Export-Import Bank Act of 1945, as amended (59 Stat. 527, 12 U.S.C. 635a(d));

(10) the Advisory Committee on Cemeteries and Memorials, authorized by section 2(a) of the National Cemeteries Act of 1973 (87 Stat. 75, 38 U.S.C. 1001);

(11) the Federal Advisory Council on Employment Services, authorized by section 11 of the Wagner-Peyser Act of 1933 (48 Stat. 113, 29 U.S.C. 49j); and

(12) the Technical Pipeline Safety Standards Committee, authorized by section 4 of the Natural Gas Act of 1938 (82 Stat. 722, 49 U.S.C. 1673(a)).

(b) The head of each agency concerned shall take such action as may be appropriate to terminate the activities of the advisory committees specified in subsection (a). Funds appropriated for the expenses of such committees may be expended for purposes of terminating their activities. Unobligated balances of appropriated funds for such committees remaining after termination are hereby rescinded."

HEARING BEFORE THE SUBCOMMITTEE ON CRIME OF THE HOUSE COMMITTEE ON THE JUDICIARY ON THE SEXUAL EXPLOITATION OF CHILDREN

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. CONYERS) is recognized for 5 minutes.

Mr. CONYERS. Mr. Speaker, I am pleased to announce that the Subcommittee on Crime, which I chair, of the House Committee on the Judiciary will hold a further hearing on the sexual exploitation of children. The subcommittee has before it H.R. 3913 and other bills which would provide criminal penalties for the taking of sexually explicit photographs of children and the transportation of the photographs or films through interstate commerce.

We have already held hearings on May 23 and 25, 1977, and have held a joint hearing on June 10 with the Select Education Subcommittee of the House Education and Labor Committee on the issue. The latest hearing will convene at 1 p.m. in room 2237, Rayburn House Office Building, on September 20, 1977. We will examine closely the present state of the law and the need for Federal legislation in this area. To that end, we will hear from members of State and Federal prosecutorial offices who must bring cases under present law. We will receive testimony also from defense attorneys familiar with State and Federal obscenity law and from members of Federal investigating agencies empowered to investigate contravention of the laws. Finally, a national public interest association will present its study of individual State statutes on child abuse and child pornography. Witness lists will be available in the subcommittee office.

Those wishing to testify or to submit a statement for the record should address their requests to the House Committee on the Judiciary, 2137 Rayburn House Office Building, Washington, D.C. 20515.

UNIONIZATION OF THE ARMED FORCES FOUND UNDESIRABLE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. SIKES) is recognized for 5 mintues.

Mr. SIKES. Mr. Speaker, I congratulate the members of the American Federation of Government Employees on their rejection of the proposal to organize a union of servicemen, and the leadership of AFGE on their decision to support the outcome of the vote. It is significant that the vote was 38,754 for and 151,582 against.

The possibility of a move to unionize the military has stirred considerable opposition in Congress. The Senate Armed Services Committee has approved a bill to bar the unionization of the Armed Forces and it is expected that congressional approval will be given to such a bill.

Military command must establish discipline through training, foster esprit de corps, build morale, develop confidence, and inspire willingness for execution of the mission. Any organization that acts to diminish these attributes can be calamitous. Undivided authority vested solely in the commander is essential to military leadership and only leadership can bring about combat readiness, a prerequisite on the battlefield. If the chain of command is weakened and abridged by superimposing an alien organization upon it, the whole structure of the Armed Forces is in jeopardy.

Unionism in the military system will create divisiveness between a commander and those in his command with predictable results. Union issues, whether they are right or wrong, are divisive. Union leaders, if they are to be effective, must impose themselves between the commander and his unit at some level in the chain of command. Finally, the ultimate weapon of a union is the strike to break an impasse in negotiations, irrespective of its legality.

Union proponents claim that in order to halt erosion of military benefits, to improve grievance procedures, to repre-

sent military men and women against further inequities in pay, promotion standards, customs and rights, it will be necessary for the Armed Forces to unionize. I do not agree. Although efforts consistently are being made to erode benefits enjoyed by the military it has been possible in the main for these benefits to be preserved.

Active and retired members of the Armed Forces should rightfully expect, as part of their compensation a continuation of these benefits, but it is well to remember that the Constitution of the United States entrusts to the Congress the responsibility of providing protection for our country, including organizing and maintaining an adequate Armed Forces. The advocate for members of the Armed Forces is the Congress. To permit military unionism is a denegation of congressional function and responsibility. It is the responsibility of the Congress to act decisively and constructively against proposals which would erode command authority and degrade military rights and benefits.

To represent Armed Forces personnel, the presence of a union would alter the constitutional relationship between the Congress and the Armed Forces and the constitutional chain of command between the President and the Armed Forces. Moreover, since union demands and negotiations ultimately would have to be acted upon by the Congress; legislation probably would be required to rectify alleged inequities.

It would be unrealistic to cite "successful experiments" with unionized Armed Forces in Europe. None of the armies which have been unionized have been tested in combat and, based on available evidence, their ability to withstand the stress and hardship of combat would be severely strained. We cannot afford experiments which could seriously undermine discipline and morale in the Armed Forces.

PANAMA CANAL TREATY

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from New Jersey (Mrs. MEYNER) is recognized for 5 minutes.

Mrs. MEYNER. Mr. Speaker, our Nation has reached a critical historical moment in our relations with Latin America and our self-conception as the most powerful nation in the world. In the next few months, the U.S. Congress will be called upon to consider the question of whether the new Panama Canal treaties will be approved and implemented.

After examining the details of the new treaty, I have concluded that it would be in the best interests of the United States to approve these treaties.

The historical and legal background of the Panama Canal has been discussed exhaustively. Essentially, the facts are these: The basis of the American claim for the Panama Canal is the Hay-Bunau-Varilla Treaty of 1903. This treaty, signed by an American and a Frenchman, granted the United States certain rights "as if it were sovereign." Obviously, these words would not have been necessary if the United States were, in fact, sovereign. In the words of Mr. Bunau-Varilla—

> The United States, *without becoming the sovereign*, received the *exclusive use* of the rights of sovereignty, while respecting the sovereignty itself of the Panama Republic. (emphasis in original)

In recognition of this fact, the United States has continued to pay rent to Panama ever since for the use of the Canal Zone. In the words of Ambassador Ellsworth Bunker:

> We bought Louisiana; we bought Alaska. In Panama, we bought not territory but rights.

Panama and other Latin American countries have long pressed for a change in what they view as a colonial enclave in the Isthmus of Panama. Even John Hay, the American negotiator of the original treaty, admitted that "you and I know too well how many points there are in this treaty to which a Panamanian patriot could object." The last four American Presidents have recognized the need for a treaty and carried out painstaking negotiations to that end. The two treaties now before the Congress are the culmination of those negotiations.

The basic Panama Canal treaty provides that the United States will have primary responsibility for the operation and defense of the canal until the year 2000, with increasing participation by Panamanians over time. After December 31, 1999, Panama will be given control over the canal's operations and defense. The treaty also provides that all payments to Panama will come from canal revenues and that the Panama Canal Company and the Canal Zone Government will be replaced by a Panama Canal Commission, composed of five Americans and four Panamanians appointed by the United States, and a Panama Canal Consultative Committee, composed of an equal number of high-level representatives of the United States and Panama.

The second treaty provides that the canal "as an international transit waterway, shall be permanently neutral * * * in order that both in time of peace and in time of war it shall remain secure and open to peaceful transit by the vessels of all nations on terms of entire equality." It also provides that "the United States of America and the Republic of Panama agree to maintain the regime of neutrality established in this Treaty." In addition, the neutrality treaty states that American warships will be guaranteed expeditious transit through the canal without regard to propulsion or cargo.

I believe that there are three major reasons why these treaties should be approved:

First. The Panama Canal is no longer vital to American trade or defense. While 50 percent of the tonnage transiting the canal in 1924 was U.S. intercoastal trade, it is now under 4 percent. Less than 1 percent of our gross national product is affected by the Canal. Nine Latin American nations are more dependent on the canal in terms of the ocean cargo transported through it than is the United States.

The advent of supertankers and other large vessels has steadily reduced the level of traffic going through the canal, from an average of 39 ships a day in 1973 to 33 ships a day in 1976. During that time, the canal lost about $29 million. A deficit of $24 million projected for this fiscal year forced President Ford to increase tolls for the third time since 1974, when the rates were raised for the first time since the canal was opened in 1914. In the words of the Wall Street Journal—

> The canal's importance is declining steadily, and canal expansion no longer seems economically feasible to many experts.

The increasing size of our naval warships has also reduced the security value of the canal to the United States, which maintains a two-ocean navy in any case. From 1971 through 1975, only 12 small U.S. warships passed through the canal. If the world's navies are ranked on the basis of displacement tonnage of their warships moving through the waterway during those years, the United States comes out tied for 19th place with Communist China, well behind the navies of Sweden, Turkey, Spain, and Japan.

Second. To the extent that the canal is still useful economically and militarily, the interests of the United States in the canal are best guaranteed by passage of the new treaties. As the formal position paper of the Joint Chiefs of Staff states:

> U.S. military interests in the Panama Canal are its use, not its ownership * * * In a hostile environment, even under the current treaty, continued operation of the canal cannot be guaranteed. * * * The preferred protection and defense of the canal would be in conjunction with a friendly Panama.

I am convinced that an indefinite continuation of the status quo would present a greater threat to the operations of the canal and the security of the United States than approval of these treaties. A 1976 report by the Ford administration to Senator CLARK of Iowa indicated that upwards of 100,000 U.S. troops might be needed to adequately defend the canal area against a determined military attack from Panama with outside support. However, the canal is also extremely vulnerable to sabotage, even by a handful of hostile forces.

The neutrality treaty, as I stated above, specifically includes provisions for a continued American defense role with respect to the canal. Frankly, however, paper rights would mean little in the case of a real military conflict. As William F. Buckley, Jr., has written:

> In a wartime situation, we would calmly decide whether to permit the Canal to act as a waterway for enemy traffic, and if we decided negatively, who would say us nay? * * * The notion that in wartime our juridical standing in the Panama Canal Zone means anything at all is quite simply naive. * * * If we are saddled, in time of war, with a president of the United States who declines to stop enemy ships from gamboling through the Canal the better to bomb or blockade our cities, we're going to lose that war whatever happens to the Panama Canal.

Third. Failure to approve these treaties would have grave implications for our relations with Latin America and the rest of the Third World.

Earlier this summer, President Carlos Andres Perez, the President of Venezuela and the leader of the Latin American democracies, met with a small group of Members of Congress. He states that he would be "profoundly disturbed" if Congress failed to approve a new treaty with Panama. He went on to say:

If the present situation is allowed to remain unresolved for any considerable period of time, or if the United States Congress were to interpose itself against a settlement, this would undoubtedly result in a strategic advance for the enemies of the United States—and by that, of course, I mean the forces of international communism. The greatest potential danger to democracy throughout Latin America and to United States relations with Latin America countries would be the failure or long delay to consummate a treaty with Panama.

There are those who claim that giving up land and facilities currently under American control would be a sign of weakness. I would assert that it can also signify strength and greatness. Of course we could stay in Panama. Of course we could defend it against attack. But at what cost and for what reason? The canal is of limited value to us. Access to it can best be assured by agreeing to these treaties. Our relations with Latin America hang in the balance. Why should we indulge in a foolish toughness that would only jeopardize our security and tarnish our name?

LEGISLATION NEEDED TO CORRECT NATIONAL CRISIS IN ADULT CARE HOMES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 5 minutes.

Mr. PEPPER. Mr. Speaker, the Select Committee on Aging, which I am privileged to chair, has been looking into the development of the so-called adult care home industry. What we have found are gross deficiencies and outrageous abuses, and I am today introducing legislation to establish a joint Federal-State policy to begin to deal with the problems we have uncovered.

Let there be no doubt, there is today a national crisis in adult care homes that affects hundreds of thousands of Americans. It is a crisis that threatens to expand and engulf thousands more. It is a crisis that often forces elderly and handicapped to surrender their only income—a small supplemental security income—SSI—check—in return for inadequate food, overcrowded conditions, and vermin-infested quarters that do not meet the most minimum fire and safety standards. It is a crisis of such magnitude and complexity that both State and Federal resources will be needed to correct it.

Mr. Speaker, one of the largest obstacles to dealing with the adult care home controversy is the obscurity in people's minds about these relatively new institutions. In order to properly consider various proposals affecting adult care homes, we must first identify certain basic facts about them. The following questions and answers are based upon our committee's intensive work on this subject which has included research, staff investigations and testimony received at a recent hearing entitled, "The National Crisis in Adult Care Homes."

WHAT IS AN ADULT CARE HOME?

Adult care homes are referred to in various jurisdiction as boarding homes, unlicensed nursing homes, sheltered care homes, and the like. In general, these homes provide room, board and personal assistance to their residents. The level of service provided is less than that provided in an intermediate nursing care facility, and more than one would routinely have available in a private residence. Adult care homes occupy a unique position in the health care—housing—social services continuum. It is a type of long term care that can be differentiated from nursing homes on the one hand and from home health and social services on the other.

Some adult care homes operate out of what were formerly private residences, some were failing and abandoned resort hotels converted to a profitable use, while others are new, large, multi-million-dollar affairs built especially to capture this market.

WHO LIVES IN ADULT CARE HOMES?

Elderly Americans and an untold number of younger people with physical and emotional handicaps seek refuge in adult care homes. Many of these individuals neither need nor want the highly institutionalized life style and medically oriented services available in nursing homes. Yet many of them are not capable of living in a totally independent environment. They are often vulnerable people who need a protected environment, where assistance is available along with appropriate social services. For these, the adult care home represents a logical, necessary alternative.

Some of those living in adult care homes have private assets and are capable of paying their own way. The overwhelming share of adult care home residents, however, appear to be poor and either partially or totaly dependent upon local, State or Federal assistance of one form or another. Payments such as SSI and its State supplements are made directly to individuals who then use this money to purchase adult home care. Although indirect, it is the Government which is the primary financer of adult care homes.

The people who live in adult care homes are often vulnerable and in need of protective services. Many are recent discharges from mental institutions. Others are elderly, too healthy to qualify for nursing home care, and too infirm to stay at home alone.

HOW MANY LIVE IN ADULT CARE HOMES?

Local, State and Federal figures on the number of adult care home residents are, at best, estimates. In hearings before the House Select Committee on Aging, Charles Hynes, Deputy Attorney General for the State of New York stated that—

In New York, we have some 500 of these places housing approximately 23,000 residents. . . . I should point out that this figure does not include the thousands of individuals residing in unlicensed facilities. . . .

Daniel J. Schulder, special assistant to the Governor, State of Pennsylvania, reported that—

The Commonwealth of Pennsylvania has from 75 to 90,000 residents who live in up to 7,000 'boarding' or 'personal care' homes.

Martin Dukler of the Texas Department of Public Welfare said that—

Conservatively some 11,000 elderly recipients of SSI in Texas fall within this group.

Ben C. Crim, director of medicaid administration for the Tennessee Department of Public Health indicated that a study completed several years ago found that "approximately 6,500 people 65 years of age or older" were living in these types of facilities. Once again, these figures are only estimates.

To better assess the presence of adult care homes, one New Jersey jurisdiction, shaken by the fire deaths of four residents, ordered building department officials to make a door to door survey of every suspect boarding home. Their search uncovered many previously unknown and unregulated boarding home operations.

At the national level, the Congressional Budget Office, in its recent issue paper entitled, "Long Term Care for the Elderly and Disabled" attempted to quantify this industry. The report stated:

Based upon the number of domiciliary and foster home residents receiving supplemental SSI payments, it is estimated that perhaps a total of 75,000 to 635,000 people are in sheltered living arrangements . . .

From all this one fact remains clearly agreed upon. The fact is that there are a substantial number of people dependent upon care provided in adult care homes.

Yet, this may represent only a small faction of the need. Studies indicate that thousands are inappropriately placed in nursing homes and could be more effectively served in adult care homes. At the same time, thousands more are not living in sheltered environments and could benefit from this type of care. The CBO report goes on to say that—

C.B.O. estimates that a total of 75,000 to 635,000 (individual) units of congregate housing or rooms in foster homes exist, whereas an estimated 1.3 to 1.7 million persons could conceivably benefit from such living arrangements.

WHY THE CONCERN ABOUT ADULT CARE HOMES?

It is clearly in the public interest for government to act to protect those who, because of infirmity or other disability, are unable to do so for themselves. Further, horror stories detailing financial ripoffs, deprivation of civil rights, physical abuse and neglect, unnecessary deaths due to preventable fire hazards, starvation and mismanagement of medications are emerging. Their frequency and intensity rival those heard from the fledgling nursing home industry not so long ago.

Because Federal SSI, veterans, and other payments are being used to buy those services, the Government is essentially supporting a rapidly developing

industry which has the earmarks, if left unregulated, of becoming a tragedy greater than that which the people of this country experienced with nursing homes.

ARE ADULT CARE HOMES REGULATED NOW?

The answer is yes and no. Some local governments regulate some varieties of adult care homes. Some State governments have taken steps to regulate some types of adult care homes. In both instances, officials admit that where they exist, current regulations are not adequate, nor are these regulations adequately enforced to protect the well-being of the individuals involved. Testimony received by our committee indicates that local and State units of government do not have sufficient resources to do this job alone.

Current Federal law is limited to those institutions, which, in the judgments of individual States, have "substantial" numbers of residents receiving SSI payments. States must publish by October 1, 1977, regulations covering such matters as admissions policies, safety, sanitation and protection of civil rights.

As of today, HEW has not yet published its own regulations to implement this law, first enacted in October 1976. Many States, therefore, will not be able to comply with the October 1977 deadline.

The only sanction available to punish violations of this law, incredibly, is to reduce the SSI checks of residents of homes not in compliance with State regulations, including all those in States with no regulations at all.

NEW LEGISLATION NEEDED

It is in this setting, Mr. Speaker, that I am proposing new legislation. Briefly, my bill would accomplish the following objectives:

Eliminate the SSI reduction for noncompliance, so that the adult care home resident, for whose protection the law was designed, would not be penalized.

Widen the scope of possible matters to be covered by State regulations, to include appropriate items now guaranteed by regulation to nursing home residents.

Offer 100-percent Federal financing to train and pay State inspectors of adult care homes, to assure compliance with new regulations—in order to receive this funding, States would have to satisfy the Secretary of HEW that the State regulations "will assure a reasonable standard of well-being for residents" of adult care homes.

Delay imposition of the new regulations until October 1, 1978.

Require publication of HEW's final implementing regulations within 6 months of enactment.

Mr. Speaker, I believe my bill is a major step forward toward responsible action to alleviate the plight of hundreds of thousands of citizens in adult care homes, most of whom are elderly. I trust that the Ways and Means Committee will consider this legislation with an urgency commensurate with the urgency of the problem.

I insert at this point the text of the bill:

H.R. 8999

A bill to eliminate the recently enacted benefit reduction which is provided for SSI recipients in certain long-term care institutions when such institutions do not meet the standards established by States under section 1616(e) of the Social Security Act, to authorize payments to States to cover the cost of training and compensating personnel to inspect such institutions, and to postpone for one year (until October 1, 1978) the effective date of such section 1616(e)

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 505(d) of the Unemployment Compensation Amendments of 1976 is amended by striking out "Effective October 1, 1977" and inserting in lieu thereof "Effective October 1, 1978".

SEC. 2. Section 1616(e) of the Social Security Act (as added by section 505(d) of the Unemployment Compensation Amendments of 1976, and made effective as provided in the first section of this Act) is amended—

(1) by striking out the second sentence of paragraph (1) and inserting in lieu thereof the following: "The Secretary shall furnish to the States such information about the residences of such recipients as is necessary for the States to establish, maintain, and enforce such standards. Such standards shall be appropriate to the needs of such recipients and the character of the facilities involved, and shall govern such matters as admission and discharge policies, transfer policies, life safety, sanitation, nutrition, access to health and social services, emergency services, medications policies, civil and religious liberties, handling of personal funds, use of patients as workers, freedom of communications, grievance procedures, resident privacy, and records confidentiality."; and

(2) by striking out paragraph (4) and inserting in lieu thereof the following new paragraph:

"(4) The Secretary, upon finding on the basis of a State's certification under paragraph (3) with respect to any services program year (and on the basis of such other evidence as may be available) that the standards established by the appropriate authority or authorities in such State under paragraph (1) will assure a reasonable standard of well-being for residents of institutions described in such paragraph, shall pay to such State, in advance on the basis of estimates (adjusted to take account of any previous overpayments or underpayments) or by way of reimbursement, amounts equal to any sums expended by the State in such year for costs attributable to the compensation or training of personnel (of the appropriate State authority or authorities or of any other public agency or agencies) responsible for inspecting public or private institutions of the type described in paragraph (1) to determine whether they comply with such standards.".

SEC. 3. Notwithstanding any other provision of law, the Secretary of Health, Education, and Welfare, shall issue proposed regulations for the purpose of implementing section 1616(e) of the Social Security Act (as added by section 505(d) of the Unemployment Compensation Act of 1976 and amended by section 2 of this Act) within 90 days after the date of the enactment of this Act, and shall issue final regulations for such purpose within 180 days after such date.

RESOLUTION TO REQUIRE THE TIMELY PRINTING OF CERTAIN AMENDMENTS IN THE CONGRESSIONAL RECORD

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. HAMILTON) is recognized for 15 minutes.

Mr. HAMILTON. Mr. Speaker, the legislative deliberations of the House of Representatives have always taken place in accordance with a set of strict rules. Under the able guidance of the Committee on Rules, the membership of the House has wisely maintained and improved the rules in order to promote the smooth and careful consideration of legislation. Members' concern for a fair and well-informed legislative process has led to the curtailment of many suspect tactics and procedures which have been characteristic of many other national legislatures. The present rules provide for a balanced contribution by both experts and laymen alike. We rely for the most part on a comprehensive system of committees which hear, mark up, and report legislation, but we permit the full House to work its will on the products of the committees through various sorts of amendments. None of us argues that the scheme is perfect, but we can take justifiable pride in the rules which govern our lawmaking activities today.

Although the various sorts of amendments are indispensable tools in any democratic legislature, there is one sort of amendment which is not sufficiently controlled in the House of Representatives. I am referring to the amendment of appropriations bills on the floor. The practice of attaching "riders" to such bills—a practice tolerated in earlier Congresses only when committees were deadlocked on an issue and alternative courses of action were closed—is all too common today. We more and more frequently resort to the practice even when no legislative crisis is imminent. We all know that years of service on a committee makes Members very conversant with the issues in the jurisdiction of the committee. Such expertise is not to be quickly set aside. Too heavy a reliance on amendments to appropriations bills, however, bypasses the Members who have become expert and creates an imbalance in the way we make our laws. Members must decide for themselves whether a few legislative victories justify the institutional damage.

Although this change in the character of the legislative process concerns me on account of the actual consequences it has and the underlying attitudes it reflects, the real problem before us is not that some Members are eager to amend appropriations bills on the floor. It is rather that such amendments are being introduced and adopted in spite of the fact that they have not been announced to or noticed by other Members. The problem is serious because such amendments are often quite important. They typically restrict the disbursement of funds being appropriated, thus rendering ineffective some previously established policy or program. We would all do well to think about the implications of allowing unannounced or unnoticed amendments.

Whether or not one generally votes in favor of unannounced or unnoticed amendments to appropriations bills, it must be conceded that there are strong arguments against their admissibility. Because such amendments may not be expected, their introduction may take many Members by surprise. Members may be acutely embarrassed if they are

inadequately briefed on an issue which has been raised all of a sudden. Worse still, since many Members may be uninformed about such amendments the meaningfulness of the debate and the validity of the final vote are seriously compromised. Consider yet another reason why this method of legislating is suspect: Given the nature of surprise amendments, more often than not committee hearings have not been held and committee reports have not been filed. If the amendments are adopted and the appropriations bills passed, what will the ramifications of the laws be and who will determine the precise intent of Congress in enacting them? Obviously, these questions are not easy to answer. The upshot is an inexcusable uncertainty in the statute books. At a time when many Members are calling for increased efficiency and effectiveness in Government programs and for increased diligence and accountability on the part of public officials, unannounced or unnoticed amendments must cause concern. Congress has no standing to criticize others' failings if it does not put its own house in order.

I am introducing today a resolution amending the Rules of the House of Representatives. The resolution would preserve a longstanding custom of conscientious deliberation in the House. Briefly, it would provide that an amendment to any bill or joint resolution making appropriations may not be considered in the Committee of the Whole House unless the amendment is printed in the CONGRESSIONAL RECORD at least 2 days before the day the amendment is considered and unless at least 25 copies of the amendment are available to the Clerk of the House before the amendment is offered for distribution to Members. To my mind, the 2-day period prior to consideration would give Members a chance to familiarize themselves with the more important potential consequences of such amendments. In the absence of committee hearings and reports, this is the least that can be asked.

Mr. Speaker, I do not favor the elimination of amendments to appropriations bills. The option should remain available to us. However, I believe that the legislative process would be greatly enhanced by guaranteeing advance notice to Members of such amendments. In an attempt to solve a worrisome problem and to secure the integrity of the House of Representatives, I urge support for the resolution which I am introducing.

SECURITY CLASSIFICATION

(Mr. PREYER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PREYER. Mr. Speaker, in several weeks President Carter will issue a new Executive order on security classification. The Subcommittee on Government Information and Individual Rights, which I chair, will hold hearings on this order shortly thereafter.

With this in mind, I asked the subcommittee staff prior to the August recess, to prepare a memorandum regarding the experience we have had under the old order—Executive Order 11652—and suggest ways in which the present system might be improved.

The staff has now concluded its study, and has incorporated its recommendations to me in a detailed memorandum. In view of the order about to be issued, I think this memorandum is particularly timely, and provides some valuable suggestions for reform. Due to the length of the memorandum, I will place in today's RECORD only the portion dealing with the executive branch performance under the order. The staff's recommendations with respect to improvement of the classification system will appear the following day.

I might add that there is a lengthy appendix to this study, consisting of statistical data, which I will not include here, but which may be obtained from the subcommittee staff.

The memorandum follows:

GOVERNMENT INFORMATION AND INDIVIDUAL RIGHTS SUBCOMMITTEE OF THE COMMITTEE ON GOVERNMENT OPERATIONS,
Washington, D.C., September 6, 1977.

MEMORANDUM

Re Security classification: The experience under Executive Order 11652 from 1973 to 1976.
To: Honorable Richardson Preyer, Chairman.
From: Staff of the Subcommittee on Government Information and Individual Rights.

In response to your request, we have prepared the following memorandum regarding the experience under the Nixon Executive order on security classification. We have also suggested, at your urging, a number of modifications in the order which we feel would result in a system less weighted in favor of secrecy.

BACKGROUND

On March 8, 1972, President Richard M. Nixon issued Executive Order 11652 which provided a system for classifying and declassifying information held by the Executive Branch, the disclosure of which could prove harmful to the interests of the United States. In general, the order was viewed as permitting greater public access to information than had been possible under the previous executive order.

According to the interagency committee charged with oversight of its implementation, the new order was drafted to "classify less, to declassify more and sooner, and to better safeguard that information which truly requires protection against unauthorized disclosure in the interests of national security."[1]

EXPLANATION OF EXECUTIVE ORDER 11652

In general

Executive Order 11652 authorizes officials in certain Executive agencies and departments to classify information in their possession if the disclosure of such information, in the judgment of such official, could result in damage to the national security. Whether particular information requires a "Top Secret", "Secret", or "Confidential" classification depends upon the amount of damage the official reasonably expects such information to cause to the United States if it were disclosed.

At the same time an official places a classification marking on a document, the Executive order requires that he make a judgment regarding its declassification. The official may specify a particular date on which such information will be declassified, or he may specify that declassification will occur pursuant to the general declassification schedule set out in the order, or, if he has "Top Secret" classification authority and the information pertains to certain categories set out in the order, he may exempt such information from declassification at any specified time.

All classified information whose declassification is subject to the General Declassification Schedule is declassified no later than 10 years from the date of original classification.

Information which is exempted from declassification may, after 10 years, be reviewed at the request of a department or member of the public for the purpose of determining whether continued classification protection is warranted. Any such request which is denied by the classifying authority may be appealed within the department and then to an interagency committee.

All classified information is automatically declassified under the order after thirty years, unless the head of the originating department determines that additional classification is warranted, in which case, he must specify a particular date for declassification.

The National Security Council is charged with monitoring the implementation of the executive order, and an interagency committee, the Interagency Classification Review Committee, is established to oversee its operation.

Specific provisions

1. Classification Authority. The Executive order, as amended, provides that the heads of the departments listed below, and designated "senior principal deputies and assistants", shall have authority to classify information as "Top Secret":

Executive Office of the President[2]
Central Intelligence Agency
Department of State
Department of the Treasury
Department of Defense[3]
U.S. Arms Control & Disarmament Agency
Department of Justice
National Aeronautics & Space Administration
Agency for International Development
Energy Research and Development Administration
Department of Commerce
Department of Labor
Department of Agriculture
Interstate Commerce Commission

These same officials have the authority to employ the lesser classifications of "Secret" and "Confidential". In addition, the application of these lesser classifications is authorized to the heads of the following departments, as well as designated "senior principal deputies and assistants":

Department of Transportation
Federal Communications Commission
Export-Import Bank of the U.S.
U.S. Civil Service Commission
U.S. Information Agency
General Services Administration
Department of Health, Education & Welfare
Civil Aeronautics Board
Federal Power Commission
National Science Foundation
Overseas Private Investment Corporation
Nuclear Regulatory Commission
Office of Micronesian Status Negotiations
Panama Canal Company

2. Authority to Declassify and Downgrade. A classified document may be declassified or downgraded by the official who was responsible for the original classification, his successor in office, or by an official who is designated by departmental regulation to carry out such actions. Classified information which has been transferred to the National Archives may be declassified by the Archivist after consultation with the de-

Footnotes at end of article.

partment or agency having an interest in the subject matter.

3. Declassification and Downgrading. Declassifying and downgrading of a classification may be performed at any time by the official responsible for the original classification.

Declassification and downgrading may also occur pursuant to the General Declassification Schedule (GDS) set out in the order. This schedule provides: (1) "Top Secret" documents will be downgraded in two years to "Secret", in four years to "Confidential", and declassified entirely ten years from the date of original classification; (2) "Secret" documents will be downgraded to "Confidential in two years, and be declassified entirely eight years from the date of original classification; (3) "Confidential" documents will be declassified 6 years from the date of original classification.

Classified documents may also be exempted from downgrading and declassification until a date later than that prescribed by the GDS, or they may be exempted without specifying a date for declassification, providing (1) that the classifier has "Top Secret" classification authority[4] and (2) the document contains information furnished by foreign governments or international organizations under a pledge of confidentiality, or pertains to cryptography; or discloses intelligence sources and methods, or discloses a system, plan, installation, project or specific foreign relations matter essential to the national security; or contains information that would place a person in immediate jeopardy.

The order further specifies that exemption authority will be "kept to an absolute minimum consistent with national security requirements."

All classified information, including that which has been exempted from declassification, is automatically declassified after thirty years from the date of original classification, unless the head of the originating agency specifies that such document requires further protection. If such determination is made, a declassification date must be assigned. All documents classified before the effective date of the order and more than 30 years old shall be declassified by the Archivist of the United States subject to the authority of an agency head to continue the protection of such document.

4. Improper and Unnecessary Classification. The order provides that "in no case shall information be classified in order to conceal inefficiency or administrative error, to prevent embarrassment to a person or department, to restrain competition or independent initiative, or to prevent for any other reason the release of information which does not require protection in the interest of national security."

The order further provides that any holder of classified information who thinks the classification of a particular document is unnecessary or improper, shall inform the originator of the classification, who shall reexamine it.

The order also contemplates having the Interagency Classification Review Committee act as a "watchdog" over the classification system by requiring it to report to the Agency concerned any unnecessary classification or overclassification which it discovers.

5. The Interagency Classification Review Committee. The order establishes this interagency committee, composed of representatives of State, Defense, Justice, ERDA, CIA, National Security Council, and the National Archives and Records Service. The order provides two functions for the committee: (1) to oversee the implementation of the order within the Exectuive branch, and (2) receive complaints and suggestions with respect to the administration of the order, and take appropriate action regarding them. This latter function has been interpreted as hearing appeals from the various departments with respect to mandatory review requests for classified documents over 10 years old which have been denied.

Footnotes at end of article.

PERFORMANCE UNDER THE EXECUTIVE ORDER

Introduction

The Interagency Classification Review Committee (ICRC), referred to above, carries out its oversight function primarily through a series of quarterly reports required of each agency with classification authority. It also makes on-site inspections of each agency to determine the degree of compliance with the order.

The subcommittee staff, in making the following analysis, has relied entirely upon figures furnished by the ICRC. A summary of this data with respect to all Executive agencies with classification authority is shown at Appendix A. An agency-by-agency summary of the experience under Executive Order 11652 is shown at Appendix B.

Authority to Classify

Twenty-eight Executive agencies currently have the authority to classify information (see p. 3). Within these agencies, in 1976, 13,977 persons were designated as individuals who may exercise classification authority. Of these, 1,487 had the authority to classify information "Top Secret"; 8,557 had the authority to classify information "Secret"; and 3,933 could classify information "Confidential".

These figures represent a considerable reduction in the number of officials authorized to classify information under the previous Executive order. Under the old order, 59,316 persons exercised such authority in 1971. Since the issuance of Executive Order 11652, gradual reductions have taken place each year.

By far, the Department of Defense (with 4,265 authorized classifiers) and the Energy Research and Development Administration (with 4,796 classifiers) have the greatest numbers of persons with classification authority. Together with the CIA (with 1,864) and the State Department (with 1,633), these agencies employ over 85 percent of the Executive branch employees with classification authority.

Frequency of classification actions

Despite the substantial reduction in the number of officials authorized to classify information, there has been no substantial reduction in the number of classification actions undertaken each year under the order. In fact, the number of classification actions in 1976 rose about 800,000 over the previous year.

In 1976, the Executive Branch classified approximately 4.5 million documents. Of this number, approximately 37,000 were classified "Top Secret", 1.3 million were classified "Secret", and 3.2 million were classified "Confidential".

The Department of Defense, with 3,678,145 classification actions in 1976, classified more documents than the remainder of the Executive Branch combined. Other executive agencies with a significant number of classification actions included the CIA (with 574,091), the State Department (with 125,620) and the Energy Research and Development Agency (with 118,551).[5]

In contrast, four agencies with classification authority—the Department of Agriculture, the Civil Aeronautics Board, the Civil Service Commission and the Interstate Commerce Commission—have not classified a single document since 1972. Two other agencies with classification authority—the Federal Power Commission and the National Science Foundation—have only classified 4 documents and 2 documents, respectively, since 1972.

Declassification policies

The Department of Defense—the most prolific classifier—did not report to the ICRC the numbers of documents it had scheduled for declassification in advance of the General Declassification Schedule, or the number which it had exempted from it.[6] Without these figures, a meaningful analysis of declassification policy on a government-wide basis is not possible. There are identifiable trends, however, that emerge from the data reported by the other Executive agencies to the ICRC.[7]

First, it is clear while the Executive order provides that the original classifier may schedule a document for declassification "at any time" in advance of the General Declassification Schedule, this authority is seldom used. In 1976, less than 1% of the classification actions reported to the ICRC (by agencies other than the Department of Defense) were marked for declassification in advance of the General Declassification schedule. This rather negligible percentage has remained constant throughout the history of the order.

Second, it is apparent that, although the General Declassification Schedule is intended by the order to be the normal standard for setting deadlines for declassification, it is being applied in practice to a relatively small percentage of documents that are classified. Excluding the Department of Defense and the Executive Office of the President, which have not reported figures in this manner to the ICRC, approximately 40 percent of the documents classified in 1976 were assigned to the General Declassification Schedule.[8]

Third, despite the language in the Executive order which states that "use of the exemption authority will be kept to an absolute minimum consistent with national security requirements", there is a discernible tendency on the part of some Executive departments and agencies which have the authority to exempt classified materials from the General Declassification Schedule to exempt most of the documents they classify. The CIA, for example, in a sampling of classification actions reported to the ICRC in 1976, exempted all but 366 documents out of 23,494 reported actions from the General Declassification Schedule. Presumably, the Agency's rationale for such a high exemption rate is that such documents revealed "intelligence sources and methods". Similarly, ERDA, in taking 118,551 classification actions in 1976, exempted all but 1,615 documents from the General Declassification Schedule. The Justice Department followed a similar course, exempting all but 1,105 documents out of 13,744 from the General Declassification Schedule.

The notable exception to this general tendency is the Department of State which assigned 104,434 classification actions—out of 125,619 actions taken—in 1976 to the General Declassification Schedule. Although the Executive Order permits exemptions if the documents are received in confidence from a foreign government or if they disclose a "specific foreign relations matter", the State Department has apparently not applied this exemption authority as a matter of routine to the documents which it originates.

Fourth, it is apparent that although the Executive Order provides that only agency heads with "Top Secret" classification authority may exempt classified documents from the General Declassification Schedule, agency heads without "Top Secret" classification authority have exempted classified documents from declassification presumably on the grounds that they relate to documents classified and exempted by other agencies with whom they have dealings. This "de-

rivative exemption authority" is evidenced by the following examples. In 1976, the FCC exempted all 42 of its classification actions for the year from the General Declassification Schedule. The Department of Health, Education and Welfare exempted 79 out of its 82 classification actions in 1976 from the General Declassification Schedule. The Department of Transportation exempted 304 of its 651 classification actions in 1976 from the General Schedule. None of these departments has explicit authority under the Executive order to exempt classified documents from the General Schedule.

Handling declassification requests

The order provides that any person or department may request declassification of any exempted documents at any time after 10 years from the date of original classification. Until 1976, however, the number of requests for declassification under this procedure was extremely small; 621 such requests were made in 1973; 1,017 in 1974; and 1,993 in 1975. In 1976, the number rose to 3,791, but when considered in proportion to the millions of exempted classified documents held by the Executive branch, even this figure appears small. It is, furthermore, noteworthy that many of these requests originate with presidential libraries, which have been requested by historians and researchers to initiate declassification review requests.[9]

Although difficult to document the reasons for the relatively small use of the declassification procedure provided for in the order are apparent. First, private individuals can obtain a similar declassification review at any time (not simply after 10 years) by filing a request under the Freedom of Information Act (5 U.S.C. 552(b)). If such a request is denied by the department concerned, the requestor has the option of seeking judicial relief, an option not available under the Executive order. Second, the procedure for declassification review under the order is not well-known to the public. Finally, the fact that this procedure is available only for documents which are more than 10 years old, necessarily limits its use, for the most part, to persons with an academic interest in the subject. The procedure would not ordinarily be useful, for instance, to the press or other institutions concerned with contemporary decisionmaking.

Agencies to which declassification requests have been made have, for the most part, complied in whole or in part with such requests. Out of the 5,477 declassification review requests received and acted upon by Executive agencies from 1973–1976, 53 percent were granted in full and 33 percent were granted in part. Only 14 percent of the requests were denied. Of the requests which were denied, either in whole or in part, 191 were appealed within the agencies concerned to special departmental committees. Of those requests appealed, 28 were granted in full, and 83 were granted in part.

Of those requests which were denied in whole or in part by the departmental committees, 43 were appealed to the Interagency Classification Review Committee (ICRC). The ICRC resolved these appeals by granting 7 in full and 16 in part; 13 appeals were denied.

It should furthermore be noted that beginning in 1976, the ICRC began hearing appeals of Freedom of Information Act requests for documents over 10 years old which had been denied by an Executive agency. Although the Executive order does not explicitly give the ICRC this authority, these appeals were heard on the theory that the requestor, being denied a request under the FOIA procedures, could begin anew under the Executive order procedures and request declassification. Since the department's response would be presumed to be the same, the requestor was permitted to "shortcut" this procedure and appeal directly to the ICRC under the Executive order. Since May 1976, the ICRC has heard 6 appeals of this nature, 1 of which was granted in full, 4 were granted in part, and 1 was denied.

Declassifying old records

The Executive order provides that the original classification authority may declassify a document "at any time". It further mandates the declassification of any document over thirty years old, unless the original classifying authority decides to continue the classification as being essential to national security.

To a limited degree, several executive agencies subject to the order have instituted on their own declassification programs to eliminate or reduce their classified inventories. For the most part, these declassification efforts have been limited to very old records held by these agencies. For example, ERDA reviewed 250,109 documents in its classified inventory in 1976 and declassified 71 percent of these documents. In the case of the Department of Defense, this effort has been even more significant. Since 1970, DOD has reviewed over 200 million classified documents, and has declassified approximately 98 percent of those records reviewed.

Responsibility for declassifying documents over thirty years old rests with the Archivist of the United States. Since 1972, over 200 million documents have been declassified under this program.

Correcting classification abuses

The Order contains specific prohibitions concerning improper use of the classification system. Furthermore, it requires anyone in possession of a classified document who is of the opinion that the document is overclassified or unnecessarily classified to inform the original classification authority of his views. Finally, the Order implicitly directs the ICRC to monitor the system for unnecessary classification or overclassification since it instructs the ICRC to report to each agency and the individual responsible any improprieties it discovers with respect to such misuse.

The ICRC requires each agency with classification authority to submit a quarterly report of "classification abuses". While the ICRC does ask each agency to report the instances of "overclassification" and "unnecessary classification" it has discovered each quarter, the bulk of the "classification abuses" reported to the ICRC concern administrative shortcomings in implementing the technical provisions of the Order, e.g., failure to downgrade on schedule, failure to identify the classification authority or exemption category, failure to mark the documents correctly.

From 1973–76, only 7 of the 28 agencies with classification authority have reported any instances of unnecessary classification. In all, 131 such instances have been reported to the IRCR during this period.

Insofar as overclassification is concerned, only 8 of the 28 agencies have reported abuses of this nature. In all, 88 instances of overclassification were reported during the four-year period.

The ICRC requires no report of the instances in which persons in possession of classified information have challenged the classification, as is contemplated in the Executive order.

While the ICRC does require a report of the agency's corrective action when an instance of over-classification or unnecessary classification is discovered, it does not seek to determine the circumstances of the abuse, nor whether the corrective action taken was appropriate.

Finally, the ICRC does not, as a practical matter, seek out such abuses during its on-site inspections of agency records. If such abuse were evident, the ICRC would presumably include it in its inspection report, but the ICRC itself does not ordinarily attempt to pass judgment on the propriety of agency classifications.

Preventing unauthorized disclosures

One purpose of the Executive Order is to prevent disclosures of information which could be harmful to the national security. The number of unauthorized disclosures, therefore, is often viewed as a measure of the Order's effectiveness. The ICRC requires a quarterly report of such violations.

During the period from 1973–76, only 6 of the 28 agencies with classification authority reported any unauthorized disclosures. In all, 47 unauthorized disclosures were reported to the ICRC during this four-year period.

The ICRC does not require that it be informed of the circumstances of each unauthorized disclosure, nor does it ask for a report of how such violation was treated by the agency, e.g. whether an investigation took place, whether criminal charges were brought, or whether it was ignored.

FOOTNOTES

[1] Interagency Classification Review Committee, *1975 Progress Report*, p. 1.

[2] The Executive Office of the President includes eleven offices: Council of Economic Advisers, Council on International Economic Policy, Domestic Council, Intelligence Oversight Board, National Security Council, Office of Management and Budget, Office of Science and Technology Policy, Office of the Special Representative for Trade Negotiations, Office of Telecommunications Policy, the President's Foreign Intelligence Advisory Board (abolished in 1977), and the White House Office.

[3] Includes the Departments of the Army, Navy, and Air Force, the National Security Agency and the Defense Intelligence Agency.

[4] The only agency with "Secret" classification authority which is permitted to exempt documents from the General Declassification Schedule is the U.S. Information Agency. Conversely, one agency with "Top Secret" classification authority, the Department of Labor, is not authorized to exempt documents from declassification. Both exceptions to the general policy contained in Executive Order 11652 were made in an amendment dated September 30, 1972.

[5] While DoD and ERDA have a similar number of officials authorized to classify information (4,265 and 4,796 respectively), DoD officials took 31 times as many classification actions in 1976.

[6] Presumably, due to the enormous volume of classification actions, DoD was unable to categorize such actions according to declassification requirement.

[7] In addition to DoD, the Executive Office of the President also failed to categorize its classification actions according to declassification requirement, and CIA reported only a sampling of such actions. All other agencies with classification authority reported these figures to the ICRC.

[8] This figure must be weighed in view of the fact that two of the agencies which are the most prolific classifiers, CIA and ERDA, also have the highest exemption rates among government agencies.

[9] Since the Freedom of Information Act has not been applied to presidential papers, the procedures set forth in the Executive order constitute the only avenue through which declassification of presidential documents may be sought.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. FOUNTAIN (at the request of Mr. WRIGHT), after 3:45 p.m. today and for Friday, September 9, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. JEFFORDS), to revise and extend their remarks, and to include extraneous matter to:)

Mr. MCKINNEY, for 20 minutes, today.
Mr. FINDLEY, for 5 minutes, today.
Mr. BOB WILSON, for 5 minutes, today.
Mr. SARASIN, for 5 minutes, today.
Mr. BURKE of Florida, for 10 minutes, today.
Mr. GILMAN, for 60 minutes, today.

(The following Members (at the request of Mr. CAVANAUGH) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.
Mr. GONZALEZ, for 5 minutes, today.
Mr. MURPHY of Pennsylvania, for 15 minutes, today.
Mr. PREYER, for 5 minutes, today.
Mr. CONYERS, for 5 minutes, today.
Mr. SIKES, for 5 minutes, today.
Mrs. MEYNER, for 5 minutes, today.
Mr. PEPPER, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. PREYER, notwithstanding the fact that it exceeds two pages of the CONGRESSIONAL RECORD and is estimated by the Public Printer to cost $1,127.

Mr. HOWARD, following the debate and vote on the amendment in the nature of a substitute offered by Mr. ROUSSELOT on House Concurrent Resolution 341.

Mr. CONTE, to revise and extend his remarks immediately prior to the vote on the Foley amendment in the Committee of the Whole today.

Mr. LAGOMARSINO, to revise and extend his remarks immediately prior to the vote on the Rousselot amendment in the Committee of the Whole today.

Mr. AMBRO, immediately after the vote on the Addabbo amendment to the Mahon motion on Senate amendment No. 41 to H.R. 7933 in the House today.

(The following Members (at the request of Mr. JEFFORDS) and to include extraneous matter:)

Mr. HILLIS.
Mr. BURGENER.
Mr. MCCLORY.
Mr. STEERS.
Mr. SYMMS.
Mr. RINALDO.
Mr. ABDNOR in three instances.
Mr. BAFALIS.
Mr. DORNAN in two instances.
Mr. MCKINNEY.
Mr. DERWINSKI in three instances.
Mr. QUIE.
Mr. CRANE.
Mr. ASHBROOK in three instances.
Mr. LENT.
Mr. DEVINE.
Mr. ANDERSON of Illinois.
Mr. BURKE of Florida.
Mr. MICHEL.
Mr. ROBERT W. DANIEL, JR.
Mr. WHALEN in two instances.

(The following Members (at the request of Mr. CAVANAUGH) and to include extraneous matter:)

Mr. EDGAR in two instances.
Mr. FRASER in three instances.
Mr. RICHMOND.
Mr. MCDONALD in five instances.
Mr. WOLFF in three instances.
Mr. MURPHY of Illinois.
Mr. GONZALEZ in three instances.
Mr. ANDERSON of California in three instances.
Mr. BOLAND.
Mr. CLAY in two instances.
Mr. FORD of Michigan.
Mr. FORD of Tennessee.
Mr. EILBERG in three instances.
Mr. UDALL in five instances.
Mr. OBERSTAR.
Mrs. SCHROEDER in three instances.
Mr. TEAGUE in 10 instances.
Mr. HANNAFORD.
Mr. KREBS.
Mr. LEGGETT.
Ms. OAKAR in two instances.
Mr. BLOUIN.
Mr. STUMP in two instances.
Mr. MILFORD.
Mr. PHILLIP BURTON.
Mr. NIX.
Mr. PEPPER.
Mr. KILDEE.
Mr. DOWNEY.
Mr. OTTINGER.
Mr. JACOBS.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 1752. An act to extend certain programs under the Elementary and Secondary Education Act of 1965 for one year, and for other purposes; to the Committee on Education and Labor.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 1153. An act to abolish the Joint Committee on Atomic Energy and to reassign certain functions and authorities thereof, and for other purposes.

ADJOURNMENT

Mr. CAVANAUGH. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 5 minutes p.m.), the House adjourned until tomorrow, Friday, September 9, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2261. A communication from the President of the United States, transmitting a statement in support of the administration's proposal to sell Iran seven Airborne Warning and Control Systems (AWACS) (H. Doc. No. 95–216); to the Committee on International Relations and ordered to be printed.

2262. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a report covering the first quarter of fiscal year 1977 on receipts and disbursements pertaining to the disposal of surplus military supplies, equipment, and material, and for expenses involving the production of lumber and timber products, pursuant to section 712 of Public Law 94–212; to the Committee on Appropriations.

2263. A letter from the Director, Defense Security Assistance Agency transmitting a report on the impact on U.S. readiness of the proposed sale by the Air Force of certain defense articles and services to Egypt (transmittal No. 77–80), pursuant to section 813 of Public Law 94–106; to the Committee on Armed Services.

2264. A letter from the Director, Defense Security Assistance Agency, transmitting a report on the impact on U.S. readiness of the proposed sale by the Air Force of certain defense articles and services to Egypt (transmittal No. 77–83), pursuant to section 813 of Public Law 94–106; to the Committee on Armed Services.

2265. A letter from the President and Chairman, Export-Import Bank of the United States, transmitting a statement desccribing a proposed transaction exceeding $60 million with the Bank of Tokyo, Ltd., Japan, pursuant to section 2(b)(3) of the Export-Import Bank Act of 1945, as amended; to the Committee on Banking, Finance and Urban Affairs.

2266. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–61, "To authorize variable periods for the issuanse and expiration of licenses, registrations and permits," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

2267. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–63, "To provide for the elimination of lead in public property frequented by children," pursuant to section 602(a) of Public Law 93–198; to the Committee on the District of Columbia.

2268. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–64, "To provide standards for definition by the Board of Appeals and Review and to provide for an expedited procedure in cases involving certification of certain persons with prior criminal convictions as security officers, and for other purposes," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

2269. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–67, "To provide for additional notice requirements to Advisory Neighborhood Commissions from certain governmental agencies," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

2270. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–77, "To provide Spanish language versions of certain forms, brochures, and other materials published by the government of the District of Columbia," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

2271. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–78. "To select private financial institutions to be deposi-

tories for District funds; to maximize earnings on public funds in a manner to benefit District citizens who traditionally have not had access to conventional credit; and to stimulate the economy of the District," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

2272. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–79, "To establish standards and procedures to protect users of hearing aids," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

2273. A letter from the Acting Secretary of the Interior, transmitting a proposed plan for the use and distribution of the judgment funds awarded to the Fort Mohave Tribe of Arizona, California, and Nevada by the Indian Claims Commission in docket No. 295–A, pursuant to sections 2 and 4 of Public Law 93–134; to the Committee on Interior and Insular Affairs.

2274. A letter from the Director, Bureau of Outdoor Recreation, Department of the Interior, transmitting the final report and environmental impact statement on the proposal to designate portions of the Upper Mississippi River, Minn., as a component of the National Wild and Scenic Rivers System, pursuant to section 4(a) of the Wild and Scenic Rivers Act, as amended (H. Doc. No. 95–217); to the Committee on Interior and Insular Affairs and ordered to be printed.

2275. A letter from the Assistant Administrator for Legislative Affairs, Agency for International Development, Department of State, transmitting notice of an increase in the funding level of the Agency's fiscal year 1977 program for the United Nations Fund for Population Activities, pursuant to section 653(b) of the Foreign Assistance Act of 1961, as amended; to the Committee on International Relations.

2276. A letter from the Director, Defense Security Assistance Agency, transmitting the quarterly report as of June 30, 1977, on foreign military sales letters of offer, pursuant to section 36(a) of the Arms Export Control Act; to the Committee on International Relations.

2277. A letter from the Director, Defense Security Assistance Agency, transmitting notice of the Air Force's intention to offer to sell certain defense articles and services to Iran (transmittal No. 77–46A), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International relations.

2278. A letter from the Director, Defense Security Assistance Agency, transmitting notice of the Air Force's intention to offer to sell certain defense articles and services to Egypt (transmittal No. 77–80), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

2279. A letter from the Director, Defense Security Assistance Agency, transmitting notice of the Air Force's intention to sell certain defense articles and services to Egypt (transmittal No. 77–83), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

2280. A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to amend the Indochina Migration and Refugee Assistance Act of 1975 to extend the period during which refugee assistance may be provided, and for other purposes; to the Committee on the Judiciary.

2281. A letter from the Administrator of General Services, transmitting a prospectus proposing alterations at the Boston, Mass., U.S. Appraisers Stores, pursuant to section 7(a) of the Public Buildings Act of 1959, as amended; to the Committee on Public Works and Transportation.

2282. A letter from the Chairman, Tennessee Valley Authority, transmitting a report on the Authority's continuing study of competition in the coal and uranium markets, pursuant to sections 14 and 22 of the Tennessee Valley Authority Act, as amended; to the Committee on Public Works and Transportation.

2283. A letter from the Comptroller General of the United States, transmitting a report on the examination of financial statements of the Overseas Private Investment Corporation for fiscal years 1976 and 1975 (ID–77–24, September 7, 1977), pursuant to section 106 of the Government Corporation Control Act (H. Doc. No. 95–218); jointly, to the Committees on Government Operations, and International Relations, and ordered to be printed.

2284. A letter from the Comptroller General of the United States, transmitting a report on agency programs for Federal civilian employees with alcohol-related problems (HRD–77–75, September 7, 1977); jointly, to the Committees on Government Operations, Interstate and Foreign Commerce and Post Office and Civil Service.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. EDWARDS of California: Committee on the Judiciary. H.R. 8200. A bill to establish a uniform Law on the subject of bankruptcies; with amendment (Rept No. 95–595). Referred to the Committee of the Whole House on the State of the Union.

Mr. NATCHER: Committee on Appropriations. H.R. 9005. A bill making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending September 30, 1978, and for other purposes (Rept. No. 95–596). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 3377. A bill to authorize the Wichita Indian Tribe of Oklahoma, and its affiliated bands and groups of Indians, to file with the Indian Claims Commission any of their claims against the United States for lands taken without adequate compensation, and for other purposes (Rept. No. 95–597). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL. Committee on Interior and Insular Affairs. H.R. 8336. A bill to enhance the outdoor recreation opportunities for the people of the United States by expanding the national park system, by providing access to and within areas of the national park system, and for other purposes; with amendment (Rept. No. 95–598). Referred to the Committee of the Whole House on the State of the Union.

REPORTED BILL SEQUENTIALLY REFERRED

[Omitted from the Record of September 7, 1977]

Under clause 5 of rule X, the bill to amend the act of October 2, 1968, an act to establish a Redwood National Park in the State of California, and for other purposes (H.R. 3813), as reported on August 5, 1977, was referred by the Speaker, as follows:

The Committee of the Whole House on the State of the Union discharged, and referred to the Committee on Appropriations for a period not to exceed fifteen legislative days with instructions to report back to the House as provided in section 401(b) of Public Law 93–344.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BONIOR:

H.R. 8962. A bill to amend the Federal Insecticide, Fungicide, and Rodenticide Act for the purpose of prohibiting the use of the chemical dibromochloropropane; to the Committee on Agriculture.

H.R. 8963. A bill to amend section 491 of the Higher Education Act of 1965 with respect to the eligibility of proprietary schools; to the Committee on Education and Labor.

By Mr. PHILLIP BURTON:

H.R. 8964. A bill to amend title VII of the Civil Rights Act of 1964 to prohibit sex discrimination on the basis of pregnancy; to the Committee on Education and Labor.

By Mr. DRINAN (for himself, Mr. BAUCUS, Mr. CONYERS, Mr. FAUNTROY, Mrs. HECKLER, Mr. LAFALCE, Mr. MAGUIRE, Mrs. MEYNER, Mr. MINETA, Mr. MOAKLEY, Mr. OTTINGER, Mr. PATTERSON of California, Mr. RICHMOND, Mrs. SPELLMAN, Mr. STEERS, and Mr. WALGREN):

H.R. 8965. A bill to amend the Wagner-Peyser Act to provide more effective job placement services, improved administration and management planning, review of policy alternatives, innovative employment services, and for other purposes; to the Committee on Education and Labor.

By Mr. DRINAN (for himself, Mr. CORNWELL, Mr. HARRIS, and Mr. MCKINNEY):

H.R. 8966. A bill to provide for certain research and demonstration respecting the disposal of sludge, the reclamation of waters damaged by sludge and sewage, assistance to State and local governments for the removal of sludge and other solid waste from waters and shoreline areas, and to provide that grants for waste treatment works shall be made only if such works provide for environmentally sound sludge management; to the Committee on Public Works and Transportation.

By Mr. EDGAR (for himself, Mr. BAUCUS, Mr. CONTE, Mrs. HECKLER, Mr. HOLLENBECK, Mr. LUKEN, Mr. NOLAN, Mr. ROE, Mr. SKELTON, Mr. STARK):

H.R. 8967. A bill to authorize in the Environmental Protection Agency a Federal program of research, development, and demonstration designed to advance the technology of removing oil spills; to the Committee on Science and Technology.

By Mr. EVANS of Georgia:

H.R. 8968. A bill to amend the Consolidated Farm and Rural Development Act for the purposes of increasing the maximum amounts of real estate and operating loans; to the Committee on Agriculture.

H.R. 8969. A bill revising repayment schedules and eligibility requirements for emergency loans; to the Committee on Agriculture.

H.R. 8970. A bill to amend the Federal Food, Drug, and Cosmetic Act to permit the marketing of certain food additives if the Secretary determines that their probable carcinogenic effect on humans is extremely small; to the Committee on Interstate and Foreign Commerce.

H.R. 8971. A bill to provide for the payment of losses incurred as a result of the ban on the use of the chemical Tris in apparel, fabric, yarn or fiber and for other purposes; to the Committee on the Judiciary.

H.R. 8972. A bill to amend XVIII of the Social Security Act to provide for the coverage of certain psychologists' services under the supplementary medical insurance benefits program established by part B of such title; jointly, to the Committees on Ways and Means and Interstate and Foreign Commerce.

By Mrs. FENWICK (for herself, Mr. STEERS, Mr. EILBERG, Mr. WHITEHURST, Mr. BEDELL, Mr. VAN DEERLIN, Mr. CLEVELAND, Mr. DOWNEY, Mr. WHITLEY, Mr. HARRIS, Mr. EDWARDS of Oklahoma, Ms. MEYNER, Mr. FRASER, Ms. SPELLMAN, Mr. FISH, Mr. MITCHELL of Maryland, and Mr. STOCKMAN):

H.R. 8973. A bill to amend the Interstate Commerce Act to liberalize entry into motor carrier and contract carrier operations, and for other purposes; to the Committee on Public Works and Transportation.

By Mr. MAGUIRE:

H.R. 8974. A bill to strengthen and improve the early and periodic screening, diagnosis, and treatment program, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. MONTGOMERY (for himself, Mr. BOWEN, Mr. GUYER, Mr. COCHRAN of Mississippi, and Mr. LOTT):

H.R. 8975. A bill to amend section 1448 of title 10, United States Code, to provide survivor benefits in case of death of certain members or former members of the Armed Forces who die before becoming entitled to retired pay for non-Regular service, and for other purposes; to the Committee on Armed Services.

By Mr. MILLER of Ohio:

H.R. 8976. A bill to amend title 38 of the United States Code to extend to 45 days the period between semesters, terms, or quarters during which the Administrator of Veterans' Affairs may continue to pay educational assistance or subsistence allowances to eligible veterans and eligible persons if the educational institution is closed during such period for more than one full calendar month as part of an energy conservation program or as a result of a fuel curtailment; to the Committee on Veterans' Affairs.

By Mr. MOSS (for himself, Mr. OTTINGER, Mr. DICKS, Mr. SCHEUER, Ms. SPELLMAN, Mr. CONYERS, and Mr. SANTINI):

H.R. 8977. A bill to amend title XIX of the Social Security Act to improve the early and periodic screening, diagosis, and treatment program; to the Committee on Interstate and Foreign Commerce.

By Mr. NIX:

H.R. 8978. A bill to provide for congressional review of proposed changes in postal services; jointly, to the Committees on Post Office and Civil Service, and Rules.

By Mr. PREYER (for himself and Mr. MCCLOSKEY):

H.R. 8979. A bill to improve the operation and extend the scope of the Federal Advisory Committee Act; to the Committee on Government Operations.

By Mr. ROSTENKOWSKI (for himself, Mr. ROGERS and Mr. WHITEHURST):

H.R. 8980. A bill to strengthen the capability of the Government to detect, prosecute, and punish fraudulent activities under the medicare and medicaid programs, and for other purposes; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. ST GERMAIN:

H.R. 8981. A bill to provide improved consumer deposit services, to promote competitive balance among financial institutions, and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

By Mr. TRAXLER:

H.R. 8982. A bill to amend title II of the Social Security Act to provide cost-of-living increases in benefits computed under the special minimum primary insurance amount formula, the same as in the case of other monthly benefits payable under such title; to the Committee on Ways and Means.

By Mr. BURKE of Florida:

H.R. 8983. A bill to provide for the construction of a Veterans' Administration hospital in Broward County, Fla.; to the Committee on Veterans' Affairs.

By Mr. ROBERT W. DANIEL, JR.:

H.R. 8984. A bill to amend the Securities Exchange Act of 1934; to the Committee on Interstate and Foreign Commerce.

By Mr. DINGELL:

H.R. 8985. A bill to amend the Energy Policy and Conservation Act to provide for the establishment of energy efficiency standards for electric motors and pumps, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. FINDLEY:

H.R. 8986. A bill to authorize a program to alleviate siltation problems at Quincy Bay and Broad and Triangle Lake areas, Illinois; to the Committee on Public Works and Transportation.

H.R. 8987. A bill to provide for timely payment under medicare of certain physicians' fees on account of services furnished on a deceased individual; jointly, to the Committees on Ways and Means and Interstate and Foreign Commerce.

By Mr. FUQUA:

H.R. 8988. A bill to amend the Miller Act to authorize the payment of attorney fees and litigation cost to a prevailing plaintiff from performance bonds furnished by Federal contractors; to the Committee on the Judiciary.

H.R. 8989. A bill to provide for the issuance of a commemorative postage stamp in honor of the 50th anniversary of the creation of the Future Farmers of America; to the Committee on Post Office and Civil Service.

By Mr. HAMMERSCHMIDT (for himself, Mr. ANDERSON of California, Mr. HARSHA, Mr. KRUEGER, Mr. MARRIOTT, Mr. ANDREWS of North Dakota, Mr. AKAKA, Mr. MOORE, Mr. BONKER, Mr. THORNTON, Mr. BAUCUS, Mr. TREEN, Mr. MURPHY of Pennsylvania, Mr. SCHULZE, Mr. BADHAM, Mr. LUJAN, Mr. JENRETTE, Mrs. SPELLMAN, and Mr. YOUNG of Missouri):

H.R. 8990. A bill to amend the Airport and Airway Development Act of 1970 to require the establishment of a system of automated flight service stations; to the Committee on Public Works and Transportation.

By Mr. JOHNSON of California:

H.R. 8991. A bill to amend Public Law 94–98 to authorize the Smithsonian Institution to construct museum support facilities; to the Committee on Public Works and Transportation.

By Mr. JOHNSON of California (for himself, Mr. HARSHA, Mr. MINETA, and Mr. WALSH):

H.R. 8992. A bill to amend title 3 of the United States Code to change the name of the Executive Protective Service; to the Committee on Public Works and Transportation.

By Mr. JOHNSON of California (for himself, Mr. HARSHA, Mr. MINETA, and Mr. WALSH):

H.R. 8993. A bill to designate the Secret Service Training Center as the "James J. Rowley Secret Service Training Center"; to the Committee on Public Works and Transportation.

By Mr. LEHMAN:

H.R. 8994. A bill to amend the Land and Water Conservation Fund Act of 1965, relating to the issuance to certain disabled individuals of lifetime admission permits to certain areas within the National Park System and national recreation areas; to the Committee on Interior and Insular Affairs.

By Mr. McDADE:

H.R. 8995. A bill to amend title II of the Social Security Act to eliminate the present inequity that prevents self-employed individuals with maximum earnings, in a year in which the earnings base increases, from ever receiving full credit for such earnings; to the Committee on Ways and Means.

By Mr. MOAKLEY:

H.R. 8996. A bill to amend title XVIII of the Social Security Act to authorize payment under the supplementary medical insurance program for the cutting and removal of corns, warts, and calluses and the reduction of club nails; jointly, to the Committees on Ways and Means and Interstate and Foreign Commerce.

By Mr. NEAL (for himself, Mr. WHALEN, Mr. BEDELL, Mr. CORNWELL, Mr. EDGAR, Mr. GILMAN, Mr. GUDGER, Mr. HARRINGTON, Mrs. HOLT, Mr. KOSTMAYER, Mr. McDADE, Mrs. SPELLMAN, Mr. WALGREN, and Mr. YOUNG of Missouri):

H.R. 8997. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide that rescue squad members are entitled to death benefits made available under such act; to the Committee on the Judiciary.

By Mr. PEPPER:

H.R. 8998. A bill to amend the Older Americans Act of 1965 to authorize the Commissioner on Aging to make grants for the establishment of internship programs for secondary school students in the field of aging; to the Committee on Education and Labor.

H.R. 8999. A bill to eliminate the recently enacted benefit reduction which is provided for SSI recipients in certain long-term care institutions when such institutions do not meet the standards established by States under section 1616(e) of the Social Security Act, to authorize payments to States to cover the cost of training and compensating personnel to inspect such institutions, and to postpone for 1 year (until October 1, 1978) the effective date of such section 1616(e); to the Committee on Ways and Means.

By Mr. ANDERSON of California (for himself, Mr. ALLEN, Mr. APPLEGATE, Mr. BEARD of Rhode Island, Mr. CARNEY, Mr. CORNELL, Mr. CORMAN, Mr. EDGAR, Mr. GUYER, Mr. HANNAFORD, Mrs. HECKLER, Ms. HOLT, Mr. JOHNSON of California, Mr. MOTTL, Mr. MURPHY of New York, Mr. PERKINS, Mr. PEPPER, Mr. QUILLEN, Mr. ROYBAL, Mr. SAWYER, Mr. SISK, Mr. STAGGERS, Mr. WALSH, Mr. WOLFF, and Mr. ZABLOCKI):

H.R. 9000. A bill to amend title 38 of the United States Code in order to provide for the payment of service pensions to veterans of World War I and for certain surviving spouses and certain children; to the Committee on Veterans' Affairs.

By Mr. SMITH of Iowa (for himself, Mr. CONTE, Mr. ST GERMAIN, Mr. NOWAK, Mr. LE FANTE, Mr. ADDABBO, and Mr. McDADE):

H.R. 9001. A bill to amend the Small Business Act to facilitate the administration of the Small Business Administration's disaster loan program; to the Committee on Small Business.

By Mr. WOLFF (for himself, Mr. BEDELL, Mr. CAPUTO, Mr. CLEVELAND, Mr. COLLINS of Texas, Mr. DAN DANIEL, Mr. EDWARDS of Oklahoma, Mr. EILBERG, Mr. ERTEL, Mr. FISH, Mr. GILMAN, Mr. HYDE, Mr. KINDNESS, Mr. MANN, Mr. MINETA, Mr. MITCHELL of Maryland, Mr. MURPHY of New York, Mr. MURPHY of Pennsylvania, Mr. NOLAN, Mr. O'BRIEN, Mr. PATTISON of New York, Mr. SEIBERLING, Mr. STEERS, Mr. TREEN, and Mr. VENTO):

H.R. 9002. A bill to amend the Internal Revenue Code of 1954 to allow certain indi-

viduals whose employers make contributions to pension plans a deduction for their contributions to employer pension funds and to allow certain individuals to establish modified individual retirement plans when the employer-employee pension contributions are small; to the Committee on Ways and Means.

By Mr. NATCHER:

H.R. 9005. A bill making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending September 30, 1978, and for other purposes.

By Mr. ASHBROOK (for himself, Mr. DEVINE, Mr. WHITEHURST, Mr. QUILLEN, Mr. KEMP, Mr. DORNAN, Mr. KINDNESS, Mr. DAN DANIEL, Mr. GUYER, Mr. LENT, Mr. WALSH, Mr. NIX, Mr. GAYDOS, Mr. BOB WILSON, Mr. BAUMAN, Mr. JOHN T. MYERS, Mr. BOWEN, Mr. TREEN, Mr. MOLLOHAN, Mr. WATKINS, Mr. MILLER of Ohio, Mr. FISH, Mr. FITHIAN, Mr. HYDE, and Mr. MITCHELL of New York):

H.J. Res. 585. Joint resolution proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

By Mr. WOLFF (for himself, Mr. BADILLO, Mr. BEDELL, Mr. BENJAMIN, Mr. BEVILL, Mr. BRECKINRIDGE, Mr. BURKE of Massachusetts, Mr. DOWNEY, Mr. ERTEL, Mr.. FISH, Mr. GEPHARDT, Mr. GILMAN, and Mr. GUYER):

H.J. Res. 586. Joint resolution to authorize the President to call a White House Conference on Families in 1979, and for other purposes; to the Committee on Education and Labor.

By Mr. WOLFF (for himself, Mr. HARRINGTON, Mr. LAFALCE, Mr. LAGOMARSINO, Mr. MCHUGH, Mr. MCKAY, Ms. MIKULSKI, Mr. MITCHELL of Maryland, Mr. MOAKLEY, Mr. MURPHY of Pennsylvania, Mr. PANETTA, Mr. QUIE, Mr. ROYBAL, Mr. VENTO, and Mr. WINN):

H.J. Res. 587. Joint resolution to authorize the President to call a White House Conference on Families in 1979, and for other purposes; to the Committee on Education and Labor.

By Mr. COHEN:

H. Con. Res. 343. Concurrent resolution expressing the sense of the Congress concerning the collection and publication of census and other information pertaining to Americans age 65 and older; jointly, to the Committees on Education and Labor, and Post Office and Civil Service.

By Mr. MOTTL:

H. Con. Res. 344. Concurrent resolution expressing the sense of the Congress that the proposed toll increases on the St. Lawrence Seaway are excessive and should not be adopted; to the Committee on Public Works and Transportation.

By Mr. COTTER:

H. Res. 751. Resolution relative to committee hearings on the Nation's future telecommunications policy; to the Committee on Interstate and Foreign Commerce.

By Mr. FLYNT (for himself and Mr. SPENCE):

H. Res. 752. Resolution to allow any attorney employed or retained by the Committee on Standards of Official Conduct to take the deposition of any person for the purpose of conducting any inquiry or investigation pursuant to House Resolution 252; to the Committee on Rules.

By Mr. HAMILTON:

H. Res. 753. Resolution to amend the Rules of the House of Representatives to provide that an amendment to any bill or joint resolution making appropriations may not be considered in the Committee of the Whole House unless the amendment has been printed in the Congressional Record at least 2 days before its consideration, and for other purposes; to the Committee on Rules.

By Mr. PATTISON of New York (for himself, Mr. BEILENSON, Mr. CARNEY, Ms. CHISHOLM, Ms. COLLINS of Illinois, Mr. EDWARDS of Oklahoma, Mr. GILMAN, Mr. GUDGER, Mr. KRUEGER, Mr. PEPPER, and Mr. RAHALL):

H. Res. 754. Resolution to authorize each Member of the House of Representatives to hire two additional Lyndon Baines Johnson congressional interns and to authorize payment of additional compensation for such interns from the clerk hire allowance; to the Committee on House Administration.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

250. By the SPEAKER: Memorial of the Senate of the Commonwealth of Massachusetts, relative to the freedom and the security of the Republic of China; to the Committee on International Relations.

251. Also, memorial of the Legislature of the Territory of Guam, relative to abolishing the Electoral College; to the Committee on the Judiciary.

252. Also, memorial of the Legislature of the Territory of Guam, relative to the development of Little League Baseball in Guam; to the Committee on Post Office and Civil Service.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALLEN:

H.R. 9003. A bill for the relief of Field C. McCord and Willie Mae McCord of Nashville, Tenn.; to the Committee on the Judiciary.

By Mr. BEDELL:

H.R. 9004. A bill for the relief of Munnie Surface; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

209. By the SPEAKER: Petition of the Legislature of the Northern Mariana Islands, Susupe, Saipan, relative to completion of the payment of claims awarded under the Micronesian Claims Act of 1971; to the Committee on Interior and Insular Affairs.

210. Also, petition of Richard Eaton, President, United Broadcasting Co., Bethesda, Md., relative to the denial by the Federal Communications Commission of the license renewal application of station WFAB, Miami, Fla.; to the Committee on Interstate and Foreign Commerce.

211. Also, petition of the Allapattah Lions Club, Miami, Fla., relative to the indictment of former FBI Special Agent John J. Kearney; to the Committee on the Judiciary.

212. Also, petition of Lester C. Wilhelm, North Miami, Fla., relative to the indictment of former FBI Special Agent John J. Kearney; to the Committee on the Judiciary.

213. Also, petition of Herbert D. Brewer, Mayor, Oneida, N.Y., relative to resolution of Oneida Indian claims in Oneida and Madison Counties, N.Y.; to the Committee on Rules.

SENATE — *Thursday, September 8, 1977*

The Senate met at 9:15 a.m. and was called to order by WILLIAM PROXMIRE, a Senator from the State of Wisconsin.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

"All work is prayer, if it be wrought
As Thou would'st have it done,
And prayer, by the inspired and taught,
Itself with work is one."

—John Ellerton, 1826–93

Grant us grace, O God, that we may worship while we work. May the time of prayer and the time of work be indistinguishable since both are offered to Thee. However crowded the hours or tense the time of debate, may we never lose touch with Thee. Keep us ever mindful of those whom we represent and for whom we work.

Through Christ who walked the toilsome way before us in perfect union with His Heavenly Father. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., September 8, 1977.

To the Senate:

Under the provisions of Rule I, Section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable WILLIAM PROXMIRE, a Senator from the State of Wisconsin, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. PROXMIRE thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia is recognized.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of yesterday, Wednesday, September 7, 1977, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETING DURING SENATE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Parks and Recreation Subcommittee of the Energy and Natural Resources Committee be authorized to meet, beginning at 7 p.m. during the sessions of the Senate, on the evenings of September 19 and 20, to consider S. 1180, the Endangered American Wilderness Act.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Commerce be permitted to meet during the session of the Senate today, to consider air bag legislation, on which there is a time limitation within which Congress must act; the time limitation being the expiration on the date of October 19.

Mr. BAKER. Mr. President, reserving the right to object, the majority leader very kindly brought to my attention the fact that he would make this request today, and I previously and privately indicated to him that I would find it necessary to object, which I shall do in a moment.

I want it clearly understood, however, that it is not because I object to legislation dealing with the air bag—I happen to feel that that proposal has much merit—but, rather, because the Senate is involved in a matter of great importance at this moment, and I do not want to interfere with the activities and conduct of Members on the floor, as distinguished from their careful attention to committee work.

It does not signal that I will object to the Commerce Committee considering this matter next week, for example, but I must on that basis object today, and I do now object.

The ACTING PRESIDENT pro tempore. Objection is heard.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum, on my time.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

TIME-LIMITATION AGREEMENT—S. 995

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at such time as S. 995, a bill to amend title VII of the Civil Rights Act of 1964 to prohibit sex discrimination on the basis of pregnancy, is called up and made the pending business before the Senate there be a time limit thereon of 3 hours on the bill, to be equally divided between Mr. WILLIAMS and Mr. JAVITS; that there be a time limitation on any amendment of 2 hours; a time limitation on any amendment to an amendment of 30 minutes; and a time limitation on any debatable motion, appeal or point of order, if such point of order is submitted to the Senate for discussion, of 20 minutes, and that the agreement be in the usual form.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

UNANIMOUS-CONSENT AGREEMENT—S. 977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when S. 977, the coal conversion bill, has been advanced to third reading the manager of that bill be authorized to proceed, without debate or intervening motion, point of order or appeal, to call up H.R. 5146, that that bill be considered at that time as having had its first and second readings, and that the manager of the bill be authorized to add to that bill two amendments, one amendment being the text of S. 977, as amended, if amended, and without further debate, intervening motion, amendment, appeal or point of order; the second amendment being the text of S. 701 as passed recently by the Senate, and two additional amendments, to wit, the text of H.R. 8444 dealing with the contents of S. 977, and the text of H.R. 8444 dealing with the relevant subject matter of S. 701, all without intervening debate, motions, further amendments, or points of order or appeals; and that H.R. 5146, as thus amended, be, without further intervening debate, amendment, motion, point of order, or appeal, passed, and the motion to reconsider laid on the table.

Mr. BAKER. Mr. President, reserving the right to object, and I shall not object, I have listened carefully to the unanimous-consent request made by the distinguished majority leader, and I have previously indicated that I shall not object to it, but I take this opportunity to explain a little.

Yesterday, the distinguished majority leader and I, together with representatives of the jurisdictional committees on both sides, discussed the question of how we were going to proceed in an orderly manner on the Senate side to consider the several energy bills and then take them to conference with the House of Representatives, which passed a single bill.

To make a long story short, Mr. President, the procedure just outlined by the majority leader does, we believe, permit the Senate to act in the traditional, ordinary, and appropriate way to consider these measures separately and to transmit them to the other body with requests for conference.

I might say for my colleagues that I have apprised the minority leadership of the House of our intentions in this respect. I believe I am correct in saying that the majority leadership is aware of this procedure as well. I believe it is a good procedure, that no rights on behalf of any Senator are transgressed or diminished, and that it will permit us to work the will of the Senate in an appropriate way.

Mr. ROBERT C. BYRD. Mr. President, I think I should add for the record my own comments, and I appreciate the statement that has been made by the distinguished minority leader. It is an accurate statement.

From the beginning, in consideration of the present rules of the Senate, it was obvious, and I so informed the leadership of the House of Representatives, that the Senate could not pass the President's energy package in a single bill for numerous reasons.

First, a single bill would undoubtedly engender the kind of filibuster in the Senate that could not be broken by cloture.

Second, it is not within the authority of the majority leader in this body to appoint an ad hoc committee and give it authority to report legislation. Only the Senate can do that.

Third, there is no way under Senate rules in which a bill can be brought to the floor, except by unanimous consent, limiting the number of amendments thereto or specifying the Members who will be allowed to offer amendments.

Consequently, the Senate, by necessity, has to deal with the energy package, as the distinguished minority leader has stated, in segments, thereupon running into the problem of getting these various measures into conference.

The House of Representatives has already passed an energy bill. The only way that a measure can be gotten into conference is for that particular measure to have been acted upon by both Houses, disagreements having resulted therefrom, and the Houses agreeing to go to conference thereon. This requires a single number for the bill. The House bill on energy is over here. If the Senate sends various Senate bills dealing with energy to the House of Representatives, their paths will have crossed midway between the Senate and the House of Representatives. The House of Representatives will have Senate bills. The Senate has a House bill. There is no way to get to conference unless one of the Houses acts on the other House's bill.

It is for this reason that the leadership in the Senate has decided to use House numbers as vehicles on which to place Senate energy-passed text, thus making it possible for conferences to be held on a bill which carries a number of the other body.

So it is for the purpose of facilitating conference action that we have asked this morning, as we shall continue to do from time to time, to place the Senate-passed energy text on a House numbered bill. In this way, we think that the conferences will not only be made possible but can be expedited.

If it were possible for the Senate to act on the entire House bill, which constitutes something like 500 pages, and then go to conference, this would also mean that the conference on that measure would not be conducted until the Senate had completed its action on the entire bill, which would be mid-October. Under the procedure that has been devised by the Senate leadership, conferences can be going forward immediately on energy legislations as each such House bill is used as a vehicles to carry the energy legislation passed by the Senate.

I thank the minority leader and all Senators for their cooperation in the matter.

The ACTING PRESIDENT pro tempore. Is there objection?

Mr. STEVENS. Mr. President, reserving the right to object, and I shall not object, I think the majority leader has outlined the proper procedure. The House of Representatives, in fact, did have separate committees dealing with the matter before it went to a consolidated committee.

I would raise just one query, not really as a warning but an inquiry: Are we

going to be certain that the bill that is selected for the vehicle for each particular section is in fact a bill that would be properly referred to the original committee in the House that dealt with the subject before it went to their joint committee? I mean, are we going to have some liaison with the House of Representatives to make certain we are not sending apples to orange committees? That would not be too good, I do not think.

Mr. ROBERT C. BYRD. The Senator has raised a pertinent question, and I am glad that he has raised it, because the response needs to be on the record.

The Senate has selected House bills, and will continue to do so, on which there is no differing opinion in the Senate. There is no controversy, for example, in regard to the particular House bill that has been selected in this instance. That bill would have been brought up in the Senate, passed without any amendment, and sent to the President. It would never have gone to conference. Consequently, that portion of the bill is left intact. There is not a single semicolon, period, or hyphen changed in that bill. Thus, when that portion goes back to the House, there is nothing in disagreement between the two Houses on that portion of the bill.

The only disagreement is with regard to the energy parts of the bill, and consequently the leadership in this body feels that the leadership on the other side, having the authority that it has to appoint any conference committee members it wishes, can appoint the members of its ad hoc Energy Committee, as it would in the case of sending the whole House energy bill back to the House. So, the potential problem which the able Senator from Alaska foresees, will not arise.

Mr. STEVENS. I thank the Senator.

The ACTING PRESIDENT pro tempore. Without objection, the unanimous-consent request is agreed to.

Mr. ROBERT C. BYRD. Mr. President, I have no further time, and I assume we have consumed all the time of the minority leader also.

The ACTING PRESIDENT pro tempore. The Senator is correct.

PRIVILEGES OF THE FLOOR

Mr. CRANSTON. Mr. President, I ask unanimous consent that the following staff members of the Committee on Veterans' Affairs be granted the privilege of the floor during consideration of S. 1307: Jon Steinberg, Ed Scott, Garner Shriver, Gary Crawford, and Lamar Lyons.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TALMADGE. Mr. President, I ask unanimous consent that the following staff members of the Committee on Agriculture, Nutrition, and Forestry be allowed the privilege of the floor during consideration of Senate Concurrent Resolution 43, including all rollcall votes thereon: Michael R. McLeod, Henry J. Casso, Carl P. Rose, Karen Schubeck, James Giltmier, Dale L. Stansbury, Nelson Denlinger, Brad Gungoll, Bill Taggart, and Dale Sherwin.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SECOND CONGRESSIONAL BUDGET RESOLUTION, 1978

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now proceed to the consideration of Senate Concurrent Resolution 43, which the clerk will state.

The assistant legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 43) revising the congressional budget for the United States Government for the fiscal year 1978.

The ACTING PRESIDENT pro tempore. Who yields time?

Mr. MUSKIE. Mr. President, I understand that under the order previously entered, the subject before the Senate is the Talmadge amendment. Am I correct?

Mr. TALMADGE. Mr. President, will the Senator use his microphone? I cannot hear him.

The ACTING PRESIDENT pro tempore. The Talmadge amendment has not been called up.

UP AMENDMENT NO. 764

Mr. TALMADGE. Mr. President, I send to the desk an amendment for myself, the ranking minority member of the Committee on Agriculture, Nutrition, and Forestry, and over 30 other cosponsors, and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Georgia (Mr. TALMADGE), for himself and Senators DOLE, ABOUREZK, ALLEN, BURDICK, CLARK, DOMENICI, EAGLETON, EASTLAND, FORD, HAYAKAWA, HUDDLESTON, HUMPHREY, LUGAR, MCCLURE, MCGOVERN, MELCHER, METCALF, MORGAN, STONE, TOWER, YOUNG, ANDERSON, THURMOND, LEAHY, MATSUNAGA, CULVER, NELSON, WALLOP, CHURCH, PACKWOOD, HASKELL, INOUYE, PEARSON, STEVENS, HART, BENTSEN, and BARTLETT, proposes an unprinted amendment numbered 764.

Mr. TALMADGE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with, and I will explain it in some detail.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The amendment is as follows:

On page 2, line 2, strike "$459,000,000,000" and insert in lieu thereof "$459,700,000,000".

On page 2, line 5, strike "$64,000,000,000" and insert in lieu thereof "$64,700,000,000".

On page 2, line 7, strike "$778,200,000,000" and insert in lieu thereof "$778,900,000,000".

On page 2, line 9, strike "$78,200,000,000" and insert in lieu thereof "$78,900,000,000".

On page 3, line 11, strike "$5,600,000,000" and insert in lieu thereof "$6,300,000,000".

On page 5, strike section 3 in its entirety.

Mr. TALMADGE. Mr. President, yesterday the distinguished chairman of the Committee on the Budget and the ranking minority member of his committee, the Senator from Oklahoma (Mr. BELLMON), the ranking minority member of the Senate Committee on Agriculture, Nutrition, and Forestry, the Senator from Kansas (Mr. DOLE), and I had a conference——

The ACTING PRESIDENT pro tempore. Will the Senator from Georgia yield himself time?

Mr. TALMADGE. I yield myself such time as I may consume.

We had a conference to determine the procedure as to how we would proceed on the second concurrent resolution on the budget for fiscal year 1978, and the conference report of the Committee on Agriculture, Nutrition, and Forestry on S. 275.

Since an agreement was made on procedure late yesterday afternoon with the chairman of the Budget Committee, more than 30 Senators have agreed to cosponsor the amendment at the desk. Of that number, 14 cosponsors are members of the Committee on Agriculture, Nutrition, and Forestry, and 6 are members of the Budget Committee. In other words, we have received expressions of support from more than half the Senate. I am proud that we could get such a strong expression of support in such a short period of time.

Mr. President, the Food and Agriculture Act of 1977 (S. 275), which has been reported out of conference, represents an extended legislative effort that began over a year ago. Both House and Senate committees held extensive hearings and markup sessions. The conferees met during the week of August 1–5 with both day and night conference sessions.

I was pleased that President Carter called both Representative FOLEY and myself to offer his congratulations on the outstanding work of the conference.

While the administration has not officially commented on the bill, we have every indication that the President will sign the measure.

While no bill can satisfy everyone, this measure goes far in meeting the needs of our farmers and consumers. Without doubt, it is the most comprehensive Food and Agricultural Act ever undertaken by Congress. This complex measure was drafted to maintain a viable agriculture for the benefit of all of our people and to assure a sound economy.

There has been concern on the part of the Congressional Budget Office over the budgetary implications of this legislation. I have always been a strong believer in a balanced budget and the budget process itself. I have worked to support balanced budgets during my 20-plus years in the Senate.

We felt that we had strong support in the Senate for the conference report, but out of respect for Senator MUSKIE, and the budget process, we decided to postpone the conference report.

During our committee's 8 a.m. markup sessions, extensive consideration was given to the budgetary impact of the legislation. We considered the cost implications of different weather conditions as well as different support levels. I consistently reminded the committee of the cost implications of the legislation being developed, and I had some reservations over the bill as passed by the Senate.

CONFERENCE ACTION

In spite of our efforts to hold the budget outlays for the agriculture function to the $5.6 billion limit established by the Budget Committee, there is a possibility that agricultural outlays will exceed this amount.

In conference, the Senate conferees made numerous concessions and were particularly sensitive to the issue of program costs. However, supply forecasts—both in the United States and abroad—have increased since passage of the Senate bill in May. In addition, market prices have dropped sharply. These developments are increasing the probable costs of the programs.

For this reason, I and other Senators are offering an amendment to raise the function 350 level to $6.3 billion. I firmly believe that this full increase will not be required, but it is necessary to cover that contingency.

There was no difference between the Senate and House on the $2.90 per bushel wheat target level for 1977. The Senate conferees accepted the House $2 per bushel target and loan levels for corn in 1977 in response to the worsening financial condition of our farmers. I might add that the administration also recognized this need by establishing identical corn loan levels.

For 1978 and in future years, supports were set largely on the basis of the lower House numbers. The target price adjustments are to be based on a moving 2 year cost of production figure which would rise less rapidly than the Senate committee formula. The Secretary is authorized to reduce loan levels by up to 10 percent annually in order to remain competitive on the world markets. Also, loan levels are not tied to the target prices, as had been the case in the Senate bill.

Mr. President, it is important to point out that the conference report is significantly less costly than the bill passed by the Senate.

One of the several major cost reductions was wheat. As passed by the Senate, the wheat target price for 1978 was set at $3.10 per bushel. For 1979 and beyond, the target price was set at cost of production, but not less than $3.10 per bushel.

The House bill, on the other hand, provided for a target price of $3 per bushel in 1978, adjusted for 1979 and beyond by changes in the cost of production.

The conferees accepted the House version, except that in 1978 the target price would be set at $3.05 if production was less than 1.8 billion bushels.

By lowering the wheat target for 1978, program payment costs are cut by $90 million to $180 million from the Senate-passed bill. This adjustment means a potential Federal savings of $630 million for the 1978–81 period just on the wheat program.

A similar situation exists for feed grains. The Senate bill set the target price for corn at $2.28 per bushel for the 1978 crop, adjusted thereafter by changes in cost of production.

The House version provided for a target price of $2.10 per bushel in 1978, adjusted thereafter for cost of production changes.

The conferees accepted the House version.

The 18-cent reduction in the target price means we reduced potential deficiency payments by $990 million annually.

The Senate conferees felt that they had acted responsibly and gone far in conference to meet the concerns of the Senate Budget Committee concerning the cost of the pending legislation. Farm programs, after all, will cost money during adverse times for farmers. That is why they are needed. However, there should be little if any cost when markets are in balance.

We felt that, with the major reductions made in conference, we were about on target in terms of meeting the $5.6 billion Senate budget resolution outlay figure for fiscal year 1978. Since the House budget resolution provided $6.1 billion for agricultural outlays, we felt that the cost issue had been resolved.

NEW CBO COST ESTIMATES

The Congressional Budget Office, however, has since done a further cost estimate based on later crop conditions and the administration's recently announced set-aside plans. This estimate adds $0.7 billion to the program costs for the commodities sections of the bill, thereby increasing the potential fiscal year 1978 outlays to $6.3 billion.

I am disappointed that the Senate Budget Committee has taken this approach of revising its cost estimate after the conference committee completed its work. I also am distressed that CBO has used the worst possible cost assumption—the July crop report rather than later crop conditions. And there has been some indication that the Senate Budget Committee wants to make an example of the agriculture budget.

(Mr. ANDERSON assumed the chair.)

Mr. MUSKIE. Will the Senator yield?

Mr. TALMADGE. I yield.

Mr. MUSKIE. I simply want to make the point that the estimate to which the Senator refers is not the Senate Budget Committee's estimate but that of the Congressional Budget Office, an independent institution created by the Congress for the purpose of providing objective information and data on the cost of the programs. The estimate was not mandated by the Senate Budget Committee. We did not set the timing. This is CBO's estimate. I take it we have some obligation to pay attention to it.

Mr. TALMADGE. I appreciate the clarification of the Senator from Maine on that point.

There are people who question the significance of agriculture—representing under 4 percent of our population—even if agriculture accounts for a quarter of the Nation's GNP.

The latest upward revisions of the Congressional Budget Office reflect depressed prices and the administration's announced increase in the 1977 corn loan level from $1.75 to $2.

Net lending for feed grains is estimated by CBO to increase by $700 million—$300 million because of the market and $400 million because of the increase in loan level to $2.

In other words, we face a budgetary problem because of depressed markets and decisions reached by the conferees and implemented by the administration.

At the same time, no recognition is given for savings resulting from the sugar amendment adopted by the conference. The CBO had earlier established a level of $185 million as needed to cover the administration's direct payments to sugar producers.

That program was declared illegal by the Justice Department but this decision came after the conference had concluded and also after the conferees had mandated the establishment of a sugar support program to be implemented at no cost to the Treasury.

The CBO cost estimate on sugar is now zero, but there is no indication as to what was done with the $185 million which was a 350 function item.

The problem of estimating costs for agricultural programs is best demonstrated by the changes in the cost of the various programs in the agriculture function made by the Congressional Budget Office. In the past 6 weeks we have had three separate reestimates for outlays for agricultural programs under current law. Originally, the estimate for outlays for agriculture was $4.7 billion, then it was increased to $4.8 billion and the latest estimate is $5.4 billion—these figures represent costs with no additional benefits under the farm bill, S. 275. The base cost alone of commodity programs has been reestimated up by $700 million—a 15 percent increase. This was not due to any action taken by the Congress—it is an estimating problem caused by the weather.

Agriculture is also subject to sharp swings in demand because of uncertainties in our export markets.

Two years ago, the Soviet Union harvested a 140 million-ton grain crop. Last year, their crop was around 225 million tons. This year's crop is expected to be about the same level. The Soviet Union alone has a major influence on our export markets, and an influence that we cannot predict.

It should further be noted that the cost estimate now being used for the agriculture function is likely to go down. Congressional Budget Office technicians agree that their estimate of $6.3 billion is probably high because of more recent downward trends in crop conditions for August and September. These trends were pointed out to CBO, but they preferred to maintain their earlier, higher cost estimates.

I should also point out that these budgetary considerations are distressing not just to our farmers but also because of the impending economic distress of our rural communities and the agricultural sector.

We in the United States are faced with a constant uphill battle against unemployment. The latest estimates are 7.1 percent of the labor force. In the past 2 years alone, the Congress has appropriated $17.4 billion specifically for job development. This budget action against agricultural programs seems to be in direct conflict with this objective of low unemployment. The farm legislation provides farm income security in a way that will maintain and create jobs in our rural communities and the agricul-

tural sector of the economy while not stimulating inflation.

The estimated additional $700 million which may be needed to carry out the farm programs will be more effective than the billions per year being spent on creating jobs.

It should also be remembered that much of the initial outlays of the farm programs are really investments in food stocks that will meet future shortfalls in supply at home and abroad. It is surprising that people have so quickly forgotten the doomsday prophecies of world starvation of just a few years ago in an effort to meet arbitrary budget targets.

I am as dedicated as any Senator to fiscal responsibility and a balanced budget, but we cannot forfeit the welfare of the Nation's farmers and consumers in an attempt to comply with an arbitrary directive of the budget resolution. Hard-pressed wheat and corn farmers around the Nation are depending on the additional benefits provided by the farm bill to meet production costs, mortgage payments, and living expenses. To suddenly deny these benefits would be a cruel blow.

Many responsible farm producers feel that the measure is, if anything, inadequate. On August 26, the Department indicated that net farm income would drop 12 percent, to $19.3 billion, in 1977.

This compares with $29.9 billion in 1973, $27.8 billion in 1974, $22.7 billion in 1975, and about $22 billion in 1976.

How many people have faced not only a 12-percent reduction in income in 1 year but a 35-percent reduction since 1973? At the same time that production costs have skyrocketed.

This increased spending is necessary to provide farmers with income support as market prices for commodities continue to decline. The USDA reports that at only one other time in history has the severe cost-price squeeze on farmers been so severe. The average parity ratio in August 1977, was 64 percent, down from 71 percent a year ago. Only in March of 1933 were conditions worse, when the average parity ratio was 55 percent. Wheat and feed grain farmers have been particularly hard hit. Prices received last month by wheat farmers represented only 40 percent of parity; feed grains were at 48 percent of parity.

Of the $6.3 billion in function 350 outlays, 37 percent, or $2.3 billion, are loans which will be repaid, with interest. USDA experience with commodity loans indicates that 98 to 100 percent of these fiscal year 1978 loans will be recovered, with 7 percent interest. The collateral for these loans is the commodity held in bonded storage.

In my State of Georgia, we experienced a disaster this year because of the drought, while other communities have experienced distress because of low prices and unmet payments on loans.

I also should note that authorization for the food stamp program expires at the end of this month, and I would like our friends in the CBO to tell us what they would do to deal with the chaos if this program were to lapse.

I suggest that we quit posturing and playing games with numbers and raise the level in the budget resolution to meet this urgent need. We pass emergency assistance and disaster legislation for other sectors of the economy.

Our farm producers deserve no less consideration.

While I expect that the full $6.3 billion is not likely to be required, we need to pass this amendment to the budget resolution to cover these potential outlays.

I urge adoption of the amendment.

Mr. President, it is unfortunate that Senator HUMPHREY, the senior Senator from Minnesota, who contributed significantly to the formulation of the Food and Agriculture Act of 1977, is unable to be with us today to speak on this important amendment. Senator HUMPHREY, the chairman of the Foreign Agricultural Policy Subcommittee, authored several bills which are now a part of S. 275. He has asked me to share with the distinguished Members of this body his views on this amendment. I ask unanimous consent that his statement be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR HUMPHREY

The Food and Agriculture Act of 1977 is one of the most significant pieces of legislation that the Congress will enact this session. It is important to the entire nation—to consumers and farmers alike. The Senate recognized the importance of this bill by passing it by a vote of 86–19 in late May.

Today, the Committee on Agriculture, Nutrition and Forestry comes before the Senate to ask that $700 million be added to the agriculture function in the Second Budget Resolution. While I am fully supportive of the effort to increase the agriculture function by this amount, I do not believe that actual outlays for commodity support programs will ever reach the level of $6.3 billion that this account would have with the passage of this amendment. In fact, actual outlays could fall significantly short of that total. The reason I do not believe that the $6.3 billion mark will ever be reached has to do with the nature in which these particular budgetary projections are made. Projecting outlays for agricultural commodity programs is an extremely difficult task that requires a combination of superb intellectual skills with inordinate good luck.

The very uncertainty that has plagued agriculture since man became a cultivator makes these types of projections especially difficult. First of all, there is the problem with the weather. Sharp fluctuations in weather can cause sharp fluctuations in commodity prices. With bad weather, commodity prices would rise and government outlays fall. Second, there is the factor of exports. The good weather that has helped produce this year's abundance of food cannot be taken for granted. But we can expand our overseas markets. This would help us reduce outlays. With a little work we will, by this time next year, have done away with the self-imposed restrictions on trade that keep us from tapping promising markets such as the Peoples Republic of China.

The point I am making is that projecting outlays is primarily a matter of guesswork. And in guessing, our budget makers have leaned to the conservative side, which has led to projections that exceed outlays.

While it is important to be aware of the difficulties in making budget projections for agriculture, these difficulties by themselves—as important as they are—may not be reason enough to support such an amendment. There are two facts that we should keep in mind in arriving at a decision on this matter. The first is that the Conference on S. 275 was completed one day after the Second Budget Resolution was passed by the Senate. The second fact has to do with a wide variety of initiatives already taken by the Administration which have the effect of increasing spending under current law to a level of about $400 million above that provided for under the Second Budget Resolution. The importance of this second fact is that the Senate, if it defeated this amendment, would have to re-evaluate both the Farm Bill and an entire array of Administration initiatives that are important for both farmers and producers.

I have every indication that the President will sign the Food and Agriculture Act of 1977.

In closing, I point out to my distinguished colleagues that this Act is a bare bones bill that assures minimal viability to our food economy. No one will get rich from this Act. In the final analysis we must recognize that we are talking about far more than an amendment to a budget resolution. We are talking about a set of policies that are important to the welfare of this nation.

Mr. TALMADGE. Mr. President, I ask unanimous consent that Mr. Joe Kinney, Senator HUMPHREY'S assistant, be granted the privilege of the floor during debate on this amendment.

The PRESIDING OFFICER. Without objection, is is so ordered.

Mr. TALMADGE. Mr. President, I yield the floor and I yield the remainder of my time.

The PRESIDING OFFICER. Who yields time?

The Senator from Maine is recognized.

Mr. MUSKIE. I shall reserve my time, Mr. President, until the proponents of the amendment have concluded theirs.

The PRESIDING OFFICER. Who yields time?

Mr. TALMADGE. Perhaps the Senator from Maine should proceed now and then Senator DOLE will take some time.

Mr. MUSKIE. I shall try to divide my time so I can respond to each of my three colleagues. I suspect that I am going to find difficulty getting other voices to join mine on this side of the issue, so I shall try to reserve my energy and time so that I can respond as intelligently as possible to the arguments of my three distinguished colleagues.

First, let me state appreciation to the chairman of the Committee on Agriculture for agreeing to use this forum, debate on the second budget resolution, for the purpose of considering the issues which he has raised. I think that is in the interest of orderly procedure and I am willing to abide by the result.

Second, I am under no illusion as to what the nose count is at this point on this amendment. It is because I understand that that I have urged the distinguished chairman of the Committee on Agriculture to use this forum, in order that the Senate, as a whole, might assume the responsibility for making the changes requested in the budget resolution.

This process is not the property of the Senate Budget Committee. It is implied, from time to time, by those who are unhappy with our recommendations that

we treat it as such, but it is not our property. It is the property and also the responsibility of the Senate as a whole. If a change of this magnitude is to be made in the congressional budget, the Senate, as a whole, should make it. That is my judgment.

The distinguished chairman of the Committee on Agriculture refers to the budget resolution numbers as arbitrary numbers. I take issue with that very vigorously. He says that as though there had been no chance for anybody, including the Agriculture Committee, to influence the numbers in the budget resolution. Let me remind the Senator, for the purpose of this record, of these facts:

No. 1, under the budget process, the Agriculture Committee is required to submit its recommendations to the Budget Committee by March 15. Those recommendations were received. They were debated at length. Many of the Senators who are cosponsors of the Senator's amendment are members of the Budget Committee, as Senator TALMADGE, himself, has emphasized today. They are just as articulate and just as vigorous at pressing the interests of the farmers in the Budget Committee as they will be on the floor of the Senate today. To suggest, therefore, that some outside force, presumably the Senator from Maine, has arbitrarily established these numbers for the agriculture function simply is not a reflection of reality. I vigorously take issue with that.

It is the Senator's prerogative, of course, to make his case for his amendment. I always assume that the distinguished Senator from Georgia acts responsibly. I do not think there is a Member of this Senate who takes his duties, either as a chairman or a member of a Senate committee or as a Senator on the floor, with a greater sense of responsibility than the Senator from Georgia.

Mr. TALMADGE. If the Senator will yield, let me express my great appreciation for the generosity of the Senator's remarks. The difficulty with trying to set budget targets for agricultural programs, of course, as the Senator knows, is that no one can predict the weather, therefore no one can predict what market prices will be. That is the cause for the $700 additional outlays that we are requesting here today—the weather and market prices. In addition the administration has increased the loan level for corn to $2 a bushel. That increase in the loan level adds an additional cost of $400 on to the agriculture function—350.

Mr. MUSKIE. I understand the peculiar factors that influence the agriculture budget. I would point out to the Senator that there are estimating difficulties involved in virtually every function of the budget.

That is one of the reasons we have two budget resolutions—a first and a second.

Mr. President, I ask that there be printed in the RECORD at this point a table which identifies the changes that have been made since the first concurrent resolution by the second budget resolution that reflects that fact.

There being no obligation, the table was ordered to be printed in the RECORD, as follows:

FISCAL YEAR 1978 BUDGET SUMMARY

[In billions of dollars]

	Function	1st budget resolution target		2d budget resolution recommended ceiling		Recommended ceiling compared to target	
		Budget authority	Outlays	Budget authority	Outlays	Budget authority	Outlays
050	National defense	118.5	111.0	116.6	110.1	−1.9	−0.9
150	International affairs	9.3	7.3	8.3	6.6	−1.0	−.7
250	General science, space, and technology	4.9	4.7	4.9	4.7		
300	Natural resources, environment, and energy	20.7	20.0	24.9	20.8	+4.2	+.8
350	Agriculture	2.2	4.35	2.1	5.6	−.1	+1.25
400	Commerce and transportation	20.0	19.4	20.5	19.6	+.5	+.2
450	Community and regional development	8.2	10.8	8.0	10.4	−.2	−.4
500	Education, training and social services	26.8	27.2	26.1	26.4	−.7	−.8
550	Health	47.9	44.3	47.7	44.2	−.2	−.1
600	Income security	179.9	146.7	178.8	146.6	−1.1	−.1
700	Veterans benefits and services	20.25	20.2	19.9	20.2	−.35	
750	Law enforcement and justice	3.7	3.85	3.8	4.0	+.1	+.15
800	General government	3.8	3.85	3.8	3.8		−.05
850	Revenue sharing and general purpose fiscal assistance	9.8	9.7	9.6	9.7	−.2	
900	Interest	43.0	43.0	41.7	41.7	−1.3	−1.3
920	Allowances	.8	.9	.9	1.0	+.1	+.1
950	Undistributed offsetting receipts	−16.3	−16.3	−16.4	−16.4	−.1	−.1
	Total	503.45	460.95	501.2	459.0	−2.25	−1.95
	Revenues		396.3		395.0		−1.3
	Deficit		64.65		64.0		−.65
	Public debt		784.9		778.2		−6.7

Mr. MUSKIE. Mr. President, there are estimating difficulties. The fact that we have had shortfalls in Federal spending in each of the last 2 fiscal years of billions of dollars supports the problem of estimating. Is that to say, therefore, that we should have no budget numbers for any program as to which there are estimating difficulties or that every program that has estimating difficulties should establish its own number?

If we are to do that, then we will be back to the budgetary chaos of previous years.

Notwithstanding these difficulties, which I acknowledge, we have a budget responsibility to estimate those numbers and that is the responsibility we have tried to discharge.

With respect to commodity price supports on this question of the arbitrariness of numbers, price supports in the Carter budget were listed at $900 million. In the first concurrent resolution, they were assumed at $2.8 billion. Under current policy, they would be $3.2 billion, taking into account the weather and other problems of that kind to which the Senator refers. The second concurrent resolution sets them at $4.1 billion.

Now, the Talmadge amendment would set them at $4.8 billion. That is a pretty wide range in a period of a few months—an increase from $900 million to $4.8 billion. It is a five-fold increase. If we compare the second concurrent resolution number of $4.1 billion with the Carter budget request of $0.9 billion that is a four-fold increase.

I do not consider that arbitrary. I consider that adjustment as an attempt on the part of the Budget Committee to respond to some of the uncertainties to which the Senator from Georgia referred. I think it was a good faith attempt to do so.

The next point I would like to make is that budgeting is not a matter of choosing between obviously good programs and obviously bad programs. If we were to define budget-making in those terms, the budget would be several tens of billions of dollars higher than it is.

Budget-making imposes on us the responsibility of choosing between good programs and programs that may be equally good, or choosing between one number and another number that is larger. It is choosing between the good and the good, or the good and just less good.

So anybody who attempts to pitch this debate on the basis of who wears a black hat and who wears a white hat is arbitrarily ignoring the nature of the budget process to serve his own political ends, or he does not understand it.

The Senator from Maine fully understands, because I have supported farm programs over the last 19 years, the problems that our farmers, including my own farmers, face.

But I am going to be asked to justify the total outlay numbers here to Members of Congress who would like to spend more money for other worthwhile objectives, including job-making.

I just heard a news report this morning that the Black Caucus had visited President Carter yesterday, urging more funds to deal with the unemployment problems of the central cities, which have risen according to the most recent statistics.

Now, is that a bad request? Are the people who are advocating that budget busters? Is their case less meritorious than this one?

Well, who is to make those judgments? The Senate as a whole, the Congress as a whole, acting as it may wish on the recommendations of the members of the Budget Committee.

I do not suggest that however a Member votes that his vote is arbitrary, but every Member under the budget process has a responsibility shared by the Budget Committee, a responsibility for evaluating that vote in the context of the overall.

The PRESIDING OFFICER. The 10 minutes have expired.

Mr. MUSKIE. I will take another 5 minutes, and then I shall yield. I have not gotten to my full statement and maybe I will reserve that for after the next one.

Mr. President, I would like to call my colleagues' attention to what precisely this does, because this is why I pleaded for this debate to take place on the floor in the context of the second concurrent budget resolution.

I think Members who vote on this amendment, or any other amendment proposed today, must do so with the recognition of the consequences in terms of the numbers that are included in this amendment.

This amendment proposes striking the total outlay figure in the second concurrent budget resolution. That figure is $459 billion. This amendment proposes to raise that by $700 million. It proposes to strike the deficit number, which is $64 billion. It proposes to raise that deficit number by $700 million. It proposes to strike the estimate of the public debt which is stated in the budget resolution at $778.2 billion and to raise it to $778.9 billion.

It proposes to strike the figure which represents this year's increase in the national debt. This year's increase in the national debt, absent this amendment, would be $78,200,000,000 and it would be raised to $78,900,000,000.

It would strike the total for the agriculture function which is listed in the resolution at $5.6 billion and raise it to $6.3 billion.

I understand that later today or tomorrow there will be offered to the Senate for its consideration three amendments to reduce taxes. I suggest to Senators that when they vote on this amendment they consider what they might like to do on those tax-cut amendments when they come up, because the effect of those tax-cut amendments will also be to raise the deficit number, to raise the public debt number, to raise the increase in the public debt number, and that is the kind of context in which the Budget Committee must consider its recommendations for all these worthwhile functions.

I do not know of a function in the budget that is not worthwhile. I do not know of a function in the budget that cannot make a case for more spending. I cannot think of a program in any function of the budget that does not have a case for more spending. But the Budget Committee has to worry about these numbers, and I suspect that if we had come to the floor of the Senate with a budget resolution that proposes a deficit of $75 billion, a majority of this Senate would have been outraged. Every Senator would have had suggestions as to how we could have cut that deficit. We reduced it to $64 billion. I remind Senators that that $64 billion is about $14 billion more than the deficit for 1977, the fiscal year in which we now find ourselves.

I submit that ED MUSKIE is not the only Senator who has a responsibility to consider those numbers when he votes not only on the agriculture function in the Budget Committee, but also every other one and every other program. I have to look at those numbers, and I suggest that they have a similar responsibility.

I am going to reserve the remainder of my time and get into my prepared statement, which goes into detail on this whole question of the agriculture function and price supports, following further discussion on the part of proponents of the amendment.

I repeat, Mr. President, that the budget process is not ED MUSKIE's process. It is not the Budget Committee's process. It is not the Senate's process alone. It is a process of the Congress of the United States. If it is to work, every Senator must exercise his discipline not only with respect to the other fellow's program and priorities, but also with respect to his own. If a process does not generate that kind of attitude on the part of Senators and Representatives, it will not survive.

That does not mean that the Senate does not have the right and even the duty to change the numbers in a budget resolution when a proper case has been made; but even then, one should bear in mind that a proper case probably could be made for other programs as well. It is more difficult for the Senate as a whole to consider add-ons one by one, because then it becomes difficult, when they all have been considered and conceivably approved, to reduce the totals back to an acceptable deficit. We can do it in the Budget Committee. We can go through the functions, vote on them individually, and if the total adds up to something more than we think is prudent, then we can go back and cut back. We cannot do that on the floor in any way that occurs to me.

This year, for example, in the committee deliberations on the functions at the end of our first round, we had a deficit that I thought was at least $2 billion too high, so I recommended to the committee that we go over the functions again. I made specific recommendations for reductions in functions, and we were able to cut $2 billion. If we could do a similar thing here in the Senate as a whole—let the Senate go to the budget function by function and exercise its own judgment on each function, and then at the end add up the total and if it is too high, cut back—that is another way of doing it. However, I suspect that if we were to do that, we would convert the Senate budget process into a Christmas tree operation of the kind that we have seen so often with respect to tax bills, and that is a dangerous business.

That is my explanation of why we are here and what we tried to do to respond to the pressures and the needs in this function.

I reserve the remainder of my time at this point.

Mr. YOUNG. Mr. President, will the Senator yield?

Mr. MUSKIE. I am happy to yield to my good friend from North Dakota.

Mr. YOUNG. I certainly agree with the objectives of the Senator from Maine to cut the budget but I believe that a special case can be made for agriculture.

When the price goes up and when we have a good foreign market—several times embargoes were imposed, so we could not sell our commodities at the then favorable prices. Wheat is a very special case. If we do sell wheat and other grain to foreign countries, the law requires that in Public Law 480 cases half of it be hauled in American bottoms. That is about the situation now if we sell wheat to Russia. One-third of such wheat has to be hauled in American bottoms, where the shipping rate is one-third more than it would be if it were hauled in ships of other countries.

So most countries which buy wheat now, if they want a cheaper price, and they do, are forced to go to some other country.

What we are doing requires that agriculture subsidize the merchant marine. I agree that we have to have a merchant marine, but I do not think agriculture alone should be required to do most of the subsidizing.

Mr. MUSKIE. I understand the difficulties to which the Senator has referred, and I do not disagree at all that they exist. But what are we to do? Do we put agriculture off budget because of those uncertainties?

May 15 to September 15 is 4 months. Do we give agriculture the prerogative of changing its numbers every 4 months as contrasted with other functions of the budget? Do we have no restraint at all? Do we give agriculture a blank check?

I know the difficulties and the uncertainties, and I sympathize. Senator BELLMON, in his discussions in the Budget Committee, has done a great deal to educate this Senator and others as to the problems of estimating agricultural costs. The whole business of the loan program costs in the long run is a question that Members of the Senate should face.

It is my impression that of the billions of dollars of loans for agricultural commodities, only a few hundred million dollars, at most, represent the ultimate cost to the Treasury. However, in the meantime, we have to provide the money. We have to fund the programs. We have to go to the marketplace to sell U.S. bonds to raise the money, and there is some budget cost. I think we should look at the real cost, not the imagined cost.

I agree with Senator BELLMON. He has some interesting ideas as to how that might be done, and I am for exploring those. But at this point—and I will make the case later—I say to the Senator from

North Dakota that from the Budget Committee's point of view—or those of the Budget Committee who are still with me—as to why we have done what we did and why we think it is justified, it seems to me that we have to raise the question for the Senate as a whole to decide what kind of discipline, if any, we should apply to this particular function, given the kinds of problems that Senator TALMADGE has articulated and that Senator DOLE, Senator YOUNG, and Senator BELLMON will discuss. I understand those difficulties fully, and I hope that somehow, in the long run, whatever we do today, we can find a better way of coming to grips with the uncertainties to which the Senator has referred.

Mr. President, I reserve the remainder of my time at this point.

Mr. TALMADGE. Mr. President, I yield 10 minutes to the distinguished Senator from Kansas, the ranking minority member of the Senate Committee on Agriculture, Nutrition, and Forestry.

Mr. DOLE. I thank the distinguished chairman.

Mr. President, I serve on both the Agriculture Committee and the Budget Committee, and I have the highest regard for both distinguished chairmen. I find myself in no conflict with either the distinguished Senator from Georgia or the distinguished Senator from Maine.

I think it has been fairly clearly explained that this Senator does not suggest that it is rural America versus ED MUSKIE or farmers against the Senator from Maine, or vice versa.

I understand the difficult position of the Senator from Maine, and I applaud him for his efforts to make the budget process work. However, as the Senator from Maine has indicated, this is an opportunity for the Senate to work its will. This is the orderly process. This is the process agreed upon yesterday as the right way to proceed, rather than some way that might appear to some to be deceptive or somehow an effort to take advantage of a Member or a committee chairman. We are proceeding in a very orderly fashion.

We have before us the second concurrent resolution on the budget; and in cooperation with the distinguished chairman of the Agriculture Committee, I understand that a total of 35 cosponsors have offered the amendment.

It would appear the amendment has a good chance of passage. We will keep working on cosponsors and, perhaps, we will have enough cosponsors before the debate ends to be sure the amendment will pass.

I will repeat briefly what the Senator from Georgia said. Without the administrative actions—and I do not criticize the administrative actions—$5.6 billion would have been adequate. But because of declining prices in the corn belt and in feed grain areas, and because of the set-aside and loan rate action taken by the administration, and because of reestimates made on more recent crop reports, unless something is done we need another $700 million. It is just as simple as that. We need to raise the figure from $5.6 billion to $6.3 billion.

Of course, that is the purpose of the amendment offered by the distinguished chairman, by myself, and by the many other Senators who have cosponsored this amendment. Republicans and Democrats, members of the Budget Committee, members of the Committee on Agriculture have offered this amendment. I would assume that there may be other cosponsors before the morning ends.

I would suggest that none of us from farm-producing areas look with any pleasure on the Federal Treasury for income. Most farmers whom I know across the country want their income from the marketplace.

I would point out that 37 percent of the $6.3 billion referred to in this amendment is for loans which are repaid by farmers. This is not a subsidy; this is not a grant. It is a loan. It is repaid with interest by the American producer. But, in any event, if prices were right there would be very little money spent for this budget function.

I would also suggest there are actions the administration could take now to reduce the cost of this function and to satisfy the statements made by the distinguished Senator from Maine and others about this particular function.

It would seem to me one thing that might be done is to program very quickly and very rapidly some of the Public Law 480 sales. It is my understanding we are lagging behind in expediting and programing for the next fiscal year.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. DOLE. Yes.

Mr. MUSKIE. I would like to make a point, because the distinguished Senator from Kansas and the distinguished chairman emphasized the point, that some of the money provided in this function is for loans. But in the Federal budget as a whole, there are outstanding about $70 billion in loans. This is the equivalent of almost a quarter of the budget, so agriculture is not the only program which might argue its justification on the basis that it is only a loan to be repaid. There is $70 billion. That $70 billion has to be provided, and that is the point I made earlier. I thought that total figure might appropriately be included in the RECORD at this point.

Mr. DOLE. I appreciate the comment, and I understand it. No one in this Chamber misunderstands it. But it is misunderstood by others. When we talk about $6.3 billion, there is a feeling out there that this is a subsidy given to the American farmer. That is not the case, as the Senator from Maine has so rightly expressed. But there are some actions that could be taken to reduce these costs, and we should look at how to reduce farm costs generally.

I suggested to Secretary Bergland that he seriously consider financing Commodity Exports under Public Law 480 and Commodity Credit Corporation programs in the following amounts for 1978:

First. Public Law 480, title I and new title III—$1 billion worth of commodities, up from $800 million in fiscal year 1977.

Second. Public Law 480, title II—$565 million worth of commodities and ocean freight. This level, if used in conformance with the pricing provisions of the new farm bill, would provide 1.7 million tons thus assuring that the legislative minimum of 1.6 million tons would be shipped.

Third. CCC credit—$1.5 billion worth of commodities, up from $1 billion in fiscal year 1977, and only a $750 million funding level recently announced by USDA for fiscal year 1978.

It seems to me we could also stimulate exports, and that could be the answer to the present farm problem. I have suggested that Secretary Blumenthal review the Eximbank's policy as it relates to agricultural exports. Instead of the relatively meager credits for farm exports ranging from only $69 to $95 million annually in recent years, I believe Eximbank should step up their financing of farm exports to $500 million annually. This would still be a very small proportion of total Eximbank resources which have been running from $6 to nearly $10 billion annually in recent years for U.S. export assistance. Farm exports which represent over 20 percent of total U.S. exports deserve considerably more attention from the Eximbank than is currently the case.

The best hope for improving farm prices is through increasing our share of export markets. A dollar spent on export stimulation may save many dollars in farm program costs.

I assume the administration is giving serious attention to how we can step up the export market to raise market prices.

It is an area that needs some attention and, if successful, then perhaps all the fears we are expressing this morning about the $700 million and the need to amend the budget will disappear.

As has been pointed out previously this morning, the fiscal year 1978 second concurrent resolution reported out of the Budget Committee on August 4, 1977, recommends a ceiling for agriculture function outlays of $5.6 billion. This ceiling was thought to be sufficient to fund commodity price support provisions under current law, plus the wheat price support provisions of the Senate-passed farm bill, S. 275. Now little more than 1 month later the same price support programs are estimated to cost $6.3 billion, or $700 million more than the previous estimate, which is the basis of the amendment offered.

Three events have occurred recently which effected these spending levels for fiscal year 1978.

First, CBO increased their estimate of the cost of commodity price support programs. Using new supply figures from USDA, CBO concluded that continuing declines in market prices for wheat and feed grains would increase outlays for loans and deficiency payments by $389 million.

Next, the administration took two discretionary actions to aid the sagging farm economy which increase fiscal year 1978 outlays. A 20-percent set-aside for 1978 crop wheat was announced by USDA last month. Since a 30-percent set-aside was assumed in previous CBO estimates, this action caused outlays to be revised upward by $200 million. Higher feed grain loan rates were also announced, increasing the expected outlays for loans by $400 million.

Finally, the Attorney General declared the administration sugar subsidy program to be illegal, eliminating outlays of $185 million.

So what we have are, in fact, some technical readjustments. These technical readjustments raise the estimated spending level for function 350 to $6.3 billion, an increase of $700 million over the level first recommended by the Budget Committee. This amendment would make these adjustments in function 350, and allow support programs to proceed as planned.

Mr. President, I ask unanimous consent to place in the RECORD at this point a table which summarizes these required adjustments to outlays for function 350.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Variation in fiscal year 1978 outlays budget function 350: agriculture

[$ billions]	Outlays
1st budget resolution target (May 1977)	=4.35
Add: Reestimates for farm support program	+.4
Senate farm bill (S. 275)	+.8
Additional agriculture research	+.1
2d budget resolution ceiling (August 1977)	=5.6
Add: Reestimates for farm support program	+.3
1978 wheat crop set-aside	+.2
Increased 1977 feed grain loan rate	+.4
Subtract: Administration sugar subsidy	−.2
Revised 2d budget resolution ceiling	=6.3

NOTE.—Totals do not add due to rounding.

Mr. DOLE. Mr. President, my colleagues in the Senate should also be aware that this adjusted fiscal year 1978 spending ceiling for function 350 provides sufficient funds for the provisions of the food and agriculture bill of 1977 as reported out of conference. It is my understanding that the Senate will take up this conference farm bill, if possible, this week and, if not, perhaps next week.

Mr. President, farmers—in Kansas and elsewhere—are acutely aware of the real causes for the substantially higher outlays for price support programs this year. The farm economy is in a state of depression. These spending increases are helping to sustain a marginally adequate income for farmers who have seen commodity prices drop well below cost of production. USDA reports that parity ratios are at a 44-year low. The average parity ratio in August was 64 percent, down 7 percent from a year ago. Wheat and feed grain farmers are particularly hard hit. Prices received by wheat farmers last month were at 40 percent of parity. Feed grain prices were 33 percent below a year ago. These farmers are counting on continuation of announced farm support programs.

It seems to this Senator and, I think, many others who represent rural constituencies, if we are talking about the American taxpayer or the American consumer or the American producer, we have got to do what may be necessary to sustain the American producer who is now on the farm and who wants to stay on the farm, not to make a profit from the Federal Government, but to at least recover his cost of production or near his cost of production.

I agree with my distinguished chairman of the Budget Committee that this is the appropriate place to debate this issue, and I hope that after full consideration we will decisively uphold the amendment offered.

I also again repeat that there has been a great deal of talk about the budget impact of the $6.3 billion. But a total of $2.3 billion, or 37 percent of the total outlays in this function are for loans. These loans are expenditures on the budget. There is no doubt about that. The Commodity Credit Corporation is not an off-budget agency. Furthermore, USDA experience with commodity loans indicates that 98 to 100 percent of these loans will be repaid, with 7-percent interest. Collateral for these loans is the commodity held in bonded storage.

This Congress has shown a great concern for jobs and for stimulating the economy. The public service jobs program is about $7 or $8 billion of the $27 billion cost in function 500, for example, providing about 1 million jobs.

I do not quarrel with the need for public service jobs. But for contrast I would point out that this amendment proposes to spend $6.3 billion—$700 million more than previously agreed—to help keep 4.3 million farmworkers on the job, and to help sustain our producers in the worst year for farmers since 1933.

There is no doubt about it that the $700 million increase we are seeking is a substantial sum of money. This amendment is estimated to increase outlays in function 350 by that amount.

But if this $700 million will help to sustain the Nation's largest and most important industry, help to maintain its $22 billion in exports, and help to retain its 4.3 million jobs, then the $700 million is money well spent.

I hope that my colleagues after full consideration will support the amendment.

Mr. President, I yield back the remainder of any time I have.

Mr. TALMADGE. Mr. President, I yield 3 minutes to the distinguished Senator from New Mexico who is a member of the Budget Committee, I might point out.

Mr. DOMENICI. Mr. President, I thank my good friend from Georgia.

Mr. President, I am not going to repeat the many facts that have been discussed here today. I am going to attempt to do just two things, first, from my standpoint and for the Senate through me to justify the need and, second, to give my rationale as to why this is not a serious departure from what the Budget Committee had in mind when it met prior to recess.

First of all, let me say, Mr. President, that in this country there are few things remaining that are really working for the benefit of the overall American economy, and among those few at the top of the list are the American farmers. Every place in this economy where you look for general macroeconomic impacts that are good farmers are at the top of the list.

While we are spending $40 billion to import oil, where would we be without the $22 billion that farmers bring into this economy by the fruits of their effort through exports?

I agree with the Senator from Kansas. We must promote that with every skill, every law on the books, and every kind of innovative international financial mechanism. The benefits to America are tremendous.

Second, with all the inflation what is the best of the necessities that Americans need? What is at the top of the list in terms of price, in terms of adequacy, and in terms of a good buy? It is food, the things that American farmers produce.

It seems to me that we as a matter of course in this Government when we find a problem with far less of an impacted community, a community that serves us well, nourishes, and feeds this great economy, with far less of a community of that type we are quick to come to their assistance. If we do not do that here for this group, it appears to me that basically we are almost being ridiculous. We find a new program for every problem in this country, and that reflects in this budget that we are concerned about. Now we find the farmers of America in one tremendous economic predicament.

It seems to me that we would not have any trouble convincing anyone as a matter of substance that the conference report that the House of Representatives and Senate will report soon is right for this country. If it is right the next thing is, do we pay for it or permit it to be paid for under the normal budget practice under our new Budget Reform Act or not? And I think the answer would be overwhelmingly yes.

So the only thing we have to concern ourselves about is the second proposition. Is this apt to destroy or water down the effectiveness of the budget process? And my answer is no. In fact, my answer is unequivocally no because if we knew the facts that we know today 6 weeks ago, just a matter of that time, then I believe we would not even be here because the orderly budget process that we are so proud of would have included it, just as we would have included between the first and second concurrent resolution readjustments in entitlement programs.

If we had figured unemployment wrong and an entitlement program was going to cost $500 million more between target in first and target in second we would put it in as a matter of fact as a matter of that is what the law is. Six weeks ago if we would have known what CBO knows now we would have added, as the Senator has indicated, over $300 million. If we would have known that the President was going to use his power with reference to the set-aside and the relationship of a need for loans, I believe we would have put it in then.

So it appears to me that the only possible thing we would have done would maybe look at the overall expenditures in this budget. But there is no doubt in my mind we are merely today doing

what we would have done and philosophically we are just putting in the numbers to comply with what we had in mind as our notion of an adequate agricultural target.

We had certain ideas. We were going to fund the conference report. It just turns out that it is going to cost more. But we intended in our target to fund that bill. The new estimates indicate that conference report will cost more. So it is very logical to add them at this point in time.

The reason I make so much of the second point is because I have the greatest respect for the budget process, and I do not think I have to repeat what I have said so many times. I have respect that is well beyond that and esteem for the distinguished chairman, the Senator from Maine, and the ranking Republican, and their efforts. I support that process and have worked hard at it. But I really believe as a matter of substance, as a matter of priority and, yes, in conclusion, as a matter of following the orderly process of the Budget Committee, that we should adopt overwhelmingly the amendment proposed by the Senator from Georgia, the Senator from Kansas, and 28 other cosponsors.

I thank the Senator from Georgia for yielding time.

Mr. TALMADGE. I thank the Senator from New Mexico.

Mr. MUSKIE. Mr. President, I yield myself 10 minutes.

First of all, may I say while the Senator from New Mexico is in the Chamber—and I wish to get the attention of the distinguished Senator from Georgia on this point—that the two speakers who have just presented their views on this amendment are members of the Budget Committee, and they are just as vigorous and just as articulate when they argue the farmer's case in the Budget Committee as they are on the Senate floor. So the Budget Committee has not been isolated from the facts, the arguments, and the philosophy that underlie the Senator's amendment.

I simply wish to make that point.

The second point I wished to make was that I am reassured by Senator DOMENICI's conviction that whatever happens to this amendment the budget process will survive. I hope that is so. There is always a risk whenever we change the numbers, but it is the Senate's prerogative to change them.

I just hope that we do not trigger, at some point, an avalanche of disrespect—or disregard, let me put it that way—for the Budget Committee's numbers. But I am reassured, and I know, from the record of his own commitment to the process in the years that we have served together on the committee, that the Senator means what he says, and I express my appreciation to him publicly, even though we disagree on this amendment.

Mr. DOMENICI. May I add just one comment?

Mr. MUSKIE. Yes.

(Mr. ZORINSKY assumed the chair.)

Mr. DOMENICI. I thank the Senator from Maine for those comments, and I would merely say, as a matter of the pragmatics of the budget process, I think the Senator would agree with me that every now and then the institution is going to make a decision that is not exactly what the Budget Committee suggested, recommended, or found. I do not think the Senator from Maine, I, or any other member of the committee would want it otherwise. That is the collective wisdom of the institution; and I think today we are going to justify this departure from accepting the committee's recommendations.

I do not think that means we will accept departures willy-nilly, lightheartedly, or in a series of irresponsible episodes.

Mr. MUSKIE. That is the way it works and is meant to work, and I hope that is the way it will work in the event this amendment prevails.

Mr. President, I would like to take the next 9 or 10 minutes, if I may, to outline tor the Senate what has happened since the early months of this year with respect to this agriculture function.

When the Senate on May 24 debated S. 275, the agriculture bill, which will be before us in a modified form today or tomorrow, a number of Senators who thought that the commodity outlays of the Senate version were too high voted for them anyway in the belief that reductions could be made in conference with the House. As a matter of fact, the Senate representatives in that conference indicated to me their belief that that is what would happen.

Forty-six Senators voted for my amendment supporting an increase in the target price for the 1977 wheat crop to $2.65 per bushel. As we all know, that amendment did not prevail and the conference agreement contains a target price of $2.90 per bushel for the 1977 wheat crop. The Senate-passed bill at the time the budget resolution was reported cost $5.6 billion. The conference version now costs $6.3 billion.

Those who voted for a costly farm bill in which they did not believe are now witnessing the consequences. Events since the Carter administration proposed its budget of $2.3 billion in agricultural outlays have made a mockery of budgetary prudence.

I am especially disappointed that the administration has capitulated to those advocating ever higher farm income supports. There were many Senators who believed the President's assurance that he would veto any farm bill if it were as expensive as the bill which passed this body a little over 3 months ago. Now the farm bill includes all of the costly features of the Senate bill insofar as fiscal 1978 is concerned, and the higher loan levels for the 1977 corn and feed grains crops, yet we hear not a whisper of opposition from the administration. Indeed, the Secretary of Agriculture by administrative action has increased loan levels for the 1977 corn crop to the amounts agreed upon by the conferees. So what began as a modest Carter administration request of $2.3 billion for agricultural outlays on February 22 has now increased nearly threefold to $6.3 billion if this amendment is accepted here today.

One wonders what other Presidential surprises are in store for those of us who believe that the administration is trying to control spending and really means what it said when it promised a balanced budget by 1981. The message is certainly clear. It is simply this—Congress must set its own spending priorities without regard to the shifting positions of the administration. I say that with regret because I know how important it is to have the administration's support in budget battles.

As chairman of the Senate Budget Committee, I want to point out some of the major policy implications of accepting this amendment and thus the conference agreement. In May and again in July, I pointed out to the Senate the possible consequences of the farm bill. In May, I expressed grave concern about some of the provisions of S. 275, particularly the proposed target price for the 1977 wheat crop of $2.90 per bushel, because the best estimates then showed that the Senate bill would cause spending for the agriculture function to exceed the first budget resolution target for fiscal 1978 by $0.8 billion; 45 of my colleagues supported my effort to reduce the cost of that bill and I think they, as well as other Members of the Senate, will be concerned with what I now have to say.

The first budget resolution provided a generous amount for farm price supports and agricultural research and services—$4.35 billion. This was $2 billion more than the Carter administration requested in its February budget message to Congress. The increase was to take care of later estimates for price supports and other agricultural needs and demonstrated that Congress was aware of the severe problems facing farmers in a time of mounting surpluses, deteriorating prices, and increased costs of production.

The second budget resolution which the Budget Committee reported on August 4 was even more generous than the first budget resolution with respect to agricultural outlays. It provided $5.6 billion for the agricultural function, and funded all appropriation actions completed and all known potential later requirements for appropriations, the July estimates by the Congressional Budget Office for price support programs under current law, and the increased costs of price support programs provided for in S. 275, as it passed the Senate. In essence, the second budget resolution agriculture outlay ceiling accommodated current law and the Senate-passed farm bill.

We responded to the mandate of the Senate at that time. May I point this out, Mr. President, with respect to the second budget resolution: The second budget resolution includes a total of five increases over the first budget resolution. The one for the agricultural function is by far the largest. Let me list the others:

Function 920, allowances, $100 million.

Law enforcement and justice, $150 million.

Commerce and transportation, $200 million.

National resources, environment, and energy—surely a high priority by any measure in this Congress—only $800 million.

Agriculture, $1.25 billion.

The Budget Committee in every other function—every other function—has reported decreases from the first concurrent resolution amounting to as much as $1.3 billion. To suggest, in the face of this record, that the Budget Committee was insensitive to the needs and problems of the farmers, is to arbitrarily ignore the record. I think I put this table in the RECORD earlier, and I simply refer to it here at this time.

The conferees on S. 275 were advised by the Senate Budget Committee of its actions during the markup so that they were aware of the amounts provided for farm price supports in the second budget resolution. The conference report on the farm bill was agreed to 1 day after the second budget resolution was reported. It included higher price support provisions for corn and feed grains which are at least $400 million higher than contemplated in the second budget resolution.

So from a budget standpoint, what we are talking about is higher target and loan support levels for wheat and corn than existed under current law at the time the budget resolution was reported. These increased supports make it impossible for the conference agreement on S. 275, when added to current law, to remain within the $5.6 billion outlay ceiling for the agriculture function under the second budget resolution.

I certainly do not mean to imply that all of the increases in agriculture outlays have occurred due to the actions of the conferees on the farm bill. Some of the increases have occurred because of two actions on the part of the administration which have altered the assumption of the Budget Committee when it recommended the $5.6 billion outlay ceiling for the agriculture function. On August 12, the Department of Agriculture altered its crop estimates of current law price support outlays and increased corn outlays by $0.3 billion and wheat outlays by $0.1 billion. These increases were offset by a reduction of previously assumed sugar outlays due to the Attorney General's opinion that the administration's sugar program was illegal. The net effect of these reestimates was an increase in agricultural outlays under current law by $0.1 billion.

A few days later, on August 29, the Secretary of Agriculture announced the administration's set-aside program for the 1978 wheat crop at 20 percent compared to the 30 percent set-aside assumed by the Budget Committee in its cost estimates, and also announced an increase in the price support level of feed grains under current law by $0.6 billion above the best estimates made by the Congressional Budget Office in late July, which was the basis for the budget resolution.

There was some discussion of that estimate by the distinguished chairman of the Committee on Agriculture and Forestry. May I make this point: we have not yet had an official estimate from USDA with which to compare the CBO estimate, but our unofficial information is that USDA is using a number of about $7.6 billion at the present time instead of the $6.3 billion that CBO has recently estimated. I do not know if that will be the final firm estimate of USDA. We did not use that number. We used the CBO estimate. By comparison CBO is more conservative than USDA appears to be trending at the present time.

The combination of new crop information and administrative actions has resulted in a net increase in outlays under current law from $4.7 billion at the time the budget resolution was reported to $5.4 billion, or $0.7 billion.

Now, if we add the increased outlays under the conference agreement on S. 275, this will require an extra $0.9 billion for wheat payments above current law, for an agricultural function total estimated by the Congressional Budget Office at $6.3 billion for fiscal 1978.

The Budget Committee anticipated that a conference agreement on S. 275 might breach the second budget resolution target for the agriculture function, and so it included language in the resolution in the nature of a reconciliation instruction directing the Agriculture Committee to limit the spending under its jurisdiction to an amount not to exceed the $5.6 billion established in the agriculture ceiling. The Budget Committee does not attempt to tell the Agriculture Committee where it should cut programs which produce outlays, but the resolution has the effect of requiring agriculture spending to conform to the budget resolution.

Faced with the consequences of enacting a farm bill that will push outlays above the ceiling of the budget resolution, it is my firm belief that there are substantial reasons to hold the budget resolution to the outlay total of $5.6 billion and to reject this amendment and the conference agreement because it will exceed the amounts set out in the budget resolution by $0.7 billion. An increase of the ceiling to $6.3 billion is unjustified for fiscal year 1978 and these policies heavily mortgage future budgets.

I say this for these reasons:

First, the amendment permits excessive outlays. The administration's action and the conference agreement working together increased projected fiscal year 1978 outlays for agriculture by more than $0.7 billion above the farm bill as it passed the Senate.

Second, the circumstances affecting agriculture are basically unchanged since the first budget resolution. No material change in agricultural policy has taken place since last spring which justifies increased farm spending which will have to be financed by more deficit spending. The American public should not be penalized by additional payments to farmers who planted with full knowledge of the level of price supports they faced.

Third, this is a major breach of a target ceiling. No other legislation except for energy, which was foreseen, has resulted in a major breach of budget targets adopted last spring.

Fourth, this amendment, by permitting the conference agreement, heavily mortgages future budgets. It provides high support levels for future years which will lead to large uncontrollable outlays in the years beyond fiscal 1978. The Congressional Budget Office estimates that fiscal 1979 costs for farm price supports will increase above the fiscal 1978 costs of $4.8 billion to $5.4 billion, and that the 4 year average cost of farm price supports under the bill will be at the high level of fiscal 1978, or $4.8 billion. So, when we add agricultural research and other farm programs, we are talking about budget costs that range between $6 and $7 billion a year over the next 5 years.

Fifth, let me simply say that increases in the agriculture function mean fewer resources for our programs. There is no inexhaustible supply of money to fund every program that we can think of in the Congress. It is irresponsible to add new programs or increase the costs of old programs two or threefold without thinking of what we are doing to the fiscal 1978 budget and later budgets. To provide for a major increase in farm price supports—and that is exactly what we are talking about—simply means fewer resources will be available for other competing goals in other functions or it means increasing the deficit.

Let me assure the Members of the Senate that the Budget Committee is not insensitive to the needs of the American farmer. As I have pointed out, we started off with a $2.3 billion request by the Carter administration and the second budget resolution more than doubled that amount to $5.6 billion. I do not think that the Budget Committee can be accused of being stingy with the American farmer. Neither do I think that the American taxpayer should bear a disproportionate burden to raise farm price supports to levels that are not in accord with fiscal prudence.

In my judgment, the second budget resolution accommodates the reasonable goals of protecting the American farmer and the American taxpayer and the consumer. We ought to defeat this amendment, and we should design a farm bill that fits within the budget resolution. I do not think we ought to do more than this for any segment of our society.

I am deeply concerned that this amendment and the conference agreement on S. 275 will have the effect of preventing a balanced budget by 1981. The level of price supports in the conference agreement on S. 275, as I have mentioned previously, will mean that we will commit at least $6 billion to $7 billion for agriculture outlays each year over the next 5 years. This compares with $2.5 billion in outlays for the agriculture function in fiscal 1976, the latest year for which we have final figures.

Let me also say that higher support levels for farm commodities mean higher food prices for the consumers and greater inflation just when we are making visible progress in the battle against inflation.

So I urge the Senators to consider all of these matters before we vote on this amendment. Now is the time to hold the line. We must apply the standard of budget discipline to agriculture programs just as we do to all other areas of the budget.

Mr. President, that is my case. That, I think, presents the situation with respect to this problem as it has evolved, from my perspective, at least, and I present it to the Senate in that spirit. I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. BELLMON. Mr. President, I yield myself 10 minutes on the bill.

The PRESIDING OFFICER. The Senator from Oklahoma.

Mr. BELLMON. Mr. President, first, let me say that I agree with the statement Senator MUSKIE has just made. The Budget Committee has attempted to deal fairly with the American farmer in the preparation of both versions of the concurrent resolution. However, the Senate is now caught up, and the Budget Committee is now caught up, by a series of events, many of which could not have been foreseen.

However, some of this dilemma regarding the cost of the agricultural program, I believe, was foreseen earlier on, because farmers who have been responding to the urging of Government to expand production have done so almost with a vengeance. This year, the 1977 crop year, the weather has been good and production has been high all across the farmbelt. It has been foreseeable that prices were going to go down and that the economic crisis in agriculture was developing.

Costs of the farm program have always been highly volatile. While they may be high one year, they may be equally low in a succeeding year. That has been the case in past years.

The farm programs have cost practically nothing during the last 3 years, while farm prices have been high, while export levels have been high, and while the marketplace has been returning a fair return to producers. But the problem of difficulty in estimating costs of the farm program is going to continue to plague Congress as long as we attempt to deal with the agricultural function on a year-to-year basis. We need to take a longer view in considering the discretionary authority which the law gives the administration to control the costs of the farm program and attempt to figure out a way of setting a ceiling, not on a year-to-year basis, but on a longer term so that we can hold the costs of the farm program in line and encourage the administration to use their discretionary authority in that way.

Mr. President, the history of the budget process is relatively short. Even so, we are noticing several common characteristics of every budget. Perhaps the most fundamental characteristic of them all has been the above-mentioned volatility of the target levels for the agricultural function. This volatility is due in great part to the fact that the administration has the tools to cause changes in agricultural spending regardless of congressional action.

Perhaps some of those tools need to be modified so that they will not be used to excess.

Second, the numbers fluctuate greatly according to weather conditions, crop conditions, and international trade developments.

As late as 1 month ago, the Senate Budget Committee agreed upon a number of $5.6 billion for agricultural outlays for fiscal year 1978. We believed at that time that this amount was sufficient to allow for expenditures under current law plus an amount sufficient for every provision of the Senate-passed farm bill (S. 275). One day later, the agriculture conference agreed upon provisions which would have resulted in a total budget of $6.1 billion in fiscal year 1978. Now we find that current law plus provisions of the conference agreement will cost $6.3 billion or, if the USDA figure is used, even more.

Much of this volatility has been caused by administrative actions over the last month: changing the loan level for feed grains, announcing a 20-percent rather than the anticipated 30 percent set-aside program, and USDA reestimates of crop yields.

Mr. President, let me point out that, in the past, the USDA has consistently overestimated crop production and there is a possibility that present estimates may prove, in the long run, to be too high. If that is the case, the cost of this program will be less. Nevertheless, it will always be true that spending requirements in this function are subject to unpredictable changes in weather, international crop and political conditions and discretionary administrative control over loan levels, set-asides, international agreements and Government sales of crop reserves. So, it will always be difficult to arrive at a solid and fixed target.

The task is made more difficult and somewhat misleading by the components of the target. The $6.3 billion can be broken into three categories:

First, $2.7 billion for deficiency and disaster payments to farmers;

Second, $1.5 billion for agricultural insurance, research and services; and

Third, $2.1 billion for loans made by the Commodity Credit Corporation to farmers with grain used as collateral for those loans.

This third category of CCC loans represents a special case of outlays. Loans are secured with good collateral and most loans are repaid. With extended resale provisions, the prospects of repayment increase. These repayments are subtracted from outlays in future years. Over this fiscal year plus the 4 years of the pending farm bill—5 years in all—CBO estimates that these loans will total $12.3 billion. Repayments again according to the CBO are expected to be $10.6 billion of that, or all but $1.6 billion. That is, 86 percent of the loans are expected to be repaid over the life of the loan. I am using the CBO figures. Others earlier, I believe, may have been using USDA figures, which indicated an even higher repayment of the loans. The 1978 fiscal year is exceptional in that 33 percent of the Agriculture function amount is for CCC direct loans. By 1982, CBO projects the CCC loan account to be only 15 percent of the Agriculture function under current law.

All parties in the Congress and administration have expressed concern over the seeming uncontrollability of the Agriculture budget target. I believe Congress should place a ceiling upon total expenditures which can be made for deficiency, disaster, and realized loan losses over the 4-year duration of the farm bill. With the policy tools available to the administration, it is possible to administer the farm program in such a way as to simultaneously benefit the American farmer and consumers while holding costs below the ceiling. I believe the administration should agree to direct its set-aside, loan level, international and food reserve policies in such a way that deficiency, disaster, and loan loss outlays amount to no more than $20 billion for the total of fiscal years 1978 through 1982—5 years. This is exactly the amount projected by CBO under current policy; $18.3 billion for deficiency and disaster payments and $1.7 billion net realized loan loss.

Mr. President, I ask unanimous consent that a chart showing the CBO estimates of the CCC loans and repayments and other costs of the farm program for the next 5 years be printed in the RECORD at this point.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

CCC LOANS AND REPAYMENTS

[In millions of dollars]

Fiscal year	Total CCC outlays	Net lending component	Deficiency disaster and other component	Gross lending	Loan repayments (equals gross minus net lending)
1978	4,811.9	2,074.5	2,737.4	2,344.4	269.9
1979	5,374.9	1,236.4	4,138.5	2,592.8	1,356.4
1980	4,301.3	707.4	3,593.9	2,164.8	1,457.4
1981	4,915.6	825.6	4,090.0	2,645.3	1,819.7
1982	4,535.2	781.8	3,753.4	2,555.8	1,774.0
5-yr total	23,938.9	5,625.7	18,313.2	12,303.1	6,677.4

	Amount
Loans outstanding, end of 5 yr	5,625.7
Loans expect to recover next 4 yr	3,938.0
Total net realized loss expected	1,687.7

*Assume conference report of agriculture bill:

Total CCC cost:	
Deficiency and disaster	18,313.2
Total net realized loss expected	1,687.7
Total	20,000.9

Mr. BELLMON. These figures show that loans outstanding at the end of 5 years will be $5.6 billion; that loans expected to recover during the next 4 years are roughly $4 billion; so that the net loss of the loans is $1.68 billion and that the costs of the deficiency and disaster program will be $18 billion, giving a total cost of the program of $20 billion.

I believe, Mr. President, that the Budget Committee, the Agriculture Committee, the Appropriations Committee, and the full Senate should insist that the administration administer the farm program so that it does not cost more than the $20 billion that the CBO estimates, which means that the cost would be $4 billion a year. If that happens, it means that, in future years, the program will have to cost far less than the $6.3 billion which is being provided if the present amendment is adopted.

This ceiling should only impose prudence and not hardships upon those individuals administering the farm bill. This amendment, when used in concert with the discretionary authority of the farm bill, will provide producers the full entitlements that the bill mandates. The amounts for agricultural research and services are and should continue to be subject to the yearly guidance of the Appropriations Committee. Likewise, as I have explained, loan amounts which are repaid should not be counted against this ceiling. But controllability requires that we institute an accounting system such as the one I describe.

Mr. President, reluctantly, I thus accept and support the $6.3 billion target for the agriculture function. I recognize the need and, in many cases, the extreme need, for help to a depressed agriculture sector of the economy.

I would like to point out that one reason agriculture is in its present distressed state is that it has been——

The PRESIDING OFFICER. The Senator's 10 minutes have expired.

Mr. BELLMON. I yield myself another 2 minutes.

One reason is that the food producers of this country have been responding in a magnificent way to earlier urgings by the administration for increased food production. There was a time, not too long ago, when there was concern about food shortages in this country and in the world. Farmers had been urged to plant from fence to fence so that they could meet the food demand and head off the shortage and avert starvation, which has been threatened in some countries. That policy, in my judgment, has been kept in effect too long. The huge surpluses which have now developed could have been prevented had farmers been given access to world markets. Rather, these markets were cut off by action of the Government, which imposed export embargoes. These things, together, triggered the present situation.

I feel that it is necessary now that the $6.3 billion be made available for the administration of this program to avert an economic disaster in agriculture and that if the program is administered wisely, using the discretionary authority which the Secretary has, this cost can be brought down in subsequent years and the total cost of the program, over the next 5 years, can be held to about $4 billion a year. But, I believe most strongly that a constraint of the type I propose would best satisfy the concerns of the American farmers and all of our interests as consumers and taxpayers.

Mr. President, I reserve the remainder of my time.

Mr. TALMADGE. Mr. President, I yield 2 minutes to the distinguished Senator from Iowa.

The PRESIDING OFFICER. The Senator from Iowa.

Mr. CLARK. I thank the Senator.

Mr. President, I rise in support of this amendment. Its effect would be to add some $700 million to function 350, the agricultural function of the second concurrent resolution on the budget.

The issue is clear. It is whether or not we have a Food and Agriculture Act of 1977 available to help our farmers at this very difficult time. If the amendment does not pass, and the farm bill must be recommitted, the delays and confusion that will certainly ensue will cost our farmers untold millions of dollars—this year and in 1978.

The amendment I am supporting here is necessary, not because the Senate-House conference failed to meet its responsibilities and increased the cost of the farm bill. On the contrary, that conference worked hard to reduce the 1978 cost of the farm bill and did so by cutting back the loan and target price levels below those recommended by the Senate Agriculture Committee and approved by the Senate. It is necessary because weather and markets changed since last May.

In spite of the work of the conference committee, most recent estimates of cost of the farm bill for 1978 and later years have increased compared to estimates made last spring and summer. For that reason, we are told, the farm bill should be recommitted to the Agriculture Committee so that some $700 million can be cut from the 1978 cost of that bill.

Mr. President, such an action would violate the purpose of the farm bill, and it would so greatly reduce its effectiveness that I hope this body will join with me in support of the Talmadge amendment and remove this threat to the farm bill.

The basic purpose of farm legislation is to provide producers and consumers of food and fiber essential protections against disastrous swings in price.

Our farmers cannot control the weather. Therefore, they cannot control their production. The "boom and bust" cycle is a classic characteristic of agriculture. Government programs alone have demonstrated any success in moderating this cycle.

Because we can neither control nor predict the weather, we cannot predict the need for farm programs. Our best estimates of the cost of farm programs this year or any year are merely guesses about what the weather will be.

So, I believe, the issue is that the farm bill either provides the basic protections it was designed to provide, and which are so badly needed even now, or it does not. If we are to send the farm bill back to the drawing board every time the weather causes us to use some of the protections in the bill, we cannot have an effective and equitable set of farm programs.

I support the budget process. I believe the Congress should be subject to its discipline. But the budget process is essentially a planning process. We cannot hold to any plan more exactly or specifically than our knowledge and control of future events permits.

That fact has been well recognized in the design of farm program authorities since the 1930's. The Secretary of Agriculture, through the Commodity Credit Corporation, has authority to operate programs as authorized by the Congress, and then come back to the Congress for reimbursement after the fact—after the need is known. That concept underlies a number of programs with responsibility to fill unpredictible needs. To support it, we must allow the congressional budget process to be sufficiently flexible to accommodate the genuine needs of programs with unpredictible responsibilities. We can do that by passage of the amendment now under consideration.

Mr. President, the need for the new farm bill—the Food and Agriculture Act of 1977 is great and immediate. I spent much of the past month of August walking through parts of Iowa. Many farmers there have crops ruined by dry weather. These farmers desperately need the new disaster provisions contained in S. 275—without these new provisions, many of these farmers will face bankruptcy.

But even more than the weather, low prices are on the minds of Iowa farmers. They expect to take their lumps from the weather, and they understand that, even though they dread it.

But right now corn in Iowa is selling for less than $1.50 per bushel. Mr. President, that is about 70 cents below the cost of production of a bushel of corn—about two-thirds of the cost of production standard Congress has selected as the measure of the minimum fair price.

Farmers are angry about these prices—and about the delays in making programs available to help them with these problems. Farmers planted large acreages because prices were good, but also because the Government urged them to. Now they face economic disaster because we have had two good crop years.

And, farmers are even angrier that Congress may delay a program badly needed now because of a concern over estimates of the future cost of the bill. The Senate did, in fact, debate the issue of future cost of the farm bill last May and an attempt to remove important protections from the bill was defeated. Farmers cannot understand why that issue should once again threaten the bill.

Mr. President, the costs of the farm bill are small compared to the benefits it contains. I hope the Senate will join me in support of this amendment and permit the agriculture function to be funded at the level of cost now expected.

Mr. President, because of the shortness of time, I would like to make simply one point that seems to me to be very rele-

vant to this discussion now, that agricultural policy, farm support prices, and so forth, are dependent almost entirely upon the weather and that they must be funded, these support prices, in a flexible enough way to allow for the changes in weather.

It is not unlike trying to fund disaster programs. No committee of budget appropriation can predict natural disasters and no committee can predict weather. That is what is involved here because the costs, the entire cost, of farm support prices are dependent upon unpredictable weather conditions.

Corn and wheat farmers received virtually no price supports in 1973, 1974, 1975, or 1976. Why not? Only one reason, in my judgment, and that was that the world's weather was unusually bad, our exports were high, with the result that support prices were not necessary.

So the planned expenditures in 1973 and 1974 never took place. Farm support prices were, generally speaking, not used in those years. We did not need them.

Now, this year and last, the weather has been unusually good all over the world. Prices, naturally, have come down, exports have gone down, so support prices are needed.

For more than 40 years, we have had support prices to assist farmers when surpluses did exist in these kinds of situations. The two Houses have worked their will to their best judgment on what protections are necessary and appropriate for farmers and consumers.

If the weather had been bad in the Soviet Union, China, or India these last few months, this amendment could say, "Let's lower the amounts needed for support prices in the budget."

That is not the case.

The PRESIDING OFFICER. The time has expired.

Mr. CLARK. May I have 1 more minute?

Mr. TALMADGE. Yes.

Mr. CLARK. That is not the case. Weather, in fact, has been good.

Support prices are needed. We do not need a program except on these occasions when, in fact, the weather has been particularly good and support prices are down.

I just completed walking abut 200 miles through western and central Iowa. These farmers have not received supprt prices for 5 years. They did not need support prices because of weather conditions. This year, they do.

If they are going to turn down this amendment and say for the first time in 5 years when support prices are needed, "You can't have it," it seems to me we ought not deceive farmers into thinking, or consumers, that these protections that are written into law really mean anything at any time.

So I hope that we adopt this amendment and thus make possible price supports at a meaningful level.

Mr. TALMADGE. Mr. President, I yield 2 minutes to the distinguished Senator from North Dakota who served on our committee longer than any other member.

Mr. YOUNG. I thank the Senator.

Mr. President, we seem to be talking about agriculture only as an ordinary industry today. There is more money invested in agriculture than any other segment of our economy. No other segment is as important as agriculture. It provides food and fiber, and what is more important than food and fiber to our people, as well as possible around the world?

But there are other industries closely associated with agriculture. Farm machinery dealers provide a great amount of necessary credit to farmers. This is true of the oil industry. This is true of the fertilizer industry. They have given a great amount of credit to farmers in the past year when prices dropped sharply.

In talking recently with Governor Wilkinson of the Farm Credit Administration, he recognized there would be much more credit needed for farmers this year than perhaps ever before. Farm debt now is over $100 billion. He said they were going to do all they could to carry farmers through, but he recognized that it would be utterly impossible for the Farm Credit Administration, with their vast credit resources, to give anywhere near to meet the need of farmers.

That is why this bill is so necessary. It does represent, I say again, the biggest and most important segment of our economy. If our farmers were not as efficient as they are and produced less and there was a little scarcity of food, prices would be better, we would need no farm program.

The PRESIDING OFFICER. Who yields time?

Mr. TALMADGE. Mr. President, I yield 2 minutes to the distinguished Senator from Montana.

The PRESIDING OFFICER. The Senator from Montana.

Mr. MELCHER. Mr. President, there is no question but what the senior Senator from Maine speaks with authority regarding the congressional budget, but the whole process is a question of priorties. What do we hold to be most important, or less than important, or moderately important? The question we are facing on these priorities is either we keep these ordinary farmers, these family farmers and ranchers, going or we lose them. They will be out of business. They will be broke. It is that tight.

The credit crunch for these operators is very tight. It is perilous for many of them.

What happens to the country if they go under?

Well, Mr. President, I refer to a column by the well-known economist, Eliot Janeway, which appeared on Sunday, April 24, in the Washington Star, where he reviewed what history has taught us. He said:

> But the main lesson bequeathed by the dire experience of the late 1920s and early 1930s is that boom conditions in the industrial economy, and in the stock market, will not be sustained if depression conditions are tolerated in the farm economy.

He goes on to say that the main lesson bequeathed by the dire experience of the late 1920's and early 1930's is that boom conditions in the industrial economy, and in the stock market, simply cannot be maintained if the farm economy goes to pot:

> This lesson, if pondered and acted on, will prevent the clear and present danger of a repeat performance of the last Depression.
>
> At that time, the one statesmanlike voice that was heard, but heeded too late, was that of the late, great Eugene Meyer, the most practical financier of his day, and, therefore the most frustrated.
>
> He was a prophetic dissenter of the Hoover years, when he served as chairman of the Federal Reserve Board.
>
> He saw clearly and warned incessantly that if a farm depression were allowed to develop, it would pull the props out from under a top heavy debt structure in the industrial economy and in the stock market.

Mr. President, we are doing this not just for farmers; we are doing it for the entire economy of this country. We need the additional outlays to protect these farmers, not just for themselves, not just for agriculture, but for all the economy of the country.

The PRESIDING OFFICER (Mr. LEAHY). Who yields time?

Mr. MUSKIE. Mr. President, I take it that neither the distinguished chairman of the Agriculture Committee nor I have further requests for time. I did not expect requests for time. I have had no requests for time. I may well be the only Senator on this side of the issue. In any case, I have no requests for time. I intend to take only 3 or 4 minutes for summation, and then I will yield back the remainder of my time, unless I unexpectedly receive a request for time.

Mr. TALMADGE. I have 3 or 4 minutes.

Mr. MUSKIE. Mr. President, I yield myself 3 minutes. I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. MUSKIE. Mr. President, I see no need to repeat the record of what has led to this amendment or the rationale for the numbers in the second budget resolution as presented by the Budget Committee. But I do want to make this point clear:

The second concurrent resolution was approved by the Budget Committee and reported to the Senate just prior to the August recess. The reason this amendment is pending before us is threefold. Since the Budget Committee's agreement, the following three events have occurred:

First, the conference report on S. 275 was agreed to by the Agriculture Committee 1 day after the second budget resolution was reported. It would cost $1.6 billion over existing law. The law has been changed, compared to the Budget Committee's allowance of $900 million. That is the difference of $700 million about which we are talking. It has nothing to do with weather, except insofar weather and the farmers' problems motivated the committee to do this. It was not the automatic result of current law. It was a change in current law.

Second, the administration has administratively raised price supports for

feed grains to the level provided for in the conference report and provided a setaside for wheat lower than was calculated in the formation of the budget resolution. The combination of these two administrative actions has raised the estimated cost of existing law by $600 million.

Third, the USDA has reestimated the yield of the current harvest, producing an increase in the estimated cost of price support programs under existing law of $100 million. That reestimate, of course, does reflect weather conditions that change the crop estimates. The last two of these reasons could have been accommodated by the second budget resolution.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MUSKIE. I yield myself 1 additional minute.

The last two of these reasons could have been accommodated by the second budget resolution if the first event had not taken place, or the first event could have been accommodated if the last two had not taken place. However, to suggest that the reason for the increase is wholly the result of the third condition or third factor is to ignore the first two.

In summation, I think the RECORD should include that record of what has taken place since the Budget Committee reported the resolution just prior to the recess.

With that, Mr. President, I think the record is complete, from my point of view, and I will yield back the remainder of my time when the distinguished Senator from Georgia has completed his summation.

Mr. TALMADGE. Mr. President, first, I pay my respects and very high tribute to the distinguished Senator from Maine, who is chairman of the Budget Committee. In my opinion, he has done an outstanding job in that capacity.

I find myself voting with him far more often than I find myself voting against him, but in this particular instance, he happens to be wrong. [Laughter.] I hope a majority of the Senate will happen to be right.

I also pay my tribute to the distinguished ranking minority member of the Senate Committee on the Budget, the Senator from Oklahoma, who serves not only on the Budget Committee but also serves with distinction on the Committee on Agriculture, Nutrition, and Forestry. The Senator from Oklahoma is a man who farms for a living. He still farms. He knows the vagaries of farming to a very high degree. He has been an outstanding member of our Committee on Agriculture, Nutrition, and Forestry. He has been an outstanding member of the Committee on the Budget. I believe that his speech this morning on the floor of the Senate is worthy of high consideration. I hope that this will mean that we can consider the matter of agriculture on more than an annual basis.

As has been pointed out this morning by virtually every Senator who spoke in favor of the amendment pending at the desk, no one on the face of the Earth can predict the weather. The weatherman who reports the weather for today is as wrong as often as he is right. How can you expect anyone to predict the weather for the entire United States during an annual growing season? It is an utter impossibility. If they cannot predict the weather for the United States, how can they be expected to predict the weather in the Soviet Union, in Europe, in China, in Afghanistan, in Patagonia? Weather determines to a greater degree than anything else the production yields worldwide.

For 2 or 3 consecutive years, we have had favorable growing weather, not only in the United States but worldwide as well. Even Bangladesh at the present time has adequate grain reserves. India at the present time has a surplus of grain reserves.

So, what is the situation? The reserves of wheat are the highest of any time in the history of mankind. What has that done? It has driven the price of wheat down to 40 percent of parity. Wheat farmers throughout America are going broke. Many farms are being foreclosed, particularly those of young farmers who have overexpanded, without a great deal of equity in their farms or their machinery.

In the United States we have had the second largest corn crop in the history of mankind. The second largest soybean crop in the history of the United States is predicted for this year. That has driven farm prices down, while yields have gone up. The demand worldwide has gone down, and that has driven prices down. That is why we now need some legislation to protect the farmers of this country. They are in worse shape now than they have been at any time since the depression days of 1933, and we remember what happened during those years. A book was written about the Oakies migrating to the West—The Grapes of Wrath. That is a situation we see in many parts of America today.

In my State, we have had the worst drought in the history of Georgia. The estimated loss about 7 weeks ago was $700 million—in 1 year.

In other areas of the country, we have had severe drought. However, in most areas of the country we have had good weather conditions, which have caused the largest yields in the history of our Republic.

Much has been mentioned today about the budget and the sanctity of the budget.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. TALMADGE. I yield.

Mr. MAGNUSON. Mr. President, I am going to vote for the Senator's amendment. I have not had an opportunity to discuss this amendment, as I just returned from my home State. I see the Senator from Idaho in the Chamber.

Despite all the conditions about which the Senator from Georgia has talked, in our area I think we have had the worst drought conditions in our history, particularly with respect to wheat and pea farmers.

The crop is down by as much as 50 to 40 percent, and they are really going broke. Without a bill like this—I would like to see the bill even better, in better shape than what it is.

Mr. TALMADGE. May I say to the distinguished Senator that most farmers have complained bitterly that it is inadequate.

Mr. MAGNUSON. This is absolutely the minimum these farmers can get along with. I do not know if they will survive even with this minimum. But if we do not do this, we are going to have more young people leave the farms, more bankruptcies, machinery prices up. Just last week I was in our area, may I say to the Senator from Idaho, all through there, and I never realized how bad the situation was because of this drought. It has rained a little. One of the days I was there it rained, and I had a little joke, I took credit for it. I took credit for the rain. But it was hardly enough to plant the winter wheat. So that is why the job the Committee on Agriculture has done is very, very important.

I know the argument the Senator had on the House side, but I am glad to be here now to be able to vote for it.

Mr. TALMADGE. I thank my distinguished friend from Washington for his comment and his support.

I yield now to my distinguished friend from Idaho.

Mr. McCLURE. I thank my friend from Georgia for yielding.

I want to second what the Senator from Washington just said. Eastern Washington and northern Idaho have been in the worst shape they have been in any kind of recorded history in the memory of man.

The eastern Palouse along the edge of Idaho and Washington, in that area the crops were 30 percent of normal or below, and I wish it were possible for us to extend to them some financing——

Mr. MAGNUSON. If the wheat farmer got up to 50, he would consider himself a very lucky person out there.

Mr. McCLURE. He would be very lucky because he would have more than the normal for that area this year.

Interim financing may be more important to those farmers than any other kind of a loan program on crops produced because he has nothing to put under loan, and the result is that as important as this legislation is, there is work yet to be done for some of those people. But I certainly support the statements that have been made, and I support the amendment.

Mr. TALMADGE. I thank my distinguished friend from Idaho.

Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Georgia has 4 minutes remaining.

Mr. TALMADGE. I thank the Chair.

Now, Mr. President, much has been said about the budget, and I support a balanced budget. In fact, I have offered a constitutional amendment to require a balanced budget, and I wish the Senate would agree to it.

But let us see what has been happening now to the budget in recent years. I hold in my hand the budget of the Gov-

ernment of the United States for 1978. Let us look at agriculture. Farm income stabilization in 1969 cost the U.S. taxpayers $5.304 billion. It has been going down, down, down ever since. In 1976 it cost the taxpayers of the United States $1.574 billion.

I ask unanimous consent that that table (Budget Outlays by Function, 1969–79) from the budget for fiscal year 1978 be included in the RECORD at this point, Mr. President.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 19.—BUDGET OUTLAYS BY FUNCTION, 1969–79

[In millions of dollars]

Function	Actual									Estimate		
	1969	1970	1971	1972	1973	1974	1975	1976	TQ	1977	1978	1979

[1] Includes allowances for civilian and military pay raises for Department of Defense. *Less than $500,000.

Mr. TALMADGE. Now, let us look at some other functions of Government found on table 19. Let us look at function 600, income security. In 1969 that cost the taxpayers $37,281 million. By 1975, Mr. President, that had increased to $127,406 million, an increase of nearly fourfold in a period of 8 years.

Let us look at some other items now. Total health 1969. That figure was $11,758 million. By 1975, just 6 years later, it was $33,448 million, an increase of almost 300 percent in 8 years.

So while these other functions of Government, are going up, the cost of agriculture has been going down, down, down. Every other item of Government, every other expenditure of Government, has been going up, up, up.

So, Mr. President, this is one time we are asking for the expenditure for agriculture to be increased. The only reason we are asking there be an increase instead of a decrease—and I have been chairman of the Committee on Agriculture now for about 6 years, and every year under my chairmanship the cost of agriculture has been going down because we have had favorable markets overseas, and now we do not have those favorable markets. We have huge surpluses, we have price declines, we have farmers in need. We have wheat farmers at 40 percent of parity; grain farmers at 48 percent of parity; other farmers who are producing commodities below the cost of production.

So I hope, Mr. President, the Senate will agree to the amendment by an overwhelming majority.

I yield back the remainder of my time.

Mr. MUSKIE. Mr. President, I would just like to take 2 minutes to make an observation, if I may, and then I will yield back the remainder of my time.

I would like to point out to the distinguished Senator from Georgia that if his constitutional amendment requiring a balanced budget were in effect, his amendment would be out of order unless we could find a way to cut $64.7 billion from other functions of the budget. If we were to do that, we would produce other deficits which would require a mandate for other cuts.

So we have to choose between that kind of mandated budget discipline or the kind of discipline which forces upon us the responsibility of choosing between good programs. Otherwise we are going to be out of balance.

The Senator has correctly pointed to the growth in income security functions. The biggest single item is that, as the Senator knows as a member of the Committee on Finance, is social security. That presumably benefits people on the farm as well as people in the cities. So social security payments are payments made under a formula mandated by law. It is not anything we can control. We

cannot cut that to make funds available for the agriculture function.

The health function has grown largely under the leadership of the distinguished Senator from Washington (Mr. MAGNUSON) who has been one of the most articulate spokesmen for increased health expenditures in the interests of the American people, and he has made an eloquent, persuasive and justified case for those increases.

But the net result, gentlemen, is we cannot rob Peter to pay Paul. We must somehow apply the discipline across the board. It is only in that spirit that I have made the case I have tried to make today.

ADDITIONAL STATEMENTS SUBMITTED

Mr. ABOUREZK. Mr. President, I am pleased to be a cosponsor of the Talmadge amendment that would increase the outlay levels for function 350, Agriculture, from the Budget Committee's reported level of $5.6 billion to $6.3 billion.

During the Budget Committee's markup of the second concurrent resolution, I supported an amendment which would have increased the agriculture outlays above the levels assumed by the Budget Committee. Unfortunately, that amendment was rejected in committee.

However, the committee did make explicit the basis for arriving at its outlay total of $5.6 billion—namely to permit funding of the Senate-passed version of the farm bill—estimated to cost approximately $0.9 billion—plus funding of "current policy." During the month of August, however, two actions over which neither the Budget Committee nor the Agriculture Committee had any control, occurred. These two actions; namely, the President's decision to set aside 20 percent of the wheatland, plus the increases in the loan rate for feed grains, has caused the "price" of current policy to be increased by approximately $700 million, the difference between the Budget Committee's agriculture mark and the levels which the Talmadge amendment would establish.

Because of this increase in current policy, and not because of direct action by either the Budget Committee or the Agriculture Committee, the functional total for agriculture must be raised in order to accommodate the conference agreement on S. 275, the Food and Agriculture Act of 1977. I strongly support this conference agreement, and hope that the Senate will give its quick approval to it.

It must be realized that this adjustment to the Agriculture function is, in my view almost equivalent to a "technical amendment," one that makes no change in the policy assumptions adopted by the Budget Committee during its markup on the second concurrent resolution on the budget. I see no inconsistency in cosponsoring the Talmadge amendment and supporting the Budget Committee resolution.

Again, I hope that the Senate will give its approval to both the Talmadge amendment, and to the budget resolution.

BUDGET-BUSTING IN AGRICULTURE

Mr. HEINZ. Mr. President, I must oppose the amendment to increase the functional ceiling for agriculture in the second concurrent budget resolution for the simple reason that it represents a wholesale attack on fiscal responsibility and the painstaking work of the Senate Budget Committee. It would be defaulting on my obligation as a member of the committee, whose charge it is to discipline Federal spending, to permit such a shameless extravagance.

It is incredible to realize that the President—who is himself a farmer—only this year submitted a budget request for function 350, agriculture, of $2.3 billion. Following the recent House-Senate conference on the farm bill, the prospect is now $6.1 billion, and I understand that some elements in the House are even contemplating $6.3 billion.

It must be remembered that before recess, the Senate Budget Committee not only acceded to an already whopping $5.6 billion figure, but actually saw fit to take the Draconian step of including in the resolution it reported a "reconciliation instruction" to insure that the Agriculture Committee would keep under this figure. The agriculture conference cavalierly ignored our committee's work.

Mr. President, I ask unanimous consent to include in the RECORD the supplemental views of mine on this subject which appeared in the report of the Budget Committee on the second concurrent resolution.

There being no objection, the views were ordered to be printed in the RECORD, as follows:

SUPPLEMENTAL VIEWS OF SENATOR HEINZ

Under the skillful and often courageous guidance of Senators Muskie and Bellmon, the Committee has again performed its difficult but necessary duty of exerting some downward pressure on Federal spending, if not quite yet succeeding in getting it under our thumb. I don't know whether we will in fact end up achieving that celebrated balanced budget by 1981, as the President keeps promising, but at least it can be hoped that the Senate Budget Committee will be able to look back content that it did its best, consistent with the demands of fiscal policy and human compassion.

It is with regret, then, that I note the one glaring exception to this otherwise responsible record, namely, the permissiveness with which we have treated the blatant budget-busting in Function 350: Agriculture. It is hard to believe that only a few months ago, in our mark-up of the First Concurrent Resolution, we could have settled so innocently on an outlay figure of $3.7 billion—$0.7 billion above the 1977 "current policy" figure as it was—and even thought ourselves generous receding in conference to $4.35 billion.

For the fact is that, since then, we have been slapped in the face with a commodity price support welfare program $0.8 billion in excess of what the Budget Committee explicitly allowed, and a House version of it yet another $0.6 billion higher. This is not to mention somehow unforeseen technical re-estimates that range upwards of $400 million to $1.2 billion. All in all, we find ourselves faced with potential spending about double what it seems we decided just a few short months ago would be reasonable.

I am simply not convinced that these dramatic changes are all a product of brand-new meteorological or market conditions. I am afraid it is also a matter of what target price for wheat we were led time and again to believe would be acceptable—and what finally was. This experience has been no less than an insult to the Committee, and in the long-run can only act to undermine the credibility and influence we desperately need to uphold the still fragile—yet still essential—congressional budget process.

Mr. HART. Mr. President, this has been a long and frustrating year for agricultural producers in Colorado and the Nation. They have experienced in 1 year's time, some of the driest weather on record and then, at the last minute, disaster-preventing moisture. Early in the year, Colorado wheat producers were daily confronted with the possible loss of their year's income when the wind started to blow and the dust started to move. They took action to stop the precious soil from blowing away, yet millions of acres of wheat were lost to wind erosion in Colorado and the other High Plains States. Then the weather changed in the Wheat Belt and the rain started to fall, just in time to save the wheat, and continued to fall in sufficient quantities to produce a record crop. I bring this up to illustrate that farming is a business that is subject to a large number of variables, all of which can have an affect on the quantity produced and on the price the farmer will receive for his commodity. Possibly the most important variable is weather, both in this country and in commodity producing areas around the world.

Earlier this year, the Congress started the process of consideration of an act that would set our farm and food policy for a number of years to come. Although not a member of the Agriculture Committee, I have followed its consideration of this proposal with a great deal of interest, since agriculture is still a major industry in Colorado and is the economic base of most of the communities in the State. I commend my colleagues on the Agriculture Committee for their hard work on the Food and Agriculture Act of 1977 and for the attention they have given to the needs of agricultural producers. Under the budget procedure that the Congress uses, earlier this year an estimate was made of the cost of the changes proposed in the Food and Agriculture Act of 1977. But now, due to changed conditions, larger than anticipated crops at home and abroad and sharply lower market prices make it necessary to change that estimate and to raise the ceiling on expenditures for agricultural programs in the second budget resolution.

Mr. President, I strongly support the amendment to Senate Concurrent Resolution 43 as proposed by Senator TALMADGE and join as a cosponsor. This amendment represents a very important statement of support that must be made by Congress to insure the agricultural producers in this Nation that we understand their problems and are ready to lend them a helping hand.

Mr. MUSKIE. I am willing now to yield back the remainder of my time and

proceed to a vote. I think the record has been made. I think it is a good one on both sides and, hopefully, the Senate will have the material on which to base a reasoned judgment.

Mr. TALMADGE. I yield back the remainder of my time.

Mr. MUSKIE. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. MELCHER). All time having been yielded back, the question is on agreeing to the amendment of the Senator from Georgia. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), and the Senator from New York (Mr. MOYNIHAN) are necessarily absent.

I further announce that, if present, and voting, the Senator from Minnesota (Mr. HUMPHREY) and the Senator from Montana (Mr. METCALF) would vote "yea."

Mr. STEVENS. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Oregon (Mr. HATFIELD), and the Senator from Idaho (Mr. MCCLURE) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) would vote "yea."

The result was announced—yeas 64, nays 27, as follows:

[Rollcall Vote No. 350 Leg.]

YEAS—64

Abourezk	Glenn	Pearson
Allen	Gravel	Percy
Anderson	Griffin	Randolph
Baker	Hansen	Riegle

NOT VOTING—9

Biden	Huddleston	McClure
Brooke	Humphrey	Metcalf
Hatfield	McClellan	Moynihan

So, Mr. TALMADGE'S amendment was agreed to.

Mr. TALMADGE. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. DOLE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. ZORINSKY). Will Senators please take their seats or retire to the cloakrooms with their conversations? The Senate will be in order.

ELIGIBILITY FOR VETERANS' BENEFITS PURSUANT TO VIETNAM ERA DISCHARGE UPGRADING

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to the consideration of S. 1307, which the clerk will state.

The legislative clerk read as follows:

A bill (S. 1307) to amend title 38 of the United States Code to deny veterans' benefits to certain individuals whose discharges from service during the Vietnam era under less than honorable conditions are administratively upgraded under temporarily revised standards to discharge under honorable conditions.

The Senate proceeded to consider the bill, which had been reported from the Committee on Veterans' Affairs with an amendment to strike all after the enacting clause and insert the following:

That section 3103 of title 38, United States Code, is amended by adding at the end thereof the following new subsection:

"(e)(1) Notwithstanding any other provision of law, no benefits under laws administered by the Veterans' Administration shall be provided on the basis of an award of an honorable or general discharge under revised standards for the review of discharges (A) as implemented on or after April 5, 1977, under the Department of Defense's special discharge review program, or (B) as implemented after January 1, 1977, and not made generally applicable.

"(2) With respect to any person who was discharged from active military, naval, or air service under less than honorable conditions and, under the revised standards described in paragraph (1) of this subsection, has been awarded a general or honorable discharge, the board of review concerned under section 1553 of title 10, United States Code, subject to review by the Secretary concerned, shall, on its own initiative and in the absence of objection by such person after being duly notified of its intention to do so, make a separate determination whether such person would have been awarded an upgraded discharge under generally applicable standards for the review of discharges under such section 1553. Any such determination that a person would have been awarded an upgraded discharge shall entitle such person to benefits under laws administered by the Veterans' Administration just as though the upgraded discharge had been awarded under generally applicable standards. In the event that such board determines that such person would not have been awarded an upgraded discharge under such generally applicable standards, such person shall be entitled to notice thereof and appearance before the board as provided in section 1553(c) of such title.".

SEC. 2. Notwithstanding any other provision of law, the Administrator of Veterans' Affairs, may, in the Administrator's discretion pursuant to such regulations as the Administrator shall prescribe, provide health care pursuant to chapter 17 of title 38, United States Code, for any disability incurred during active military, naval, or air service in line of duty by a person other than a person barred from receiving benefits by section 3103 of such title, but not, pursuant to this section, for any disability incurred during a period of service from which such person was discharged by reason of a bad conduct discharge.

SEC. 3. The Administrator of Veterans' Affairs, in promulgating, or in making any revisions of or amendments to, regulations governing the standards and procedures by which the Veterans' Administration determines whether a person was discharged or released from active military, naval, or air service under conditions other than dishonorable, shall, in keeping with the spirit and intent of this Act, not promulgate any such regulations or revise or amend any such regulations for the purpose of, or having the effect of, providing any unique or special advantage to veterans who have received upgraded discharges under the Department of Defense's special discharge review program or otherwise making any special distinction between such veterans and other veterans.

SEC. 4. Section 1 of this Act shall apply retroactively to deny entitlement to benefits, but the United States shall not make any claim to recover the value of any benefits provided prior to the date of enactment of this Act.

Mr. CRANSTON. Mr. President, I ask unanimous consent that Ned Massee of Senator Randolph's staff may have the privilege of the floor during the consideration of this measure.

Mr. THURMOND. Mr. President, I make the same request in behalf of Gary Crawford of the staff of the Veterans' Affairs Committee.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 765

Mr. CRANSTON. Mr. President, for the information of Senators, there will be a rollcall vote, I think, quite shortly on this measure. I now send to the desk an amendment to S. 1307 as reported, which the Senator from South Carolina and I are authorized to submit on behalf of the Committee on Veterans' Affairs, and I ask for its immediate consideration.

The PRESIDING OFFICER. The time for debate on this measure is limited to 20 minutes, to be equally divided and controlled by the Senator from California (Mr. CRANSTON) and the Senator from South Carolina (Mr. THURMOND). If there are any amendments, debatable motions, or appeals, there will be a limitation of 10 minutes on each, to be taken from the time on the bill; provided further, that should there be a sufficient number of amendments to require additional time, the minority leader and the majority leader will be recognized to obtain additional time or lay the bill aside temporarily, the agreement being in the usual form.

The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from California (Mr. CRANSTON), for himself and Mr. THURMOND, proposes an unprinted amendment numbered 765.

Mr. CRANSTON. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

Strike out all after the enacting clause and insert in lieu thereof the following:

Notwithstanding the first sentence of this paragraph, with respect to any person in receipt of benefits under this title on the date of enactment of this paragraph, such benefits shall not be terminated under this paragraph until such time as a final determination not favorable to the person concerned is made on an expedited basis under this paragraph or the expiration of 180 days after the date of enactment of this Act, whichever is the earlier, and the United States shall not make any claim to recover the value of any benefits provided to such person prior to the date of such final determination. The Administrator shall, as soon as administratively feasible, notify the appropriate board of review of the receipt of benefits by any person described in the preceding sentence or of the application for such benefits by any person dscribed in the first sentence of this paragraph.".

(b) The Secretary of Defense shall inform each person whose discharge was upgraded under circumstances described in section 3103(e)(2) of title 38, United States Code, as added by subsection (a) of this section of the implications of the provisions of this Act for each such person.

SEC. 2. Notwithstanding any other provision of law, the Administrator of Veterans' Affairs, may, in the Administrator's discretion pursuant to such regulations as the Administrator shall prescribe, provide the type of health care and related benefits authorized to be provided under chapter 17 of title 38, United States Code, for any disability incurred or aggravated during active military, naval, or air service in line of duty by a person other than a person barred from receiving benefits by section 3103 of such title, but not, pursuant to this section, for any disability incurred or aggravated during a period of service from which such person was discharged by reason of a bad conduct discharge.

SEC. 3. Paragraph (18) of section 101 of title 38, United States Code, is amended to read as follows:

"(18) The term 'discharge or release' includes (A) retirement from the active military, naval, or air service, and (B) the satisfactory completion of the period of active military, naval, or air service for which a person was obligated at the time of entry into such service in the case of a person who, due to enlistment or reenlistment, was not awarded a discharge or release from such period or service at the time of such completion thereof and who, at such time, would otherwise have been eligible for the award of a discharge or release under conditions other than dishonorable.". That (a) section 3103 of title 38, United States Code, is amended by adding at the end thereof the following new subsection:

"(e)(1) Notwithstanding any other provision of law, (A) benefits under laws administered by the Veterans' Administration for a person described in the second sentence of this paragraph shall be provided, as a result of a change in or new issuance of a discharge under section 1553 of title 10, only upon a case-by-case review by the board of review concerned, subject to review by the Secretary concerned, under such section, of all the evidence and factors in each case under uniform standards (historically consistent with criteria for determining honorable service) and procedures generally applicable to all persons so discharged who apply for such review; and (B) this paragraph shall apply, for such period of time for application (but in no event for less than one year after the date of enactment of this paragraph) as the President shall establish, to any person who, prior to the date of enactment of this paragraph, was administratively discharged under other than honorable conditions from active military, naval, or air service performed at any time if any part of such service occurred on or before March 28, 1973.

"(2) Notwithstanding any other provision of law, any person who was discharged from active military, naval, or air service under other than honorable conditions and who, under revised standards (A)(i) as implemented on or after April 5, 1977, under the Department of Defense's special discharge review program, or (ii) as implemented after January 1, 1977, and (B) not made generally applicable to all persons to whom paragraph (1) of this subsection applies, has been awarded a general or honorable discharge prior to the date of enactment of this paragraph, shall be entitled to benefits under laws administered by the Veterans' Administration only upon a case-by-case review on an expedited basis under standards meeting the requirements of paragraph (1) of this subsection applied by the board of review concerned under section 1553 of title 10, subject to review by the Secretary concerned, after notification by the Veterans' Administration to such Secretary that such person has applied for such benefits or after receiving a written request by such person for a decision regarding prospective entitlement. In the event that such board determines that such person is not entitled to the award of an ungraded discharge under standards meeting such requirements, such person shall be entitled to notice thereof and appearance before the board as provided for under section 1553(c) of such title prior to a final determination on such question.

SEC. 4. The Administrator of Veterans' Affairs, in promulgating, or in making any revisions of or amendments to, regulations governing the standards and procedures by which the Veterans' Administration determines whether a person was discharged or released from active military, naval, or air service under conditions other than dishonorable, shall, in keeping with the spirit and intent of this Act, not promulgate any such regulations or revise or amend any such regulations for the purpose of, or having the effect of, providing any unique or special advantage to veterans who have received upgraded discharges under the standards (A)(i) as implemented on or after April 5, 1977, under the Department of Defense's special discharge review program, or (ii) as implemented after January 1, 1977, and (B) not made generally applicable to persons who served at any time, or otherwise making any special distinction between such veterans and other veterans.

Mr. CRANSTON. Mr. President, I ask for the yeas and nays on passage.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. CRANSTON. Mr. President, today Senator THURMOND and I are submitting on behalf of the Committee on Veterans' Affairs, a committee modification to S. 1307 as reported and urging its immediate passage as a fair and equitable resolution of the many issues which have been raised about the Department of Defense's April 5, 1977, special discharge review program.

This legislation is the result of extensive discussions between myself and the distinguished Senator from South Carolina (Mr. THURMOND), a strong and valuable member of the Committee on Veterans' Affairs who originally introduced S. 1307. I wish to congratulate the Senator from South Carolina (Mr. THURMOND) on his sense of fairness, his openmindedness, and the cooperative spirit which made it possible for us to produce a measure which has gained the unanimous support of the Committee on Veterans' Affairs and which merits the support of the entire Congress. I also wish to express my appreciation for the help and cooperation of the Senator from Kansas (Mr. DOLE) who has been so interested in this measure. I also am very grateful to the Senator from South Dakota (Mr. ABOUREZK) and the Senator from Massachusetts (Mr. BROOKE) for their concern and cooperation.

INTRODUCTION

Mr. President, on April 19, 1977, the Senator from South Carolina (Mr. THURMOND) introduced S. 1307; and on June 14 I submitted, on behalf of myself and the Senator from South Carolina (Mr. THURMOND), amendment No. 414 to S. 1307.

The committee conducted a hearing on S. 1307 and amendment No. 414 on June 23, 1977. The hearing also included general oversight of the Defense Department's special discharge review program, as implemented on April 5, 1977. Submitting testimony at that time were the Secretary of the Army, other representatives of the Department of the Army, the general counsel of the Veterans' Administration, representatives of veterans' organizations, and other concerned parties.

Although opposed by the administration, the bill as it was proposed to be amended by amendment No. 414—and thus the bill as ultimately reported—was supported by the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, American Veterans of World War II, Korea, and Vietnam, the Paralyzed Veterans of America, and the Blinded Veterans Association.

On June 23, 1977, the committee unanimously voted to report favorably S. 1307 with a committee amendment derived from amendment No. 414 and a title amendment. Thus, on June 28, I reported the committee bill.

The bill as reported is cosponsored by a total of 29 Senators, including all other members of the committee—Mr. TALMADGE, Mr. RANDOLPH, Mr. STONE, Mr. DURKIN, Mr. MATSUNAGA, Mr. STAFFORD, and Mr. HANSEN—and by Mr. BYRD of Virginia, Mr. YOUNG, Mr. CURTIS, Mr. LAXALT, Mr. MCCLURE, Mr. SCOTT, Mr. HELMS, Mr. GARN, Mr. GOLDWATER, Mr. ZORINSKY, Mr. DOLE, Mr. SCHMITT, Mr. HATCH, Mr. STEVENS, Mr. HAYAKAWA, Mr. ALLEN, Mr. WALLOP, Mr. SASSER, Mr. HUDDLESTON, and Mr. CLARK.

BASIC PURPOSE OF COMMITTEE BILL

Mr. President, the basic purpose of the bill as reported, as well as of the committee amendment, is to provide a fair and equitable basis for granting veterans' benefits to former military personnel whose undesirable or clemency discharges have been or will be upgraded

to discharges under honorable conditions, that is, general or honorable discharges, under revised standards for the review of discharges, as implemented after January 1, 1977 and not made generally applicable. In two such instances since January 1, 1977, discharge review standards have been revised for special classes of former servicepersons: First, the program ordered by President Ford on January 19, 1977, for former military personnel who had applied for clemency under President Ford's clemency program for draft evaders and military-absence offenders from the Vietnam era, which President Ford defined as the period August 4, 1964, to March 28, 1973; and second, the Defense Department's special discharge review program, implemented at President Carter's direction on April 5, 1977, for former military personnel who received administrative discharges other than honorable discharges during the Vietnam era—again defined as the period August 4, 1964 through March 28, 1973—and for military deserters-at-large from the same period—except those who deserted in or from a combat zone—who return to military control and receive administrative discharges during the 180 days following April 5, 1977. The committee bill provides that no benefits may be awarded on the basis of an upgrading of a discharge under such revised special standards. However, the committee bill would insure that no individual who responded to President Ford's or President Carter's offers of assistance under a special program of discharge review would be prejudiced by having responded, in terms of opportunities for obtaining eligibility for veterans benefits that would have been granted of such special programs had never been established.

The committee bill would also provide the Administrator of Veterans' Affairs with authority to furnish health care for the treatment of service-connected illnesses and injuries incurred in line of duty by former active duty military personnel—with no restriction based on their period of service or date of discharge—who may not otherwise be entitled to such care because they have administrative discharges under less than honorable conditions.

SUMMARY OF PROVISIONS—S. 1307 AS REPORTED

Mr. President, S. 1307 as reported had four sections, three of which relate to the basis on which veterans' benefits may be granted those whose undesirable or clemency discharges are upgraded to honorable or general discharges pursuant to special programs for the review of discharges which provide for the application of discharge review standards implemented after January 1, 1977, and not made generally applicable. These provisions would:

First, preclude the granting of veterans' benefits on the basis of an upgrading under such special programs.

Second, require military Discharge Review Boards—the boards which, under section 1553 of title 10, United States Code, make upgrading decisions, subject to the review of the Secretary concerned, generally as well as for purposes of the special programs—to determine whether a discharge under less than honorable conditions—or a clemency discharge—which had been upgraded under the standards of a special discharge review program would have been upgraded under generally applicable standards; and provide that such determination, if favorable, would entitle the individual to veterans' benefits permitting the individual to retain whatever upgraded discharge—general or honorable—had been given under the special discharge review standards.

Third, place the responsibility on the Discharge Review Boards to take the initiative in making that determination under generally applicable standards in each case unless the individual, after the notification of the board's intention to make such determination, objects; and preserve, in connection with such determination, the procedural protections currently available to persons applying for discharge upgrading under ordinary circumstances, such as the right to personal appearance.

Fourth, preclude the Administrator of Veterans' Affairs—in replacing, revising, or amending regulations governing the standards and procedures by which the Veterans' Administration determines whether an individual with a less than honorable discharge was discharged "under conditions other than dishonorable"—which decision, if favorable, entitles the individual to veterans' benefits—from giving any special advantages, through "character of discharge" regulations, to veterans who may have received upgraded discharges under the special discharge review program.

Fifth, specify that the act would apply retroactively to deny entitlement to benefits; but preclude the United States from recovering the value of any benefits provided prior to the date of enactment of the act.

The remaining provisions would authorize the Administrator to provide health care, on a discretionary basis pursuant to such regulations as the Administrator shall prescribe, for the treatment of any disability incurred in line of duty during active-duty service by certain persons who might otherwise not be entitled to such treatment because they were administratively discharged under conditions less than honorable or because they hold clemency discharges.

CHANGES MADE BY COMMITTEE MODIFICATION

Mr. President, since this bill was ordered reported, we have made modifications, primarily to try to take into account certain objections which the White House had to the reported bill. We believe we have done that to the extent it could be done consistent with the principles of S. 1307 as reported—that veterans' benefits not be granted based on special standards not generally applicable to veterans of all service periods, and that these benefits not be granted based on any automatic factors but rather only after a careful case-by-case review of the entire record and all the relevant evidence and factors in each case. The modified version of the committee substitute fully—and I stress fully—carries out those principles; in fact, we believe it does so more effectively than the bill as reported.

The changes we have made generally make the tone of the language of the bill more positive than negative, and remove the requirement for a "second" review under general applicable standards in every case where benefits eligibility was granted due to an upgrading in a special program prior to enactment. Rather, this second review, by a military discharge review board, would be required under our modification only if the previously upgraded veteran actually has applied for veterans' benefits or requested that determination from the service concerned.

Mr. President, the modification also makes the reported bill identical, in one additional respect, to a similar House bill (H.R. 8698) by adding a provision included in H.R. 5027, as ordered reported on July 15 and reported on August 3 by the Committee on Veterans' Affairs. This provision deals with veterans who "re-up" before completing their originally intended periods of service.

Mr. President, the modification has been submitted to the three largest veterans' organizations—the American Legion, Veterans of Foreign Wars, and Disabled American Veterans. Certain further revisions were made after discussions with these organizations; and I am pleased to report that each of these organizations supports the committee amendment.

Mr. President, the provisions of the modification can be summarized as follows:

Subsection (a) of section 1 of the modification—like section 1 of the bill as reported—adds a new subsection (e), consisting of paragraphs (1) and (2), to section 3103 of title 38. Paragraph 1 of new subsection (e), as modified, applies prospectively and mandates certain standards and procedures for discharge review in the cases of those whose discharges would have not been upgraded by the date of enactment of this measure. Paragraph 2 applies only to those whose undesirable or clemency discharges would, by the date of enactment, have been upgraded under President Ford's January 19, 1977, discharge upgrading program or President Carter's April 5, 1977, special discharge review program.

The revision of paragraph (1) of new subsection (e) of section 3103 changes the main subject and verb from a negative form of expression—"no benefits . . . shall be provided"—to a positive form—"benefits shall be provided only". The other changes in this paragraph generally represent a tightening-up of its provisions. Whereas the version reported by the committee required—for purposes of eligibility for veterans' benefits as a result of upgrading—only that discharge-review standards for upgradings

be applicable to all former military personnel, the proposed revision requires that such discharge-review standards incorporate "case-by-case review—by the military authority concerned—of all the evidence and factors" and requires the "application of uniform standards and procedures" that are "historically consistent with criteria for determining honorable service". This paragraph would apply to any person (a) who has been administratively discharged prior to enactment, (b) who saw any service at any time prior to the withdrawal of the last U.S. troops from Vietnam (March 28, 1973), and (c) whose discharge was not upgraded prior to enactment.

This paragraph would also provide for the establishment of a new discharge review program, under which individuals would have at least 1 year to apply for upgrading, for all personnel other than those who entered active-duty service after the end of U.S. involvement in Vietnam and those who are discharged after the date of enactment. Such a program would—in order for discharge upgradings thereunder to confer entitlement to veterans' benefits—have to be based on the following principles: First, notwithstanding the limitation on review of discharges under section 1553 of title 10, United States Code, which requires the individual to apply for upgrading within 15 years from the date of discharge, the program would have to be open to all former military personnel—other than post Vietnam-involvement enlistees. This requirement would avoid the inequity to, for example, Korean conflict and World War II personnel, which the special discharge review program entailed.

Second, the program must incorporate "case-by-case review of all the evidence and factors." This requirement would eliminate the use of any criteria which would automatically result in upgrading or denial of upgrading regardless of the overall quality of the individual's service. The April 5 special program does not meet this standard.

Third, the program's standards and procedures must be "uniform." For several years, the discharge-review process has been criticized for the great disparities in the results among the services. I believe that the requirement of "uniform standards" will be very beneficial in this regard. The guidelines for discharge-review determinations have, in the past, been set forth in internal memorandums and have not been codified and published. Thus, in the case of the Army Discharge Review Board, for example, such guidelines have, at least in part, been set forth in an unpublished document from the Board's president entitled "President's Guidance, Army Discharge Review Board Standard Operating Procedure." In fact, the only published codification of discharge-review standards appears to have been the April 26, 1977, publication in the Federal Register of special discharge review program standards.

Fourth, the program's standards must be "historically consistent with criteria for determining honorable service." Thus, no radical departure from the historic standards, such as the use of automatic criteria, would be permitted. As discussed above, such discharge-review guidelines have been unpublished and have been rather vague and lacking in specificity. However, at the June 23, 1977, hearings on S. 1307, Defense Department witnesses testified that the criteria established for the special program incorporated principles which had previously been informally understood and applied in the general discharge-review process. As the Secretary of the Army testified, those "criteria . . . have been and will continue to be an aspect of discharge review in either a specific or philosophical sense." Therefore, it would appear that criteria similar to those used in the special discharge review program would be "historically consistent" if such criteria were modified as necessary to be applicable to all prior eras and to eliminate the automatically qualifying and disqualifying characteristics of certain of those criteria.

The revision of new paragraph (2) of new subsection (e) of section 3103 would continue to require, in order to determine eligibility for VA benefits, a "second" determination as to whether those persons whose undesirable or clemency discharges have been upgraded under "special" discharge-review programs would have been upgraded under generally applicable standards—as described in paragraph (1). However, based on strong White House and Defense Department objections to the conduct of a "two-tier" discharge-review program, under which two separate determinations are made—one under special standards for purposes of upgrading "bad paper" and the second under generally applicable standards as described in paragraph (1)—it can be assumed that, upon enactment of this legislation, the special discharge review program will be terminated and a subsequent review program will incorporate the principles of paragraph (1) in a "one-tier" process. Thus, one basic change from paragraph (2) in S. 1307 as reported is that, when a new discharge review program is established consistent with the principles set forth in paragraph (1), the "second" review would have to be made only for cases decided before the enactment of the bill—since everyone upgraded thereafter would be entitled to benefits only under the conditions in the new paragraph (1)—and only if the veteran either applies for benefits or specifically requests such a review in writing. Such reviews are to be made expeditiously upon prompt notification by the VA that the individual has applied for benefits. By limiting the mandatory conduct of reviews to cases where an application for benefits or a specific request is made—rather than automatically in all cases, as previously provided for in S. 1307 as reported—a proper balance has been struck between equity and administrative efficiency.

The deletion of the requirement of mandatory review in all cases, however, does not imply that the discharge review boards would not have the authority to undertake such reviews on their own initiative. Rather, the purpose has been to avoid imposing a new backlog of 12,000 or more cases immediately upon enactment. In fact, in order to avoid the possibility of such reviews being made on extremely stale records, such as when a veteran who participated in this program first applies for benefits 30 or 40 years from now upon becoming eligible for the veterans' pension program, it is strongly recommended that the review boards undertake reviews of all upgradings of undesirable and clemency discharges under the special program within the next 2 to 3 years.

The proposed revision of new paragraph (2) limits its application to only those cases, under the April 5 Department of Defense special discharge review program and the similar January 19 Ford program, which are decided prior to the date of enactment, thus making unnecessary any explicit reference to retroactivity, such as was included in section 4 of S. 1307 as reported. Also, in light of the fact that the "second" review would not, under the proposed revision, be made automatically and immediately in all cases, but would, instead, be required to be initiated only after the veteran applies for benefits—or requests a "second" review in writing—the revised version would allow benefits to continue to be paid to those in receipt of benefits on the date of enactment pending the finalization of the "second" review.

This provision recognizes that, among the 12,270 undesirable discharges upgraded as of September 1, 1977, under the April 5 special program, there is a substantial likelihood that in any given case the upgrading may be upheld at the time of the "second" review; that some veterans whose discharges were so upgraded will be receiving benefits on the date of enactment of this act; and that, in some such cases, the veteran's need for benefits may be immediate. Thus, in order to avoid possibly great disruption and confusion for such veterans already receiving benefits and whose entitlement would eventually be sustained under this legislation, benefits would generally be continued unless and until a previous special program upgrading decision is reversed. But, in order to insure that reviews in those cases are undertaken expeditiously and that benefits do not continue for an unduly prolonged period while an ambiguous entitlement situation persists, provision is made for termination of benefits pursuant to the initial upgrading decision in cases which have not been finally determined within 180 days of enactment. If the initial upgrading determination is later sustained in a "second" review, of course, the entitlement to VA benefits would be reestablished.

I also wish to make clear, Mr. President, that there is no intent in this legislation to diminish the Government's obligations—incurred prior to the date of

enactment in the cases of persons whose discharges were previously upgraded under the special program—under such provisions as the home-loan guaranty program under chapter 37 of title 38, United States Code.

New subsection (b) of the proposed revision of section 1 would require the Secretary of Defense to notify all persons whose undesirable or clemency discharges have been upgraded under the special programs of the implications of this act for them.

In section 2, a change has been made to correct the inadvertent omission in section 2 of S. 1307 as reported of the words "or aggravated" so that health care may be provided for disabilities "aggravated" as well as "incurred" during active duty in line of duty. This would correct an oversight in drafting and conform to existing title 38, United States Code, definitions of service-connection, such as the section 101(16) definition of "service-connected." Also, the words "and related benefits" have been added after "health care" to clarify the fact that coverage is intended with respect to certain benefits, such as beneficiary travel and special clothing made necessary by the wearing of prosthetic devices, authorized as part of health-care benefits under chapter 17 of title 38.

Section 3 has been revised—as it should have been previously—to conform to an earlier change in section 1 to make reference to the January 19, 1977, Ford program.

A new section 4 has been added. It is identical to section 302(a) of H.R. 5027 as reported, and to section 5 of H.R. 8698 as reported by the House Committee on Veterans' Affairs, regarding "re-upping". This provision eliminates a clear inequity in the law regarding the eligibility for veterans' benefits under certain circumstances when an individual, before completing a period of service, agrees to extend his or her period of service. It expands the definition of the term "discharge or release" in section 101(18) of title 38, United States Code, in order to assure eligibility for veterans' benefits to one who has satisfactorily completed a period of service when he or she has not received a discharge or release at the completion of that period because of having agreed to extended active-duty service.

The need for this amendment can be illustrated by comparing the situations of three individuals, "A," "B," and "C," all enlisting on the same day for the same 3-year period of active-duty service:

A

A, after 2 years of service on a 3-year enlistment, agrees to a 4-year extension. Because A's original enlistment has not yet expired, he or she is issued a "conditional" discharge at that time—a discharge conditioned on immediate reentry into active-duty service for a period of 4 years. Such a discharge is not recognized by the VA for purposes of benefits eligibility.

A satisfactorily completes 3 years of service but does not receive an honorable discharge at that time because there are 3 years of extended service remaining. During the 5th year of service, A is involved in various incidents resulting in a discharge under conditions other than honorable. Despite having completed satisfactorily the 3 years of service for which A originally enlisted, A would not have a discharge making him eligible for benefits.

B

B completes satisfactorily the original 3-year enlistment, receives an honorable discharge, and immediately reenlists for a second 3-year tour of active-duty service. Like A, B is involved in various incidents during the 5th year of service and is discharged under conditions other than honorable. Unlike A, however, B has a discharge—one received after 3 years of service—carrying with it eligibility for veterans' benefits.

C

C completes satisfactorily the original 3-year enlistment and receives an honorable discharge. C never reenters active-duty service and is eligible for veterans' benefits.

These hypothetical cases, it seems to me, lead inescapably to the conclusion that a serviceperson may be prejudiced in terms of eligibility for veterans' benefits by agreeing to extended service before the expiration of his or her first period of service. Only A—who completed his initial 3-year commitment honorably under circumstances identical to B and C—is not entitled to benefits. Ironically, such extensions generally result from encouragement by the service for the purpose of obtaining assurance of its ability to meet future personnel requirements.

BACKGROUND

Mr. President, on January 21, 1977, President Carter announced his pardon of those who had violated the draft laws during the Vietnam conflict, which he described as the period from August 4, 1964, to March 28, 1973. At that time, I felt that moral and equitable considerations required that he also extend a comparable measure of forgiveness and compassion to individuals who entered and served in military service during that same period, but who failed to complete military service successfully. In fact, in announcing the pardon, the President stated that he was referring to the Department of Defense the question of how, in light of the pardon, to deal equitably with the problems of former military personnel from the Vietnam era who had received less-than-honorable discharges during that time.

On March 2[illegible], 1977, Secretary of Defense Harold Brown announced that the President had approved a program for the review of certain administrative discharges—other than honorable discharges—received during the Vietnam era.

INEQUITIES IN SPECIAL DISCHARGE REVIEW PROGRAM

I have, and have had, a number of major concerns regarding the program which was announced on March 29 and implemented on April 5, 1977—the special discharge review program. First, as a program that is supposed to help bind up the divisions of the Vietnam era, I do not believe that it fully effectuates a measure of compassion for those with unsatisfactory military experiences similar to the forgiveness extended to those who had violated the selective service laws. In my mind, forgiveness for a former GI—comparable to the January 21, 1977, pardon—should mean wiping the slate clean in every case where it is reasonable to do so in the spirit of forgiveness and compassion, through the issuance of an honorable discharge to those who received general or undesirable administrative discharges.

In my mind, the special discharge review program fails to accomplish that objective in several important respects. For example, unlike the pardon, whereby forgiveness was extended with respect to draft law violations which occurred during the period of the Vietnam conflict, as the President defined it, the scope of the special discharge review program is tied to an administrative step taken by the military services—the issuance of an administrative discharge—rather than tied to the individual's conduct during that period. For the programs to be truly parallel, I believe that all administrative discharges based in whole or in part upon the individual's behavior during the period defined as the Vietnam conflict should have been encompassed within this program.

I also believe that this program should extend—at a minimum—to individuals who served in Vietnam after the involvement of regular military personnel in armed conflict in Vietnam but prior to the August 4, 1964, Gulf of Tonkin resolution.

Moreover, I think that the special program falls far short as an act of forgiveness, in that it seems to favor the upgrading of undesirable discharges to general discharges, which have a serious stigmatizing impact, rather than favoring upgrading to fully honorable discharges.

Mr. President, I made a lengthy statement on June 23, the day this bill was ordered reported from committee. As part of that statement, I inserted into the RECORD an extensive exchange of correspondence between late April and early June which I had with the Department of Defense, as well as my March 2 letter to President Carter. This material can be found at page 20519 of June 23.

SPECIAL STANDARDS FOR CONFERRING BENEFITS

Beginning with my March 2, 1977, letter to President Carter regarding the possible formulation of a special discharge review program, I have held and expressed a deep concern regarding the need to distinguish between the compassionate upgrading of certain "bad paper"

discharges to remove their stigmatizing effects, on the one hand, and the conferring of veterans' benefits as a consequence of such upgrading, on the other hand. Compassion and forgiveness under these circumstances properly call for the cleaning up of a bad record so that the individual can resume his or her normal civilian pursuits without the disadvantage of a stigmatizing discharge. Thus, nothing in the bill as reported or the committee modification would alter the nature of the discharge "paper" granted the individual under the special discharge review program.

However, compassion and forgiveness should not, in my view, automatically entail financial rewards in all cases. The decision regarding entitlement to benefits should be made on the basis of a careful case-by-case review in accordance with standards generally applicable to all veterans and taking into account the full record in each case. I believe that the broad and sweeping conferring of such benefits without regard to the whole record, on grounds of compassion and forgiveness, does substantial damage to the fundamental principle that veterans' benefits are entitlements to be earned through honorable military service to the Nation.

BIPARTISAN APPROACH

As I indicated earlier, the committee bill was cosponsored by each member of the Veterans' Affairs Committee and 20 other Senators, and supported by the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, the AMVETS, the Paralyzed Veterans of America, and the Blinded Veterans Association. Moreover, it is noteworthy that this approach has commanded the same bipartisan approach in the House of Representatives. On June 20, the ranking minority member of the House Veterans' Affairs Committee, JOHN PAUL HAMMERSCHMIDT, introduced H.R. 7885, legislation identical to amendment No. 414. On the following day, this legislation was endorsed by Congressman TOM DOWNEY of New York, a leader in the field of discharge review board reform legislation.

INEQUITABLE BEARD AMENDMENT ON APPROPRIATIONS ACT

On the other hand, Mr. President, it is quite disturbing that on June 14, 1977, the House passed by a vote of 273 to 136, the so-called Beard amendment to H.R. 7554, the House-passed version of the HUD-Independent Agencies Appropriations Act for fiscal year 1978.

That amendment, on its face would absolutely prohibit the expenditure of funds for veterans' benefits from fiscal year 1978 appropriations to any individual whose undesirable discharge is upgraded under the special program, even though that individual might have been entitled to an upgrading under generally applicable discharge-review standards, or to a favorable character-of-discharge determination from the VA. Thus, an individual—with an undesirable discharge—who responded to the President's invitation in the spirit of compassion and forgiveness to seek a discharge upgrading would be penalized if he received such an upgrading, by being automatically denied thereafter any benefits out of fiscal year 1978 appropriations. In contrast, another individual with identical circumstances who did not apply for upgrading in the special program would be fully eligible to apply under the regular discharge review process and, if successful, obtain benefits which the Beard amendment would deny to the former individual.

Mr. President, some very important data show just how punitive and inequitable the effects of this appropriations amendment would be. As of September 1, 1977, for the Army alone, 1,188 undesirable discharges had been upgraded to honorable under the special discharge review program. Of these 1,188 Army veterans, 890 served in Vietnam, including 155 who received the Purple Heart, 91 who were decorated for valor, and 384 who were decorated for merit. The significance of these 1,188 cases lies in the fact that the special program does not incorporate any special compassionate standards for upgrading an undesirable discharge to an honorable discharge. Thus, the decision to upgrade an undesirable discharge to honorable—even under the special program—is made in accordance with generally applicable standards, standards which were in effect before the special discharge review program was implemented. It is clear that in each of these 1,188 cases the veteran would have received an upgrading in the absence of the special program. Each served honorably and each is fully entitled to veterans' benefits. A vote for the Beard amendment would be, therefore, a vote to deny veterans' benefits to more than a thousand veterans who served honorably during a time of war, most of whom served in the combat zone.

In addition, the President of the Army Discharge Review Board testified in the June 23 hearing before the Senate Committee on Veterans' Affairs that approximately one-half of the undesirable discharges being upgraded under the special discharge review program would be upgraded under generally applicable standards. As of September 1, 12,270 undesirable discharges had been upgraded under the special program. Half of that number—about 6,000—would probably have been upgraded under ordinary review standards. A vote for the Beard amendment is, therefore, also a vote to deprive 6,000 or more deserving veterans of their rights to benefits.

Nowhere in the history of the U.S. Congress is there any precedent for legislation that would deprive wartime and combat veterans who served faithfully of their rights to benefits.

Mr. President I am very pleased that H.R. 7554, as passed by the Senate on June 24, contains no such amendment; and I am delighted that the Senate conferees refused to accept that amendment, reporting back in disagreement on that item.

However, on July 19, the House again voted in favor of that amendment by a vote of 251 to 160. I would strongly urge that all Senators reject the amendment when the conference report on H.R. 7554 comes to the floor.

Mr. President, so that all Senators and the public may have a clear understanding of the background for and the principles underlying this legislation, I ask unanimous consent that there be printed in the RECORD at this point appropriate excerpts from the committee report on S. 1307 (S. Rept. 95–305).

The PRESIDING OFFICER. Without objection, it is so ordered.

BACKGROUND

ADMINISTRATIVE SEPARATION OF ACTIVE-DUTY PERSONNEL

Through the administrative discharge system, the military services administratively effect the separation of personnel (principally enlisted personnel) from active-duty service prior to the scheduled completion of a normal tour of duty. The administrative discharge program does not include punitive discharges—Bad Conduct Discharges and Dishonorable Discharges—which are imposed only as part of a special or general court-martial sentence following conviction. During the period in question—August 4, 1964, through March 28, 1973, described by Presidents Ford and Carter as the Vietnam Era—administrative discharges were either Honorable Discharges, General Discharges (under honorable conditions), or Undesirable Discharges[1] (under less than honorable conditions).

Administratively issued Honorable and General Discharges are both considered to be issued under honorable conditions and both entitle the recipient to eligibility for benefits under laws administered by the Veterans' Administration. Thus, an individual holding an Honorable or General Discharge issued administratively is fully entitled to all veterans' benefits accruing from the period of active-duty actually served.

An Undesirable Discharge entitles an individual to no veterans' benefits based on the period of service which it terminates; and it often carries a very serious stigma in civilian activities.

The grounds for administrative discharge with an Honorable or General Discharge prior to expiration of the individual's scheduled period of service cover a wide variety of circumstances. These include, among others, the convenience of the Government, undue and genuine hardship or dependency, and unsuitability, which, in turn, includes eight categories, including inaptitude, character and behavior disorders (as determined by medical authority), enuresis, and alcohol abuse. (Department of Defense Directive 1332.14, section VII, paragraphs B–G, December 20, 1965, reissued September 30, 1975 (hereinafter referred to as "DOD Directive 1332.14").) If a discharge is based on one of the enumerated factors, the discharge must be either honorable or general and may not be undesirable.

Grounds for administrative separations which could possibly result in the issuance of an Undesirable Discharge (that term was altered recently—see footnote 1) have in-

[1] With respect to undesirable discharges, the nomenclature has been revised effective January 1, 1977; the new designation is "discharge under other than honorable conditions."

cluded security reasons, unfitness (including, among other things, frequent involvement of a discreditable nature with civil or military authorities, sexual perversion, an established pattern for shirking, and an established pattern showing dishonorable failure to pay just debts), and misconduct (including conviction by civil authorities of an offense for which the military justice penalty includes confinement for more than one year, procurement of a fraudulent enlistment, and continuous unauthorized absence of one year or more). (DOD Directive 1332.14, section VII, paragraphs H–J.) Also, on July 29, 1968, the Department of Defense specifically authorized the issuance of Undesirable Discharges on grounds of a request for discharge for the good of the service when the individual's "conduct rendered him [or her] triable by court-martial under circumstances which could lead to a punitive discharge [Bad Conduct or Dishonorable Discharge"]. (DOD Directive 1332.14, section VII, paragraph K.)

The type of discharge which an individual may receive administratively depends upon the grounds, as discussed above, and the quality of his or her military service. DOD Directive 1332.14 provides:

VI. Standards for discharge

The type and character of discharge or separation will be determined according to the following standards.

A. *Honorable Discharge.* Issuance of an Honorable Discharge will be conditioned upon proper military behavior and proficient performance of duty with due consideration for the member's age, length of service, grade, and general aptitude. A member will not necessarily be denied an Honorable Discharge solely by reason of a specific number of convictions by courts-martial or actions under Article 15 of the Uniform Code of Military Justice during his current enlistment or period of obligated service.

B. *General Discharge.* Issuance of a General Discharge is appropriate when a member's military record is not sufficiently meritorious to warrant an Honorable Discharge as prescribed by the regulations of the service concerned.

C. *Undesirable Discharge.* An Undesirable Discharge may be issued for misconduct, unfitness, or security reasons based on the approval of a recommendation of an administrative discharge board, or waiver of the right to board action, or resignation or request for discharge for the good of the service as provided for in Section VII.K. of this Directive.

D. *Special Consideration.* In any case in which an Undesirable Discharge is authorized under this Directive a member may be awarded an Honorable or General Discharge, as appropriate, if during his current enlistment, period of obligated service, or any voluntary or involuntary extensions thereof, or period of prior service he has been awarded a personal decoration as defined by his particular service, or if warranted by the particular circumstances of a specific case.

Department of Defense discharge statistics for General and Undesirable Discharges issued during the period fiscal year 1965 through fiscal year 1976 are as follows:

TABLE 1.—DEPARTMENT OF DEFENSE

	Undesirable discharges (1965–76) [1]								General discharges (1965–76) [1]							
Fiscal year	Army	Percent	Navy	Percent	Marine Corps	Percent	Air Force	Percent	Army	Percent	Navy	Percent	Marine Corps	Percent	Air Force	Percent

ADMINISTRATIVE DISCHARGE REVIEW PROGRAM—GENERAL

Pursuant to section 1553 of title 10 United States Code, each Military Department has a Discharge Review Board consisting of such number of panels as the Secretary concerned deems necessary. These boards, acting through panels consisting of five officers each, may, on their own motion or upon application by or on behalf of a former serviceperson, review and change, correct, or modify any administrative discharge, and issue a new discharge. Actions of these Boards are subject to review and modification by the Secretary concerned.

Army Regulation No. 15–180, April 11, 1977, the Department of the Army's generally applicable implementing regulation, provides that remedial action under section 1553 of title 10 "is intended primarily to ensure that no discharged or dismissed former members of the Army will be deprived unjustly of any benefit provided by law for former members of the military service by reason of a type of discharge or dismissal inequitably or improperly given."

Prior to November 1975, these review boards met only in Washington, D.C. At that time, panels were established on a regional basis, and some panels now travel to and conduct hearings at cities having large numbers of applicants.

During the period fiscal years 1965 through 1976, Army Discharge Review Boards upgraded 359 Undesirable Discharges to Honorable Discharges and 5,969 Undesirable Discharges to General Discharges, and denied upgrading in 28,523 cases involving Undesirable Discharges. Thus, in 22 percent of such cases in this 11-year period, entitlement to veterans' benefits resulted from Army Review Board action. (Comparable data is not available with respect to the Discharge Review Boards of the other Departments.)

In addition, each Military Department has a Board for the Correction of Military Records pursuant to section 1552 of title 10, United States Code, consisting of civilian employees of the Department concerned. These boards consider applications from current and former active-duty military personnel requesting the correction of "errors or injustices" in their service records, including the correction of discharges.

VETERANS' ADMINISTRATION "CHARACTER OF DISCHARGE DETERMINATIONS"

Section 101(2) of title 38, United States Code, defines "veteran" as "a person who served in the active military, naval, or air service and who was discharged or released therefrom under conditions other than dishonorable." Generally, one must qualify as a "veteran" in order to be entitled to veterans' benefits under title 38. The Veterans' Administration now accepts Honorable and General Discharges, whether originally issued in that form or later upgraded, as conclusive evidence that the individual was discharged "under conditions other than dishonorable." In cases of Undesirable Discharges (and Bad Conduct Discharges imposed by special court-martial, which discharges are not all involved in the bill as reported), the Veterans' Administration will, upon application by the individual for veterans' benefits, make its own determination whether the discharge was issued "under conditions other than dishonorable." The applicable VA regulations (paragraph (d) of section 3.12, title 38, Code of Federal Regulations) specify that:

(d) A discharge or release because of one of the offenses specified in this paragraph, is considered to have been issued under dishonorable conditions.

(1) acceptance of an undesirable discharge to escape trial by general court-martial.

(2) mutiny or spying.

(3) an offense involving moral turpitude. This includes, generally, conviction of a felony.

(4) willful and persistent misconduct. This includes a discharge under other than honorable conditions, if it is determined that it was issued because of willful and persistent misconduct. A discharge because of a minor offense will not, however, be considered willful and persistent misconduct if service was otherwise honest, faithful, and meritorious.

(5) generally, homosexual acts.

SPECIAL DISCHARGE REVIEW PROGRAMS—1977

The January 19, 1977, program—President Ford

A. Background (The September 16, 1974, Clemency Program): On September 16, 1974, President Ford issued Proclamation 4313 and Executive Order 11803 establishing a clemency program covering four categories of persons: fugitive (unconvicted) draft law offenders, fugitive (unconvicted) military-absence offenders, convicted draft offenders, and former service persons with undesirable or bad conduct discharges for unauthorized absences. Only individuals who had committed a selective service law or military offense between August 4, 1964, and March 28, 1973, were eligible. The program covered a total of 113,000 known individuals along with approximately 250,000 unidentifiable persons who had not registered for the draft. Applications for the program were received

from September 16, 1974, through March 31, 1975, a period of six and one-half months.

Under this program, fugitive draft-law offenders (not previously convicted) were able to turn themselves in at the offices of U.S. Attorneys in the districts where their alleged offenses had occurred. These individuals, by taking an oath of allegiance, waiving certain legal rights, and performing not more than 24 months of alternative service, were to become entitled to have the charges of draft law violations against them dropped. Of 4,522 known offenders and roughly 250,000 persons who had never registered for the draft, 706 draft fugitives applied, and 699 were assigned to alternate service. As of June 6, 1977, 323 had completed alternate service, 216 had been terminated from alternative service for failure to satisfactorily complete such service, 136 had been transferred to "pardon status" as a result of President Carter's January 21, 1977, pardon of draft law violators, and 24 were still performing alternative service.

Fugitive military-absence offenders—those who were absent without authority from active-duty military service, which absence commenced during the period August 4, 1964, to March 28, 1973—could return to military control, immediately be issued undesirable discharges, and be offered a chance to earn Clemency Discharges (without entitlement to veterans' benefits) by performing not more than 24 months of alternative service. Of the 10,115 fugitive military-absence offenders eligible, 5,555 applied; 4,527 were assigned to alternate service, but, as of June 6, 1977, 3,568 had been terminated from such service for failure to complete it satisfactorily, 881 had completed alternate service, and 78 were still performing their assignments.

Convicted draft offenders were eligible to apply to the Presidential Clemency Board for pardon. Of 8,800 persons eligible for pardon, 1,879 applied. Approximately 1,600 received Presidential pardons, and 136 were assigned to alternative service. As of June 6, 1977, 89 had completed alternate service, 37 had been terminated from such service for failure to complete it satisfactorily, 9 had been placed in "pardon status", and 1 was still performing his assignment.

Former military personnel with undesirable or bad conduct discharges based on absence offenses were permitted to apply to the President Clemency Board for pardon. When this program was initiated, 170 servicepersons who had been serving prison sentences as a result of court-martial proceedings were released upon making application for clemency. In total, approximately 90,000 former military personnel were eligible, 13,589 of whom applied. Pardons without an alternate service requirement were granted to 4,620 applicants, 885 were denied clemency, and 3,107 were assigned to alternative service. As of June 6, 1977, 1,181 had completed alternate service, 1,895 had been terminated from alternate service for failure to complete such service satisfactorily, and 31 were still performing their assignments.

B. Implementation: As previously indicated, 13,589 former military servicepersons who had been discharged on grounds of absence offenses and 5,555 fugitive deserters applied for clemency under President Ford's September, 1974, Clemency Program. On January 19, 1977, in memoranda to the Secretaries concerned, President Ford directed that the discharges of those who had applied for clemency and who had been "wounded in combat or who [had] received decorations for valor in combat in Vietnam . . . be reviewed on an individual basis." He further directed that those "discharges be recharacterized as under honorable conditions", in the absence of "a compelling reason to the contrary in any case". Pursuant to this program, 288 discharges have been upgraded to General or Honorable Discharges.

DEPARTMENT OF DEFENSE APRIL 5, 1977, SPECIAL DISCHARGE REVIEW PROGRAM

A. Background (President Carter's January 21, 1977, Pardon): On January 21, 1977, President Carter issued Proclamation 4483 granting pardons to all persons who had been convicted of, or may have committed, draft law offenses which occurred between August 4, 1964, and March 28, 1973, except those persons whose actual or possible offenses either involved "force or violence" or were in connection with their duties or responsibilities arising out of employment in the Selective Service System. In issuing this pardon of draft evaders, President Carter announced he was delegating to the Department of Defense responsibility for development of a program to deal "compassionately" with the approximately 430,000 former military personnel from the Vietnam era who had been issued other than Honorable Discharges.

B. Implementation: On March 28, 1977, Secretary of Defense Harold Brown announced that President Carter had approved a program for the review of certain administrative discharges received during the Vietnam era—defined as August 4, 1964, through March 28, 1973. According to a Department of Defense press release, persons with Undesirable and General Discharges received during that period were eligible to apply for upgrading in accordance with the "President's desire that these discharges be reviewed in a spirit of compassion." The concluding paragraph of the release stated: "This program is being implemented in the spirit of forgiveness and compassion in which the President has sought to bind up the divisions of the Vietnam era. Any upgrading obtained under the program will be an act of forgiveness and prospective in its effect. . . ."

On April 26, 1977, notice was published in the Federal Register (Vol. 42, pages 21308–11) regarding the establishment, by the Secretary of Defense, of a Special Discharge Review Program with an effective date of April 5, 1977. The Department of the Army was designated the Executive Agent for the conduct of the program and a plan for the Special Program was published.

The Special Discharge Review Program Plan provided for the establishment of a Joint Liaison Office in St. Louis, to which applicants are able to place toll-free telephone calls in order to apply for discharge review under the Special Program. Unless otherwise specified by the caller, it is assumed that he or she is seeking an upgrade to an Honorable Discharge under the Special Program. Following the phone call, a letter is sent to the applicant to explain the program, inform him or her of the opportunity to submit additional information, and to advise him or her that, if additional documentation is not received within thirty days from the date of the letter, an initial review by the Discharge Review Board will be undertaken based on material in the individual's military records only.

The initial review of the individual's military records and of any information submitted in writing by the individual is held in closed session by the Discharge Review Board concerned. If the initial review results in less than full relief, the individual is advised of his or her right to a *de novo* hearing, including the right to a personal appearance. Also, if after the initial, closed session review the individual does not have a discharge under honorable conditions, the Military Departments will provide counsel, without charge to the individual, to represent him or her at the *de novo* hearing.

The criteria for discharge review under the program provided:

3. *Special Considerations.* Applicants with discharges Under Other than Honorable Conditions who meet one of the following considerations will have their discharges upgraded to a general discharge under honorable conditions (or may be upgraded to an honorable discharge if the [Discharge Review Board] so determines) unless there are compelling reasons to the contrary:

a. Received a U.S. military decoration other than a service medal.

b. Was wounded in action.

c. Satisfactorily completed an assignment in Southeast Asia or in the western Pacific in support of operations in Southeast Asia.

d. Completed alternate service or was excused therefrom in accordance with Presidential Proclamation 4313 of 16 September 1974 [the Ford clemency program].

e. Received an honorable discharge from a previous tour of military service.

f. Had a record of satisfactory active military service for 24 months prior to discharge. (*Id.* at 21310.)

With regard to the "compelling reasons" not to upgrade the discharge of such an applicant, the plan stated:

(2) Applicants with discharges Under Other than Honorable Conditions who meet one of the special considerations . . . will be upgraded . . . unless there are compelling reasons to the contrary. Compelling reasons are the following:

(a) Discharge was for desertion or absence in or from the combat zone. An individual who departed the combat zone on leave, TDY, or other authorized absence basis and did not return is considered to have deserted or absented himself in or from the combat zone. Conversely, an individual who failed to report to an embarkation point for further assignment to the combat zone is not considered to have been absent in or from the combat zone.

(b) Discharge was based on an act of violence or violent conduct.

(c) Discharge was based on cowardice or misbehavior before the enemy.

(d) Discharge was based on an act or conduct that would be subject to criminal prosecution if it had taken place in a civilian environment. (*Id.* at 21309.)

The plan also identifies eight "mitigating factors" in the following fashion:

4. *Mitigating Factors.* Applicants with discharges under other than honorable conditions may also qualify for upgrading to a general discharge under honorable conditions (or an honorable discharge) when a Service Discharge Review Board finds such action is appropriate based on all of the circumstances of a particular case and on the quality of the individual's civilian record since discharge. Factors to consider in this regard include:

a. Age, general aptitude, and length of service at time of discharge.

b. Education level at the time of discharge

c. Individual entered the service from a deprived background.

d. Actions which led to the discharge were alleged at the time of discharge to have been motivated by conscience.

e. Individual entered the service upon a waiver of normally applicable entrance standards.

f. Possible personal problems which may have contributed to the acts which led to discharges.

g. Record of good citizenship since discharge. Boards are encouraged to give weight to this factor when a good record is documented.

h. Was discharged for drug or alcohol abuse and, if so, any contributing or extenuating circumstances

i. Other factors which the applicant contends warrant an upgrade in discharge. (*Id.* at 21310.)

In the case of applicants with General Discharges (under honorable conditions), the plan provides that their applications

should be considered in light of "the President's desire that discharges be reexamined in a spirit of compassion."

The plan also provides for a program for deserters at large—persons in a deserter status whose absence commenced during the Vietnam era, as defined in the plan. Such individuals are given 180 days, from April 5, 1977, to October 4, 1977, to return to military control. Upon return, if there are no other charges which were pending at the time of desertion or absence, charges for desertion and absence will be dismissed and the individuals will be discharged by reason of "prolonged unauthorized absence." Such individuals would then have the same opportunity as those who received other than Honorable Discharges during the Vietnam era to apply for upgrading under the Special Discharge Review Program.

As of June 21, 1977, initial-review decisions under the Special Program have been made in 11,345 cases involving undesirable discharges. In 8,115 cases, the discharge has been upgraded to either a General or Honorable Discharge. Thus, to date, entitlement to veterans' benefits has been granted in 72 percent of these cases.

IMPACT OF SPECIAL DISCHARGE REVIEW PROGRAMS ON STANDARDS FOR AWARDING VETERANS' BENEFITS

In correspondence with the Chairman of this Committee and in testimony at the June 23 Committee hearing, Department of the Army officials, speaking on behalf of the Department of Defense, have asserted that the April 5, 1977, special discharge review program does not amount to a substantial departure from the generally applicable standards by which discharges are reviewed and upgraded. For example, in a June 22, 1977, letter to the Chairman, the Secretary of the Army stated:

"[I]t must be borne in mind that the criteria in use for the Special Program are duplicative of the criteria that are part and parcel of the discharge review, per se, [sic], since they deal with the totality of the individual and his service. To that extent, there is similarity in consideration of cases. The essential difference is, of course, that under the Special Program, there is a requirement to upgrade under certain circumstances and this requirement would not otherwise be present under normal review."

In a similar vein, the Secretary, in his testimony before the Committee on June 23, 1977, stated:

"The [Special] Program is unique only in that it took the courage and stature of the President to shoulder the responsibility for directing this mass review. Criteria that are a part of the [Special] Program have been and will continue to be an aspect of discharge review in either a specific or philosophical sense. The one new aspect of this review, however, is that if a person meets one of the six criteria established, the discharge will be upgraded absent compelling reasons to the contrary."

A brief analysis of the two special programs, however, clearly indicates that its standards for discharge review do place former military personnel eligible for the program in a favored position relative to other former service persons. For example, the provision regarding the "special considerations" mandates the upgrading of persons who meet any one of two (in the Ford program) or six (in the Carter program) criteria unless (one of four in the Carter program) compelling reasons to the contrary exists. To illustrate, under the Carter program the Undesirable Discharge of an individual who "satisfactorily completed an assignment in the Western Pacific in support of operations in Southeast Asia" must, under the Special Program, be upgraded, unless his or her discharge was based on "desertion or absence in or from the combat zone" (a zone to which he or she may not even have been assigned), an act of violence or violent conduct, cowardice or misbehavior before the enemy (again, the individual need not have been in combat), or an act or conduct that would be subject to criminal prosecution if it had taken place in a civilian environment. Under ordinary discharge review principles, using Department of Army regulations as an example, the upgrading determination in this and all other cases would be made on the following basis:

The scope of the inquiry of the ADRB [Army Discharge Review Board] will be to determine whether the discharge received was equitably and properly given. When the ADRB determines in an individual case that the discharge was not equitably and properly given, it is authorized . . . to direct The Adjutant General to take appropriate action; that is, to change, correct, or modify any discharge . . . , and to issue a new discharge, such direction being subject to review and modification only by the Secretary of the Army. Such remedial action is intended primarily to insure that no discharged . . . former member of the Army will be deprived unjustly of any benefit provided by law for former members of the military service by reason of a type of discharge . . . inequitably or improperly given.

The Committee has also been provided with what appear to be informal guidelines for Army Discharge Review Board decisions, under ordinary circumstances, a document entitled "President's Guidance, Army Discharge Review Board Standard Operating Procedure", authored by the President of the Army Discharge Review Board. These guidelines make no reference to special considerations such as those set out in the Special Discharge Review Program plan and clearly do not single out any one class of former military personnel. Rather, the document advises Discharge Review Board members:

The greatest difficulty the panel faces . . is to strive for uniformity that is defensible and comprehensible to impartial observers who possess no expertise nor any reliable means of evaluating the way of life of the military.

* * * * *

Impartiality must be the rule for each panel member. A clear, non-jaundiced, unprejudiced evaluation must be made, which favors neither the individual nor the government but which simply tries to fairly consider whether or not the actions that took place can now be justified with the benefit of hindsight. The board must strive for uniformity in its adjudicative deliberations

In addition, although the Special Discharge Review Program plan does not so specify, in cases in which none of the six criteria identified as "special considerations" are involved, review is intended to be accomplished in a "spirit of compassion and forgiveness", pursuant to the President's wishes, and the Secretary of the Army so justified at the June 23 hearing.

While Defense Department witnesses—the Secretary of the Army and the President of the Army Discharge Review Board—stated in their testimony that the spirit of compassion and forgiveness under which discharge reviews are to be conducted in the Special Program does not distinguish that program from the ordinary discharge review process, the above-quoted Army regulations regarding discharge review and the informal guidelines of the President of the Army Discharge Review Board do not mention "forgiveness" at all and mention compassion only in the following passage from "the President's Guidance":

Points of view and expressions of compassionate concern must not be ridiculed nor must the individual expressing them be cut short in his discussion or argument as long as they are relevant to the merits of the case.

Perhaps the clearest statement of the distinction between the Special Program and the ordinary discharge review standards is the Secretary's recognition in his testimony that "It is true that some will receive benefits under this Special Program that otherwise may not have received such benefits." That statement is supported by further testimony from Department of Defense witnesses, including the Secretary, that only half of those whose discharges have been upgraded from Undesirable to General under the Special Program would receive an upgrading under the generally applicable standards.

It is likewise obvious that the January 19, 1977, program established by President Ford for the review of two categories (two of the six later adopted by President Carter in his program of April 5) of individuals who had applied for clemency under his earlier September 16, 1974, Clemency Program applies standards differing from those that are generally applicable. With regard to persons in those two categories—those "wounded in combat" and those decorated "for valor in combat in Vietnam"—President Ford, in his Memoranda to the Secretaries of the Departments concerned, stated:

"I have a continuing concern over the welfare of these people, particularly those [in the foregoing categories] * * * . * * * I am hereby directing that you take all necessary action to ensure that the discharges of these former servicemembers * * * be reviewed on an individual basis.

"I am further directing that these discharges be characterized as under honorable conditions, unless you find a compelling reason to the contrary in any case."

Thus, as the Defense Department and VA witnesses testified, the January 19 program is similar in approach and structure to—though on much smaller scale—to the April 5, 1977, Special Discharge Review Program. The only apparent distinctions are that only two of the six "special considerations" under the April 5 program are included in the January 19 program and that the April 5 program defines the term "compelling reason" for not upgrading while the January 19 program leaves that term undefined.

DISCUSSION

APPROPRIATE BASIS FOR GRANTING VETERANS' BENEFITS

The April 5, 1977, Defense Department Special Discharge Review Program constitutes a large-scale departure from fundamental, historic principles for the granting of veterans' benefits which are not being applied even-handedly to all former service personnel. Section 101(2) of title 38 provides the basic definition of the term "veteran" for purposes of benefits under laws administered by the Veterans' Administration—"a person who served in the active military, naval, or air service, and who was discharged or released therefrom under conditions other than dishonorable." Throughout title 38, that term is used to denote an individual who is entitled, by virtue of the character of his or her service, to specific benefits. This definition thus establishes a minimum standard regarding the quality of active-duty service which will result in entitlement to veterans' benefits.

The Committee recognizes that the Military Departments properly make initial determinations regarding the character of the active-duty service of individuals and have authority, under sections 1552 and 1553 of title 10, United States Code, to revise such determinations when warranted by the facts in individual cases. However, the Committee questions the conferring of veterans' benefits as a consequence of discharge upgrading on grounds which depart very substantially from the historic principles on the basis of which benefits have been and should be granted.

In addition to injecting considerations which the Committee finds to be of dubious

statutory derivation into determinations resulting in the conferring of benefits, the Special Discharge Review Program singles out a limited class of former military personnel as the beneficiaries of favored treatment. The Committee finds no provision in title 10 or title 38 which provides any Executive Branch official with the discretion to discriminate among former military personnel on the basis of period of service or date of discharge so as to afford some a peculiar advantage with regard to veterans' benefits.

The Committee believes that this unevenhanded application of standards by the Federal Government raises the most basic questions of fundamental fairness and equal treatment.

Nor does the Committee believe that such a distinction for purposes of rewarding honorable service can be justified on any acceptable basis. While this Committee has three times approved legislation (in S. 2108 in the 92nd Congress, S. 284 in the 93rd Congress, and S. 2908 in the 94th Congress) designed to deal with some of the very distinct aspects of the Vietnam war and has under active consideration at this time legislation (in S. 1693) to provide for special readjustment counseling assistance for certain Vietnam-era veterans, the Committee does not find that these distinctions warrant the fundamentaly disparate treatment afforded in the special programs for the purposes of determining when veterans' benefits have been earned by the character of a person's military service.

On a much smaller scale, the program established by President Ford on January 19, 1977, directing that certain discharges not involving entitlement to veterans' benefits be upgraded to discharges under honorable conditions (carrying entitlement to benefits) in the absence of "compelling reasons to the contrary", involved a similarly discriminatory application of special standards to a class that had been singled out for that purpose.

Because these programs involving special discharge review standards conflict with fundamental principles on which veterans' benefit are properly granted and with the evenhanded treatment which should characterize Government action, S. 1307 as reported denies entitlement to benefits on the basis of discharge upgrading through the application of such special standards.

Simply denying entitlement based on such special upgrading, however, does not provide a complete or equitable resolution of the situation created by these special programs. In the absence of specific legislative authorization and direction, persons who have received upgrading under a special program might not have the opportunity to obtain the kind of determination available to all others under ordinary circumstances regarding an upgrading carrying with it entitlement to veterans' benefits. Also, the procedures to be applied in connection with making such determinations would be uncertain, possibly leaving it to the individual to apply for a determination which, in the Committee's view, should be undertaken on the Discharge Review Board's initiative, and leaving the right to personal appearance in question.

To remedy this situation, S. 1307 provides that the Discharge Review Board concerned must—unless the individual, upon due notice, objects—make a separate determination whether, under generally applicable standards, it would grant an upgrading of the undesirable discharge. Such a determination if favorable, would entitle the individual to veterans' benefits and would leave undisturbed the upgraded discharge issued as the result of the application of Special Program standards. This provision applies to both an individual whose discharge has been upgraded under the April 5 standards prior to the date of enactment of this legislation as well as to those whose cases are pending or who apply thereafter for upgrading under the April 5 standards.

With respect to the procedures for making the separate determination, S. 1307 as reported preserves for the individual those procedural protections, such as the right to personal appearance, currently available to individuals who apply for upgrading under ordinary circumstances.

With respect to cases in which undesirable discharges have already been upgraded under either special program prior to the date of enactment of this measure, the Committee intends that the Discharge Review Board concerned provide the individual with notice of its intention to make a separate determination regarding upgrading under generally applicable standards for the purpose of resolving the issue of whether the individual should be entitled to veterans' benefits. In the absence of timely objection from the individual, the Board would proceed to make that determination on the basis of documentary evidence. If, as a result of such a "paper" review, the Board does not make a favorable determination, it would then notify the individual and proceed to afford the individual a full opportunity for a personal appearance in accordance with current procedures generally applicable.

As to cases in which an initial decision had not yet been made by the date of enactment of this legislation, the board concerned should, in the interests of efficiency and time, make two determinations simultaneously—one, as to whether an upgrading should be granted in accordance with the applicable special discharge Review Standards and the other as to whether under the generally applicable standards. If an upgrading is granted under the special standards, but would not have been under generally applicable standards, the case should proceed in accordance with existing procedures regarding personal appearance to a final determination of the latter issue. If, on the other hand, the individual's discharge is not upgradable under either standard, the case should proceed in accordance with the procedures prescribed in the Special Discharge Review Program plan, which entitle the individual to a *de novo* hearing and the provision of counsel without charge by the Military Department concerned.

According to Administration projections regarding numbers of applicants and upgradings, the undesirable discharges of approximately 20,000 to 25,000 individuals will be upgraded under the Special Discharge Review Program. If, as Department witnesses testified, half of the discharges so upgraded would not be upgraded under generally applicable discharge review standards, S. 1307 as reported would result in the denial of veterans' benefits to approximately 10,000 to 12,500 individuals who would otherwise be entitled to them.

Thus, using VA estimates of the average annual cost of benefits per veteran entitled to benefits—$1,100, $1,131, $1,060, $950, and $820 for fiscal years 1978 through 1982, respectively, S. 1307 as reported would produce a savings of approximately $11 million to $13,750,000 in fiscal year 1978 and approximately $50,610,000 to $63,262,500 in savings over the five year period in terms of benefits not paid.

The Congressional Budget Office (CBO) estimate of such cost-savings reflect the maximum potential savings, assuming all 161,000 eligible persons with Undesirable Discharges apply. Thus CBO estimates a $36.8 million cost-savings for fiscal year 1978 and a five-year (fiscal years 1978 through 1982) cost-savings of $288.4 million in terms of benefits not paid.

HEALTH CARE FOR PERSONS WITH ADMINISTRATIVE DISCHARGES UNDER LESS THAN HONORABLE CONDITIONS

S. 1307 as reported would give the Administrator of Veterans' Affairs discretionary authority, pursuant to each regulations as the Administrator shall prescribe, to provide for the furnishing of health care services to former active-duty personnel who may be precluded from treatment by virtue of an Undesirable or Clemency discharge. This authority applies only to persons other than those barred from receiving benefits under section 3103 of title 38. In addition, the services authorized to be provided are limited to the treatment of disabilities incurred during active duty in line of duty, that is, disabilities that are not the result of the individual's own willful misconduct or disabilities incurred while on unauthorized absence.

This provision recognizes the strong moral obligation of the Federal Government to provide treatment for service-connected disabilities. In the Committee's view, that general obligation becomes fixed at the time such an illness or injury occurs and is not vitiated by any circumstances short of those resulting from the sentence of a court-martial or otherwise specified in such section 3103.

This provision in S. 1307 would apply without regard to the individual's period of service or date of discharge.

"CHARACTER OF DISCHARGE" DETERMINATIONS BY THE VETERANS' ADMINISTRATION

To be eligible for veterans' benefits, an individual generally must meet the requirements of the definition of "veteran" in section 101(2) of title 38.—"A person who serves in the active military, naval, or air service, and who was discharged or released therefrom under conditions other than dishonorable." Under VA regulations (32 C.F.R., section 3.12), Honorable Discharges or General Discharges (under honorable conditions)—regardless of whether issued by a military service at the time of completion of a tour of duty or by virtue of a correction or upgrading by a Board for the Correction of Military Records or a Discharge Review Board—are generally now accepted by the Veterans' Administration as determinative of the honorable (literally "other than dishonorable") character of the individual's discharge.

Under section 3103 of title 38, on the other hand, a discharge issued imposed by a general court-martial unless set aside by a court or a Board for the Correction of Military Records is a conclusive bar to benefits. Administratively-issued discharges under less than honorable conditions (Undesirable Discharges) as well as Bad Conduct Discharges imposed by special courts-martial do not, *per se*, determine the issue whether the individual was discharged "under conditions other than dishonorable" for purposes of the section 101(2) definition of "veteran". Therefore, the Veterans' Administration has established standards and procedures, govern by regulation, by which it determines that issue.

The authority of promulgate, revise, or amend these "character of discharge" regulations should not be used to create special categories of veterans to be afforded any particular advantage relative to other former military personnel. Therefore, consistent with the sprit and intent of section 1 of S. 1307 as reported, section 3 of this measure would prohibit the Administrator from replacing, revising, or amending the VA's "character of discharge" regulations for the purpose of, or having the effect of, providing any special treatment thereunder to those who receive upgraded discharges under the Department of Defense's Special Discharge Review Program.

RETROACTIVITY

The final section of S. 1307 as reported provides that section 1 of the measure shall apply retroactively to deny entitlement to benefits to those whose entitlement is based on an upgrading of a discharge under less than honorable conditions by virtue of the application of special discharge-review standards implemented after January 1, 1977. That same provision, however, prohibits the United States from attemping to recover the value of benefits provided prior to the date of enactment of this legislation. Since there is no conceivable basis for questioning the good faith of individuals who would have been granted such upgrading under either the Ford or Carter program, no attempt should be made to recover from them the value of benefits received prior to the date of enactment of this measure.

Thus, upon enactment of this bill, those individuals whose Undesirable or Clemency discharges were upgraded prior to enactment will no longer be entitled to veterans' benefits by virtue of such upgrading, but they will have the opportunity for a determination under generally applicable discharge-review standards as to whether they should be granted such benefits.

CONCLUSION

Mr. CRANSTON. Mr. President, enactment of the committee modification of S. 1307 as reported would provide for the establishment of a discharge-review program consistent with principles on which there is broad consensus in the Senate and among veterans' organizations. This legislation also deals fairly with those who have received upgrading of their undesirable and clemency discharges under the January 19, 1977, and April 5, 1977, special programs.

There is no question that this legislation is far preferable to the Beard amendment and I, therefore, urge rapid congressional action leading to enactment of this measure and, eventually, congressional rejection of the Beard amendment.

Mr. President, although the administration has not expressed its support for the committee amendment—it has "no position" officially—there is no doubt in my mind that this modified version is far more acceptable to the White House.

Mr. President, in closing, I again want to express my personal thanks to the Senator from South Carolina (Mr. THURMOND) for his excellent work in the development of this legislation; and I wish to make note of the excellent staff work that went into the development of the committee bill and this modification. Among those to be congratulated are Gary Crawford, minority counsel for the Senator from South Carolina; Garner Shriver, minority counsel of the committee; chief counsel of the committee, Jon Steinberg; the committee's general counsel, Ed Scott; and other committee staff members, LaMar Lyons and Harold Carter.

Mr. THURMOND. Mr. President, today will be a day when the dignity of the service rendered our Nation by its 30 million veterans will be vindicated. Many of us in the Congress opposed the variety of programs instituted by the administration that had the effect of either pardoning those who ran from their duties during the Vietnam war or of forgiving those who performed it disgracefully and had to be separated from the military service. The opposition of some of the membership to these programs was strongly supported by the major veterans organizations—the American Legion, the VFW, the DAV, and AMVETS. The fervor of the opposition to such programs increased significantly, however, when it became apparent that former military personnel who had been separated from the military service with undesirable discharges could have their discharges upgraded under the administration's special discharge review program and qualify for veterans' benefits.

It was my position when I first introduced S. 1307, and it remains my position today, that the conferral of veterans' benefits upon individuals whose entitlement to them has been acquired under standards lower than that required of the remainder of our veterans' population, is not compassion at all but rather the reckless and uninhibited dishing out of benefits to those not entitled to them. The strong feeling in the Congress in opposition to automatic qualification for veterans' entitlements as a result of President Carter's discharge upgrade program affecting some 420,000 former Vietnam era service personnel was publicly dramatized on June 16. On that date an amendment to the HUD-independent agencies appropriations bill offered by Congressman ROBIN BEARD of Tennessee, which denied funds for VA programs for persons eligible by virtue of the new discharge upgrade program, passed the House by a vote of 273 to 136. Congressman BEARD is certainly to be commended for his timely and effective leadership in this effort. The House's decisive action surely must have galvanized many who were previously unaware of the implications of awarding veterans' entitlements on the basis of any special discharge review standards.

S. 1307 denies automatic entitlement to veterans benefits to those whose discharges have been upgraded under any special discharge review program. It specifies that persons applying for upgraded discharges under the administration's special discharge review program are entitled to veterans benefits only as a result of a determination by the Discharge Review Board concerned which must employ criteria for the review of discharges which applies to all veterans. Furthermore, in making this determination, the Discharge Review Boards are required to employ historically consistent standards with criteria for determining honorable service.

For persons who have already been upgraded under the administration's special program, the provision of S. 1307, as amended, would provide equitable treatment. Persons already receiving VA benefits will not be cut off automatically upon the passage of this act. Their entitlement will be determined however, employing discharge review standards made generally applicable to all veterans.

S. 1307 also provides the Administrator discretionary authority to provide health care to certain persons with less-than-honorable discharges for disabilities incurred or aggravated in line of duty. The bill also amends title 38 United States Code Section 101 to broaden the term "discharge or release" to include a person who completed a satisfactory period of military service but who did not receive a discharge because of an enlistment or reenlistment. Finally, S. 1307 prohibits the Administrator of Veterans' Affairs from publishing character of discharge regulations inconsistent with the provisions of this act.

Mr. President, S. 1307 would appear to be an eminently rational and equitable solution to the serious issues raised by the special discharge review program or under any future discharge upgrade program that employs standards not made generally applicable.

The task of reconciling diverging philosophies and of identifying the critical substantive issues for resolution by the Veterans' Affairs Committee was not easy. In this regard I commend the strong leadership exerted by the chairman of the committee, Senator CRANSTON. He and the staff of the committee are to be commended for their understanding and diligence in working with this difficult issue. I would also like to recognize the statesmanship of our colleague, BOB DOLE, who cooperated with the committee's effort to resolve these difficult issues legislatively and who has been instrumental in our being able to bring this measure before the Senate for action.

Mr. President, it is the unanimous view of the Veterans' Affairs Committee that S. 1307 is the most appropriate response for dealing timely and equitably with the granting of entitlement to veterans' benefits within the context of special standards for upgrading discharges. I urge that it receive the full support of my colleagues.

Mr. DOLE. Will the Senator from South Carolina yield?

Mr. THURMOND. I am pleased to yield.

Mr. DOLE. Mr. President, could we have order in the Senate?

The PRESIDING OFFICER. The Senate is not in order. Will Senators please retire to the cloakrooms for their conversations?

The Senator from Kansas.

Mr. DOLE. Let me say that I commend both distinguished Senators for their leadership in resolving some of the complex problems in S. 1307, in fact beyond S. 1307. In addition to any comments made in my statement, I want to point out that both the distinguished Senator from California and the distinguished Senator from South Carolina, and other committee members on the committee, deserve much credit. I know there were many meetings and numerous hours of time spent in trying to reconcile the differences.

Mr. President, the Senator from Kansas rises in support of S. 1307, a bill that prevents automatic eligibility for veterans' benefits by individuals who discharges have been upgraded as a result of the Carter special discharge program.

First of all the Senator from Kansas would like to commend the most able and distinguished Senator from South Carolina and other committee members on

their long and arduous work in developing permanent legislation regarding veterans' benefits.

LONG-TIME CONCERN

The Senator from Kansas has had a long-time concern in what might result from the Carter program to automatically upgrade discharges and one who strongly questions whether someone who failed to serve this country, deserted, or otherwise ignored his responsibility to this country, should now automatically qualify for veterans' benefits. Likewise, the Senator from Kansas has had a long-time interest in making sure we prevent this from happening.

DOLE AMENDMENT

On June 24, 1977 during the Senate consideration of the HUD appropriations bill, I offered an amendment to this bill that would have prevented funds appropriated in this act from being spent for any payment or benefit by virtue of the special review program. This measure would have provided a stop-gap to the automatic awarding of upgraded discharges and benefits while Congress could thoroughly consider and debate the question of benefits.

However, based on the assurance from the chairman of the Committee on Veterans' Affairs, the distinguished Senator from California (Mr. CRANSTON) that a bill, S. 1307, addressing this problem would be thoroughly and immediately acted upon by the committee, I withdrew my amendment.

LEGISLATION IS NEEDED NOW

As a result of a meeting I attended yesterday with the distinguished Senators THURMOND and CRANSTON, Congressman ROBIN BEARD, and several veterans' organizations, the Senator from Kansas is convinced that S. 1307 has been thoroughly considered and developed with an approach that offers responsible compromises between the Carter program and the so-called Beard amendment in the HUD conference report. S. 1307 is supported by the American Legion, Fleet Reserve Association, National Association of Concerned Veterans, Veterans of Foreign Wars, Disabled American Veterans, and Non-Commissioned Officers Association. However, in spite of broad veteran organization support and compromise language, President Carter continues to refuse to take a position on S. 1307.

In view of the fact that there is no indication from President Carter that S. 1307 would be enacted into law if passed by Congress, the retention of the Beard amendment in the HUD conference report is crucial if we are to be assured for the time being, that no individual, solely because of existing special criteria, will be entitled to veterans' benefits.

SUPPORT FOR S. 1307

It is my desire, and hopefully the desire of my distinguished colleagues, to insure, with passage of S. 1307 and the adoption of the Beard amendment in the HUD conference report, that those veterans whose military service was less than honorable are not placed on an equal footing with those men and women who served this Nation faithfully and honorably.

Mr. CRANSTON. Mr. President, I believe we are ready to act on the amendment. I yield back the remainder of my time on the amendment.

Mr. THURMOND. Mr. President, I yield back the remainder of my time on the amendment.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

Mr. CRANSTON. Mr. President, in closing, I again want to express my personal thanks to the Senator from South Carolina (Mr. THURMOND) for his great cooperation on this matter. I thank also the Senator from Kansas (Mr. DOLE) and the Senator from South Dakota (Mr. ABOUREZK) and the Senator from Massachusetts (Mr. BROOKE) as well as our ranking minority committee member, the Senator from Vermont (Mr. STAFFORD).

Mr. THURMOND. Mr. President, in my earlier statement I commended the able Senator from California and the able Senator from Kansas for their parts in this matter. Again I thank the distinguished Senator from California for the fine cooperation he has extended during the consideration of this legislation.

Mr. CRANSTON. I am prepared to yield back my time, Mr. President.

Mr. THURMOND. Mr. President, I yield back the remainder of my time.

Mr. NELSON. Mr. President, S. 1307 is a carefully designed compromise, which seeks to defuse the emotionalism which surrounds the upgrading of discharges and receipt of veterans' benefits by Vietnam veterans who received "bad paper" discharges. Senators CRANSTON and THURMOND deserve great credit for their painstaking work on this bill and their willingness to accommodate the concerns of the administration and certain Senators by amending the bill significantly after it was reported from committee.

There is no doubt that this bill is a good faith effort to deal equitably with both veterans of the Vietnam war and those of earlier conflicts. There is also no doubt that S. 1307 is prompted by an understandable desire to design a viable and compassionate alternative to the amendment adopted by the House which punished Vietnam veterans who received a discharge upgrade in the President's special discharge review program—SDRP—by denying them veterans' benefits automatically, regardless of the merits of their claim.

Nevertheless, I am voting against S. 1307. Despite the moderate approach taken, S. 1307 inevitably requires the President and the Department of Defense to discard the SDRP and devise a new program in its place.

The administration's special discharge review program is not perfect. As Senator CRANSTON has pointed out, it defines the "Vietnam era" in such a way that certain veterans of the war could be rendered ineligible for an upgrade. Certain improvements of this sort might profitably be included in a successor program established if legislation like S. 1307 becomes law. But in its main thrust, the SDRP is fair and compassionate. It does not mandate the automatic upgrading of "bad paper" discharges. It still demands a case-by-case review by the same Discharge Review Boards which have statutory responsibility in all cases. 10 United States Code, sections 1552, 1553. The program does set forth written criteria which the Discharge Review Boards must follow. Under the program, veterans with discharges under other than honorable conditions will have their discharges upgraded, unless there are compelling reasons to the contrary, if they have: First, been previously decorated for military service; second, been wounded in action; third, satisfactorily completed an assignment in Southeast Asia or in the Western Pacific in support of operations in Southeast Asia; fourth, received an honorable discharge from a previous tour of military service; fifth, had a record of satisfactory active military service for 24 months prior to discharge; or, sixth, satisfactorily completed alternate service or been excused from such service under President Ford's clemency program.

Failing to meet any of those standards, an applicant may also qualify for upgrading if the Discharge Review Board "finds such action is appropriate based on all of the circumstances of a particular case and on the quality of the individual's civilian record since discharge." The program sets forth a broad range of factors to be considered in this regard.

Even if an individual would qualify for an upgrade under either of these standards, he would not be upgraded in cases where his discharge was for "desertion or absence from a combat zone," "an act of violence or violent conduct," "cowardice or misbehavior before the enemy" or an act which would be subject to criminal prosecution if it had taken place in a civilian environment.

The program was not designed to be "amnesty" and has not operated as such. To date, the SDRP has operated on a discriminating case-by-case basis; approximately 60 percent of the men who have applied have been upgraded, and 40 percent have been denied. The criteria in the first category—those which require an upgrade unless compelling reasons to the contrary exist—are the hallmarks of honorable service. The criteria in the second category are apparently considered—in varying degrees—by Discharge Review Boards in all cases, and the final decision on how to weigh these factors rests with the Discharge Review Board.

It is probably true that some of those upgraded in the SDRP would not have been upgraded otherwise, but not in most cases. In my judgment, it is not worth scrapping a viable program in an effort to identify and winnow out those veterans whose upgrade might be questioned under preexisting standards.

In the past, the process of obtaining a discharge review has been extremely difficult. For a long time, Discharge Review Boards sat only in Washington, effectively foreclosing many veterans from a realistic chance of seeking review. Even after some geographic dispersion of the review

boards was accomplished, the process still placed disheartening obstacles in the path of veterans.

One great advantage of the Carter program is that it streamlines procedures and makes rapid consideration of a veteran's discharge a realistic possibility. Under the program, the applicant could initiate the procedure through a toll free telephone call; a short 30 day filing date was established for submission of outside material; and a two-stage review process was instituted which would permit the application to be reviewed by the Board without the personal appearance of the applicant. Although the terms of the program are not simple, it is susceptible to a simple explanation, in part because if the discharges are upgraded, the veteran becomes eligible for benefits.

S. 1307 changes all that. It eliminates a program without creating one in its place. In this complex, emotional area, there is no guarantee that any program which ultimately emerges will be as equitable or compassionate as the Carter program. Even assuming the best possible outcome, thousands of veterans around the country are left in limbo for months, first while Congress considers legislation, and then while the Department of Defense devises a new program. Veterans who would have come forward to seek an upgrade of their discharge will be put off. For those who came forward in good faith and obtained an upgraded discharge under the program, S. 1307 represents a cruel disappointment: the award of veterans benefits that accompanies the upgrade is rescinded, pending another evaluation of their case under the program to be created in the future.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendments to be proposed, the question is on agreeing to the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and the third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

The PRESIDING OFFICER. The question is, Shall the bill pass? The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Delaware (Mr. BIDEN), the Senator from Maine (Mr. HATHAWAY), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), and the Senator from New York (Mr. MOYNIHAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY) would vote "yea."

Mr. STEVENS. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Oregon (Mr. HATFIELD), the Senator from California (Mr. HAYAKAWA), and the Senator from Idaho (Mr. MCCLURE) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) would vote "yea."

The vote was announced—yeas 87, nays 2, as follows:

[Rollcall Vote No. 351 Leg.]

So the bill (S. 1307) was passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 3103 of title 38, United States Code, is amended by adding at the end thereof the following new subsection:

"(e)(1) Notwithstanding any other provision of law, (A) benefits under laws administered by the Veterans' Administration for a person described in the second sentence of this paragraph shall be provided, as a result of a change in or new issuance of a discharge under section 1553 of title 10, only upon case-by-case review by the board of review concerned, subject to review by the Secretary concerned, under such section, of all the evidence and factors in each case under uniform standards (historically consistent with criteria for determining honorable service) and procedures generally applicable to all persons so discharged who apply for such review; and (B) this paragraph shall apply, for such period of time for application (but in no event for less than one year after the date of enactment of this paragraph) as the President shall establish, to any person who, prior to the date of enactment of this paragraph, was administratively discharged under other than honorable conditions from active military, naval, or air service performed at any time if any part of such service occurred on or before March 28, 1973.

"(2) Notwithstanding any other provision of law, any person who was discharged from active military, naval, or air service under other than honorable conditions and who, under revised standards (A)(i) as implemented on or after April 5, 1977, under the Department of Defense's special discharge review program, or (ii) as implemented after January 1, 1977, and (B) not made generally applicable to all persons to whom paragraph (1) of this subsection applies, has been awarded a general or honorable discharge prior to the date of enactment of this paragraph, shall be entitled to benefits under laws administered by the Veterans' Administration only upon a case-by-case review on an expedited basis under standards meeting the requirements of paragraph (1) of this subsection applied by the board of review concerned under section 1553 of title 10, subject to review by the Secretary concerned, after notification by the Veterans' Administration to such Secretary that such person has applied for such benefits or after receiving a written request by such person for a decision regarding prospective entitlement. In the event that such board determines that such person is not entitled to the award of an upgraded discharge under standards meeting such requirements, such person shall be entitled to notice thereof and appearance before the board as provided for under section 1553(c) of such title prior to a final determination on such question. Notwithstanding the first sentence of this paragraph, with respect to any person in receipt of benefits under this title on the date of enactment of this paragraph, such benefits shall not be terminated under this paragraph until such time as a final determination not favorable to the person concerned is made on an expedited basis under this paragraph or the expiration of one hundred and eighty days after the date of enactment of this Act, whichever is the earlier, and the United States shall not make any claim to recover the value of any benefits provided to such person prior to the date of such final determination. The Administrator shall, as soon as administratively feasible, notify the appropriate board of review of the receipt of benefits by any person described in the preceding sentence or of the application for such benefits by any person described in the first sentence of this paragraph.".

(b) The Secretary of Defense shall inform each person whose discharge was upgraded under circumstances described in section 3103(e)(2) of title 38, United States Code, as added by subsection (a) of this section of the implications of the provisions of this Act for each such person.

SEC. 2. Notwithstanding any other provision of law, the Administrator of Veterans' Affairs, may, in the Administrator's discretion pursuant to such regulations as the Administrator shall prescribe, provide the type of health care and related benefits authorized to be provided under chapter 17 of title 38, United States Code, for any disability incurred or aggravated during active military, naval, or air service in line of duty by a person other than a person barred from receiving benefits by section 3103 of such title, but not, pursuant to this section, for any disability incurred or aggravated during a period of service from which such person was discharged by reason of a bad conduct discharge.

SEC. 3. Paragraph (18) of section 101 of title 38, United States Code, is amended to read as follows:

"(18) The term 'discharge or release' includes (A) retirement from the active military, naval, or air service, and (B) the satisfactory completion of the period of active military, naval, or air service for which a person was obligated at the time of entry into such service in the case of a person who, due to enlistment or reenlistment, was not awarded a discharge or release from such period of service at the time of such completion thereof and who, at such time, would otherwise have been eligible for the award of a discharge or release under conditions other than dishonorable.".

SEC. 4. The Administrator of Veterans' Affairs, in promulgating, or in making any re-

visions of or amendments to, regulations governing the standards and procedures by which the Veterans' Administration determines whether a person was discharged or released from active military, naval, or air service under conditions other than dishonorable, shall, in keeping with the spirit and intent of this Act, not promulgate any such regulations or revise or amend any such regulations for the purpose of, or having the effect of, providing any unique or special advantage to veterans who have received upgraded discharges under the standards (A) (i) as implemented on or after April 5, 1977, under the Department of Defense's special discharge review program, or (ii) as implemented after January 1, 1977, and (B) not made generally applicable to persons who served at any time, or otherwise making any special distinction between such veterans and other veterans.

Mr. CRANSTON. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. THURMOND. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 766

Mr. CRANSTON. Mr. President, I have a title amendment at the desk and I ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from California (Mr. CRANSTON), proposes unprinted amendment No. 766.

The amendment is as follows:

Amend the title so as to read: "A bill to require case-by-case review under uniform, historically consistent, generally applicable standards and procedures prior to the award of veterans' benefits to persons administratively discharged under other than honorable conditions from active military, naval, or air service, and for other purposes.".

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from California.

The amendment was agreed to.

Mr. CRANSTON. Mr. President, I ask unanimous consent that S. 1307 be printed as amended and that the Senator from North Dakota (Mr. BURDICK) be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, is the distinguished Senator from Georgia (Mr. TALMADGE) a cosponsor of this bill? If not, he wanted to be added as a cosponsor. I ask unanimous consent he be added if he is not. I think he is.

The PRESIDING OFFICER. He is a cosponsor.

Mr. THURMOND. I thank the Chair.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Governmental Affairs and the Select Committee on Aging be authorized to meet during the afternoon today.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Governmental Affairs be authorized to meet until 1 o'clock p.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

NATURAL GAS AND PETROLEUM CONSERVATION AND COAL UTILIZATION POLICY ACT OF 1977

The PRESIDING OFFICER. Under the previous order, following the disposition of S. 1307, the Senate will resume consideration of the unfinished business, S. 977, which the clerk will state by title.

The second assistant legislative clerk read as follows:

A bill (S. 977) to require that new and, to the extent practicable, existing electric powerplants and major fuel-burning installations, in categories to be determined, utilize other than natural gas or petroleum as their primary energy source in compliance with applicable environmental requirements, and for other purposes.

The Senate resumed the consideration of the bill.

The PRESIDING OFFICER. Under the previous order, the Senator from Massachusetts (Mr. KENNEDY) is recognized.

Mr. ROBERT C. BYRD. Mr. President, without prejudice to Mr. KENNEDY, under the order of yesterday, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TOWER. Mr. President, I ask unanimous consent that during the consideration of the Kennedy amendment, all amendments thereto and votes thereon, that Mr. Ron Smith of my staff be granted privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TOWER. Mr. President, I suggest the absence of a quorum and ask unanimous consent the time consumed be charged to neither side.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a brief period for the transaction of routine morning business, the time not being charged against anybody on either side, and that the period be limited to not to exceed 10 minutes, with statements limited therein to 2 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

CANADIAN TAX PROVISIONS ON U.S. BROADCASTING

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 365, which has been cleared on all sides for passage by unanimous consent and has been on the calendar since August 5.

Mr. BAKER. Mr. President, reserving the right to object, and I will not object, the majority leader and I have discussed this matter and, of course, he is correct, it has been cleared on this side and we would not object to the immediate consideration of this measure or to transfer to the Unanimous-Consent Calendar if the majority leader may wish.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader.

Under those circumstances, I, therefore, ask unanimous consent that the Senate now proceed to its consideration.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolution be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 152) expressing the sense of the Senate that the President bring to the attention of the Government of Canada the adverse effect on the United States broadcasting industry of certain provisions of the Canadian tax code.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report. (No. 95-402), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE RESOLUTION

The purpose of the resolution is to express the sense of the Senate that the President raise with the Government of Canada the question of the impact of the recent provisions of the Canadian tax code on the U.S. broadcasting industry with a view to adjusting outstanding differences.

BACKGROUND

Over 20 Canadian cities receive programs from U.S. television stations, either through a closed cable relay system or off-the-air. The American stations involved range from Seattle, Wash., to Presque Isle, Maine. To a lesser degree, signals from a number of Canadian stations are received on the northern border cities of the United States.

Border stations in both countries are governed by agreements between the two Governments and cross-border service is a result of wavelength assignments made pursuant to those agreements. Also, the regulatory agencies of both countries allow cross-border television signals to be picked up by domestic cable television systems. The Federal Communications Commission (FCC) has developed a reciprocity rule which allows foreign programs to be carried by a domestic American station where it or another station could benefit in the reverse situation, that is, its programs could be carried reciprocally by the Canadians. The Canadian Radio-Television Commission (CRTC) issues licenses specifically indicating to each cable TV sys-

tem the signals it may carry. In some cases it has allowed American signals to be picked up and transmitted by micowave relay to cable systems many miles beyond the area in which they could otherwise be received. As a result about 40 percent to 50 percent of all Canadians with TV sets are cable subscribers, making the Canadian cable TV industry one of the most extensive in the world. In neither country do cable operators have to pay stations for use of their programs. Broadcasters are expected to obtain their compensation by selling advertising to businesses interested in reaching the cable system's subscribers.

On July 26, 1971, the CRTC proposed in its "Policy Statement on Cable Television" an amendment to Canada's Income Tax Act to prevent Canadians from deducting as a business expense their advertising on foreign stations even though their purpose was to reach Canadian audiences. On January 23, 1975, the Canadian Government announced it would seek to abolish tax concessions that allow companies to deduct the cost of advertisements in American magazines or broadcasts aimed at the Canadian market. The Canadian Parliament approved a measure denying tax deductions in July 1976, effective the following September, except for certain contracts signed before the effective date. The State Department began discussions with Canadian officials on the substance and timing of the legislation, but was told that since the measure dealt with internal domestic tax matters it was not subject to international negotiation. The Department has advised the committee that it intends ". . . to keep this matter and its adverse impact on U.S. broadcast interests before the Canadian Government as opportunities to do so arise."

On May 4, 1977, the Foreign Relations Committee asked for comments by the Department of State on the resolution and received a reply on July 19, the text of which follows. After reviewing the letter, which stated that the Department had no objection from the point of view of foreign policy, the committee discussed whether the resolution would strengthen the Department's hand in negotiations of outstanding border broadcasting issues, including the provisions of the Canadian tax code. Because the Department had said it plans to keep this matter and its adverse impact on U.S. broadcasting interest before the Canadian Government as opportunities to do so arise, the committee felt it would be useful for the State Department to have this expression from the Senate during those negotiations.

During the discussion on a motion by Senator Sarbanes the committee agreed to delete the clause in the preamble, which read:

"Whereas the Senate seeks to amend certain provisions of the United States Internal Revenue Code, which provisions appear to inhibit travel by Americans to Canada;"

COMMITTEE ACTION

On April 26, 1977, Mr. Moynihan and 16 cosponsors introduced the resolution which was referred to the Committee on Foreign Relations. On May 4, 1977, it was sent to the Department of State for comment and a reply was received July 19, 1977. The Department did not object to the resolution. On August 2, 1977, the committee discussed the resolution and by voice vote and without dissent ordered it to be reported favorably, with an amendment, to the Senate.

COMMITTEE COMMENTS

The resolution speaks for itself. The preliminary clauses state that the people of the United States place "the utmost value on their enduring friendship and special relationship with the people of Canada," but that recent amendments to the Canadian tax code appear to inhibit commercial relations between Canadian businesses and American broadcasters.

VIEWS OF THE DEPARTMENT OF STATE

DEPARTMENT OF STATE,
Washington, D.C., July 19, 1977.

Hon. JOHN SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate.

DEAR MR. CHAIRMAN: The Secretary has asked me to reply to your letter of May 4 in which you ask for the comments of the Department of State on Senate Resolution 152, "expressing the sense of the Senate that the President bring to the attention of the Government of Canada the adverse effect on the United States broadcasting industry of certain provisions of the Canadian tax code."

The Department of State has no objection, from the point of view of foreign policy, to this resolution. In fact, in the recent past the Department has conducted extensive negotiations with the Canadian Government on outstanding border broadcasting issues, including the provisions of the Canadian tax code to which Senate Resolution 152 refers. On the basis of our discussions with the Government of Canada, we consider it unlikely that it will alter the tax policy in question. Nevertheless, it is our intention to keep this matter and its adverse impact on U.S. broadcast interests before the Canadian Government as opportunities to do so arise.

The Office of Management and Budget advises that from the standpoint of the administration's program, there is no objection to the submission of this report.

Sincerely,

DOUGLAS J. BENNETT, Jr.,
Assistant Secretary for Congressional Relations.

The resolution was agreed to.

The preamble was amended.

The resolution, with its preamble, reads as follows:

Whereas the people of the United States place the utmost value on their enduring friendship and special relationship with the people of Canada;

Whereas the people of Canada and the people of the United States have established singular standards of openness and candor in discussing mutual interests and concerns; and

Whereas recent amendments to the Canadian tax code appear to inhibit commercial relations between Canadian businesses and American broadcasters: Now, therefore, be it

Resolved, That the Senate call on the President to raise with the Government of Canada the question of the impact of the recent provisions of the Canadian tax code on the United States broadcasting industry with a view to adjusting outstanding differences.

SEC. 2. The Secretary of the Senate is directed to transmit a copy of this resolution to the President.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

TRANSFER OF MEASURES TO UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there are three measures on the calendar which have been cleared for action by unanimous consent. Accordingly, I ask that the clerk transfer to the Unanimous Consent Calendar Orders numbered 364, 370, and 372.

The PRESIDING OFFICER. The measures will be so transferred.

(Routine morning business transacted and additional statements submitted are printed later in today's RECORD.)

CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask that morning business be closed.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

NATURAL GAS AND PETROLEUM CONSERVATION AND COAL UTILIZATION POLICY ACT OF 1977

The Senate continued with the consideration of S. 977.

Mr. ROBERT C. BYRD. Mr. President, what is the pending business before the Senate?

The PRESIDING OFFICER. The pending business before the Senate is S. 977.

Mr. ROBERT C. BYRD. I thank the Chair.

RECESS UNTIL 1 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask that no time be charged against either side for the ensuing recess, and I move that the Senate stand in recess until the hour of 1 p.m. today.

The motion was agreed to, and at 12:39 p.m., the Senate recessed until 1 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. BURDICK).

NATURAL GAS AND PETROLEUM CONSERVATION AND COAL UTILIZATION POLICY ACT OF 1977

The Senate continued with the consideration of S. 977.

Mr. ROBERT C. BYRD. Mr. President, without prejudice to Mr. KENNEDY, under the order entered, I suggest the absence of a quorum, and I ask unanimous consent that the time be charged against both sides on the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MELCHER). Without objection, it is so ordered.

TRANSFER OF MEASURE TO UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there is a bill on the calendar which has been cleared for passage by unanimous-consent. It is Calendar Order No. 356, S. 2002, a bill to authorize the Secretary of the Interior to transfer franchise fees

received from certain concession operations at Grand Canyon Unified School District, Ariz., and for other purposes.

I ask that the clerk transfer the bill to the Unanimous Consent Calendar.

The PRESIDING OFFICER. It will be so transferred.

NATURAL GAS AND PETROLEUM CONSERVATION AND COAL UTILIZATION POLICY ACT OF 1977

The Senate continued with the consideration of S. 977.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum and I ask unanimous consent that the time be charged against both sides on the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 838

Mr. KENNEDY. Mr. President, I call up amendment No. 838 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Massachusetts (Mr. KENNEDY), for himself and Mr. BAYH, proposes amendment No. 838.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 139, between lines 7 and 8, insert the following new section:

PROTECTION OF COMPETITION

SEC. 6. (a) The Energy Supply and Environmental Coordination Act of 1974, as amended by this Act, is further amended by adding at the end thereof the following new title:

"TITLE V—PROTECTION OF COMPETITION

"DEFINITIONS

"SEC. 501. As used in this title the term—

"(1) 'person' means an individual, corporation, partnership, joint venture, joint stock company, trust, trustee in bankruptcy, receiver in reorganization, association, or any organized group, whether or not incorporated, but does not include any authority of the United States or of the several States;

"(2) 'control' means a direct or indirect legal or beneficial interest in, or direct or indirect legal power or influence over, another person or asset arising through direct, indirect, or interlocking ownership of capital stock, interlocking directorates or officers, or contractual relations which substantially impair the independent business behavior of another person;

"(3) 'affiliate' means a person controlled by, controlling, or under or subject to common control with respect to any other person;

"(4) 'Outer Continental Shelf' has the same meaning as provided for such term in section 2(a) of the Outer Continental Shelf Lands Act (67 Stat. 462);

"(5) 'major petroleum producer' means any person (including all affiliates of such person) who, during the calendar year 1976, or in any subsequent calendar year, produced within the United States (including the Outer Continental Shelf) a total of fifty-five million barrels of crude oil and condensate and natural gas liquids, or whose interest in crude oil and condensate and natural gas liquid production within the United States totalled fifty-five million barrels, or who produced within the United States (including the Outer Continental Shelf) one hundred billion cubic feet of natural gas, or whose interest in natural gas production within the United States totalled one hundred billion cubic feet;

"(6) 'Commission' means the Federal Trade Commission;

"(7) 'coal asset' means natural deposits of coal in recoverable quantities;

"(8) 'uranium asset' means natural deposits of uranium in recoverable quantities; and

"(9) 'antitrust law' means the Sherman Act, the Clayton Act, or the Federal Trade Commission Act.

"UNLAWFUL ACQUISITIONS

"SEC. 502. Notwithstanding any other provision of law, it is unlawful for any major petroleum producer to acquire any interest in or control over any coal asset or uranium asset after the date of enactment of this Act.

"EXEMPTION AUTHORITY

"SEC. 503. Upon the recommendation of the Secretary of Energy and the Secretary of the Interior, the Commission may, after consultation with the Attorney General of the United States, exempt specific persons otherwise subject to the provisions of section 502 of this Act with repect to a specific acquisition of a coal asset or uranium asset if the Commission finds that such acquisition—

"(1) would significantly enhance energy resource production; and

"(2) would not create or maintain a situation inconsistent with the antitrust laws.

"REPORTS

"SEC. 504. Not later than thirty days after the date of enactment of this Act, each major petroleum producer who owns or controls any interest in any coal asset or uranium asset shall file with the Commission and the Attorney General of the United States a report listing and describing its interests in such assets. Each major petroleum producer shall also file a report with the Commission and the Attorney General of the United States listing and describing any coal asset or uranium asset hereafter acquired within thirty days of the date of acquisition thereof and any coal asset or uranium asset held or controlled, but not previously reported, within thirty days of the date such major petroleum producer learns of the existence of such coal or uranium asset. The Commission or the Attorney General of the United States may order such major petroleum producers to file additional reports and may order any other person to file reports as it deems necessary to carry out the purposes of this Act.

"SANCTIONS

"SEC. 505. (a) Any person or any officer, director, or partner thereof, who violates any provision of this Act shall be subject to a civil penalty of not more than $100,000, in the case of an individual, or not more than $1,000,000, in the case of a corporation. Such penalties shall accrue to the United States.

"(b) Any person, or any officer, director, or partner thereof, who violates a lawful order of the Commission issued pursuant to this Act shall be subject to a civil penalty of not more than $5,000 for each such violation which shall accrue to the United States. Each separate violation of such an order shall be a separate offense, except that in the case of a violation through continuing failure or neglect to obey an order of the Commission, each day that such failure or neglect continues shall be deemed a separate offense.

"(c) The Commission may enter such order as may be appropriate and the Attorney General may obtain in the courts of the United States such equitable relief as may be appropriate, to accomplish the purposes of this Act.

"REPORT ON SOLAR ENERGY

"SEC. 506. Not later than one year after the date of enactment of this Act, the Commission shall report to the Congress the extent to which the control of solar energy technology by major petroleum producers may be retarding the production of solar energy and the extent to which such control may limit the competition of solar energy with petroleum and other more conventional energy sources.

"APPLICATION OF ANTITRUST LAWS

"SEC. 507. Nothing in this title shall be deemed to convey to any person immunity from civil or criminal liability, or to create any defenses to actions, under any antitrust law.".

(b) Notwithstanding the provisions of section 7 of this Act the amendment made by this section shall become effective on the date of enactment of this Act.

Mr. KENNEDY. Mr. President, I ask unanimous consent that Mr. Susman, Walter Measday, and Hank Banta, of the Antitrust Subcommittee staff, be accorded the privilege of the floor during consideration of this amendment and remainder of the consideration of the pending legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, I understand there is a time limitation on this amendment. Am I correct?

The PRESIDING OFFICER. There is a 4-hour time limitation on the amendment.

Mr. KENNEDY. That is evenly divided. Is that correct?

The PRESIDING OFFICER. That is correct.

Mr. KENNEDY. I yield myself such time as I may use.

Mr. President, the amendment I have called up would prevent major oil and gas producers from acquiring further coal and uranium resources. It is not, contrary to some accounts, a divestiture amendment. It merely places a ban, a moratorium, a prohibition on the largest oil and gas producers against additional acquisitions of coal and uranium assets.

And even at that, the amendment is not inflexible and airtight. In appropriate circumstances—where production would be substantially increased and competition not diminished—exceptions to this prohibition can be granted to any company covered by it.

The purpose of this amendment is straightforward: To allow the rapid and orderly development of coal and uranium resources in a competitive environment. In this light, it is not only relevant to S. 977, but may even be critical to the legislation's effectiveness.

THE COMPETITIVE PROBLEM

Mr. President, the coal conversion legislation presently before the Senate is

one of the central pieces of the President's energy plan. That plan represents an attempt to move toward a more efficient use of energy resources and greater reliance on more abundant domestic resources.

Obviously, coal must play an important role in the fulfillment of these goals. It is one of our most abundant domestic resources. And on a Btu basis, it is actually cheaper than oil and gas. The President's proposals also involve greatly increased reliance on nuclear power to meet the energy gap in the years to come.

This proposed shift in reliance from oil and gas to coal and uranium raises a fundamental question: How do we insure that those firms on which we must rely will behave like aggressive competitors? If coal companies were simply coal companies, and uranium companies simply uranium companies, the question would hardly arise. Or at least it would be a far simpler question.

But a very large part of our coal and uranium producing industries has been absorbed into the major petroleum companies. Thus, at a bare minimum the potential exists for the development of truly awesome market power which would frustrate the President's national energy objectives and cost consumers billions of dollars. Our problem, then, is to insure that our energy industries can be relied on to respond to the market signals of supply and demand, rather than to the temptations—and opportunities—to restrict output and reap excess profits presented by a lack of competition.

COMPETITION IN THE PETROLEUM INDUSTRY

Central to this problem is the fact that the oil and gas industry is not competitive. The major integrated firms dominate crude oil production and refining. The control of crude oil production by the top firms has grown rapidly over the last 20 years. By 1975, the top eight firms controlled over half of the Nation's domestic crude production while the top 20 controlled over three-fourths. In refining, the top eight refiners controlled over half the industry in 1972, while the top 20 were responsible for more than four-fifths of refinery production in that year.

Numbers alone do not present a complete picture of the economic power of the big oil and gas companies. The control of the majors over the industry—through their control of farmout acreage and pipelines—extends beyond their own productions. The pervasive exchange agreement system has removed a substantial portion of crude oil from open cash markets and foreclosed the oportunities of some potential buyers. The practice inevitably involves the sharing of a great deal of information about the firms' respective production and refining operations. The bewildering maze of joint ventures and other joint arrangements which the oil and gas companies have created over the years also has enlarged the economic power of big oil.

Following a decade of study and investigation of the petroleum industry by its Antitrust Subcommittee, the Senate Judiciary Committee reported its conclusions to the Senate. Its central conclusion was that—

There is no free market for crude or product in the petroleum industry today because of the dominance of the major vertically integrated companies.

The relevance of all this to the problems of coal and uranium development is simple: there is a wholly reasonable fear that the oil and gas industry will bring to bear the same tactics in the coal and uranium industries.

THE TAKEOVER OF COAL AND URANIUM BY OIL AND GAS COMPANIES

The major petroleum companies are now in their second decade of coal company acquisition. Gulf Oil led off the invasion with its 1963 acquisition of Pittsburg Midway Coal Co. The pace then quickened. In 1966, Continental Oil took over Consolidation Coal, then the leading U.S. coal producer. In 1968, Occidental Petroleum acquired Island Creek—No. 3—and Standard Oil of Ohio acquired Old Ben—No. 10. Two years ago, Standard Oil of California acquired 20 percent of the stock of AMAX, the Nation's third largest coal producer. Many smaller oil and gas companies have been swallowing coal companies since the early 1960's. While oil and gas companies accounted for only about 11 percent of total U.S. coal production in 1967, by 1975 oil and gas companies controlled about 20 percent of the Nation's coal production. If captive production is excluded—mines owned mainly by steel and electric utility firms—the oil and gas companies' share of the Nation's marketable coal mined in 1975 amounts to about 25 percent.

Uranium is likely to be an increasingly important source of energy in the future. One gram of atomic fuel can produce the same amount of electricity as 2½ tons of coal or about 11 barrels of crude oil. Big oil has made inroads into the uranium industry. Gulf has acquired General Atomic, Getty Oil snapped up nuclear fuels and Atlantic Richfield—ARCO—bought both nuclear materials and equipment and the Anaconda Co. The last acquisition occurred last year—today Kerr-McGee, ARCO-Anaconda, and Exxon are the first, third, and fifth largest uranium producers. Sohio and Reserve Oil & Gas brought a large joint venture on stream last fall. The Getty mill is currently shut down to permit a 75 percent expansion in capacity by late this year or early next. Phillips Petroleum and Union Oil will each open large mills within the next couple of years.

Ten years ago two oil companies had 28 percent of the industry's milling capacity; 5 years ago four mills with 38 percent of the capacity were operated by oil and gas companies. According to an FTC study of capacity in operation, under construction, and announced as firm, oil and gas producers will control 59 percent of capacity in the near future. All the evidence we have shows that the share of the industry controlled by oil and gas companies is growing and will continue to grow.

Equally troubling in the present context is the fact that the oil industry's ability to restrict output has not been wholly a matter of economic power. The industry has a long record of manipulating political institutions for its purposes. State prorationing, the Connolly Act, the Oil Import Quota all testify to the industry's political skill. No less an authority than the present Federal Energy Administrator has argued that this political record alone justifies keeping the oil industry out of the development of competing fuels.

DIVESTITURE EFFORTS

Legislation to undo this tangled web of oil, gas, coal, and uranium ownership was introduced in the last Congress. And the Antitrust Subcommittee conducted 6 days of hearings on S. 489, to prohibit any oil or gas company to own or acquire "any interest in the coal business, oil shale business, uranium business, nuclear reactor business, geothermal steam business, or solar energy business."

In October of 1975, I offered an amendment to an energy bill on the floor which would require divestiture by major energy companies of any assets in other energy companies. This amendment was not adopted, however, after substantial debate on the subject.

Last month I introduced a bill which was more modest in scope than that of these two earlier proposals. My bill, S. 1927, would prohibit acquisition or ownership of coal or uranium assets by major oil or gas producers. Hearings commenced last month before the Antitrust Subcommittee on this legislation.

I am still convinced, Mr. President, based on testimony from the 1975 hearings and last month's, that divestiture is the appropriate legislative response to the problem of growing concentration of our energy industries. But I can well understand the concern of my colleagues who would like to review the subcommittee's hearings and analysis before considering a divestiture proposal. My amendment is not aimed at divestiture. It would not disturb the corporate structure of any energy company. It would maintain the present structure of the energy industry and allow the Congress and the administration more time to study and discuss the merits of divestiture.

ADMINISTRATION OFFICIALS' POSITION

This amendment is thus entirely consistent with the present position of the administration—that action on divestiture should be postponed until after it has completed a full study on the subject. I should note that the Federal Trade Commission has for over 5 years been trying to do a report on the coal industry, but has yet to receive data from Exxon and Atlantic Richfield, so any conclusions that it draws can only be tentative. So long as the administration allows oil and gas companies to continue to acquire coal and uranium while it studies the situation, ti is likely to have as little success as the FTC in obtaining all of the necessary data. Time can only work to the advantage of the oil companies.

In this respect, Mr. President, I point out provisions of the amendment, under which the Secretary would be able to permit those companies which would

otherwise be excluded under this amendment from the acquisition of coal and uranium to be able to require such assets under certain conditions. But, in effect, that would put the burden of proof on the oil companies rather than where it is at the present time, on the public, to acquire information.

If these major oil companies wanted to move ahead in terms of the acquisition of coal, or in terms of the acquisition of uranium, they would have to make that case in the Department of Interior and the Federal Trade Commission. Those two agencies would be able to require the kind of information necessary in order to make an intelligent judgment. The tragedy is, as I have just mentioned, that the Federal Trade Commission is now unable to get the basic kind of information from Exxon and from Arco to be able to make an important judgment in terms of the competitive impact of such acquisition. It seems to me that the public interest is served by putting the burden not on the public to come up with this information, but to place the burden on the oil companies to provide that information so an intelligent and informed decision could be made in the public interest and in the interest of this Nation in meeting the challenges of energy policy.

I should point out, Mr. President, that this amendment falls short of the divestiture objective supported so strongly in statements by most of the high level administration officials. President Carter himself stated on January 16, 1976:

> I support legal prohibitions against ownership of competing types of energy, oil and coal, for example.

While in the Senate, our colleague, Senator MONDALE spoke out time and again against allowing oil companies to extend their control over coal and uranium resources, and he voted in favor of my divestiture amendment in October 1975.

But the support of administration officials for divestiture does not end there. On a Face the Nation program earlier this year, Interior Secretary Andrus indicated unequivocal support for horizontal divestiture legislation. He said:

> I think that we are in the danger of having large energy companies, instead of just oil companies, and I would hate to see that. I think that we have to have competition, and between the forms of energy, if you're going to have any adequate price structure for the American people.

FEA Administrator John O'Leary also holds this view. In June he testified before my Antitrust and Monopoly Subcommittee that—

> We are into diminishing returns as a result of the spread of the oil companies into energy companies.

Mr. O'Leary reiterated his strong convictions voiced in testimony 2 years earlier that horizontal integration by oil companies was a matter to be addressed "very urgently and very sensitively."

Finally, last month in his confirmation hearings the Government's antitrust chief, John Shenefield, said:

> If I were a sitting Senator and asked to vote on a law for (horizontal) divestiture, I would vote aye. My concern in the area of horizontal integration is great enough that, in the absence of information, I would tend personally to be against it.

TVA REPORT

Of particular significance is a report released yesterday by the Tennessee Valley Authority. This massive study concluded that:

> During the last 13 years, two structural aspects of the domestic coal and uranium markets have become increasingly important. First, concentration within each industry is high and the markets are, or are tending to become, oligopolies. Second, the same huge energy companies which dominate the oil and gas industry have come to dominate both the coal and uranium markets.
>
> The uncompetitive structure of the coal and uranium markets adversely affects both fuel prices and supplies. Because the fuel markets are oligopolies and since oligopolists price their goods between competitive market price and monopoly price, the prices energy consumers pay for coal and uranium are likely to be higher than competitive prices. Worse, since the same group of energy companies which dominate the coal markets also dominate the uranium market, consumers are even deprived of the potential benefits of price and supply competition between those two substitute fuels.

CONCLUSION

Even with all of this, Mr. President, even with my own conclusion—backed up by support from these administration officials all the way up to the top—that horizontal divestiture is warranted, I did not propose a divestiture amendment to this legislation. I think that if the coal conversion legislation were on the floor next session, I might well be proposing the divestiture amendment. But I wanted to give the Senate an opportunity to take the first step this fall, in the context of this coal conversion bill. I think that this is a modest first step at that.

There is no reason to fear that this measure will in any way retard development of coal or uranium. The major oil and gas companies covered by the bill—with one exception—own considerable undeveloped reserves. Acquisitions of further reserves by these companies can serve no useful purpose for quite sometime. Exxon, for example, has announced that by 1985 it expects to be producing 40 million tons a year of coal. At this rate its reserves would last for more than two centuries. Sohio at its current rate can stay in business for about 85 years.

If there are cases where further acquisitions by these companies would genuinely increase domestic production the amendment makes provision for exemptions. If, for example, a company covered by the amendment needs to acquire an adjacent block of coal lands in order to make up a unit that can be economically mined it should have little difficulty in meeting the test for the exemption.

But, more importantly, there is no reason to believe that the development of our coal and uranium resources needs to depend on oil and gas companies. In fact, there is every reason to be suspicious of the oil industry's motivation in acquiring vast reserves of coal and uranium. Coal and uranium are in competition with oil and gas. And to the extent that they are priced competitively, they can hold down oil and gas prices. It simply defies commonsense to expect the major petroleum companies who have spent billions of dollars on developing oil and gas reserves around the world to use coal and uranium to hold down their own prices.

One should waste little time with the naive delusion that the problem of maintaining optimum levels of coal and uranium production can be met by such devices as "due diligence" requirements or even actual production quotas. A casual examination of the history of the oil industry gives ample evidence of its ability to manage output in spite of the viligance of kings, shahs, shieks, and Texas royalty owners. The belief that bureaucrats can do better should not be taken too seriously.

Our economic system is grounded on the notion that the free play of market forces is the most effective economic regulator. Unfortunately, our present energy problems have forced us to resort to massive Government intervention into the marketplace. While much of this is unavoidable, we must be constantly on guard that we go no further than is absolutely necessary. We must not let the corporate and Government bureaucrats overestimate their ability to plan our economy. Misguided schemes of regulation tend to have long lives. There is no question that competition is far easier to maintain than it is to restore. This amendment is a small reasonable step aimed at preserving what competition we have in the energy industries.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. HANSEN. Mr. President, I yield to him such time as the distinguished Senator from Texas may require.

Mr. TOWER. I thank the Senator from Wyoming.

Mr. President, the language of the amendment we are debating today might well be mistaken for a sheer case of plagiarism. The words—and their meaning—are as close to George Orwell's novel, "1984," as one would expect to see in legislative form.

The thrust of the amendment, too, is far more in keeping with the "Big Brother" society of Orwell's "1984" than it is with the energy needs and economic structure of this Nation today.

It is a first step in the move toward the nationalization of America's energy industries. It is a step that need not, and must not, be taken.

Those of us who read that novel will recall how the first step was the attack on and destruction of the private enterprise system. In the words of George Orwell:

> It had long been realized that the only secure basis for oligarchy is collectivism. Wealth and privilege are most easily defended when they are possesed jointly. The so-called "abolition of private property" which took place in the middle years of the (20th) century meant, in effect, the concentration of property in far fewer hands than before; but with this difference, that

the new owners were a group instead of a mass of individuals. . . . It had always been assumed that if the capitalist class were expropriated, Socialism must follow; and unquestionably the capitalists had been expropriated. Factories, mines, land, houses, transport—everything had been taken away from them; and since these things were no longer private property, it followed that they must be public property.

Let me repeat a singular line from that quote:

It had always been assumed that if the capitalist class were expatriated, Socialism must follow, and unquestionably the capitalists had been expatriated.

That was Orwell—"1984."

Mr. METZENBAUM. Mr. President, if the Senator from Texas will excuse me, I am very much interested in what he is saying, but I cannot hear him. If it is possible, will he use the mike?

Mr. TOWER. I shall try raising my voice. I opposed putting these evil instruments in the Senate in the first place and I have no intention of using them.

Mr. METZENBAUM. Perhaps the Senator can raise his voice, then.

Mr. TOWER. I am flattered that the Senator from Ohio is so interested in what I have to say.

Mr. METZENBAUM. I am very interested.

Mr. TOWER. I shall try to project a little better.

Let's turn now to the Senator from Massachusetts—1977—and I quote from the proposal before us—which curiously, also discusses mining:

It is unlawful for any major petroleum producer to acquire any interest in or control over any coal asset or uranium asset.

And, again, in the words of this proposal, "any asset" is defined as "natural deposits of coal—and uranium—any asset used primarily in the exploration for, development of, or production of coal—and uranium—including, but not limited to, an interest in real property, whether such property is developed or undeveloped; and . . . geological and geophysical information relating to natural deposits of coal—and uranium."

Does that sound like language to promote competition in the search for alternate fuels? Does that sound like language designed to increase energy production for our energy-short economy? Does that sound like language that would redu e costs of alternate energy sources for the consumer and to expedite the time when those fuels will be available? Does that sound like America's traditional private enterprise system? It does not.

Rather, it sounds like language straight out of George Orwell—only 7 years early. It is the language of expropriation, and it should raise the hackles of every American, who believes that the private enterprise system that has made this Nation great deserves more than an unceremonious burial.

Before we accept so harsh a sentence for the private sector, it would be wise to examine its consequences on the voters who elected us to this Chamber. We must ask ourselves, "What possible benefit could this proposal have for them and for their children?" And I believe the answer is clear. The proposal has neither public benefit nor public merit—and it should be summarily rejected.

Why? Let us examine the full implications of this measure in terms of future energy supplies, and in terms of its potential toward destroying the last vestiges of the private enterprise system in the United States. First, consumer supplies.

Coal and uranium are keystones in the national energy plan—both as proposed by the administration and as adopted by the House of Representatives. By 1985—under the latter measure—coal production is expected to increase by 60 percent, to a capacity of 1,065 tons. And, under the administration's plan, nuclear capacity is expected to more than triple by that date.

That expansion will require billions of dollars in capital investment. By one estimate,[1] between 1975 and 1985, the energy industries in the United States will require nearly $1.4 trillion—not including working capital changes, or financial outlays for debt servicing and dividends. Over one-half of that amount will be needed to meet consumer demand for electrical generation—primarily through nuclear power facilities. And $69 billion will be required to expand and improve the Nation's coal productive capacity.

This money is not just money needed for the oil companies, or the coal companies, or the uranium mining and milling companies. This is money needed by the consumer, for without it the consumer will not have the energy needed to keep the factories going, goods and people transported, and homes, factories, hospitals, and schools operating. And, if for some reason—such as the shortsighted adoption of this proposal—that energy is not forthcoming, it is the people of this Nation—the workers and consumers and taxpayers—who will suffer.

But to give some indication of how utterly ridiculous, and confiscatory, this proposal is, let us examine what effect it will have on the operations of those companies listed as major oil companies now, and those which might have become major at some later date were it not for this proposal.

Technically, those major oil companies would not be able to buy a replacement shovel—hand or powered—that broke after the adoption of this measure. If one of the oil companies which "qualified" for punishment, under the "big is bad" theory fundamental to this proposal, owned two properties separated by a foot of land, it could not buy that land, even if it meant that no coal would be produced from either of the other coal tracts. And, if a non-"major" company were to expand oil or gas production to meet consumer needs—and that expansion exceeded the arbitrary and capricious limits in this proposal—it would be precluded from acquiring coal and uranium interests.

[1] Estimate by the Standard Oil Company (Indiana) in conjunction with the American Petroleum Institute seminar on capital formation, Chicago, Ill., November 11, 1975.

Even to the most callous observer and most antibusiness mind, the folly of such a proposal must be apparent. Those major oil companies having had the foresight and courage to expand into coal and uranium—for their own and their consumers' interests—would see those interests self-destruct, as equipment wore out. Millions of acres of potential coal and uranium would go undeveloped, as acreage, now uneconomical to develop, would be permanently foreclosed to economic operations. And small oil companies would be reluctant to expand petroleum production near the limit set in the proposal for fear that they would be precluded from acquiring coal and uranium interests in the future.

How many millions of tons of coal and hundreds of thousands of tons of uranium ore would never come to the marketplace because of this proposal is unknown. But, by conservative estimate, the toll on American energy supplies would be great. And every ton of coal and uranium ore not produced will be measurable in an equivalency of imported oil and imported natural or liquefied gas. And it will be measurable in increasing dependence on the foreign oil cartel for the energy essential to a healthy and growing economy.

But, what of the other aspects of this proposal, the unwarranted and ill-advised attack on the fundamental structure of the private enterprise system. I say private enterprise since, by virtue of previous assaults by Government officials free enterprise no longer exists.

Competition is the key to our economic system. Yet, the proposal before us would:

First, lessen the number of companies competing for coal and uranium acreage;

Second, drive billions of investment dollars available from the so-called major companies out of coal and uranium research, exploration, and production;

Third, reduce consumer supplies by restricting the freedom of entry in coal and uranium;

Fourth, reduce investment in oil and natural gas exploration and production by companies approaching the proposal's restrictive limits;

Fifth, preclude companies categorized as majors from acquiring new information about the coal and uranium deposits they already own, preventing further development of those critically needed resources; and

Sixth, violate the historic and constitutional rights of individuals and companies, alike, who would seek to expand their coal and uranium interests in the future.

How much closer can you come to nationalizing the energy industries without taking that final step. How much closer can you come to undermining the economic structure of this Nation, without bringing it to its knees in supplication and surrender to the foreign oil cartel? How much closer can you come to sacrificing the interests of the American consumer in an unjustifiable attempt to destroy the Nation's energy companies?

The proposal before us is "double think" 1977, and I want no part of it. It is, indeed, one could say, Big Brother 7 years early.

In conclusion, Mr. President, I note it is my understanding that similar legislation is currently under consideration in the Judiciary Committee. I think that a measure of this profound importance with considerable implications and consequences that are as yet unknown should proceed through the orderly committee process.

I note further that the bottom line, Mr. President, at a time when we are trying to expand on our domestic energy production and particularly enhance our utilization of our vast abundance of coal, is that we need companies that have the capital, that have the financial backing, that have the administrative and risk management capability, and have the technology to develop the efficient and effective and clean use of this great abundant coal supply we have in the United States.

I submit that the major oil companies do possess the resources and the expertise that will better enable us to develop this important resource.

Mr. BAYH addressed the Chair.

The PRESIDING OFFICER (Mr. METZENBAUM). The Senator from Indiana.

Mr. BAYH. Mr. President, I consider it a privilege to be able to join with our distinguished colleague from Massachusetts, the sponsor of this amendment, as a cosponsor, and also to be a member of the subcommittee that he chairs in Judiciary.

I would like at this time to send to the desk an amendment to the Kennedy amendment, if I may.

The PRESIDING OFFICER. No amendment is in order until all time has been used or yielded back.

Mr. BAYH. I ask the Chair if he would not reconsider what was said on the floor yesterday in which the leader questioned the Presiding Officer at that time and, as I read the RECORD, this kind of amendment would be appropriate.

Mr. KENNEDY. Mr. President, I will ask unanimous consent without asking for it at the present time, just yielding the time to the Senator from Indiana to be able to explain briefly his amendment, and then I will indicate support for it. I believe, basically, it is noncontroversial.

I believe a fair reading of the dialog between the leaders yesterday indicated that they wanted to have a firm time limit on the amendment which I offered. Therefore, in order to achieve that, he meant to have the time for amendments to be included within the 4 hours.

It is a brief amendment. I believe it is basically noncontroversial. He can explain it. If there is objection to it, then we will get on with the debate, and I will let the Senator from Indiana inquire of the majority leader.

I do not think that there should be any objection to it. It will just move us along more rapidly.

Mr. HANSEN. Mr. President, reserving the right to object——

Mr. KENNEDY. I have not asked for consent yet. I wanted just to explain this.

Mr. TOWER. If the Senator will yield, I had a colloquy with the leader yesterday and it is my understanding that any amendment to the amendment of the Senator from Massachusetts would be in order, but under the usual form of time having been yielded back or having expired before it could be offered.

I would object to the consent agreement if it were proposed now, but certainly I will probably not object if we follow the procedure suggested by the Senator from Massachusetts, and the Senator from Indiana be yielded time to explain his amendment, then go on from there.

Mr. KENNEDY. The only point I would make, I was on the floor at the particular time the consent request was made. I understood the nature of the agreement and it is printed in the RECORD and I believe we ought to at least follow it at that time.

I just refer to the understanding of the majority leader and I will read the appropriate provision. It says, referring to the Senator from Texas:

Mr. ROBERT C. BYRD. I thank the Senator. He has rendered a service by bringing up the matter at this time.

I should think—and there has been no discussion of this contingency that could arise—that there could be an amendment to the Kennedy amendment in the natural course of things, but that any such amendment to the Kennedy amendment would have to be included timewise in the overall 4-hour limitation.

Mr. TOWER. That would be included in the 4-hour limitation, and then, if the tabling motion did not bring down the amendment to the amendment along with the amendment, the time would be unlimited.

Mr. ROBERT C. BYRD. Exactly.

Mr. TOWER. I thank the distinguished majority leader.

Mr. ROBERT C. BYRD. The Senator has stated the situation precisely.

Mr. President, I would ask the Chair if he sees anything in the agreement which would rule out an amendment to the amendment by Mr. Kennedy as long as such amendment were germane to that amendment, and that if such an amendment were offered the 4 hours would be running on such an amendment as well as on the amendment in the first degree.

The ACTING PRESIDENT pro tempore. If the intent is clear, if that is the intent, to allow other amendments to the Kennedy amendment within 4 hours, that would be proper, if that is the intent. Otherwise, the amendment would not be in order until the 4 hours had been completed.

Mr. ROBERT C. BYRD. The intent was that there be a 30-minute time limit on second degree amendments.

Mr. BAYH. If my colleague will yield, perhaps if the Senator from Indiana will take about 3 minutes to explain what his amendment is, there would be no objection. I certainly did not want to get involved in a parliamentary discussion and take time in that manner. I thought this would be a good way to perhaps make the Kennedy amendment even more palatable, or more palatable to some who may not support it, and yet reach a worthwhile goal.

Mr. TOWER. That objective may not be possible, but I am prepared to listen to the Senator from Indiana.

Mr. BAYH. I appreciate the willingness of my friend from Texas to listen, but I have a sneaking suspicion, listening to his very passionate remarks, that although the Senator from Indiana believes in some miracles, that that is one that perhaps we will not see today. But I appreciate his willingness to listen.

Basically, I think you can argue pluses and minuses of the integration program, and reasonable men can differ. As I think the Senate knows, I have been one of those who takes issue with the position of the Senator from Texas, and I am equally concerned about free enterprise; but I am very much concerned, both vertically and horizontally, about the way in which large amounts of capital integrated together in national and multinational corporate structures really lessen competition, which is a very important element of the free enterprise system.

However, whatever the limitations might be, it seems to me that they should be placed equally and equitably on all the parties involved.

The amendment of the Senator from Indiana says that if you are going to apply a prohibition against horizontal integration, you should use the same Btu value as it is applied to gas corporations, as you apply to oil corporations. The 55-million-barrel limit and the 100-billion-cubic-feet limit in the Kennedy amendment would apply a standard that is three times as severe to gas corporations as to oil corporations.

What the Senator from Indiana would do would be to strike the 100-billion-cubic-foot requirement or description of gas companies and replace that by 302.5 billion cubic feet, which is the same. 302.5 billion cubic feet of natural gas gets the same amount of Btu's, has the same energy value, as 55 million barrels of oil.

If the Senate would accept that, then we would go ahead and let the Kennedy amendment rise or fall on its merits.

Mr. KENNEDY. Mr. President, I accept the amendment of the Senator from Indiana. He is quite correct in terms of the Btu equivalency.

It is harder for gas companies to withhold and control and coal companies would be in an anomalous position if they were to produce, by gasification a good deal of gas up to the limits of this particular provision, and then fall within the provision. Obviously that never was intended.

So the amendment is acceptable to me

The PRESIDING OFFICER (Mr. MELCHER). Does the Senator ask unanimous consent to modify his amendment?

Mr. KENNEDY. I do.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the amendment is so modified.

The modified amendment is as follows:

UP AMENDMENT No. 767

On page 3, line 8, strike: "one hundred" and insert in lieu thereof "302.5".

On page 3, line 10, strike "one hundred" and insert in lieu thereof "302.5".

Mr. KENNEDY. Mr. President, I am prepared to yield time to the Senator from Ohio for a statement.

Mr. TOWER. Did the Senator accept the amendment of the Senator from Indiana as a modification of his own amendment?

Mr. KENNEDY. Yes.

I yield such time as the Senator from Ohio requires.

Mr. METZENBAUM. Mr. President, I ask unanimous consent that Roger Berliner, a member of my staff, may have the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. METZENBAUM. Mr. President, I am not certain as to whether the record indicates that I am a cosponsor of this amendment. However, in order that there be no question about it, I ask unanimous consent that my name be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. METZENBAUM. Mr. President, I am pleased to join the Senator from Massachusetts and the Senator from Indiana and certain other Senators as a cosponsor of this amendment to prohibit further acquisition of coal and uranium resources by the major oil and natural gas companies.

This amendment does not constitute horizontal divestiture. It does not require the oil and gas companies to divest their current coal and uranium holdings, but it does call a halt to the disturbing trend toward the concentration of ownership of energy in all its forms in a very few hands.

The national energy plan proposed by the Carter administration foresees a massive conversion over the next few years from oil and natural gas to coal and nuclear energy; and if all goes according to schedule, nuclear generating capacity will more than double by 1985. Coal production will rise in the same period to 1.2 billion tons a year, a 40 percent increase over current levels.

Although I strongly agree with President Carter that we must move away as rapidly as possible from our excessive dependence on foreign imports and decreasing supplies of domestic oil and natural gas, I am deeply concerned about what I consider to be a key weakness in the national energy plan—the failure to recognize that free market conditions do not prevail in the energy industry. Unless our national policy takes energy market conditions into account, there is good reason to doubt the capacity of this program to produce results in the public interest.

It is no secret that the major oil companies have become vast fuel conglomerates. Their interests have expanded far beyond oil and gas. With their great resources, they soon will be, if they are not already, in a position to control the price and the pace of development of virtually all forms of energy.

As the 1977 Democratic platform stated, such horizontal concentration of economic power is "dangerous both to the national interest and to the functioning of the competitive system."

Now let us consider the following: In coal, 14 of the top 20 holders of reserves are oil companies or oil company affiliates. Oil companies now control 44 percent of our total coal reserves, and their share is rising rapidly. Between 1967 and 1974, oil and gas companies increased their coal reserve holdings by 141 percent.

El Paso Natural Gas Co. increased its coal holdings in that period from zero to 11.8 billion tons; Mobil went from zero to 2.6 billion tons; Shell from zero to 5.1 billion tons; Texaco from zero to 2.5 billion tons.

The coal companies do not actually take issue with those figures. We have heard from Shell, which says they really do not have 5.1 billion tons of coal in reserve. They have something like 1.5 billions tons of coal in their resources. I have difficulty with that kind of fine distinction.

But suffice it to say there can be no argument about the fact that the oil companies have moved more and more and more into the coal industry. Whether you use the word "resources" or the word "reserves" or whether you just talk about the fact that they have continued to acquire leaseholds in companies that are presently in the coal industry, there can be no argument about the fact that the oil industry has moved literally to take over the coal industry.

In spite of the fact that the coal prices have risen by more than 300 percent since 1970, acquisition of large coal reserves by the coal interests has not led to increased production.

The argument was made before Senator KENNEDY's Antitrust Committee, on which I am privileged to serve, that when the oil companies come in, they provide the capital and they provide the resources so that the coal may be developed. Then you go and look at the facts and you look at the chart submitted by no less an impressive witness than the spokesman for Exxon Corp., and you find that he says that it takes 5 years to start production rolling after the industry moves in.

But when you look at the figures, what you find is after the oil companies moved into the coal industry, after they made their acquisitions of operating coal companies, perhaps in some instances for a year there was an increase which could be related back to the activities of the independents before they were acquired. But when you look down the road 5 years, with almost no exception the production decreased after the oil company bought the coal company.

Of the 24 petroleum companies with significant coal reserve holdings, only 8 actually produced, only 8 out of 24; and of these a majority did so because they acquired coal-producing companies in the 1960's.

El Paso, Mobil, Shell, and Texaco have produced no coal at all to date. Exxon ranks among the 5 top holders of reserves but does not fall within the top 15 producers.

Now, Exxon is sensitive about this kind of charge. The world's largest industrial company, the world's largest corporation, a corporation larger in assets than many nations of the world, a corporation larger in income than many nations of the world, and you would think when they went into the coal industry they would indeed cause production to increase.

What is the fact? I will not deny that Exxon has made some moves forward. They have indicated some progress. They have indicated they intend to do some things. But the facts are that in 1975 Exxon produced only .033 percent of its reported reserves.

You must remember they are one of the top five holders of reserves in this Nation.

By contrast, Westmoreland, a top independent, with less reserves, far less, produced at more than 20 times Exxon's reserve production percentage. Pittston, another independent, produced at 38 times the Exxon rate.

During recent hearings before the Antitrust Committee, the evidence was replete with the fact that it is a contradiction in terms: bringing in the new capital, bringing in the new wealth, bringing in the strength of the oil companies with their marketing potential has not indeed caused coal production to increase. Instead that production has declined.

In 1968, for example, Occidental Petroleum purchased Island Creek a company with nearly 26 million tons of coal production a year. Production rose in 1969 to 30.3 million tons. It dropped slightly to 29.7 million tons in 1970, and then it slumped sharply to 22.9 million tons in 1971. By 1976 production was down to only 17.6 million tons.

Similarly the Old Ben Corp. was producing 12 million tons of coal a year when it was acquired in 1969 by a company whose headquarters are in my own State, Standard Oil of Ohio. Was its record any better? I am sad to report it was not. By 1975 production had declined to 9,258,000 tons from the earlier figure of 12 million tons at the time of acquisition.

These are not isolated examples. Conoco and Gulf Coal subsidiaries show the same pattern, which repeats itself time and again across the industry. This pattern tells us something of what we can expect if we permit the process of concentration in energy ownership to proceed.

In uranium the situation is similar. Thirteen of the top 20 uranium reserve holders, 6 of which are also among the top 20 holders of coal reserves, are oil companies or oil company affiliates. Five major oil companies control 62 percent of our domestic uranium milling capacity, and 4 of those 5 firms are also among the top 20 in coal.

Mr. President, the supply projections in the national energy plan are based on the assumption that higher energy prices

will stimulate greater fuel production. That assumption is perfectly reasonable when free market conditions prevail.

But if the major oil companies attain dominance in coal and uranium there is good reason to doubt that higher prices will, in fact, bring us the supplies we need. We simply cannot afford to permit a few large companies to control all of our energy alternatives.

The amendment before us today would not restore full and free competition in the energy industry, but it would say to the major oil and gas companies that their attempt to gain control of potentially competing fuels must stop, and that it must stop now.

I suggest to my colleagues if we permit this process of acquisition to continue, we will soon confront a situation in which all fuels will be produced at levels and at prices determined by corporate profit requirements rather than by the free interplay of supply and demand in the marketplace.

I am a product of the free enterprise system. I believe that competition is the vital missing element, however, in the national energy plan, and I believe that free competition is basic to the entire free enterprise plan.

National policy must be directed toward insuring the survival of competition among independent producers of coal, uranium, oil, and natural gas. I have seen this country's oil companies spend enormous sums of money on slick television commercials, and full-page newspaper ads, magazine ads, to assure Americans that they are devoted to free enterprise principles.

Members of the Senate, I firmly believe the issue before us is a basic one. The issue is not a question of whether X oil company or Y oil company will be permitted to go into the coal or uranium business. I believe if those who shout the loudest about free enterprise truly believe what they have been telling the world, they would be here today supporting this very limited and modest amendment.

The amendment will take nothing away from the companies. In fact, it will leave them with their very powerful positions in coal and uranium.

The amendment will not curtail future coal or uranium production by the major companies. Exxon already has enough coal to last 200 years at currently projected production rates. Conoco has enough coal to last for more than a century, even assuming a production rate nearly double last year's output. Sohio has enough for 85 years. Other companies hold billions of tons of reserves and have not even begun to produce.

Finally, the amendment will not lock energy production into a straitjacket if additional involvement by the major oil companies in coal and uranium turns out to be needed.

Mr. TOWER. Mr. President, will the Senator from Ohio yield long enough to get the yeas and nays on the amendment?

Mr. METZENBAUM. I yield.

Mr. TOWER. Mr. President, I ask for the yeas and nays on the Kennedy amendment.

The PRESIDING OFFICER (Mr. CLARK). Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The Senator from Ohio.

Mr. METZENBAUM. The amendment provides for exemptions when acquisition of additional Federal coal and uranium leases by the major companies is in the national interest and will not diminish competition.

Mr. President, Members of the Senate, competition is the heart of our economic system. I think it is time for those of us who truly believe in the free enterprise system to abandon the head-in-the-sand attitude that many in the business community often bring to change of any kind.

Take a stand in favor of the free market. This bill gives us an opportunity. It provides for no divestitures. It just says let us call a halt to this concentration all in one industry. Let us let free competitive forces work. We need the energy. And let competition have its impact upon that industry.

Mr. President, the people of this country, I believe, would vote for this amendment. I hope the Senate does.

I ask unanimous consent to have printed in the RECORD a list of recent mergers between petroleum companies and firms in other energy industries.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

RECENT MERGERS BETWEEN PETROLEUM COMPANIES AND FIRMS IN OTHER ENERGY INDUSTRIES

Date, acquiring firm, and acquired firm:

1955, Continental Oil,[1] American Coal.
1955, do.,[1] Atwater, Wm. & Co. (coal).
1955, Occidental Petroleum,[2] Pond Creek Pocahontas (coal).
1955, El Paso Natural Gas, Arrowhead Uranium.
1956, Continental Oil,[1] Little Sister Coal.
1956, do.,[1] Pocahontas Fuel Co. (coal).
1956, Occidental Petroleum,[2] Algoma Coal Coke.
1956, do.,[2] Red Jacket Coal.
1956, Phillips Petroleum, Holly Minerals (uranium).
1957, Standard Oil of Ohio,[3] Coal Processing Co.
1958, Occidental Petroleum,[2] Guyan Eagle (coal).
1959, do.,[2] Elk Creek (coal).
1960, Kerr-McGee, American Lake Uranium.
1961, do., Guyan Eagle (coal).
1961, do., Lakeview Mines (uranium).
1962, Continental Oil,[1] Truax-Traes Coal.
1962, Kerr-McGee, Ambrosia Lake Uranium.
1962, do., Spencer Chemical (uranium).
1962, El Paso Natural Gas, Rare Metals Corp. (uranium).
1963, Continental Oil,[1] Crozer Coal & Land.
1963, do., Reis Coal.
1963, Occidental Petroleum, Western Kentucky Coal.
1964, Gulf Oil, Pittsburgh & Midway Coal.
1964, Kerr-McGee, Kermac Nuclear Fuels.
1965, Standard Oil of Ohio,[3] Enos Coal.
1966, Occidental Petroleum,[2] Evans Elkhorn (coal).
1966, Continental Oil, Consolidated Coal.
1967, Standard Oil of Ohio, Mountaineer Coal.
1968, Occidental Petroleum, Island Creek Coal.
1968, Standard Oil of Ohio, Old Ben Coal.
1968, Belco Petroleum, Hawley Fuel Corp. (coal).
1969, Occidental Petroleum, Maust Coal & Coke.
1969, Western Transmission Co., Canterbury Coal Co.
1969, Getty Oil (66 percent), Nuclear Fuel Services.
1969, Diamond Shamrock, Pickand Mather & Co. (coal).
1969, Westrans Industries, Canterbury Coal.
1969, do., Kristianson & Johnson (coal).
1970, Gulf Oil,[4] C. & K. Coal.
1970, Zapata Petroleum, Boone County Coal.
1970, Falcon Seaboard Petroleum, Breathitt County Coal.
1970, do., Black Eagle Coal.
1970, do., Mt. Top Stripping & Pine Bluff Auger (coal).
1970, McCulloch Oil, Kingdom Come Coal.
1970, do., Marietta Coal.
1970, do., No. 7 Corp. (coal).
1970, U.S. Natural Resources, Twilight Industries (coal).
1970, McCulloch Oil., Big Four (coal).
1971, Marathon Oil, Mintech Corp. (coal).
1971, Ashland Oil, Arch Minerals (coal).
1971, do., Farco (coal).
1971, Crestmont Oil & Gas, Black Lode (coal).
1971, Dal Oil, Dusky Diamond (coal).
1971, Mapco, Webster County Goldsberry (coal).
1971, Dargas, River Processing (coal).
1971, Transcontinental Oil, Greer-Ellison (coal).
1972, Alco Standard, Upshur (coal).
1972, Ray Resources, Sigmon Construction (coal).
1972, General Exploration, Hardy (coal).
1973, Coastal State Gas, Southern Utah Fuel (coal).
General Exploration, Fresno (coal).
1973, Houston Natural Gas, Ziegler (coal).

Date of merger or formation not known:

Champlin Petroleum, Union Pacific Coal.
Newmont Oil, Dawn Mining (uranium).
Kerr-McGee (50 percent), KGSJV (uranium).
Getty Oil (33 percent), do.
Skelly Oil (17 percent), do.
Kerr-McGee (50 percent), Petrotronics (uranium).
Getty Oil (33 percent), do.
Skelly Oil (17 percent), do.
Atlantic Richfield, NUMEC (uranium).

The PRESIDING OFFICER. Who yields time?

Mr. HASKELL. Mr. President, I see the Senator from Massachusetts is not in the Chamber, but I wish to have 5 minutes yielded to me.

Mr. METZENBAUM. I yield 5 minutes to the Senator from Colorado.

Mr. HASKELL. Obviously, Mr. President, I cannot speak for the committee because this matter did not come before the committee, but I will give my personal view.

I think it is quite obvious, it is so obvious that it hardly needs to be stated, that if any one of us is running a company which has a huge reserve of oil and gas, huge reserve of coal and huge reserve of uranium, he is obviously not going to promote interfuel competition. I think to believe otherwise is sort of equivalent to believing in the tooth fairy.

So I think the fact of the matter that the combination of these fuels under one corporate umbrella is anticompetitive really does not need to be argued.

The question comes, however, why are not the existing antitrust laws adequate to take care of anticompetitive situations?

Mr. President, just very briefly one example, I think, will show why the existing laws by their very nature are not. Two years ago one company, I believe it was IBM, spent more in the defense of one antitrust action than the entire budget of the Antitrust Division of the Department of Justice.

What the Senator from Massachusetts and others are trying to do here—and the Senator from Massachusetts indicated that he thought it was a modest first step, and I would agree with him—is to prevent a situation of such an aggregation of economic wealth as to basically stifle competition between fuels, and for that reason he is not asking them to get rid of anything; he is just saying, please do not gobble up more of the reserves. To me it is a very modest first step, and it is my hope that the amendment is agreed to.

I thank the Senator from Ohio for yielding.

Mr. McINTYRE. Mr. President, will the Senator from Ohio yield me 10 minutes?

Mr. METZENBAUM. I yield 10 minutes to the Senator from New Hampshire.

Mr. McINTYRE. I thank my good friend.

Mr. President, the growing control over the Nation's energy resources—oil, gas, coal, uranium, oil shale, tar sands, geothermal and solar energy—by the major integrated petroleum companies gravely concerns this Senator from the northeast, from New Hampshire. Fundamental changes have taken place in the basic structure of the Nation's fuel industry over the past 15 years. Traditionally, the industry had been characterized by distinctly separate lines of control over the three basic energy forms: petroleum—oil and gas—coal, and nuclear energy. However, the expansion of petroleum companies into nonpetroleum energy has blurred the traditional lines of interfuel competition.

The potential stifling of competition in the infant solar energy industry is even greater than in coal or uranium. A patchwork of conflicting Government energy and capital policies is forcing small alternative energy companies out of business while encouraging the petroleum companies to buy them and their technologies.

I know of no statistics showing the extent to which big oil has taken over the solar energy industry. But a few examples will illustrate my point.

In recent hearings before the Select Committee on Small Business, Paul Cronin, a former congressman from Massachusetts and now president of a solar energy company in that State, testified that after investing $300,000 in manufacturing and marketing, his company needed more working capital. He approached the Small Business Administration and was turned down. He then asked the SBA if he could have gotten the loan earlier, when he had the $300,000 but no plant, no marketing and no product to sell. "Of course," they told him. "Of course, you could."

The head of another solar energy company, from my home State of New Hampshire, also testified at those hearings. This company, known as Contemporary Systems, had won two ERDA grants by competitive bidding. The company had a backlog of orders and wanted to expand its manufacturing capabilities with a new plant.

Since that hearing, Contemporary Systems has been turned down by several banks, and just this morning my office was notified that they had been turned down by SBA. The reason: they did not have enough cash of their own. The approval of one Government agency—ERDA—did not carry much weight with the other, SBA.

Let me contrast these experiences with that of a third New England solar energy company, a company known as Daystar, of Burlington, Mass. Daystar people designed a solar collector but they, too, ran out of money. They had sense enough not to go to the Federal Government for help or even for advice. They went to Exxon Corp., the world's biggest oil company, for cash.

Two years ago, Exxon bought 40 percent of Daystar. Last year, that ownership was increased to 70 percent. And in April of this year, Exxon took 100 percent ownership.

The results were great for Daystar, but they do not bode well for competition in the emerging solar energy industry.

As of today, Daystar has 30 distributors throughout the Northeast, obtained with Exxon's help. Daystar has further developed its solar energy system with the help of Exxon research and engineering. Exxon is also financing a training program for Daystar equipment installation and is doing a 3-year comparative market study to show Daystar the best sales methods.

Yet another example comes to mind, another Massachusetts firm, Solar Power Corp. This company was started back in 1970 to make and sell another kind of solar technology called photovoltaic cells. In 7 years of operation Solar Power Corp. has not yet made a profit. But it has not been going out of business, either. To the contrary, it has become one of the world's leading manufacturers and sellers of photovoltaics. Solar Power Corp. has been able to stay in business while losing money for 7 years because it, too, is owned and financed by Exxon.

An Exxon official explained that both Daystar and Solar Power Corp. are viewed as long-term investments with a 20-year payout. These subsidiary companies will have the opportunity to aggressively take over markets—while losing money—for years, with Exxon's backing. Their independent competitors, who cannot get loans or venture capital under restrictive Government policies, do not stand a chance.

Mr. President, it is not my intention to belittle the remarkable success that Daystar and Solar Power Corp. have achieved with Exxon's help.

These examples were drawn only to illustrate the point that the independent alternative energy companies are foundering, while those who have been taken into the fold of major petroleum companies are enjoying substantial financial backing.

A small business cannot even obtain a loan from SBA for a plant—although the experts at ERDA have twice endorsed its products with grant money. Another, aided by big oil, has signed up 90 distributors to sell its solar collectors.

There is something drastically wrong with our Government energy and capital policies. We are bankrupting independent companies by restricting their access to capital. At the same time, our policy of high oil prices is putting so much money in the hands of the major oil companies that they are buying up every piece of property and every technology having to do with energy.

It is for these reasons that I recently introduced legislation which will place a moratorium on the horizontal expansion of the petroleum industry and for this reason I am supporting the amendment of the distinguished Senator from Massachusetts (Mr. KENNEDY). I do not know at this time whether I agree with him that full divestiture of competing fuels by major petroleum companies is necessary to preserve competition in energy. It may be. Perhaps some altogether different action is more appropriate.

It is my understanding this moratorium and the study required by this amendment will give us the opportunity to find out what should be done, while preventing any further acquisitions which would be all the more difficult to reverse if we were to find out that some divestiture is necessary.

At the same time, this amendment does nothing to stop the major petroleum companies from developing and expanding production of their existing reserves in other kinds of energy.

Mr. President, if there is a motion to table this amendment, I urge my colleagues to defeat it; and when the opportunity comes to vote this amendment up or down, I urge Senators to vote for it.

The trend toward oil company acquisition of competing energy resources poses a serious problem as Dr. John Wil-

son, a noted energy expert, pointed out in testimony before the Joint Economic Committee:

The fundamental problem, from a national policy viewpoint, is that without a competitive infrastructure, market forces simply cannot be relied upon to curb inflation and unemployment or to allocate our Nation's economic resources in an equitable and efficient manner. If non-competitive circumstances persist, directly imposed and effectively administered market controls will be essential to the restoration of economic order in the energy sector. The only alternative, if we hope to establish a stable economic equilibrium within the context of an unregulated free market company, is to assure that private industry is sufficiently competitive so that market forces can function in a positive manner, consistent with the public interest.[1]

In 1975 the petroleum industry accounted for about 20 percent of domestic coal production and 30 percent of domestic uranium production. In the long run the pattern of growing control by the major integrated oil companies over the Nation's reserves of energy may be far more important than concentration in current production.

Although a great deal of the Nation's coal and uranium reserves lie outside the control of the petroleum industry, the potential for industry mischief is already evident. Gulf Oil's participation in the international uranium cartel—the cartel which is now being accused of having forced up the price of uranium from $6 a pound to more than $41 a pound, and in the process driving the Westinghouse Corporation to the brink of bankruptcy—raises the specter of similar cartel increases in coal prices just at the time President Carter's national energy program begins to stimulate the demand for coal. From this table it can be seen that in 1973, 16 of the 18 major integrated petroleum companies were involved in oil shale and uranium activities, and 10 were diversified into coal and tar sands.

According to estimates made by the American Petroleum Institute, estimates which I believe to be very conservative, as of 1975 petroleum firms owned 21 percent of the U.S. coal reserve base and 72 percent of the proven U.S. uranium reserve.[2]

This table lists the energy reserves of the top 30 oil companies. It shows that petroleum company holdings of non-petroleum energy are more significant than their holdings of petroleum energy. For example, in 1975 Exxon's reserves of crude oil and natural gas totaled about 47,000 trillion Btu's whereas its holdings of coal totaled 199,000 trillion Btu's. Continental Oil held fifty-one times the Btu equivalent amount of coal as it did oil and gas. Overall, the top twenty oil companies held a total 276,000 trillion Btu's of oil and gas, and 970,000 trillion Btu's of coal and uranium; it is strange that we still call this group of companies the "petroleum" industry rather than the "coal and uranium" industry.

A third table makes it evident that petroleum firms have shown little interest in expanding the output of the coal companies that they acquire. It is interesting to note that between 1970 and 1975 the coal output of the five coal companies owned by oil companies fell from 114 million tons to 94 million tons—an 18 percent decline—during a period in which the rest of the industry expanded production by 13 percent, from 489 million tons to 552 million tons.

I ask unanimous consent to have printed in the RECORD three tables—numbered table 1, table 2, and table 3—prepared by the Congressional Research Service.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

[1] Includes only those companies with more than 1,000,000 tons of coal production in 1975.
[2] Year acquired by oil company.
[3] Acquired in March 1976.

Source: Appears in Congressional Record, July 26, 1977: S12805.

Mr. McINTYRE. I thank my good friend from Ohio for yielding me time.

The PRESIDING OFFICER. Who yields time?

Mr. HANSEN. Mr. President, I yield 5 minutes, or whatever time he may require, to the distinguished Senator from New Mexico.

Mr. SCHMITT. I thank my friend from Wyoming.

Mr. President, I find myself, as a new Senator and one who has been involved in various ways in the mineral and energy industries for a large number of years, including being born within a copper pit, appalled that we would be wasting the time of the U.S. Senate on an amendment of this nature, particularly at a time when it is so absolutely necessary that we mobilize all of the great resources of this country—resources of imagination, capital, ingenuity, and willingness to take risks—toward a solution of what is known as our energy crisis.

I think the most telling point against an amendment of this kind, or any attempted front door or back door divestiture, is that we are dealing with an energy industry in which there is no restriction on entry. New companies are growing all the time, whether they be coal, oil, gas, or uranium companies, and therefore it is not a monopolistic industry. There are big companies, but there are also medium sized and small companies, all of which hope to be big some day, and have an opportunity to do so.

It is important to realize that the free enterprise system works on the basis of supplying a demand, and there is demand for coal, there is demand for uranium, for oil, and for gas, and there will be for many years to come, because we have allowed ourselves, for a variety of reasons, to become way behind in the energy power curve, to use the vernacular of the airplane pilots.

If we vote to accept this amendment offered by the Senator from Massachusetts, we will be doing a great disservice not only to the intent of S. 977, the purpose of which is to increase our utilization of coal, but also to the intent of everybody's energy plan, which is to increase the production of coal and its utilization as rapidly as possible in order to save the very precious natural chemicals, crude oil and natural gas. I personally think that S. 977 is the wrong way to go about this, but even if it were not, the amendment of the Senator from Massachusetts, obviously supported by the Senator from Ohio, will work in the opposite direction. It will prevent the application of the great resources—capital, cash flow, and imagination—of the oil and gas industry, which is a heavily competitive industry at this time, from being applied to this very important national problem.

I am no defender of the excesses of big business in the past, and I never will be, but I do know what it is going to take to provide the coal and uranium necessary to provide a transition to that time when there will be abundant, inexhaustible energy resources for this great country and for the world.

Having grown up in the mining business, which is closely related to the energy extraction business, I believe there is one point that is too often overlooked about what is necessary in order to see new resources turned into reserves and then developed as our own extractable energy products.

As an aside, I might say that I find it discomforting, to say the least, that the Senator from Ohio would not care about the difference between a resource and a reserve. It is a very fundamental and important difference to this country, and I hope he will take time out at some time to understand that very important difference. A reserve is something you have, that you know about, that you can get to. A resource is something you think you may have. That is a very important difference.

But more important, within the mineral extraction business it is extremely important to have a risk mentality, a philosophy within the business management of the industry of being willing to take risks.

Let me give you a case in point from my own experience. In the post World War II time, up until the mid 1950's, there was a tremendous potential in the Southwestern United States for the development of new copper mines. The traditional mining industry was sitting, in many cases, on deposit after deposit of potentially great value of copper ore. But no one would invest. The industry had become so conservative in their way of doing things, so limited in their basic capital resources, that they could not then invest; they could not find it within the purview of the industry to develop these mines that had such tremendous potential productivity.

In the mid 1950's, some companies coming from success in the oil and gas field decided that the time had come to diversify, to provide their corporate structure and their stockholders with a broader base of potential return, and they came into the Southwest and were willing to risk their capital on the development of new copper property. As a result, mine after mine after mine——

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. HANSEN. Mr. President, I yielded the Senator such time as the Senator might require.

The PRESIDING OFFICER. The Chair misunderstood.

Mr. SCHMITT. I thank the Senator.

In the course of the next decade or so, mine after mine bearing huge resources of copper were provided by the influx of capital and of the willingness to take risks from the oil industry into the mining industry. It showed the way how things should be done, and I think will be done in the future.

The same occurred when we finally realized that we would have an energy crisis, that we had forgotten that we needed to develop uranium resources so that we could fuel these nuclear reactors that are going to be important to at least a part of our energy future. The same thing occurred a few years ago, and what happened? The only sources of capital, the only sources of the willingness to take risks that we could find, for the most part, were those in the oil and gas industry.

They came into my home State of New Mexico in a very competitive way—you would not believe the competition that existed—and now have developed vast new resources and reserves—most importantly reserves—of uranium that, if we are going to be successful in implementing that portion of a national energy policy, are going to be absolutely vital.

If we had not had this resource in this country, this willingness on the part of the oil and gas industry to take risks, to invest their capital in hidden deposits of uranium, then we would not today have even a first approximation of the ability to fuel the light water reactors which are going to be necessary to this transition phase of our energy future.

Again, I find it extremely hard to believe that we are spending the time, the very valuable time, of the Senate this fall in debating an amendment of this kind, which will do absolutely nothing to help us solve the basic energy problems to meet the basic energy challenge of this great country and of the world.

Again, let us remember that with the antitrust laws we have properly enforced, none of the specter which has been brought before us today will be realized, the specter of monopolistic control of a very high demand for coal and uranium, monopolistic control by the oil companies. Those laws must be enforced; they can be enforced and I believe they should be enforced.

Let me also remind my colleagues that without barriers to entry, monopolistic control is impossible. And there are no barriers to entry in these energy markets today. The demand is far too high, the potential for profit is far too high, to see any barriers of entry being created within the free enterprise system itself. However, barriers for entry can be created by Government, and that is what we have to be very careful of. They are being created, they have been created, but certainly within the industry itself there are no barriers for entry.

I believe the distinguished Senator from New Hampshire in his examples may have inadvertently pointed out what Government has done to make it very difficult for the entrepreneur, the small businessman, interested in solar energy to enter the market, largely because of artificial barriers to entry which have been created by Government.

Mr. President, I hope our colleagues, as they come to the floor today prior to a vote on this amendment will take the time to reflect on just what our basic energy challenge is. That challenge, in briefest form, is to produce as much oil and gas as we possibly can from domestic sources as rapidly as we can so that we can develop coal, uranium, geothermal, and dispersed solar resources which will allow us to transition into another time, into the next century, when our solar electric technology, our fusion technology, our hydrogen energy technology, and maybe technologies yet to be discovered or invented, will allow us to have energy available at rates which are equal to the demand, and energy available from essentially inexhaustible resources.

This great country has yet to be asked to face the positive side of the challenge. That is, to do what we do best, to do new things. If, by amendments such as this amendment proposed by the Senator from Massachusetts, and by bad legislation, such as represented by S. 977, we continue to make it impossible for Americans to be positive, to go out and solve their problems, then I will have very, very grave concerns about our ability to meet this challenge and about our ability to survive in a very, very competitive world, in a world which is going to become more competitive from the standpoint of energy as every year goes by.

Mr. President, I am willing to yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. SCHMITT. I would be happy to yield to the Senator from South Carolina.

The PRESIDING OFFICER. The Senator from South Carolina is recognized.

Mr. THURMOND. Mr. President, we are presented with an amendment which can easily be misconstrued. Not only the amendment's purpose, but its effects are partially disguised by its provisions. The amendment is cloaked in the language of moderation and in provisions which promise a preservation of the status quo without actually harming anyone. The amendment would cause a future restructuring of the oil and gas, as well as the coal and uranium industries. Restructuring is what divestiture is all about.

This deceiving appearance masks a most radical measure that is a divestiture amendment regardless of the contrary contentions of its sponsors. Indeed, if it is not a divestiture amendment, then why are its sponsors offering it? The arguments used in favor of this amendment are virtually the same arguments in favor of horizontal divestiture. To the extent that this amendment does not go as far as other proposals in accomplishing divestiture, it is—to be honest—because its sponsors have decided that this body is not willing to adopt the more extreme measures they actually favor. They know we will not buy the whole camel. They are hoping the camel's nose in the tent might not be so objectionable.

Mr. President, it is disturbing to me that this particular amendment is being offered here on the Senate floor to other energy legislation. This particular route of obtaining passage of such a momentous measure clearly circumvents the committee system. Hearings are continuing on the subject of horizontal divestiture. We are collecting information on whether or not there is a need for such a bill and what the effects would be on our national energy situation. These hearings were scheduled to examine not only the subject of horizontal divestiture, but also proposals to prevent ownership of alternate energy sources by petroleum companies. While limited hearings have been held on the subject of horizontal divestiture, no hearings have been held on this measure being debated today.

Senator KENNEDY presently has a horizontal divestiture bill (S. 1927) under consideration in the Antitrust and Monopoly Subcommittee of the Judiciary Committee. Because this subject is receiving expeditious and considered treatment within the framework of the committee system it is hardly advisable to attempt to begin implementing divestiture without allowing the appropriate committees to reach a judgment on that issue.

The truth is, Mr. President, this amendment would call a halt to the most promising development in the coal industry, an essential development if this Nation is to achieve the increasing reliance on coal so necessary to a national energy plan. The movement of capital, technology, and management from the petroleum industry into the coal industry is helping to produce the coal this Nation must have to broaden our energy base. This amendment would stifle that movement.

In the first place, major oil and gas producers already into coal or uranium would be prevented from acquiring additional interests.

In the second place, oil or natural gas companies covered by this amendment who have not already moved into coal or uranium would be prevented from moving into these fuels.

Third, this amendment creates the rather grotesque spectacle of a governmentally imposed system in which some companies are permanently disadvantaged while others are permanently favored. Those companies into coal and uranium are allowed to stay there, presumably to reap the benefits of holdings they have already acquired. Companies not into coal or uranium, and covered by this amendment, would be denied the opportunity to seek these same benefits.

Fourth, if passed, this amendment will undoubtedly cause, not merely a freeze, but a shrinkage in the commitment of oil and natural gas companies to the development of coal and uranium:

Companies with coal or uranium reserves that do not constitute a mineable block would not be allowed to expand these reserves so that it would be economic to develop them. Such reserves might well be divested by the companies.

Companies with subsidiaries in coal or uranium might well find that the limits on growth imposed by this amendment would so restrict their operations that they would divest them.

Companies might well find that coal or uranium subsidiaries prevented from growing are a poor prospect for their investment funds so that the capital presently going into the development of these subsidiaries might be reduced.

Any oil or gas company—and there are many of them—involved in such research as coal liquefaction and gasification would find it foolish, if not actually illegal, to continue such research.

Oil and gas companies throughout the country will be less inclined to invest capital in any alternative energy resources, even those not covered by this amendment, because passage of this restriction would be a clear signal that this Congress is succumbing to the kind of suspicions which are hardly encouraging to a company considering any move into any alternate form of energy.

So what we have, Mr. President, is not merely some moderate and harmless amendment preserving the status quo but a clear and strong attempt to limit and even partially divest oil and gas company participation in coal and uranium. This amendment is offered in its present form, in my judgment, because it is the strongest form of divestiture its sponsors feel they can get the Senate to pass. If the amendment were not a measure designed to accomplish the aims of horizontal divestiture, the proponents of this measure would not bother to offer it.

Mr. President, the contention that this is not a divestiture amendment is a technical accuracy that misses the point of

the amendment. For in fact, while the amendment does not require any company to divest itself of any asset, it will create economic restrictions which will encourage petroleum companies to get out of coal and uranium.

It will put a legislative straitjacket on petroleum companies not presently into coal and uranium.

It will put a ceiling over the heads of oil and gas companies not covered by the bill to discourage growth which would bring a company into the threshold set by the amendment.

It will start building a wall around coal and uranium, a wall that will prevent these important fuels from receiving the full benefits of our economic system.

It will scare America's technologically advanced energy industries away from significant investment in other alternate forms of energy.

Further, it is an important first step toward horizontal divestiture. For if companies are discouraged from expanding their coal and uranium holdings, they will be discouraged from developing them and discouraged from owning them.

Mr. President, this will set the stage for other amendments next year and the year after that which will implement horizontal divestiture completely, with all its ills and implications for America's energy policy.

I wish to make two other points concerning this amendment. The first point is that a constructive national energy policy requires heavy reliance on coal. This country has a lot of coal, probably more coal reserves than any other country in the world. Development of these coal reserves is an important part of any workable national energy plan. We are talking about increasing coal production from 665 million tons to 1,065 million tons by 1985. It just does not make sense to start eliminating any segment of our economy from trying to develop coal.

Second, it is important that the Members of the Senate understand that during the last 5 years concenetration into a few firms has declined in the coal industry. In 1970 the top four coal firms accounted for 30.7 percent of coal production. By 1975 that figure had declined to 26.4 percent.

The same thing is true for the top eight firms: a decline from 41.2 percent of coal production to 36.2 percent. The top 15 firms declined from 52.2 to 45.9 percent. The top 20 firms declined from 56.5 to 50.6 percent.

All of this is a long way off from having the top four firms with 50 percent of the market which is what most economists would call the danger point.

In conclusion, Mr. President, this amendment circumvents the committee system. This amendment attempts to accomplish divestiture without saying that is what it is doing. This amendment is harmful to the goal of increased coal production. Finally, this amendment is an unnecessary restriction on the free enterprise system, with no benefit to the American people.

Thank you.

Mr. SCHMITT. Mr. President, I yield to the Senator from Montana such time as he may require.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. MELCHER. I yield to the Senator from South Carolina.

Mr. THURMOND. Mr. President, I ask unanimous consent that Peter Chumbris and Emory Sneeden of the Antitrust Subcommittee of the Committee on the Judiciary be accorded the privilege of the floor during consideration and voting on this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MELCHER. Mr. President, earlier in the discussion this afternoon, the Senator from Ohio (Mr. METZENBAUM) listed some of the coal reserves that have been acquired by oil and gas companies. I think it is pertinent to point out that if these reserves are in the West, there is a series of reasons why there has not been rapid development of those coal reserves.

One of those reasons causing a delay in the development of western coal has been the long time it has taken the Congress and the executive branch to enact a national strip mine reclamation bill. In my State of Montana, which has more coal reserve by far than any other State in the country, the ownership of Federal coal in a checkerboard fashion throughout most of the area of the State where there are coal reserves made it absolutely essential that, before development started that Federal coal, there be a finely drawn blueprint for development. Much of that has been taken care of with the recent enactment of the strip mine reclamation bill.

But it would be foolish to think that rapid development of that western coal could take place without that Federal law being enacted. Coal in my State, loaded on the railroad cars, costs about $5 a ton. To me, that seems like a competitive price. I think it is. Yet, to get a mining operation going, to strip the land and strip mine that coal, does indeed take 5 years, as was noted by Senator METZENBAUM.

It takes 5 years and a pretty big investment. It takes investment in machinery, and some investment in getting the permits to mine that federally owned coal.

Just having a lease on Federal coal does not open it to mining. A mining plan must be approved by the Department of the Interior and the program that the Department of the Interior has followed has been necessarily slow by the lack of firm direction from Congress, agreed to by the executive branch.

Again I say, I think the enactment of the national strip mine reclamation bill and signing by President Carter does clear many of the uncertainties involving approval of mining plans that will allow for the development of federally owned western coal.

I think that we also have to recognize that much of the energy development does hinge on securing approval by Federal agencies of Federal permits. In many instances, approval by State agencies for State permits. We have enacted a series of laws during the past decade or more that require this. Some of them are for environmental protection, most of them are, as a matter of fact, that we have enacted here in Congress in the last decade regarding these Federal permits. I think the same is true with the State permits.

But let us note that it takes time to get those permits approved—time plus investment. The large companies are in a better position financially to make those investments, both in time and in money.

I hope we have shortly before the Senate a bill that 20 of us have cosponsored that would curtail some of the time involved and limit the time involved on Federal permitting for oil pipelines from the west coast to inland States.

There is a great need for that because we will give the classic example in that bill of an independent, what we would call a small independent oil pipeline group, that wants to build a pipeline from the west coast into Minnesota to hook up with existing pipelines and to deliver the oil into the Midwest, as well as to the northern tier States, including my own State of Montana.

But let me note now that this independent group has been diligently pursuing Federal and State permits for 2 years. The group is a relatively well off group of individuals. They have been successful. They have invested their own money, but they are running out of it. They are running out of their own money to spend on securing these Federal and State permits.

If they do not obtain those permits, their $2 million, $3 million, or $4 million personal investment is down the tube. It is washed out. Their proposal is gone. It is an example, a classic example, of what it costs to get into the energy business, in this case transportation of oil, desperately needed in the northern tier and midland area States, inland States, a project that is very definitely needed.

I think we have to bring our own house in order on the Federal permits for energy companies, whether it is oil transportation or coal companies, as is the case of the discussion this afternoon.

If we really want competition, and we all do, we have to make certain that the small independent companies can stay in business, will have sufficient capital to go through this period of time to secure permits and remain viable. That is competition.

If we allow it to drift too long because we have set up too much redtape, then we, indeed, create the vacuum where the giant companies move in.

There are two other instances in the West in coal development that need a little bit of attention here today.

Mr. SCHMITT. Will the Senator yield?

Mr. MELCHER. I am delighted to yield.

Mr. SCHMITT. Before the Senator moves along in this very cogent and important statement, I would just like to associate myself with his remarks and in the situation faced by Montana, being something with many of the similar characteristics and similar situations in my State of New Mexico.

I think the Senator's point about the necessity of confidence in what Federal law is going to be, and what Federal regulations are going to be, and what the permitting process is going to be, is

extremely important because that has been a fundamental problem in the delay in the extraction of coal and uranium and other resources in the West.

I hope the Senator is correct in that with the passage of the strip mining law, we, in fact, will see some of this confidence or some of the insurance of what the process is starting to develop.

I am not quite as confident maybe as the Senator might be that it is going to happen very rapidly because the permitting process now is transferred to Washington.

For the most part, the Senator described it very well, the kind of problem that a small group of investors will run into, as well as larger investors will run into, and the Senator from New Hampshire and others have discussed today about the problems that small investors have.

I think it is important to realize that not the least of the problems is the Federal Government itself and that we have to be careful in trying to take that first modest step toward divestiture that we are not misanalyzing the problem.

The large part of that problem is the inhibitions that are put in front of small business by the Federal Government.

I appreciate the statement of the Senator and I thank the Senator for this interruption.

Mr. MELCHER. I thank the Senator for his remarks.

There are two proposals for coal development in the West that cause us great problems in Montana and other Western States because they involve the use of water. One of these is a proposal for coal slurry pipelines.

We are apprehensive in my State, and I think in other Western States, about the enactment of the law granting eminent domain that would allow coal slurry lines to be built. It is because we do not know how much water we can spare and it is because we do not know, in many instances, what individual State's prerogatives are involved with water that might be used in coal slurry lines.

So we are reluctant to endorse such legislation. Of course, that reluctance, we recognize, does cause some energy companies, which are waiting for coal slurry lines, to be just waiting.

We take note, those of us in the West that oppose coal slurry lines, that railroads are adequate now and in the next 10 or 15 years can haul all the coal that is necessary or that will be mined in our part of the West.

The second proposal involves coal gasification.

Again, all known processes take considerable amounts of water for each coal gasification plant. We have a reluctance on that, also, but our reluctance is based on whether we can give up the water that is involved.

So I think that in considering all the ramifications of rapid development of Western coal, we should not lose sight of these points.

Just owning the reserves in the form of leases on Federal coal or having ownerships of coal reserves in the West that are in these checkerboard fashion ownerships, intermingled with Federal coal in the West, does not necessarily mean there will be rapid development of those coal reserves, for the reasons I have mentioned.

Mr. President, on the facts that are available to me now and on the existing circumstances that face us in the development of Western coal, I would be extremely reluctant to vote for the pending amendment. I would prefer to do as the advocates have recommended to us, to assure competition, that we pay some attention to the smaller energy companies, see what their problems are, clear up the time-consuming, money-grabbing procedures in getting Federal permits, and allow those applicants, whether for coal development or for oil pipelines, who are sincerely and diligently trying to pursue their business without degradation to the environment, and in the truly competitive manner we advocate, to go ahead with their proposals and to assist them in making sure that they are not hamstrung for so long a time, costing so much money, that they have to abandon their proposals which would be a benefit to the country and would assure competition.

Mr. SCHMITT. Mr. President, I again thank the Senator for his moving and very important statement in this debate.

Mr. HANSEN. Mr. President, would the Senator from Massachusetts like to speak?

Mr. KENNEDY. Would the floor manager like to propound a consent request now or later?

Mr. HASKELL. Mr. President, I should like to propound one later. We are checking with one Senator.

Mr. KENNEDY. Mr. President, I yield myself such time as I may use.

The PRESIDING OFFICER (Mr. FORD). The Senator may proceed.

Mr. KENNEDY. Mr. President, I listened with great interest to the arguments of the Senator from Montana. I think there is substantial truth to the arguments with respect to the issue of competition, that the rules, the regulations, the time frames are basically anticompetitive in terms of permitting smaller units, whether in the coal industry, the oil industry, or natural gas, to compete with the majors. There is a great deal of wisdom to that pronouncement, and it is one with which I agree.

However, I daresay that as we begin to attempt to see what can be done to relieve those particular rules and regulations and that redtape, if we continue to permit the major oil companies to acquire these coal resources, the horse will be out of the barn by the time we take the steps that are recommended by the Senator from Montana.

I picked up the Wall Street Journal this morning and read that Mobil Oil has increased its domestic coal reserves by 3.5 billion tons through the recent acquisition of Mount Olive & Staunton Coal Co. That puts it in the top 10 of all the coal producers. They just announced that this morning.

Those of us who support this amendment say that by the time we are able to do something to reduce the redtape, the regulations, the licensing agreements—all the other things that work in an anticompetitive way, as the Senator from Montana carefully and eloquently and knowledgeably pointed out—there will not be the opportunities for these smaller companies, the medium-sized companies, to be able to function and to be able to work.

However, I welcome the opportunity to work with the Senator from Montana in this area, to try to see how we can best deal with that particular issue which he has identified and to which I am extremely sympathetic.

Mr. President, during the course of the afternoon a number of arguments have been made, but one that continues to be repeated is the issue of whether it is essential that we permit the major oil companies to continue to purchase the smaller or medium-sized or even larger coal companies or uranium companies because of the availability of new capital to these major oil companies.

For a number of years, during my service in the Senate, I have listened to statements about the constant problem that the major oil companies have in terms of the accumulation of new capital. They represent before our Interior Committee and the House committees that they themselves are facing serious capital problems and that is why they are against the equalization tax and the wellhead tax. They come before the committees and say, "We can't possibly form the new capital to develop the oil and natural gas in this country unless you stop the crude oil equalization tax proposed by the administration."

On the other hand, we find some Senators who are against that tax recommended by the administration saying, "Well, listen, boys, the oil companies have the only available capital to go out there and develop the coal and develop the uranium."

They cannot have it both ways. Either they have the capital that is available to go out, on the one hand, or they do not. It seems to me that they are playing both sides against the middle in this situation.

Mr. SCHMITT. Mr. President, will the Senator yield?

Mr. KENNEDY. I will yield in a few moments on this point.

The second question with regard to the capital market is this: We heard in the Finance Committee last year Mr. Eliot Janeway, one of the most distinguished economists, one of the most knowledgeable people in Wall Street, one of the most knowledgeable people in this country in terms of new capital formation, indicate that there was no capital shortage in the country at this time. He testified just last spring before the Senate Finance Committee.

Then we pick up the recent issue of Business Week magazine, in which there is a full-page ad talking about new mining opportunities: "As modern technology and industry gobble them up, man must find more." It says that Canadian Imperial Bank of Commerce, over $26 billion strong, can be helpful. What they are advertising here is, "If you have a new mine, come to the Canadian Imperial Bank of Commerce, and let's try to work out some capital formation for that

development." Here it is in Business Week magazine.

I daresay that those who oppose this amendment on the basis of capital formation have to make a stronger argument than they have made here today.

Furthermore, Mr. President, let us look at the facts and what has happened in terms of oil companies that have acquired coal companies in recent times and where the capital formation has really developed.

When Occidental Petroleum acquired Island Creek, was it the situation where Occidental was bringing tens of millions or hundreds of millions of dollars to Island Creek? Quite to the contrary. Occidental was taking tens of millions of dollars away from Island Creek to use in its North Sea oil development.

Sohio pledged the credit of Old Ben Coal Co., one of the leading coal companies in this country, for pipeline development.

Similarly, Continental Oil used resources of Consolidation Coal Co. for oil development. So, Mr. President, when we start looking at the facts, when we begin to examine both the capital market and what the oil companies have done in terms of the major coal companies they have actually acquired, we find a rather different situation from that which has been presented here during the course of the afternoon.

No one questions that the coal companies had financial difficulties over the period of the sixties, 10 years ago, 15 years ago, and were facing problems in terms of modernization or of acquiring new capital. It was basically not a very prosperous industry.

But times have changed in terms of the energy requirements of this country and throughout the world. The technology is being developed—and, I daresay it has not been developed by the major oil companies, it has been developed primarily by the coal companies of Western Europe.

We have listened to the argument about the need for bringing new management from the major oil companies into the coal companies. Well, it is interesting that the major acquisitions by the oil companies have been of those coal companies that have been the most successful in terms of managerial skills, knowledge and techniques. For the most part, they have left the management personnel in place in those particular coal companies.

So, Mr. President, I find these arguments which have been made in these particular areas still failing to be persuasive.

It seems to me that more important is massive concern by the purchasers of the coal and uranium. We heard before our Antitrust Subcommittee from Mr. Shearon Harris, who is president of the Carolina Light and Power Co., and a vice president of the U.S. Chamber of Commerce. He runs an important light and power company down in the Carolinas and he talked about the trends and the developments that he see resulting from the consolidation and acquisition of power by the oil companies. No one thinks he is for the destruction of the American free enterprise system.

Listen to what the rural electric cooperatives are saying about their problems in acquiring coal and uranium. You find those who are trying to secure reasonably priced fuel understand the problem. The ones who face the American consumer—no matter what part of this country they are in, whether it is TVA or Carolina Light and Power or the rural co-ops—they understand what is happening in the marketplace.

The only purpose of this amendment is to say, "Let us have a status quo during the time when the President and the administration and the Congress continue their comprehensive review of horizontal integration in the energy industries." Exxon and Mobil have all the coal resource that they need under their own projections to be able to meet their requirements for the foreseeable future. But let us not permit them to continue to gobble up these resources which, over a period of time, might mean a shortage of these materials, and unquestionably higher consumer prices for the average American family.

I would be glad to withhold the time. Now I yield to the Senator from New Mexico for questions.

Mr. HASKELL. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. KENNEDY. I yield.

Mr. HASKELL. Mr. President, how much time is remaining?

The PRESIDING OFFICER. The Senator from Massachusetts has 52 minutes, and the Senator from Colorado has 64 minutes.

Mr. HASKELL. Well, since the Senator from Colorado has the same position as the Senator from Massachusetts, it would be the Senator from Wyoming who has the time.

The PRESIDING OFFICER. The Chair stands corrected. It is the Senator from Wyoming who has 64 minutes.

Mr. HASKELL. I wonder if the Senator from Wyoming would agree to 30 minutes to be remaining and the Senator from Massachusetts 20 minutes in view of the disparity of time remaining?

Mr. HANSEN. Mr. President, responding to the query by the Senator from Colorado, let me say that Senators BARTLETT and WALLOP have each indicated a desire to speak. I do have a short statement that I can utter or insert in the RECORD. I would suspect that 30 minutes would be sufficient time on our side.

If I may tentatively enter into that agreement I shall do so now, provided there is an understanding that I have not yet had a chance to speak to either our colleagues WALLOP or BARTLETT to be certain as to the amount of time they require. I will not require but 10 minutes, so that would leave 20 minutes for them.

Mr. HASKELL. I suppose that is a little bit difficult. Maybe the staff could get in touch with those two Senators.

Mr. HANSEN. I think the staff has been making an effort to reach both of them, and I would suspect they will be over here very shortly.

Mr. HASKELL. Perhaps we should delay any request until we have heard from those two Senators. I think that would be appropriate.

Mr. SCHMITT addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from New Mexico?

Mr. HANSEN. Yes, I do.

Mr. SCHMITT. I just wanted to say to the Senator from Massachusetts that his description of the flow of capital is a reasonably good example of what I sometimes call incomplete statistics, the best example being all of those people who are pushed to shore by porpoises which has given the porpoises a reputation for saving people from drowning. We do not hear about the people who have been pushed out to sea. So it is a good example of incomplete statistics.

In this case I think we always have to remember that capital goes where the return on the investment is going to be the greatest for the stockholders and for other investors in the particular enterprise.

At the present time, because of artificial restrictions on the price of natural gas and the threat of increased restrictions on the wellhead tax on oil and gas, capital investment in oil and gas does not represent as large a return on investment as capital investment in coal and uranium.

I just think we need to keep that in mind. There are these kinds of distortions in the energy capital picture, and those distortions are going to continue until the Government realizes what is necessary to increase the supply of energy.

One of the things that is necessary is to not further inhibit this great resource, competitive resource, we have represented by a large number of large oil and gas entities. They can invest and are investing in coal and uranium and are allowing the production rate we have today, and will, if not too greatly restricted, unreasonably restricted, provide for increased coal and uranium production in the future.

My own State of New Mexico and the Senator from Wyoming's State of Wyoming have very similar characteristics in terms of large coal and uranium resources, and they would not presently offer this country and our States the great economic potential that they do if it had not been for this availability of capital coming from the oil and gas industry, the capital that was not being invested in the production of oil and gas because of these other restrictions, these artificial restrictions, in the pricing structure of oil and gas commodities.

So I think the Senator from Massachusetts and others supporting his amendment must at least be fair and realize we have distorted the energy market by Federal intervention, unnecessary Federal intervention, and that capital is going to be where the return on the investment is the greatest.

Mr. KENNEDY. I yield myself time to respond.

I find myself in remarkable agreement with my friend from New Mexico, and he

really is making my point. I am opposed to the Federal Government's allocating capital, just as I am opposed to the board room of Exxon making the judgments in terms of capital. I think they should be made in terms of the marketplace and investors. I think those should make the judgments; that is going to be a truer reflection of what the opportunities and public needs are going to be.

For example, if you have the oil companies owning both oil and coal and it so happens that the oil aspects of that mix are a good deal more profitable to that particular company, it seems only reasonable to expect that the corporate officials are going to invest more in the oil end of the business than in the coal end. While if you had a situation, for example, where you come to the capital market in New York City or any other major city in this country, the choice is to be made by an investor. He says they either have coal or department stores to invest in, and he may very well make the decision to invest in coal.

But I just wonder why the Senator from New Mexico believes that the corporate board rooms can make more intelligent decisions in the allocation of capital than the marketplace. I am for the marketplace and the best way of insuring that the marketplace is going to make that judgment is by supporting this amendment. It will insure the opportunity for a free flow of capital, and it will not necessarily require the corporate board of directors to do so.

Obviously if the investment is going to be sound from the oil company's point of view, it would be sound from an investor's or bank's point of view. If it does not make sense for banks to invest in any mine, then an oil company is not going to make the investment because the official would otherwise be thrown out by the stockholders.

So I would agree with the Senator from New Mexico that that capital formation should be left in the hands of the marketplace, not the Federal Government, not the board rooms of the major oil companies. The best way to achieve that is support of this amendment.

Mr. SCHMITT. The Senator makes a number of points which I think warrant a little bit more discussion. From his remarks I generally would assume that he will favor the elimination of the wellhead tax when that comes up. That is a distortion imposed by the Federal Government on the disbursement of capital. So we will look forward to that kind of support when we get to that point in the energy bills that are before the Senate.

I think it is also important to realize that the board rooms, as he refers to them, are part of the marketplace, and they are going to respond to market pressures. Some of those pressures now exist on behalf of the Federal Government and that is a policy which is only incompletely defined, not very well implemented at the present time, to develop a variety of energy sources, uranium, coal, oil, gas, solar, and so forth. So, by making that a national policy, and I think an important national policy, we have created the demand in those various market sectors to which the board rooms are going to respond. And they are responding in fact. They are responding in one way by diverting capital resources from that exploration and production of oil and gas to the production of coal and uranium because the Federal Government has distorted that marketplace to where that is the most profitable place to put the board room dollar.

Mr. KENNEDY. On that point I would be interested in the Senator's authority for that particular statement, that they are diverting resources from oil and gas to coal. And, second, it seems to me that we should have a national position on that particular issue. Is that wise? Is that what we really want to do to meet our energy needs in this country—to divert capital formation from oil and gas, as the Senator from New Mexico has said, into coal? How does that meet our energy requirements? I hope that since that is what the Senator from New Mexico believes, he will try to tell us why that makes a good deal more sense than continuing to try and see the development of more oil and gas with the independent development of coal and uranium at the same time. I think he talked himself into a Catch-22.

Mr. SCHMITT. No, I do not believe so.

Mr. RANDOLPH. Mr. President, if the Senator will yield, I do not want to break the Senator's continuity, and I can ask to make a comment just a little later. But it comes naturally from what the Senator is saying.

Mr. SCHMITT. If the Senator will allow me to make one or two more short points, one is that I do not believe it is correct that capital should be diverted from the production of domestic oil and gas at this time. Unfortunately the market distortions are such that they are forcing the oil and gas industry to divert that capital from the production of domestic oil and gas. That is our most essential need right now, increased domestic oil and gas production. But with the continued regulation of oil and gas prices on the interstate market and the threat of wellhead taxes which do nothing to increase incentives for production, we are further causing the diversion of that capital investment into areas other than the production of domestic oil and gas. So, I would agree with the Senator that is the most important short-term need that we have.

In the intermediate term and as a matter of national policy, which I agree with, we must increase our production of coal. The incentives are there for the increased use of coal. That is going to happen. We will see capital going into the direction of production of coal as well as uranium. So the difficult part of it, and I sympathize with the Senator's difficulty, is looking at these various resources as a function of time. The most immediate need is oil and gas, and we are doing everything we can in this country to prevent the production of domestic oil and gas and we are going to continue to do it, unfortunately, in this Congress, in this session of Congress. The next need in the intermediate term is the production of more coal and uranium, and by the Senator's amendment we are going to further inhibit the production of coal and uranium in the intermediate term. So we are starting not only to cut off our nose but are going to put out an eye or two. In the long term we are doing almost nothing, absolutely nothing, for the development of those long-term inexhaustible energy sources such as solar, fusion and hydrogen that are going to be necessary if our children are not going to have to put up with the kind of junk that we are having to put up with in this session of Congress.

So I am sorry that the Senator from Massachusetts and I cannot agree on this point. I hope at some time in the future we will find some points we agree on but I think the basic economics of the situation, the basic needs of the country are very clear, and it is unfortunate that we are having to deal with an amendment of this kind that does not go to the heart of the basic problem.

Mr. RANDOLPH. Mr. President, will my colleague yield?

Mr. SCHMITT. I yield to the Senator.

The PRESIDING OFFICER. The Senator from Wyoming controls the time.

Mr. HANSEN. How much time does the Senator from West Virginia desire?

Mr. RANDOLPH. I really wish to be in colloquy with the Senator from New Mexico.

Mr. HANSEN. Fine. All right.

Mr. SCHMITT. I will yield.

Mr. RANDOLPH. This pertains to the comments that the able Senator has been making in reference to New Mexico focusing on uranium as well as oil, gas, and coal. New Mexico is a producer of all four products.

Mr. SCHMITT. And solar.

Mr. RANDOLPH. Yes, that is true. I have a very understandable appreciation of the problems in New Mexico and elsewhere from the standpoint of providing the housing and facilities for development of mines—not only uranium in nature but also coal.

Mr. SCHMITT. Yes.

Mr. RANDOLPH. As the discussion went back and forth between the Senator from New Mexico and the Senator from Massachusetts who take different points of view on the matter of the marketplace, I understand very well what the able Senator from Massachusetts is saying. However, I do not believe that a bill which seeks to expand coal production is the appropriate place to discuss ownership of local mines. In the coal mining industry and other industries as well the matter of weather plays an important role in the production of the fuel.

In the past spring, we have had in the State of West Virginia devastating floods in many of the counties that are our highest producers of coal. The situation, disastrous in nature, followed the very severe winter of the months just preceding the spring floods. Those two natural problems are compounded greatly by the wildcat strikes in the coal mining fields of West Virginia—as well as of Kentucky, Pennsylvania, and other States. I am perhaps being provincial for the moment and thinking just in terms of West Virginia, but our production, regardless of who owns the coal mine, oil

company, or independent is effected by these natural forces, compounded by the problem of manpower or lack of such. We must not forget—and I do not—that production is not just a function of financial capability. I placed in the RECORD on yesterday some of the production figures which are of interest—I gave the production figures for each and every county in West Virginia for coal, and also manpower and other matters that are involved. So I am not attempting to draw any support for what I am saying from either of the Senators, who are knowledgeable in this field, I simply want to say there are these other factors which we must not fail to consider in connection with the production of coal, the marketing of coal, and ultimately the pricing of coal.

Mr. SCHMITT. The Senator is absolutely correct, and I am glad he has brought this further note into the discussion. It illustrates the compexity of an industry which is a mineral extraction industry, and how a large corporation or a small company that had never been involved in this effort, or involved with only limited resources, has a very difficult time not only in getting started, but in continuing to operate, because of these kinds of restrictions.

I think we saw an example of that particularly in a State such as yours when the Federal regulations started to come into being, many of which are necessary——

Mr. RANDOLPH. Coal mine health and safety, yes.

Mr. SCHMITT. But which saw production dropping from 16 tons per day to about 11 tons per day in the small and large underground coal mines in the Senator's State. These are the factors which make this such a very difficult problem, and one which has to be dealt with.

Mr. RANDOLPH. There are these variables, and they are very real as we look at the overview of this subject matter. I do not wish to detain the Senator longer, except to say that the record might well reflect that in the operation of an independent mine in West Virginia, the costs of opening such a mine, acquiring or leasing the land for such a mine, the acquiring of rights-of-way and then the construction of the rail lines are all matters of heavy financial investment. This cost might reach $30 million, $40 million, or $50 million. These are not figures that are lightly arrived at. But there is this capital investment, which is very heavy.

There is the problem, of course, in connection with the opening of a new mine, for example in Boone County, where two mines are in the process of opening, that the costs there are compounded by a further cost of providing housing for the miners themselves. This difficult terrain which makes the housing problem a very difficult one. Miners in West Virginia, in many instances, are driving 10, 20, or 30 miles a day back and forth to work in underground mines.

All of these factors have added to the cost of opening and operating a mine. We must not forget, as we discuss this subject matter today, that these are problems which we must assess and keep in mind in connection with whatever we do as we provide coal conversion authority.

Mr. SCHMITT. The Senator is absolutely correct, and he brings to mind another problem alluded to by the Senator from Massachusetts, which is the question of how we can develop the technology by which we can utilize our vast underground coal resources. If I remember correctly, 70 percent of the coal reserves in this country are underground, and available only by underground mining techniques.

The Senator from Massachusetts was absolutely correct when he said our technology is directly derivative from what was happening in Europe 20 or 30 years ago. That prompts the question, what happened in this country to prevent the development of that technology here? The answer is simple. We fixed the price of natural gas at an artificially low level, coal users converted their equipment for gas, and the coal industry was rapidly destroyed.

Coal-producing technology development is now resuming, but it has only recently come up to where it was 25 or 30 years ago, through the development of strip mining techniques; but the underground technology has hardly changed.

There are new technologies now available that could be applied to underground coal mining: Automotive technology, fire control technologies, new communications technologies, and a wide variety of technologies to make underground mining safe for the miners by letting them operate from the surface rather than underground. If we can make use of some of these technologies, the problems will be greatly alleviated.

Mr. RANDOLPH. Mr. President, if my colleague will yield, it was my opportunity, a few weeks ago, to participate in the fourth annual conference sponsored by the University of Pittsburgh on coal gasification, liquefaction, and conversion. All of these factors were discussed, not only from the standpoint of the United States, but many other countries as well.

One of the matters that was brought before the delegates—there were 500 or 600 persons in attendance—was the cost of developing new mines. Frankly, even though they were knowledgeable, the delegates did not realize the terrific costs involved in the production of coal, the initial costs and the costs involved in the productivity and the movement of the coal itself.

We in this country are at fault, very great fault, for having failed to do what we should have done 30 years ago when we had, in a sense, substantial knowhow gained in part from the Germans, in the process that would use coal in the development of a strong energy base for the United States. Looking back, we realize it is so often easy to act after the fact, and so difficult to act before it.

Because our friend from New Mexico is a pilot, and understands not only air but space as well, I think the record might reflect that even as the Luftwaffe attempted to bomb London into submission, there was no failure of the Luftwaffe to have sufficient aviation fuel to do the job. The failure was the result of the lack of aircraft, because of the attrition that was taking place. There was enough fuel, and the fuel was being taken from coal by a process then in being.

So coal is a basic fuel in time of need, and it is a basic fuel for the next 15, 20 or 30 years in this country. I think we must be careful not to stifle the programs for production of coal and the further refinement of the development and uses of coal. I think these are matters we must take into consideration during this debate.

Mr. BARTLETT. Will the Senator yield?

Mr. SCHMITT. Let me finally say the Senator from West Virginia is usually very wise and tenacious in his remarks. I would agree with him completely. I hope as we realize the importance coal will play at least in the next 50 years of our future, until these other technology resources are available, we will start to focus on the underground coal resources of our country. Many arguments will begin to disappear, particularly environmental arguments.

About strip mining, if we can begin to mine that coal underground, then the other problems we have about the environmental penalty concerning strip mining will disappear. I thank the Senator for his remarks and yield the floor.

Mr. BARTLETT. Will the Senator from Wyoming yield?

Mr. HANSEN. How much time does the Senator from Oklahoma desire?

Mr. BARTLETT. I desire 10 minutes.

Mr. HANSEN. I yield 10 minutes.

Mr. BARTLETT. Mr. President, I thank the distinguished Senator from Wyoming. I was very interested in the colloquy between the Senator from Massachusetts and the Senator from New Mexico, because they talked about some very basic points regarding energy. They talked about the free market. They talked about governmental control. They talked about monopoly.

The way the Senator from Massachusetts stated it, I believe, was somewhat in the words:

> Do you want the Government to control the pricing mechanism, the sales, and the way in which coal is going to be developed? Do you want Exxon to do it? Or do you want the free market?

Obviously, as the Senator knows, we want the free market, and the free market happens to be, in the example he gave, Exxon. But that is not all of the free market. In fact, in the coal business, as the Senator knows, most of the companies are very small. He knows that if we formed a partnership and called it Kennedy-Bartlett and we decided to invest in the coal business, we would have an opportunity to buy, if we wanted to, or offer to buy, a small company, the Peabody Coal Co., or somebody else. If they were willing to sell, if we offered enough money, we would be in the coal business together. That is what is available today.

If we also wanted to get into the oil business and wanted to integrate and invest in other forms of energy, we would be able to do it. If we were already

operating as a company and wanted to broaden our interests and diversify, we would be able to do that.

I believe the Senator knows that what his amendment would do is to provide Government controls. It is the Government in the example he gave. It would be providing the restrictions that would not permit the free flow of ideas, the free flow of money, the free flow of capital.

The Senator was concerned that with oil companies buying coal interests, the money will go to one and not the other. We do not know how it would go in the future. I believe right now, if a company has invested both in coal and in oil and gas, they are going to move more into coal, because it offers the greater opportunities. What will be the determining factor from now on will be where the profits are.

That may sound like a bad word. It may sound like not a good reason. But, actually, that is a good word. What does it mean that they can make more profit in coal than oil and gas? What it means is that they are going to use that capital more efficiently by putting it into coal than into oil and gas, if that is where the profits are. They can turn it over more rapidly and put more money into coal and have more energy, because they have invested in coal than they would have if they had stayed in oil and gas.

I believe the Senator from Massachusetts and I some time ago talked in a rather philosophic way about energy. I was glad I heard him talk again about it in a similar way. It is important that this body approach the energy problem from the point of view of reaching the goal of how to establish an environment in which private enterprise can develop more domestic energy of all kinds.

That should be the goal of this body. I do not think it has been. We have been worried about the cost of energy, yet we cannot do anything about OPEC. We must pay OPEC prices for any energy we purchase on which we do not control the price, which today is nearly half of the petroleum energy.

I believe we have worried about monopoly. In the example the Senator from Massachusetts gave, using the word Exxon, he was implying monopolistic control.

If Exxon is guilty of monopolistic actions, they certainly should have the book thrown at them in the courts, or if the laws are not sufficient then we should write some new laws or strengthen the present laws.

Where we err is that we do not look at the problem from the point of view of how we can create an environment that is going to be more friendly to the development of more energy. We do not do that. We do not do it in natural gas, we do not do it in oil, we do not do it in nuclear, we do not do it in coal.

The Senator from Massachusetts mentioned Government controls, that we should have a free exchange. I wish he felt that way regarding deregulation of natural gas and taking the controls off of gas, controls which have so weakened the condition of the industry that it cannot produce sufficient gas.

I do not believe the Senator from Massachusetts really believes in the free market when it comes to natural gas, in which the case can clearly be shown that controls were the reason we ended up with insufficient supplies and high prices anyway.

It is very obvious, I am sure, that what we want is the free market; but what the Senator is offering is a controlled market, a restricted market, putting forth as his judgment, as the judgment of this body and as the judgment of the United States that restrictions are superior to the free economic judgment of all the people of this country.

If the people who own the small oil company want to retain it, regardless of the price offered, they may do it. If they want to accept the offer of Kennedy-Bartlett Enterprises, they can do that. If they want to accept Exxon's offer, they can do that. They are free to act as they choose. I believe there are a lot of advantages in having the free market which permits the sale of assets. It permits capital to move, and in permitting capital to move it is permitting people to try to use that capital more efficiently to make more profit. If they can make more profit in one energy than in another. Godspeed. This means we are going to have more of that energy, if they are successful.

Mr. President, the energy problems facing this Nation are severe and the President's leadership has helped convince the American people that the energy crisis is a problem, not a conspiracy. One result of the public's awakening to the severity of the energy situation is that people want actions that will bring results. The public is tired of empty rhetoric that promises but does not produce. They have had it with wild accusations motivated by politics instead of policy.

The American people want their Government—the Congress as well as the executive branch—to adopt proposals that will do more than merely stir the pot. The people want solutions: Sensible measures that will provide both meaningful conservation and a useful increase in energy production.

Horizontal divestiture is at best a nonsolution. At its worst it would disrupt America's energy industry, retard the growth of nonpetroleum fuels, increase costs of providing energy to the American people and finally worsen an already bad situation.

Mr. President, the amendment introduced by the senior Senator from Massachusetts will unfortunately stir a lot of pots but not only will it not get us any meat and potatoes, it may well put us in a stew instead.

Part of the problem with this legislation is that it is rooted in suspicions which translate progress into problems. One of the healthiest developments of the past decade in the American coal industry—a development which clearly augurs well for future coal production—has been the movement of several oil companies into the coal business. In addition to bringing much needed capital to a capital-short industry, the oil companies have brought the experience and expertise of the world's most technologically advanced energy industry into the production of coal and other alternate fuels.

This development has been applauded by the coal industry and should be regarded as a welcome step in the move to increase production of our most abundant energy source. There are those, however, whose economic thinking appears to be guided by antibusiness suspicions.

Mr. President, the truth is there is virtually no danger of monopoly in the coal industry from oil companies or anyone else. There are over 700 individual companies in the coal business in the United States and you have to combine the production of the 20 largest coal companies in order to account for as much as half of our coal output. While it is true that concentration into a smaller number of firms increased between 1955 and 1970, this trend has been reversed since 1970.

Looking to the future, there is no rational basis for fearing that a monopoly or oligopoly will develop in coal. The single greatest owner of coal reserves is the U.S. Government with 30 percent. Surely, the leverage provided by this level of ownership will be sufficient to discourage any kind of anticompetitive cartel in coal, Remaining reserves are spread out among a large number of companies and interests which will encourage a healthy, competitive business environment for coal production. The top 10 petroleum companies combined hold only about 13 percent of coal reserves—much less than the Government coal reserves at 30 percent of the total.

Mr. President, the U.S. Geological Survey, in January 1974, had this to say about monopoly in the coal industry:

> The information available on the distribution of coal and on ownership of coal rights leads convincingly to the conclusion that it would be virtually impossible for any individual, corporation, or cartel to obtain a monopoly on coal or even to significantly influence the price. The reasons for this conclusion are (1) coal is widespread and abundant in the United States; (2) ownership is broadly distributed; (3) the Federal and State Governments own substantially more than half the coal lands and coal rights in the Rocky Mountain and Northern Great Plains regions; (4) leases of Federal coal rights have practical acreage limitations for holdings in any one State; and (5) most major consumers of coal have substantial coal holdings.

Central to the argument of the proponents of this amendment is the belief that oil companies would purposely decrease coal production to lessen its competition with oil.

The facts do not bear out this charge. The truth is, coal companies owned by oil companies have annual rates of coal production to reserves almost identical to nonoil coal companies similarly situated. Those favoring putting a legislative straitjacket on America's energy industry have been adding apples and oranges in an effort to shore up their position.

Mr. President, statistics purporting to show that oil company coal production has lagged ignore two very important facts.

First, most oil company coal interests are underground mines in the East. If

their production rates are compared to Western strip mine production, the numbers of course show a discrepancy. Major strikes in 1971 and 1974, as well as wildcat strikes in 1974 and 1975, have retarded coal production since 1970. These problems have not affected western mines to a similar degree.

In addition, production in underground mines was slowed by implementation of the Federal Coal Mine Health and Safety Act.

Mr. President, the facts also indicate that oil companies will be significantly increasing coal production in the future. Currently the top six affiliated coal companies account for about 17 percent of coal production. The capacity of the new coal mines planned by the oil-related coal companies is projected to be 33 to 38 percent of new coal mine capacity. Clearly, oil companies are in the coal business to provide coal.

And why should any company not be in the business to produce coal. After many years in the doldrums, coal is becoming a fuel very much in demand. Any company deliberately sitting on coal production would merely lose business to the hundreds of other companies producing coal.

Similarly the record of expenditures on coal research and development is a clear indication of these oil-affiliated companies' commitment to coal. The fact is, because coal has traditionally been mined by smaller, low-capitalized firms, there has been very little coal research and development in this country, other than government research. In 1975, oil companies spent 40 percent as much on coal research and development as they had the previous 9 years combined. One oil-affiliated coal company—Consolidation Coal—increased its research and development effort from an average $300,000 annually before it was bought by Continental Oil to $1,200,000 since its purchase.

Mr. President there is absolutely no evidence that this amendment will produce 1 additional ton of coal, 1 additional ounce of uranium, or 1 additional barrel of oil. Nor is there any evidence that this amendment will lower the costs of the coal, uranium or oil already being produced.

What this amendment will do is limit the amount of investment capital available to coal just at the time we must increase coal production. It will also establish legal barriers to entry—in effect sheltering other firms from new competition. This amendment is not just foolish—it is harmful. Harmful to the goals of the national energy plan, harmful to the structure of our economic system, harmful to the welfare of the American people.

I strongly warn my colleagues against the adoption of this amendment.

Mr. HANSEN. Does the Senator from Oklahoma desire more time?

Mr. BARTLETT. No. I thank the distinguished Senator from Wyoming. I thank the Senators from Massachusetts, New Mexico and West Virginia for their colloquy. I believe we are sitting on very important problems, problems which need to be resolved. I wanted to amplify them a little further.

Mr. RANDOLPH. Will my colleague yield?

Mr. BARTLETT. I yield.

Mr. RANDOLPH. I appreciate the reference to items which I brought into this discussion.

In the State of West Virginia—and there, we are familiar with the figures—the production has not been less for those coal companies over which there is an umbrella of ownership. That production, very frankly, has been higher than the production under the actual ownership of independents. I am not trying to draw this out to a great degree, but the figures speak for themselves. The share of total West Virginia coal production attributable to oil company-owned firms has generally increased since oil firms became active in the industry around 1968. Our records show that production from oil company-owned mines increased from 28.5 to 36.5 percent in the first 5 years and has remained constant since that time.

Mr. BARTLETT. I appreciate that the point which the distinguished Senator from West Virginia (Mr. RANDOLPH) made is very important, because it is reported to be otherwise. The facts are that the production from the coal companies acquired by the oil companies has increased.

One other thing has happened, I bring to the attention of the Senator from West Virginia. That is that the companies have increased very greatly their research and development. This is vital today, because of the need to use coal in more and better ways.

I ask the Senator from Wyoming if I may have 1 or 2 more minutes?

Mr. RANDOLPH. Will the Senator yield?

Mr. BARTLETT. Will the Senator from Wyoming yield me 1 or 2 more minutes?

Mr. HANSEN. I do.

Mr. RANDOLPH. Will the Senator yield for 30 seconds?

Mr. BARTLETT. Yes, I do.

Mr. RANDOLPH. I take this opportunity, because of what the Senator has just discussed about production—to say that in the last 7 years in West Virginia, with regard to those deep mines of coal companies that are under the ownership of oil companies, there has been an increase in production, not a decrease. The increase has been approximately 7.5 percent.

Mr. BARTLETT. I state further on the matter of research and development that this is so important because we need to have research done so we can liquefy and gasify coal and use it in different forms. This will help replace natural gas if we decide we do not want to deregulate or do not want to produce what we have.

Also, they are doing research on mining techniques, every aspect of mining. This is new to the mining industry and it is very helpful to the mining industry. I think those in it appreciate what is being done. It is not a question of favoring one energy over the other. My position is to favor all of them, trying to develop every one to the fullest but letting the free market determine what will be developed and when; encourage and create an environment so we can produce our energy.

This body has not done that. This body has taken steps that have thwarted and kept the free market from working, that have kept people out of the oil and coal business, have put people out of the oil and coal business, have not attracted them to it.

If you have expertise in one kind of energy, chances are you have expertise in another kind, and if one wants to invest in the other kind, I think the critizens of this country are way ahead if we can encourage investment in these sources of energy by people who know what they are doing.

Mr. President, I yield the floor.

The PRESIDING OFFICER. The Senator from South Dakota is recognized.

Mr. KENNEDY. I yield to the Senator 5 minutes.

Mr. ABOUREZK. Mr. President, if anyone thought the oil companies would not use any argument that came into their mind to accomplish their purposes, that ought to be dispelled by the fact that they are arguing on the one hand—for example, just pertaining to oil—that they do not have enough money to develop resources, so, therefore, they need oil prices raised. On the other hand, they argue that they have so much money that they have to invest in coal and other sources of energy. I have heard both of those arguments on behalf of the oil companies.

The second thing I would like to say about this particular amendment, or this concept of horizontal divestiture, is that, in an attempt to refute the arguments that a lot of money is needed and the oil companies are the only people who can produce coal and invest in coal reserves and do whatever research it is that they are talking about to develop coal reserves, in hearings that I held in the Antitrust Committee a year or so ago, we took testimony of the Sohio Oil Co., which had bought the Old Ben Coal Co.

Their pretense was that they bought it because they were the only company that could develop Old Ben. It turned out that the Old Ben Coal Co. was bought by Sohio based on contracts that they had. They never put a penny of cash into the purchase. They went to the banks and borrowed the money based on the contracts. Then they took the assets of Old Ben Coal Co. and pledged that as collateral for their participation in the Alyeska Pipeline Co.

If anybody can tell me why it is that oil companies are needed to develop coal companies—it appears to me that they are needed to exploit the coal companies and the American consumer. I do not think anybody can refute that fact. It was testified to in the hearings that we had in the Antitrust Subcommittee.

The second aspect of this is that, during other hearings in the Antitrust Subcommittee on this particular legislation, we had the vice president of Continental Oil Co. Continental owns Consolidation Coal. I asked the vice president of Continental Oil Co., "Would you either allow

or encourage your coal subsidiary to undersell your oil subsidiary on a Btu equivalent basis?"

His answer was to the effect that, "We would be foolish to do so."

I agree with him. Of course, it would be foolish. We would not expect him to do it. But the bottom line answer of that testimony of the facts, of the reality of the situation, is that you put an end to inter-fuel competition each time you allow an oil company to buy a competing fuel source.

That may be good for the oil company, but it is not good for the American public, the people who have to shell out their money to make sure that the coffers and the bank accounts of the oil companies and their stockholders are full.

I think it is a disastrous policy that we are following. I do not really blame the oil companies for arguing any way they can to preserve themselves financially, but I do not understand why a bunch of supposedly well-informed people such as represent the American people in Congress would buy that particular argument. I think it is ridiculous on its face.

Mr. HART. Will the Senator from Massachusetts yield 3 minutes to me?

Mr. KENNEDY. I yield to the Senator from Colorado.

Mr. HART. Mr. President, I would like to try to reinforce what the Senator from South Dakota has said. Coming from an oil-producing State, I have heard a great deal from producers in the State of Colorado as well as in other States in the Union—about their need for more capital and more financial backstop to develop petroleum reserves.

If that is the case, I do not understand, why opponents of this amendment argue that all this capital the oil companies have must go into coal, because they are the only ones that can finance coal production.

As the Senator from South Dakota has said, there is a lot of money around this country looking for a place to invest and make profits. The banks have a lot of money, pension funds have a lot of money, and there is a lot of capital in various other segments of our economy outside of the petroleum companies. If you can make money marketing coal, then you can find a bank, or a pension fund, or some other investor that will lend you the money to mine that coal and put it on the market.

It is not as if the oil companies have all the available capital in the world. They have an awful lot of money but not all of it. I think they have a lot they can be putting into petroleum activities, but they are not, for a variety of reasons. But I leave that for another day.

The argument here is that the free market must prevail. There seems to be a presumption here that the free market inevitably is going to become the big market. We know differently, from various periods of our history, that the two are not necessarily the same thing. We can have a big market and not have a free market.

I think that is what this amendment is all about. It is our job to protect the free market, not to promote the big market. I do not know why we cannot make that distinction, or why—somehow, inevitably—whatever the big market wants is thought to constitute the free market. I think we must take steps here to promote genuine free market competition, to guarantee that that free market does prevail.

That is what the history of the antitrust laws is all about. If we did not have those laws, inevitably we would have a concentrated market, but I do not happen to believe that that is necessarily the same as a free market. This amendment does not, as the Senator from Oklahoma has indicated, take one more step to hamstring the energy companies of this country. If there is one thing it has done, this Government has cooperated too fully in making sure that a handful of companies have what they want.

We have to determine what is in the best interest of this country, how that interest can be promoted in a way that is compatible with competitive, free market principles and take these steps necessary to insure that the structure and operation of the marketplace reflects those principles.

That is the role of the Congress. That is our constitutional duty. I think that is what this amendment is all about and I support it.

The PRESIDING OFFICER (Mr. ZORINSKY). Who yields time?

Mr. HANSEN. Mr. President, I yield myself such time as I may require.

The PRESIDING OFFICER. The Senator from Wyoming.

Mr. HANSEN. Mr. President, let me first yield to my colleague from Wyoming (Mr. WALLOP).

Mr. WALLOP. I thank my colleague from Wyoming.

Mr. President, I would respond to the Senator from Colorado's remarks that I agree with him that what we are trying to do is protect free markets and not big markets.

I think too often the whole effect of the Nation's regulatory setup does just exactly that. I think that is one of the reasons why campaign contributions, generally reflect the fact that the money from the major companies of America goes to the majority party because, in effect, they are allowing the Government to use the regulatory agencies of this country to stifle the small businesses of this country, statistics generally are the sole star in the firmament of the bureaucratic agencies. They would rather have 400 instances in which they dealt with one thing than one instance where they dealt with 400, though the effect of the latter on the Nation's consumers might be much more beneficial.

In this instance I do not think that we are actually eliminating the free market or the small market.

The bind on our State by the major coal companies, exclusively coal companies, would become enormous.

The bind on our ability to deal with a broad spectrum of producers would be endlessly more difficult under the amendment as proposed by the Senator from Massachusetts than if we were to let the variety of companies that can operate within the coal-producing world operate freely.

One of the things that troubles me is if the amendment, contrary to the rather benign description of it in the Dear Colleague letter from the distinguished Senator from Massachusetts, covers far more than 22 companies, advertently or inadvertently, but if we read it, it cannot in any way be limited to just those companies because of the way in which it is drafted.

There are technical ambiguities which simply do not bear up under scrutiny.

We talk about interfuel competition. There is interfuel competition, but one of the things that is going to develop in America very shortly is that we are going to be striving for fuel of any description, not competition between fuels.

If we want to keep major oil companies out of solar, if we want to keep them out of the exotics, by all means keep them out of the exotics. I would support some kind of a horizontal divestiture that applies just to solar and exotic fuels.

Among things that will happen to us very shortly is the mixture of fuels which could become the saving grace of this Nation's energy problems.

There is right now a technical possibility to mix powdered coal, petroleum distillates, limestone and water, to achieve a fuel with a higher Btu than any of the coal or the distillate by itself, and cleaner than either burned separately and the residue product is a useful product in America. It can be used for making highways and roads.

But that product is going to require companies that have the technical ability to deal with coal and with oil at the same time. And which of those will be able to function under the terms of this amendment. Not the 22 plus 100 other companies that the amendment's technical difficulties will disallow, and not the coal companies, because they are not allowed in this field.

We have to have a third entity, and it will be an impossibility in this country to have the benefit of those fuels at any reasonable cost.

Gasification. Who is going to distribute the gasification?

Under the amendment of the Senator from Massachusetts, the major pipeline companies of this country will not be able to use gasified coal products. That is all there is to it. I do not care how we go about explaining it. If we look at the language of the amendment, they will not be able to carry gasified coal products.

Will we build new pipelines and just disband all the pipelines that exist when the natural gas is gone from this country? I think not. In the interest of the consumers, in the interest of the public it is impractical. I surely think not in the interest of a conservative conservation-minded Nation.

What about liquefied coal? Liquefaction. That is going to be the new gasoline of America when conventional gasoline products disappear. Who will manufacture that? The coal companies? To buy up the corner gas stations and refineries? Do they have the expertise? Are we going to wait and mark time while those peo-

ple learn the things that the major petroleum companies have learned? And the minors, because the minor petroleum companies come under this amendment, except the very smallest companies in this country. They come under the technical terms of this amendment.

There is only 1 year in which there is a defined limit of production. All the rest thereafter is a cumulative definition, no matter how we strike it.

The antitrust protections in the abuse of market power already exist. Treble damages exist. All kinds of things exist for the abusers of these kinds of free market demands.

But take a look, and I do not think anybody has specifically made the argument on this floor that only the major coal companies have the capital to develop leases. But to sit here and dream and suppose that somehow or other the coal reserves of this Nation can be developed by ma and pa operations is absolutely fatuous. It is looking at the Milky Way through eyes that cannot see anything but smog.

The fact is that just a dragline sufficient for a small mine in Wyoming today is $5 million and 5 years away, and not very many people in this country have that kind of capital.

To turn our State over, to turn the West over, solely to the enterprisers of the major coal companies is, I think, to do us a bigger disservice than to put us into competition with major coal companies, major energy companies, and major any other kind of companies that want to get into it.

I think we need the whole spectrum, and the Kennedy amendment would limit the spectrum too much. It would limit us where we, in our State, would have only one set of companies, essentially, to deal with, and those companies, in fact, have not been known for the grace with which they treated the land.

If the Senator would like, I would happily give him a guided tour of our State and show him those lands which have been mined by strictly coal companies, and those lands that have been mined by the major petroleum producers that have come in there.

I think he will agree with me that they are by far the most shining examples of modern mining techniques.

One thing more they have done that nobody else has done is that they have speeded the marketing of our Western coal and have addressed the human problems of impact endlessly more quickly and endlessly more willingly than those companies that strictly produced coal.

I can demonstrate that any day. We can take 12 hours in the State of Wyoming and see for any kind of specific reason that we are better off with a variety of energy companies operating—coal, oil, and other things—than we are with just being turned over to the mercies of one focused, deadlined industry.

It is important to realize the fuel situation in which this country finds itself today, the fuel situation in which this world finds itself today. To deny the ability to combine fuels and to get the largest number of miles out of each Btu of energy seems to me to be the most singular backward step we could take in Congress.

It is not a question of protecting big companies. I do not want to do it any more than anybody else here wants to do it. I think the bill should put them into competition, not take them out of it.

Take a look at the reserves held in the hands of the U.S. Government and the reserves held by coal companies. They are far in excess of the reserves held by petroleum companies.

If we really want to free up the market, and want to keep coal companies in the coal business but let other companies participate in a competitive market, I think the results the Senator seeks will be exactly the opposite of what he will get should we adopt this amendment.

I thank my colleague from Wyoming, and I yield back to him at this time.

Mr. KENNEDY. Mr. President, I yield myself 4 minutes to respond to the arguments of the Senator from Wyoming.

First of all, with regard to the technical language that concerns the Senator from Wyoming, we have taken the opportunity to examine those reservations and concerns in much greater detail; and it seems to me that any fair and reasonable reading of the language of the amendment is completely consistent with the representations of the "Dear Colleague" letter. If there are particular matters for clarification in terms of legislative history, I will be glad to make those clear.

Let us examine the merits of the arguments of the Senator from Wyoming. As I gather the thrust of at least one of his arguments, it is that unless a particular company is able to acquire a coal company, or uranium company, or others, it will not be able to mix fuels and will not be able to respond to the challenge of American energy policy. I believe that is an unrealistic statement.

The American automobile industry could not produce automobiles without steel, but that does not necessarily mean that the automobile companies own all the steel companies. As a matter of fact, they do not. It does not mean that some of our most successful chemical producing companies, such as du Pont, which depend upon hydrocarbons, coal, and oil, have to own their own coal mines or their own oil wells. They do not. They purchase these products, and they are extraordinarily successful.

The argument that we are not going to be able to develop mixed fuels, referred to by the Senator from Wyoming, without permitting oil operations and coal operations to be owned by a single huge company does not make any sense, based upon an examination of American history over the last 200 years.

The Senator also makes a point about the comparisons with respect to the way land is treated by some oil companies, some coal companies. I thought we were going to deal with that issue with the strip mining bill.

Did the Senator vote for the strip mining bill?

Mr. WALLOP. I did.

Mr. KENNEDY. I welcome that fact, because I thought one of the principal results of that particular piece of legislation would be to restore the land. I listened to those who promoted that legislation. Land reclamation is certainly an important aspect of that piece of legislation.

I deplore the ravishing of the lands, but it is not a fair conclusion to say that we can only have the land restored if we are going to permit the major oil companies to own the coal resources of this country.

Mr. President, the major oil companies already have extraordinary reserves. I read during the earlier part of the debate the Wall Street Journal report this morning that Mobil has increased its domestic coal reserves to 3.5 billion tons. In the earlier debate I pointed out what Exxon, Texaco, and other major oil companies have in terms of resources, enormous resources, at the present time.

The real question is whether we are going to effectively close off the opportunity for either the smaller companies or the coal companies themselves to develop, whether we are going to give a lock on all the energy resources of this country to the major oil companies.

Mr. WALLOP. Mr. President, will the Senator yield for a question on that point?

Mr. KENNEDY. I yield.

Mr. WALLOP. That is one of the things that concern me most about the Senator's amendment, that by moving at this point——

The PRESIDING OFFICER. The Senator's 4 minutes have expired.

Mr. KENNEDY. I yield myself an additional 4 minutes.

Mr. WALLOP. At this time by chopping that off, it would effectively ace out, under the terms of the Senator's amendment and under the language by which it is drafted, the possibility that any other small petroleum producer might get into the coal business.

The reserves, as the Senator has pointed out, are big enough to effectively franchise those companies without the possibility of a small company such as Husky Oil Co., or Farmland Industries, or anyone else, to achieve the energy supply sufficient to deal with local markets on the mix I was mentioning. That is one of the things that concerns me most.

I think the Senator will admit that all petroleum companies in America combined, big and little, control only about 24 percent of the total reserves.

I fail to see that what we are trying to do would be accomplished under the terms of the amendment.

Mr. KENNEDY. The language seems quite clear. We are talking about oil and gas production—not reserves—in production defining major producers subject to the amendment.

I came here this morning with all kinds of tables about the concentration ratio. We can argue about coal resources, recoverable resources, lease resources, or captive resources. I expected that we would be wrestling with those charts for hours today. I expect we can get charts

that can support the Senator's position and charts that can support mine. Rather than get into this, let me refer to others who have studied the energy industries. The Federal Power Commission, the Federal Trade Commission, the Interior Department of the TVA—all have reached conclusions similar to those I stated here earlier about the situation today and prospective trends which raise enormous questions about the future of competition.

I put into the RECORD statements of some large energy purchasers, such as Carolina Light & Power Co.; represented by Shearon Harris, who is vice-president of the U.S. Chamber of Commerce. It is a good-sized utility which is very much concerned about the future competition in fuels.

No matter where we look, the fact remains that both large and small fuel users believe they are facing a real crisis situation with respect to control by the major oil companies over these alternative energy resources.

This amendment does nothing in terms of making decisions about divesting existing coal and uranium resources of any oil company. What we are saying now is that we should put a moratorium on future acquisitions. This will permit the administration to study the question and permit the Committee on the Judiciary to make a final recommendation with respect to divestiture. But let us do this before the horse gets out of the barn.

Mr. President, how much time do we have?

The PRESIDING OFFICER. The Senator has 33 minutes.

Mr. KENNEDY. I will be prepared at an early time to yield back and move toward a vote, but I will reserve the remainder of my time and wait until the manager of the bill comes to the floor.

Mr. TOWER. Mr. President, I suggest the absence of a quorum and I ask unanimous consent that the time be equally charged.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HELMS. Mr. President, I hope that my colleagues will take no solace out of the article that appeared in this morning's Washington Post entitled "Oil Firms' Energy Control Opposed in TVA Report." I further hope that Senators will restrain their enthusiasm concerning the TVA report as a basis for their supporting the Kennedy amendment.

A cursory glance of history will establish without doubt that TVA desires no one with financial resources to move into their area of coal purchases. I intend, in a moment, to quote from a book published in September 1976 written by Harry M. Caudill of Whitesburg, Ky. But before doing so, I should mention that Mr. Caudill dislikes "big coal," big land companies, and TVA. On pages 60 and 61 of his book "The Watches of the Night"—A New Plea for Appalachia, I quote:

> The TVA had grown like a rank weed, spreading its power and influence into counties left prostrate by the monumental coal collapse of 1948. When it first entered steam generation as a supplement to hydroelectric power, its directors made a crucial choice. The authority could have resolved at the beginning to be a constructive influence in the districts from which its coal would be drawn. It could eschew strip mining because of its environmental desecration, buying from subterranean mines at decent prices. This course would have necessitated higher power rates for its customers but would still have left those favored people paying half that required of Americans generally.
>
> The second choice was the one Chairman Aubrey Wagner and his henchmen on the authority's board of directors embraced. It disregarded all social and environmental consequences and aimed solely at achieving the lowest possible cost for the agency's electricity—and hence the lowest possible price for its customers. It used its immense leverage to drive prices relentlessly down, and by 1955 the architects of disaster over whom Wagner presided could congratulate themselves on having bought coal in eastern Kentucky for as little as $2.95 per ton FOB the cars.
>
> This catastrophe was achieved in the strongest buyer's market in the history of the American coal industry. The railroads had dieselized, coal-burning ships were a fading memory, a space heating in homes and factories was shifting to natural gas. In the resulting dearth of customers TVA could and did set its own prices.
>
> Steel and power companies demanded the same cheap coal that was going to the TVA. By the beginning of the Kennedy administration all that could be sacrificed for economy had been jettisoned. As in earlier periods of hard times, safety precautions were the first to go. Foremen caused fewer roof props and roof bolts to be set, tunnels reached deeper into the hills without the emplacement of additional ventilation fans, and mining machines ran longer with worn and dangerous parts. At the same time men were exhorted to work harder and bring out more coal. Consequently, amid the breakup of the companies there as unprecedented carnage.

Thus it appears that Chairman Wagner representing TVA has prepared this report with one motive in mind, the cheapest coal regardless of the economic consequences in the area in which TVA buys.

Mr. President, by reason of the intervention of TVA into this debate, it now becomes vital that the Kennedy amendment be tabled so that extensive hearings can be held determining the state of the coal industry in the United States, but more importantly determining TVA's motives, albeit their long history of controlling the east Kentucky and east Tennessee coal fields. They should be called to explain why they have long-term, built-in profit contracts with major coal companies, but make no provision for such contracts with small operators who wish to become a viable part of the American economic system.

Their intervention in this debate highlights the necessity for them to be called to account for the manner in which they have conducted their affairs. Their take-it-or-leave-it contracts to the small vital coal operator in the eastern coal fields should be exposed so that their vested interest in wanting to control the price of eastern coal can be exposed to the American public.

Mr. HANSEN. Mr. President, I yield myself such time as I may require.

The PRESIDING OFFICER. The Senator from Wyoming.

Mr. HANSEN. Mr. President, the Senate is considering legislation to increase our use of coal. While all of us may not be convinced that this legislation is the best way to achieve this end, we are all agreed that we must use more of our abundant resources and less imported oil.

This amendment will certainly have an adverse effect on our ability to produce coal. It is difficult indeed for me to discern what possible benefit we would derive from passage of this amendment. Passage of this amendment would certainly result in no decrease in the consumer costs of coal. The basic pitch for this amendment seems to be that this amendment will not do any harm, so why not pass it? Even if this were true, I maintain that that is a very poor reason for passing legislation.

This amendment raises more questions than it provides answers. No hearings have been held on this amendment and the process of committee markup has not taken place. The Senate floor is no place to undertake original debate on such a complicated issue. This matter should be referred back to the Judiciary Committee for a much greater consideration.

The legislation which we have before us would require a doubling in our production of coal by 1985. Our Nation will need well over a billion tons per year of production to meet our needs, even if President Carter's conservation efforts succeed. The Federal Energy Administration has estimated that between $17 and $22 billion of new investment will be required in the coal industry to meet this increase in production. The companies which this amendment would restrict are the very companies that could provide this increased investment. Our national energy goals can best be met by allowing all kinds of companies to enter into all kinds of energy production.

Oil and gas companies have demonstrated that they are among the best producers of coal. An analysis of four coal companies taken by major oil producers shows that in the 5 years after acquisition capital expenditures by these companies increased more than 240 percent over the 5 years previous to takeover. Such increases in capital expenditures show that the oil companies involved are trying to develop coal despite any fears of interfuel competition.

In 1975 the U.S. Geological Survey concluded that it would be impossible for any cartel to obtain a monopoly on coal or to even significantly influence the price. The proponents of this amendment have gathered no evidence to show that the USGS is incorrect in its conclusions. If that is true, what purpose does this amendment serve?

The 1975 Ford Foundation study reported that to halt further entry of oil companies into other energy fields is not economically justified. A 1974 Federal Trade Commission staff investigation concluded that they could find no posi-

tive support for keeping oil companies out of the coal or uranium business.

Mr. President, where is the evidence that this amendment is needed?

This amendment would severely interfere with the ability of our existing companies to meet our coal demands. By requiring permission before acquisition of inholdings within existing reserves, it could cause the very problem that it is purported to solve, that is companies not mining reserves. By restricting capital flow into the coal business, it could deprive our Nation of a needed expansion of its coal resources.

Mr. President, earlier this afternoon the Senator from Ohio pointed out that following acquisition of coal companies by oil companies production of the acquired companies declined. This is true. But I would like to point out that not only did coal production decline in those companies that were acquired by oil companies, but production declined in all other companies as well.

In some of the non-oil-owned companies production declined even to a greater extent. In this period of time it should be observed that we passed the Coal Mine Safety Act which cut production per man-hour in mining almost in half. We passed stringent environmental laws which inhibited mining. We had extensive flooding in the coal mining regions of the East, as has already been pointed out. We had a very sharp increase in wildcat labor stoppages, and they continue at the present time as everyone knows and then, as was pointed out by the distinguished senior Senator from West Virginia, we have had very bad weather on top of that.

All of these factors, Mr. President, combined to reduce production in all coal mines, not only those owned by the oil companies. Thus, ownership by the oil companies can certainly not be blamed for this decrease.

It has been implied that there is something sinister or wrong or bad about an oil company wanting to get into the energy business, and yet it seems surprising to me that anyone would raise this point. After all, people in the oil business basically rely upon the information that is necessary and essential for their operations upon the advice of geologists and other earth scientists. So the people who are searching for oil have at their disposal talented scientists who know something about coal and other natural energy sources as well. As a matter of fact, in western Wyoming where we have some of the biggest deposits of sodium carbonate known to exist in the world today, the presence of that soda ash, as we oftentimes refer to it, was discovered by Mountain Fuel and Supply Co. when they were drilling for natural gas. They found that these beds existed along with coal there. It seems perfectly understandable and logical that people in the energy business will look upon other sources of energy as a way of complementing their operations.

To refer and respond to the charge that it is not in the public interest to have oil companies in the coal business, let us ask ourselves as was earlier suggested by the distinguished Senator from New Mexico and by the Senator from Oklahoma what are we trying to do? Is our basic concern to see how we can minimize our dependence upon foreign sources of petroleum? Right now we import about half of the oil that we consume in the United States.

I think that no one need be reminded in this Chamber that we have a very serious and growing balance-of-payments problem because of the oil we import. We have a very serious cloud put over our national security as we reflect upon the fact that we have to buy from foreign countries about half the oil we use in this country, that our whole military machine is moved and made mobile by oil, generally speaking, so as to underscore the significance of this dependency upon uncertain foreign sources of supply.

The steps that are being taken now by domestic oil companies and their entry and interest in the production of coal has to be good news for all Americans. It insures a lessening of our dependence upon foreign sources of supply. It tends to reduce the problems that balance of payments have imposed upon Americans, and it certainly tends to give us greater latitude in trying to devise the sort of foreign relations program that will best serve the interests of America uninhibited by the dependence that we presently have to feel toward foreign oil producing countries.

I hope very much, Mr. President, that the Senate will move to table this amendment. It certainly cannot be in the interest of what is best for America.

Mr. METZENBAUM. Mr. President, the distinguished Senator from Wyoming alluded to my earlier remarks and said that in a comparable period of time the coal industry as a whole had declined in its production records, and yet the facts are not in accordance with that statement.

I point out to my friend from Wyoming that, when a representative of Exxon testified before the Antitrust Subcommittee in connection with other legislation, he presented us with an exhibit 1 having to do with oil firm coal production, and that exhibit was based upon the Keystone Coal Industry Manual published by McGraw-Hill for various years and it included only those companies with more than 1 million tons of coal production in 1976. Senator HANSEN will recollect that he stated that coal production had declined in this period. Reading from those figures in 1964, 487 million tons, in 1965, 512 million tons, 533 million tons for each of the succeeding years, 552 million tons, 545 million tons, 560 million tons, 602 million tons, 552 million tons, 595 million tons, 591 million tons, 601 million tons, 648 million tons, and 665 million tons.

So during the period from 1964 to 1976, production actually increased from 487 million tons to 665 million tons, and yet the facts are that when one looks at the individual coal companies that were acquired by oil companies, when one looks at Consolidation which was acquired by Continental, one finds that falloff after the 5-year lag period subsequent to the date of acquisition which according to the petroleum company representatives themselves is the time that it takes in order to increase production; therefore, the petroleum companies cannot be given credit for that increase. But thereafter with no exception except Arch Mineral, which was acquired by Ashland, in every other instance the coal production has declined after the petroleum company acquired the coal company. Whatever the source has been with reference to the question of the industry as a whole declining during this period and that being the reason for the petroleum companies coal companies declining, I do not think that that is supported by the facts as presented to us in the antitrust subcommittee by the representative of Exxon Corp.

Mr. HANSEN. Mr. President, let me say by way of response to my good friend from Ohio, I do not have the paper before me to which he just referred, but it is my understanding as the information is brought to me by staff that the distinguished Senator from Ohio has spoken about those coal companies which have been purchased by oil companies. I ask him does he have the comparable figures for nonowned oil companies? I was trying to make the point that during the general period of time to which my friend from Ohio earlier referred not only did this decline in production of coal by oil-acquired coal companies decline but it declined in the noncoal oil companies as well.

Is that not a fact?

Mr. METZENBAUM. I understand the Senator's point. The figures that I was using had to do with the industry totals.

Mr. HANSEN. Yes; and I think what we are talking about are conclusions that are based upon impartial facts. I should not say impartial facts; I mean only partial facts.

What I wish the Senator from Ohio had is not the total coal production, because more and more people, have become increasingly aware of the fact that we made a very bad mistake when we started regulating the price of natural gas some 25 or 30 years ago, and thereby greatly discouraged the production of coal, and there is now a broadening awareness of the fact that there is not enough natural gas to go around and serve increasing needs all the time. So there have been companies into the coal mining business which were not in the business before, which accounts, among other things, for the overall increase in coal production, and that is a fact.

My point was that when you look at individual companies, what I thought the Senator from Ohio was trying to say was that almost invariably when a coal company was purchased by an oil company, the production went down.

My point is that while that is true, it went down with non-oil-company-owned coal companies as well, and I pointed out that we have had floods, we have had wildcat labor stoppages, we have had environmental protection laws, and we have had coal mine safety laws, all of which have made it more difficult for every coal company in the United States to operate.

Mr. METZENBAUM. The Senator and I are both on the same wavelength. We are both addressing ourselves to the same question.

The question is, Is there or is there not a similar pattern in the non-oil-company-owned coal companies to that which exists with respect to the oil-company-owned coal companies?

My point is exactly that the industry as a whole has increased its production, but with the petroleum companies that own coal companies and have bought coal companies, after they bought them they went down in production. So the strikes, the floods, and all of the other problems that have occurred in the industry would certainly have caused an impact upon the entire coal industry; but when you look at the record, you find that indeed in 1968 there was a falloff of 7 million tons. When you look at the total picture you find that across the board, on the industry total, the figures have been upward, whereas the coal companies owned by the petroleum companies have had figures that have decreased.

Mr. President, I ask unanimous consent that the table may be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

OIL FIRM COAL PRODUCTION [1]

[In millions of tons]

Coal company	Parent company	1964	1965	1966	1967	1968	1969	1970	1971	1972	1973	1974	1975	1976
Consolidation & Affiliated Co	Continental	45.4	48.6	[2] 51.4	56.5	59.9	60.9	64.1	54.8	64.9	60.5	51.8	54.9	55.9
Island Creek	Occidental	21.2	20.6	23.7	25.9	[2] 25.9	30.3	29.7	22.9	22.6	22.9	20.8	19.4	17.6
Old Ben	Standard of Ohio	5.1	6.3	9.9	10.3	[2] 9.9	12.0	11.7	10.5	11.2	10.8	9.5	9.3	9.7

8 company total		93.6	101.4	113.9	123.3	126.4	13.2	139.8	121.2	140.8	138.3	129.2	132.5	134.2
Industry total		487.0	512.1	533.9	552.6	545.2	560.5	602.9	552.2	595.4	591.7	601.0	648.4	665.0
8 company output as percent of total		19.2	19.8	21.3	22.3	23.2	23.9	23.2	21.9	23.6	23.4	21.5	20.5	20.2

[1] Includes only those companies with more than 1,000,000 tons of coal production in 1976. Keystone Coal Industry Manual (McGraw-Hill), various years.
[2] Year acquired by oil company.
[3] Arch Minerals was formed in 1969, with production beginning in 1971. In 1972, Ashland acquired Southwestern Illinois Coal Corp. Southwestern's coal production is reflected in the years prior to 1971.

Mr. HANSEN. Mr. President, I do not disagree with the Senator from Ohio, but I only wish that he would look at all the facts. So far as I know, thus far he has not disclosed what happens to the production for the coal companies that were not oil company acquired in the same time.

My point is that their production went down, too. Overall, I do not disagree. Overall, we have been producing more coal generally, if you examine any period of time, and I account for that by the fact that people are becoming increasingly aware that gas is uncertain, that we have had shutoffs. As the distinguished Senator knows, in his own State of Ohio last winter there occurred a very serious natural gas shortage, in part because of the failure of the transportation delivery system. The natural gas pipelines simply were not big enough to carry the amount of gas necessary to keep all of the factories going, all of the industries going, and heat all of the homes and schools and public buildings at the same time.

My point is that when you look at the entire picture, you cannot say that the oil companies insure that their acquired coal properties will yield less coal.

The PRESIDING OFFICER. The time of the Senator from Wyoming on the amendment has expired. Who yields time?

Mr. KENNEDY. Mr. President, I am prepared to yield back the remainder of my time.

Mr. HANSEN. I am prepared to yield back the remainder of my time.

Mr. JACKSON. Mr. President, will someone yield me time?

Mr. HANSEN. Mr. President, may I reserve such time as the Senator from Washington would require?

The PRESIDING OFFICER. The time would have to come from the bill itself.

Mr. KENNEDY. Mr. President, I yield the Senator from Washington such time as he may need.

Mr. JACKSON. I thank the Senator from Massachusetts.

Mr. President, Senator KENNEDY's amendment deals with a subject which deserves serious consideration by the Senate.

It is not at all clear to me that the Congress should permit oil companies to move into alternate energy sources without considering the effects on competition and our ability to meet national energy needs.

However, I do feel that it is inappropriate to consider this issue as part of the coal utilization bill before the Senate today. The role of the oil companies in acquiring and developing other energy sources is an important subject which should be dealt with separate and apart from the coal bill and other elements of the President's program.

The President's energy package is already incredibly wideranging and complex. The House version of the measure is 300 pages in length. To add a new, major issue area which is not in the House-passed bill might well preclude final action on the package in this session.

I am not unsympathetic to Senator KENNEDY's amendment and regret that I cannot support it here today. As chairman of the Committee on Energy and Natural Resources, I will be glad to cooperate with him in assuring that the issues covered by his amendment are properly considered by the Senate later in this Congress.

ADDITIONAL STATEMENTS SUBMITTED

Mr. HART. Mr. President, I support the amendment offered by Senator KENNEDY. This measure strikes a reasonable balance between encouraging coal production and recognizing the possible damage to competition—and the threat to a secure supply of coal at reasonable cost—posed by petroluem companies further consolidating their control of coal and uranium reserves.

Oil companies in 1961 controlled minimal amounts of coal; for example, in 1975 oil companies accounted for 44 percent of noncaptive coal production. In 1961, the Tennessee Valley Authority's 10 largest suppliers of steam coal were companies principally involved in the coal business. By 1971, all but one of its major suppliers of steam coal were companies principally involved in the oil business. In 1966, oil companies owned 30 percent of our uranium reserves.

Of particular concern is the extent to which oil companies have acquired assets in coal to be used in the large-scale generation of electricity. One of the conclusions reached by a recent study released by the Tennessee Valley Authority is that changes in the competitive structure of the coal industry during the last 13 years—largely as a result of oil companies getting into the coal business—together with the coincident increase in the price of coal were instrumental in forcing TVA to nearly double average residential electric rates between 1970 and 1975.

The fact is that coal and uranium are naturally competitive with oil and gas in many regional markets. If there is genuine interfuel competition, lower coal and uranium prices exert a downward pressure on oil and gas prices. To permit firms with a vested interest in higher oil and gas prices to acquire substantial assets in coal and uranium within these markets would allow decisions about prices to be made regardless of principles of supply and demand. In other words, it would tend to create a noncompetitive marketplace.

Beyond this, Mr. President, is a concern over the extent to which international politics can influence the behavior of multinational energy conglomerates involved in coal and uranium production. Since oil and gas are competitive with coal and uranium in many in-

stances, there is the potential that integrated oil companies might not develop coal and uranium reserves as quickly as possible, in order to preserve their ready and exclusive access to Middle East oil. This would of course be inconsistent with the President's plan to expedite coal conversion.

The potential effect on our economy, should these companies follow their short-run interests rather than the long-run interests of the Nation, staggers the imagination. While we determine those markets where interfuel competition is possible, it seems most prudent to place a moratorium on further horizontal mergers of this nature while we continue to carefully study the economic impact of such actions.

This measure does not say that oil companies should never be allowed to develop coal or uranium. Neither does this measure force oil companies to divest their interests they now have in these energy fields. It simply puts a moratorium on further acquisition of coal or uranium assets by major integrated petroleum companies.

Mr. President, this proposal is consistent with a bill which I have offered, Senate bill 3888, which provides for a moratorium on all horizontal mergers pending further study.

The bill has my strong support.

Mr. DECONCINI. Mr. President, I intend to support the Kennedy amendment to S. 977, the Coal Conversion Act of 1977. However, I also want to make it clear that my support of this amendment does not necessarily imply that I favor divestiture. The two are separate.

The legislation before us today will substantially increase the economic incentives to mine and produce coal and other alternative fuels like uranium. A major expansion of coal production and usage has become a high priority national goal. It is, furthermore, a goal which I support wholeheartedly. In the short run, it is the only readily available alternative to oil and natural gas.

It seems to me quite appropriate at this moment for the Congress to address itself to the question of future ownership of this increasingly valuable and crucial natural resource. There has been a tendency over the last few years for the major oil and gas companies to move into other energy fields. At present, there is evidence which suggests that the major oil and gas companies may own up to 50 percent of our coal and uranium deposits.

The free enterprise system depends upon competition to function correctly and in a socially desirable manner. We have long understood this and, as a consequence, have enacted legislation to prevent monopolies except in those few instances where monopolies are necessary. The amendment being offered today can best be described as preventive medicine. Its purpose is to prevent or avoid monopolies in the future. Our best evidence today suggests that the trend is toward the development of energy monopolies by the major oil and gas companies.

It is not, in my estimation, socially desirable or economically wise to allow a few companies to own virtually our entire stock of fuel resources. By definition, the major oil and gas companies already own the lion's share of oil and natural gas. They are already moving toward the control of coal and uranium. I think that movement should be stopped or, at least, slowed down.

Were this amendment a divestiture amendment, I would be reluctant to support it. To force companies to divest themselves of assets acquired legally and in good faith over the years is a serious matter. I think that in such a case the burden of proof would be overwhelmingly on the side of the proponents of the amendment to demonstrate in no uncertain terms that clear and specific harm had resulted or was likely to result unless remedial action were taken.

The Kennedy amendment is preventive. It is far easier to avoid an accident than to reconstruct the victims and vehicles after the fact. By passing this amendment, we may avoid the unpleasant task of facing a future energy monopoly which may have to be broken up. I believe this amendment will encourage competition within the energy field. Many smaller companies will no longer be overwhelmed by the resources of the oil and gas giants. To insure that consumers receive the best product at the lowest price, we need to insure competition between producers of that product.

I would also add that the amendment contains a mechanism to allow exceptions to the ban. If the Secretaries of Interior and Energy agree that a waiver is in the national interest, this can be done. I would expect this procedure would be used to insure that companies with existing holdings would be provided with the additional land necessary to make their operations viable. It could also be used if there were a dearth of other developers.

In sum, I believe the amendment is a good one that serves a legitimate national purpose. I commend Senator KENNEDY for his efforts. and I urge my colleagues to support the measure.

Mr. GARN. Mr. President, I must oppose the Kennedy amendment. Its passage would be counterproductive. It would perpetuate and legitimize the idea that governments can meddle in free markets to improve their workings. It is unjustified and unneeded. It has not had sufficient hearing before the appropriate committee.

The argument that it is not a divestiture bill because it is prospective only is a fiction, designed to enlist support for a first step down that path. Any argument that can be made in support of this bill can as well be made of a divestiture bill. If this amendment is accepted, there is no logical reason not to go the whole hog, and vote for divestiture across the board.

Mr. President, I do not intend to go into a discussion of the structure of the energy industry. There are other Senators here who can do that better than I, and who have done so. Suffice it to say that, both today and over the last few years, I have listened to arguments on both sides; I have read widely on the subject; I have even participated in the debate, both as a candidate for this office when I defeated one of Senator KENNEDY'S close friends, and since coming here. I have never been persuaded that the energy industry is monopolistic, or even oligopolistic.

Certainly there are barriers to entry into this industry. Other than the legal ones erected by the Federal Government's intervention in the market, however, there are the barriers of high risk, inadequate return, and capital requirements. These factors are the precise reason this amendment is so harmful. It would not guarantee competition in the energy industry. That competition already exists, by an objective measure. It would simply guarantee that potential supplies, of the very energy resources the Nation so badly needs, would not be developed.

Mr. President, I have a sneaking suspicion that one of the motivations behind this amendment is just that, to obstruct the development of two sources of energy that are challenged most vociferously by environmentalists. Every objective study I have seen concludes that in the short run we will need to use massive amounts of coal to bridge the gap between petroleum and solar, or other exotic, energy. Every analysis indicates that only through increased use of nuclear energy will we be able to provide the Nation's needs for the next 25 to 50 years. Yet this amendment would deny to many of the very companies with the capital, the expertise, and the management skills, the right to develop those two sources of energy. And this without the slightest justification.

Senator KENNEDY has left an escape clause in the bill, one which gives the Executive one more grant of discretionary power. I had understood recent election returns as saying that the people are tired of Washington exercising arbitrary and discretionary power. It is time to stop endowing bureaucrats with the trappings of infallibility. Let us admit that they are unable to manage their own departments, and stop giving them the economy to manage. If we do not, we will end up without an economy at all. That even will make last winter look delightful by comparison.

HORIZONTAL EXPANSION IN THE COAL AND URANIUM INDUSTRIES

Mr. DOLE. Mr. President, I am particularly concerned about the amendment which has been offered by the Senator from Massachusetts to prohibit the direct or indirect acquisition of coal and uranium interests by major oil and gas companies. This new version of the horizontal divestiture concept may not require divestiture directly, but it certainly is a major step in that direction. It would, I believe, have a serious counterproductive impact on the development of necessary energy resources for this Nation.

Let me point out that the coal industry is and will continue to be a highly competitive industry. No one firm or small group of firms now have, or are likely to gain monopolistic control of the coal industry. In fact, ownership of coal reserves is widely distributed.

The Federal Government owns about 70 percent of the vast coal lands of the

West, and the Federal Coal Leasing Amendments Act of 1975 requires review by the Justice Department for any possible antitrust violations prior to coal land leasing.

None of us wants to see a monopolistic trend develop in the crucial coal and uranium markets. But it seems to me that existing antitrust laws are adequate to deal with anticompetitive behavior should it occur.

NO APPARENT THREAT

Actually, evidence in recent years tends to downplay any threat that oil and gas companies could dominate other energy fields. A 1975 Ford Foundation study reported that legislation "to halt further entry" of oil companies into other energy fields "is not economically justified." In addition, a 1976 U.S. Geological Survey report concluded:

* * * That it would be virtually impossible for any individual, corporation, or cartel to obtain a monopoly on coal or even to significantly influence the price.

A study by the Council on Wage and Price Stability, entitled "Study of Coal Prices," pointed out that coal production is less concentrated than other industry groups. The top four coal companies produced 25 percent of the coal. In manufacturing, the top four industrial companies produce 39 percent of the goods. There is also a trend away from concentration in coal production since 1970. The study concludes that the price of coal is very stable and is projected to be stable or decreasing in the future.

There is thus no a priori proof that the coal companies are engaged in monopolistic practices and no need to penalize them at this time. All evidence is that the market is working. Even Senator KENNEDY seems to predict that free competition will continue.

In his factsheet he states the failure of oil companies to develop their coal reserves in recent years is not surprising. While competitive coal prices were low, the rate of return on coal investments was less than what the oil companies were used to or would accept. Now that coal prices are much higher than they were—and the industry has become very profitable—the oil companies are starting to develop their reserves.

Even Senator KENNEDY seems not to predict that oil companies will hold on to reserves in order to drive prices up.

Existing antitrust laws—which were strengthened by the Antitrust Improvements Act of 1976—seem adequate to prevent acquisitions or mergers that would lessen competition. I do not seek to diminish the importance of preventing monopolistic trends in the coal industry or in any other market that will affect our Nation's vital energy resources in the years ahead. But I do believe that there are adequate protections already in place to prevent such developments.

COUNTERPRODUCTIVE TO RESPONSIBLE DEVELOPMENT

In fact, this amendment, if enacted, would serve only to shackle responsible development of adequate coal and uranium resources for this Nation's energy needs in the crucial days ahead.

I believe our energy needs can best be met by encouraging all kinds of companies to enter all types of energy production. Certainly, capital availability to the coal and uranium industries would be restricted. Much of the capital requirements and risks involved in these industries would be beyond the scope of smaller coal and uranium companies. Larger oil and gas firms are in a favorable capital position to undertake these types of products, and can contribute management talent to enhance the development and expansion of coal production capacity.

Because coal companies traditionally have a low return on investment, there is not much attraction for the billions of dollars that may be required in the years ahead to start or expand mining operations. Firms with large cash flows may be able to fill this short-fall of capital if they are permitted to do so.

In fact, it cannot be denied that investments from oil, gas, and other large industries have already made valuable contributions to increased coal production, to R. & D. expenditures, and to the ability of coal companies to withstand adverse effects of decreased productivity in sales.

RELATED HARMFUL ASPECTS

But there are other harmful aspects which need to be considered as we look at this amendment. First, it is entirely possible, if not likely, that the provisions of the Kennedy amendment may keep oil and gas companies which are approaching the arbitrary production limits outlined in the measure from expanding their production, in order to stay below levels that would trigger the acquisition ban. By the same token, it would "grandfather" certain oil and gas companies into the coal and uranium fields while keeping out other oil and gas companies, merely because of different rates of energy diversification.

Second, the oil companies can serve the country since they are a source of technical expertise. The oil companies have the technology to liquefy and gasify coal. If they are allowed to exploit that technology then the United States will have an alternative source of liquids and gas in the event of another Arab price increase. This will limit the size of a possible price hike for oil and gas.

If oil companies are deprived further access to the coal market, they will have less interest in developing the alternative to their own product. The country could thus be deprived of the technology it might need if another embargo occurs.

Third, coal and uranium compete with oil only in the market for electricity. Even there, oil prices are already so high that there are no new baseload oil plants on order for the future. Besides, S. 977 says that utilities will be unable to burn oil or gas in the future.

It seems that the Government is forcing utilities away from oil and gas, thus removing the interfuel competition in the only market where they now compete. The Government is offering a clear signal to these companies that there will be less use for their oil in the electrical sector. Their interest in coal can be considered as a predictable response to Government initiatives.

All of these aspects can be carefully considered and thoughtfully judged during the deliberations on S. 1927, a horizontal divestiture measure already under review by the Judiciary Committee. I share the opinion of the distinguished Senator from South Carolina that this amendment constitutes a circumvention of the normal committee system in that it has been called up prior to completion of the markup and reporting process by the Judiciary Committee.

For all of these reasons, I intend to vote against the Kennedy amendment and would encourage my colleagues to carefully consider all the implications that are involved.

Mr. HELMS. Mr. President, the distinguished Senator from Massachusetts is proposing an amendment to the bill before us which would prevent oil company ownership of coal and uranium resources. However well intentioned the amendment may be, the Senate would be well advised to consider carefully whether the able Senator is not really advancing a dangerous and counterproductive proposal.

At a time when it is imperative that we have a national energy policy to prevent further reliance on foreign imports of oil, it seems ill advised that the Senate should be asked to approve a proposal that would disrupt the development of all our domestic sources of energy.

Nearly 4 years ago, when the oil-producing nations of the Middle East, operating on political impulse, shut off the flow of oil to this country, it became apparent that something had to be done to increase the domestic supply of energy in this Nation. That stark reality has been brought home to us again and again with periodic supply shortages, the seasonal unemployment that much of the Nation endured last winter, and the discomfort of having to do without in a land of plenty.

Tragically, while the United States had the opportunity and the time since then to develop domestic sources of energy, Congress opted instead for restricting the exploratory efforts of the petroleum industry by withholding Federal leases. Congress also placed self-defeating controls on the price that producers could charge for gas and oil. Moreover, environmental legislation was enacted to make the development of alternate energy sources more costly.

The point of all this is that the results of such ill-advised efforts in the energy arena have been destructive to the national interest.

Today, the United States imports more of its oil needs than it did just prior to the imposition of the oil embargo in October 1973. At that time, imports filled 36.1 percent of our needs. The figure for 1976 was 41.8 percent. Indications this year are that it will go even higher, perhaps to 50 percent of our liquid petroleum needs.

What is more important is that the sources of our crude oil imports have changed drastically. Neither Canada—which in 1973 was our principal source of imported oil—nor Venezuela remains among the top four crude oil suppliers for the United States. Today, our leading

suppliers are Saudi Arabia and Nigeria. Both are members of the Organization of Petroleum Exporting Countries—OPEC; both are many thousands of miles from the United States.

The economic costs of this dependence on Eastern Hemisphere OPEC oil are both staggering and fearsome. According to the Department of Commerce, in 1970 the United States paid $3 billion for foreign oil. In 1974, the payment rose to $26 billion. In 1976, it rose to $35 billion. This accounted for a large part of the Nation's record trade deficit of $9.2 billion last year.

The Federal Energy Administration has estimated that the money spent by this country in 1974 for oil imports could have paid the wages of a million or more American workers, or built one-half million new homes. Accordingly more costly lost opportunities resulted in 1976. Yet, the trend continues. And if Congress embraces this untimely amendment calling for horizontal divestiture, it will only exacerbate the problem.

Preventing the oil companies from assisting in the development of this Nation's coal and uranium resources would, in all probability, lower domestic energy production of alternate energy sources. This would have the effect of widening OPEC's market and could encourage the cartel to charge even higher prices. There would then be a double cost—higher imports which would increase our vulnerability to unfriendly foreign action, and higher prices for those imports which would have a predictable negative impact on our domestic economy.

It is time to realize that an enormous job needs to be done in the energy field. The task is to develop all our energy sources as quickly as possible. Depriving oil companies, which have repeatedly demonstrated a willingness and a capability for getting the job done, from participating in the development of coal and uranium seems punitive and shortsighted. And I submit that the proposed amendment is exactly that: Punitive and shortsighted.

In his introductory statement this past July, the senior Senator from Massachusetts called for legislation to prevent oil companies from owning coal and uranium reserves. In his remarks, he said:

> The basic theory underlying the bill is not complicated or difficult to understand. It is that firms engaged in one line of business ought not to be able to hold or acquire firms engaged in a competing, or potentially competing, line of business.

The Senator was right on one point. The underlying theory is not complicated. It is simple. Too simple. Dangerously simple. If the Senate accepts such an uncomplicated theory as this, and embraces it as conventional wisdom, we shall be turning our backs on the 200-year economic history that helped make this country what it is.

If we fail to reject this uncomplicated premise, we shall, in effect, be sounding the warning bell to all industries that 1984 arrived a little early this year. Think about it. A firm "engaged in one line of business ought not to be able to hold or acquire firms engaged in a competing, or potentially competing, lines of business."

If we tell oil companies that they cannot own coal or seek to develop synthetic oil and gas from coal, then let us also be mindful of where this kind of logic—or lack of it—would take us. Shall we then tell the tire industry that it should have remained in rubber and not have gotten into synthetics? Shall we tell the publishing companies that if they are in newspapers they cannot also be in books or magazines or films? Shall we tell the brewers that if they are in beer, they must stay out of ale? Shall we tell meat packers that it is either beef or chicken, but not both? And while we are at it, shall we tell some of the big bakeries that if they make pies, they cannot make cake?

This is the kind of logic being proposed here—that we are merely following an uncomplicated underlying theory, and that Americans are no longer allowed to compete and expand. This kind of logic would compel us to make sure that colleges are no longer using Samuelson's or anyone else's basic textbook on introductory economics. We should tell them that there is now a new primer on economics.

In it they will find that the underlying theory "does not rely on regression analysis or econometric models." Instead, "it relies on commonsense." The Senator from Massachusetts charges that major oil companies have already effectively made competition a dead letter in the oil industry, and that they should not have the opportunity to work their will on other industries.

To support this allegation, the distinguished Senator points to the fact that the 8 largest oil companies in 1973 accounted for almost as big a share of crude oil production as did the 20 largest in 1955. Well, this piece of information demands that we investigate this data a little further.

In the year cited, 1973, the top eight oil companies[1] accounted for 42.1 percent of total U.S. production of crude oil, condensate, and natural gas liquids. This amounted to 4.6 million barrels per day. By comparison, the top 20 companies in 1955 accounted for 46.3 percent of total production but this amounted to only 3.5 million barrels per day. But whatever trend there may have been it seems to have reversed itself. Consider these factors:

In 1975, the top eight oil companies accounted for 53.5 percent of total refining capacity in the United States and Puerto Rico. In 1973 it was 55.9 percent.

The top eight oil companies accounted for 57.7 percent of the total U.S. refinery runs in 1975. In 1973, it was 62.3 percent.

In 1975, the top eight oil companies accounted for 49.9 percent of the national market in motor gasoline sales. In 1973, it was 52.7 percent.

In 1975, the top eight oil companies accounted for 41.2 percent of total U.S. crude oil production. In 1973, as Senator KENNEDY pointed out, it was 42.1 percent.

There are some important observations to be made regarding these figures. By far the most significant one is that such figures are by no means prima facie evidence that oil companies have stifled competition by precluding new entries into the field. Nor do the figures indicate that oil companies have attempted to withhold production. As a matter of fact, such data only shows that they have grown in concert with the rest of the U.S. economy.

Senator KENNEDY's introductory statement at the recent hearings on S. 1927 implies that the oil companies are unduly concentrated. Again, if this is the case, I feel compelled to warn the bulk of the industries which make up this U.S. economy. Someone should tell them that according to the new, simplistic economics I referred to earlier, being big is being evil. And, by the Senator's reasoning, it matters not that you deliver competitively priced, quality-controlled goods to the American consumer. Nor does it matter that you are big and efficient and provide employment for countless thousands of Americans. Apparently, these attributes become irrelevant, in the mind of the Senator from Massachusetts. Any company might still fall under the aegis of the new economics that bigness is badness, if one accepts the Senator's logic.

If concentration levels should be used to determine whether or not an industry is competitive, then a whole list of American industries will have to respond to the charge. Measured in terms of the value of shipments, the eight largest companies in a number of industrial areas far exceed the level of concentration that the Senator from Massachusetts finds so alarming in the oil industry.

According to data cited in a 1975 study sponsored by the National Science Foundation,[2] the concentration ratios of widely varied segments of the national economy are much greater than those of the oil industry. Some of them, such as motor vehicles, primary copper, and chewing gum exceed 95 percent. The study concludes that the evidence does not indicate that the energy industries are highly concentrated. To the contrary, the evidence suggests that the energy business is among the least concentrated in the United States. Based on concentration ratios alone, there is little reason to worry about the anticompetitive behaviour of the oil industry.

Senator KENNEDY's introductory statement argues strongly that price is an important consideration in the energy arena. I agree with him. However, I strongly disagree with certain statements he makes about price.

The Senator says:

---

[1] See "U.S. Petroleum Market Volumes and Market Shares: 1950–1975, Individual Company Data," Jane Atwood, Discussion Paper No. 003R, American Petroleum Institute, Oct. 15, 1976, for the concentration percentages used here.

[2] *Competition in the Oil Industry*, William A. Johnson, Richard E. Messick, Samuel Van Vactor, Frank R. Wyant, The Energy Research Project: George Washington University, Washington, D.C. 1975.

The fact is that as long as this country needs to import half or more of its crude oil, the price of crude will be set by the OPEC cartel and it will be a monopoly price. Beyond this . . . the domestic petroleum industry is calling for deregulation of natural gas. They argue, we should have "Btu parity"—natural gas should sell for $2.50 Mcf because this is the energy equivalent of crude oil at the world price. The logical extension of this argument, of course, is that coal and uranium should also be priced in terms of their energy equivalence to crude oil. In other words, according to the producers, the prices of all fuels in the United States should be linked to the monopoly price established by the OPEC cartel.

I submit that my able colleague has unfortunately misinterpreted some of the facts of the matter.

In the first place, the price of natural gas has been kept at such an artificially low price since 1954, because of Government controls, that reserves of the fuel have steadily depleted to the point that spot shortages—such as occurred this past winter—threaten to become the norm rather than the exception. Moreover, for most of this decade, the price of oil has also been regulated through a complex system of fixed-pricing by the Federal Government. Oil and natural gas—if they remain at artificially low price levels such as those mandated by the Government—will continue to remain more attractive to industrial consumers than the problem-oriented coal and uranium sources. This would run directly counter to the goals of the national energy plan proposed by the administration.

As far as producers seeking to tie fuel prices to the monopoly price established by the OPEC cartel, I would refer Senator KENNEDY to the administration's national energy proposal. That proposal—and not the oil companies—advocated that energy prices should reflect replacement costs. While the crude oil equalization tax, which the House adopted, means more money for the Federal Treasury and means that crude oil prices will be somewhat tied to the "world price" set by OPEC, it is hardly a measure the oil producers sought to have established.

If the Senator from Massachusetts would like to see pressure placed on OPEC to lower the world price, it would be better achieved by phasing out price controls for oil and gas, thereby providing the petroleum industry with the incentive for finding new reserves and providing the U.S. investor with the likelihood of receiving an adequate rate of return on investment. In this way, U.S. producers would be in a far better position to deal with domestic demand. Accordingly, reliance upon OPEC sources of oil would decrease, and the possibility that OPEC would be forced to lower their price would be greatly enhanced.

There is one other important point out of the many contained in Senator KENNEDY'S introductory statement on horizontal divestiture. The Senator stated that coal companies owned by oil companies have declined in production in recent years. He neglected to point out that there have also been lower rates of production at Eastern underground coal mines not owned by oil companies. He neglected to point out that environmental regulations, which he vigorously supports, have slowed the development of both new and existing mines. He neglected to point out that labor difficulties have had a considerable impact on the production of coal, particularly in the past 4 years.[3] And he neglected to point out that the new Federal surface mining act, which he also vigorously supported, will make open pit mine development considerably more costly and, therefore, will have an impact on new mine development and production.

Mr. President, I would suggest that hearings should be held on some of the specific allegations made by Senator KENNEDY before we vote on this matter. Much is at stake. In our haste to resolve our energy problems, we have already pushed through legislation which may do far more harm than good in terms of decreasing our dependence on foreign suppliers. For this reason and because of the points I have mentioned today, I urge that this body table the proposed amendment for horizontal divestiture, at such time as the motion is made.

Mr. BURDICK. Mr. President, I rise in support of a motion to table the Kennedy amendment. This is not to be construed to mean that there is no merit in the amendment. It simply means that in view of the energy crisis facing this Nation, we should not act upon an amendment that comes from the floor, and which was not offered or considered by the Committee on Energy and Natural Resources which reported the bill. This amendment could have far-reaching consequences not contemplated at this time.

Further, the amendment does not deal with the substance of the legislation before us—which is coal conversion—but with legal limitations, which are properly in the jurisdiction of the Judiciary Committee. A subject of this importance should have full hearings, in the appropriate committee, before being brought to the Senate floor for action.

Mr. JACKSON. Mr. President, if no other Senator wishes to be heard, I shall move that the amendment be laid on the table, unless someone wishes to comment further.

Mr. President, I move that the Kennedy amendment be laid on the table, and I ask for the yeas and nays.

The PRESIDING OFFICER. Does the Senator from Massachusetts yield back the remainder of his time?

Mr. KENNEDY. I yield back the remainder of my time.

Mr. HANSEN. I yield back my time.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table. The yeas and nays have been ordered, and the clerk will call the roll.

[3] See "Coal Production Shortfall Due to Strike Predicted," The Washington Post, August 17, 1977.

The legislative clerk called the roll.

Mr. SPARKMAN (after having voted in the affirmative). Mr. President, I have voted aye on this measure. I have a pair with the distinguished Senator from Minnesota (Mr. HUMPHREY). If he were present and voting, he would vote "nay." Therefore, I withdraw my vote.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. HUMPHREY), the Senator from Arkansas (Mr. MCCLELLAN), and the Senator from Montana (Mr. METCALF) are necessarily absent.

I further announce that, if present and voting, the Senator from Arkansas (Mr. MCCLELLAN) would vote "yea."

Mr. STEVENS. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Oregon (Mr. HATFIELD), the Senator from Maryland (Mr. MATHIAS), and the Senator from Idaho (Mr. MCCLURE) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) would vote "nay."

The result was announced—yeas 62, nays 30, as follows:

[Rollcall Vote No. 352 Leg.]

YEAS—62

Allen	Garn	Nunn
Baker	Glenn	Packwood
Bartlett	Goldwater	Pearson
Bellmon	Gravel	Percy
Bentsen	Griffin	Randolph

PRESENT AND GIVING A LIVE PAIR, AS PREVIOUSLY RECORDED—1

Sparkman, for.

NOT VOTING—7

Brooke	Mathias	Metcalf
Hatfield	McClellan	
Humphrey	McClure	

So the motion to lay Mr. KENNEDY'S amendment on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. HASKELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 824

Mr. BARTLETT. Mr. President, I call up my amendment 824 and ask that it be considered.

The PRESIDING OFFICER (Mr. STONE). The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Oklahoma (Mr. BARTLETT), for himself and Mr. DOMENICI, proposes amendment No. 824.

Mr. BARTLETT. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 115, line 11, strike out "existing natural gas contracts and" and all that follows down through line 15, and insert after line 11 the following:

"(i) existing natural gas contracts;

"(ii) renewals or extensions thereof under normal escalation clauses or other clauses which set forth an objective basis on which price can be determined at or before renewal of such contracts; or

"(iii) such new contracts or other renewals or extensions of existing contracts as the Administrator determines are necessary to meet the system compliance plan or are necessary to maintain reliability of service.".

The PRESIDING OFFICER. The Senate will be in order. Will those Senators conversing kindly withdraw to the cloakrooms?

Mr. BARTLETT. Mr. President, I yield to the majority leader.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the time on this amendment be reduced in half—to wit, 30 minutes—to be equally divided in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HASKELL. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. BARTLETT. Yes, I do.

Mr. HASKELL. Mr. President, I ask unanimous consent that William Donovan, of Senator MCINTYRE's staff, and Jared Cohon of Senator MOYNIHAN's staff, may have the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. METZENBAUM. Mr. President, I ask unanimous consent that Barry Direnfeld, of my staff, may have the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BARTLETT. Mr. President, I ask unanimous consent that the distinguished Senator from Louisiana (Mr. JOHNSTON) be added as a cosponsor to this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BARTLETT. Mr. President, this is a perfecting amendment to section 214 of S. 977. This section deals with the so-called system compliance option which provides a method for those electric utility companies, primarily in the South and Southwest, now almost totally dependent on natural gas for the generation of electricity to make some use of existing gas-fired plants after the date when the legislation would otherwise prohibit the use of natural gas in those plants.

When we adopted this section in the committee, we sought to restrict the companies from entering into new contracts for natural gas as well as to impose a number of other conditions which would limit the use of natural gas in those existing plants to peaking purposes after 1990. Unfortunately, we failed to provide for those cases where existing contracts and those limited renewals and extensions which we allowed might not provide a sufficient quantity of natural gas for even the limited peaking uses that we provided for.

The purpose of this amendment, which I understand is acceptable to the administration and to the majority manager of the bill, is to provide a mechanism consistent with the restrictions of the section, for limited exceptions to allow those new contracts that would be necessary to furnish enough natural gas to permit peaking use of plants if existing contracts did not do so.

The system compliance option would allow an electric utility company now dependent for most of its generating capacity on existing plants designed to burn natural gas to make some use of those plants after 1990, when they would otherwise under the terms of the bill have to stop burning natural gas to generate electricity. The electric companies affected are mostly in the South and Southwest part of the country. These plants cannot reasonably be converted to burning coal, and they can be converted to burn oil only at great expense and at a substantial loss in capacity. Because of economic considerations these companies have already embarked on extensive construction programs which will result in practically the entire systems being shifted to coal and nuclear power.

The net effect of the legislation is to add on top of these construction programs—which already strain their financial capacity to the maximum—a requirement for the conversion of the existing plants to oil or their abandonment and the construction of new oil-fired peaking plants. The extra financial burden of the premature retirement of these plants will fall unfairly on the citizens and ratepayers in this region without any special relief such as the home heating oil users in the Northeast are receiving under the President's energy program.

The net effect of the section is to allow a limited and carefully constrained use of the existing plants for peaking purposes. This, in a way, is a conservation program since the construction of new plants for peaking purposes will take energy and the premature abandonment of good plants would waste the energy it took to build them in the first place. Moreover, every barrel of oil burned for peaking purposes is a barrel of oil, in effect, imported from abroad; whereas the gas would be developed domestically from high priced, intrastate reserves.

The purpose of the amendment is simply to insure that enough gas can be obtained to meet this very limited objective. In case existing contracts and already permitted renewals and extensions are not sufficient, it would allow the administrator to permit a new contract.

This amendment is fair and reasonable, and I urge its favorable consideration by my colleagues.

It has been said that this amendment was defeated in committee. Well, that can hardly be true, since it was never proposed. The matter was briefly discussed during a hasty and confused committee markup. However, the transcript is ambiguous and lends itself to a variety of interpretations.

In truth the committee itself formulated no position on this issue. Had the members been made aware of its importance, they would doubtless have supported this amendment.

In a sense, what the amendment does is make the bill consistent with itself, particularly the section that deals with the so-called system compliance option.

This provides a method for those utility companies, primarily in the South and Southwest, now almost totally dependent on natural gas for the generation of electricity, to make some use of existing gas-fired plants after the date when the legislation would otherwise prohibit the use of natural gas in those plants. This is done under certain conditions in which the Administrator finds that it is in the best interests of the public generally to make this exception. Also, it limits the amount used to 20 percent of the amount of gas that the company used in 1976.

At the same time that this system compliance option was adopted in committee by an amendment sponsored by the distinguished Senator from Louisiana (Mr. JOHNSTON) and myself, an administration suggestion was apparently accepted which negated the amendment that we were adopting. So this is a corrective amendment that will permit a utility to negotiate a new natural gas contract or extend an existing one. If this were not done, many utilities would not have sufficient gas to get to 1990, much less ask for an extension for peaking power use beyond that date.

I have discussed this amendment with the floor manager of the bill on the majority and minority sides. I see the Senator from New Hampshire is replacing the majority floor manager. I understand that this amendment is acceptable and I will withhold further remarks.

Mr. DURKIN. Mr. President, the floor manager has informed me he is willing to accept this amendment and move its adoption.

Mr. BARTLETT. Before we do that, there was a matter we wanted to correct in dialog, a very small part of the bill, and if the distinguished Senator from New Hampshire is prepared to do this, I will proceed.

Mr. President, I would like to ask the distinguished majority floor manager of the bill to help clarify the language of section 214, paragraph (d), appearing on lines 13 through 19 of pages 116 of the bill. The language reads as follows:

The Administrator may extend the deadlines in paragraph (a)(2) of this section for periods of up to five years * * *

If certain limited conditions are met. Would the Senator please confirm that the intent of this paragraph is to authorize the Administrator to grant multiple extensions of up to 5 years each?

Mr. HASKELL. Yes, that is correct. That is, if at the end of, say, a 4- or 5-year extension the appropriate conditions can be met, the Administrator may grant another extension under the terms of the system compliance option.

Mr. BARTLETT. I thank the distinguished Senator from Colorado.

Mr. DOMENICI. Will the Senator yield?

Mr. BARTLETT. I yield to the Senator from New Mexico.

Mr. HASKELL. Mr. President, if I may inquire, what is the status of amendment No. 824 of the Senator from Oklahoma?

The PRESIDING OFFICER. It is pending. There has been no action on it.

Mr. BARTLETT. I say to the Senator from Colorado, we are ready to have a vote right away. The Senator from New Hampshire indicated that the floor manager of the bill found it acceptable, and as soon as we hear from the Senator from New Mexico, we will have a vote.

Mr. HASKELL. I would like to hear from the Senator from New Mexico.

Mr. DOMENICI. Mr. President, I shall take only a few moments.

The system compliance option provides a means whereby large utilities in the Southwest that are heavily dependent on natural gas from intrastate supplies can convert to coal on a system-wide basis, rather than by a plant-by-plant conversion. It is a reasonable and fair means of addressing the conversion under circumstances where enormous capital expenditures are required. Unfortunately the option, as detailed in this legislation, will be of little or no benefit to many of the utilities it was intended to assist. This situation can be rectified by a relatively minor addition, namely a provision that allows the use of new natural gas contracts to carry out the SCO.

Let me provide a specific example relating to application of the SCO. The Southwestern Public Service Co., of Amarillo, Tex., has developed a program of conversion to coal on a time scale that is as short as practicable. SWPSC is located in Amarillo, Tex., and serves a substantial portion of New Mexico. Under what might quite fairly be called an aggressive program of conversion, SWPSC, which until a year ago was based 100 percent on the use of natural gas, will construct more than 3,000 megawatts of coal-fired capability over a 12-year period. By 1990, 86 percent of the utility's generating capacity will be coal-fired. Natural gas would be used for peaking purposes only after 1990, and would be phased out entirely by 1993. This is a financially-feasible program that provides for reasonable phase-out or conversion of gas-fired capacity.

The principal obstacle to this program is the fact that natural gas available to SWPSC under existing contracts will provide only 39 percent of the need in 1991, and some 63 percent in 1992, as the phase-out of natural gas use continues. To carry out this plan, and not unduly penalize SWPSC's customers, new gas contracts are necessary.

As a final point, let me note that SWPSC's total gas-use tax liability under the administration's energy tax legislation will amount to $423 million. None of this will be offset by new construction. However, SWPSC's plan does provide for conversion of 1,188 megawatts of existing gas-fired capacity to coal at a cost of $422 million. As a result the net user tax liability to be faced by SWPSC will actually amount to $175 million. This will, of course, have to be passed along to the utility's customers via additional rate increases. Thus, in spite of good-faith efforts by SWPSC to move aggressively from 100-percent dependence on natural gas to complete dependence on other fuels in a little over 12 years, SWPSC's customers will be penalized $175 million in unnecessary rate increases.

I would urge my Senate colleagues to support amendment No. 824 to Senate bill 977.

Mr. President, I commend the Energy and Natural Resources Committee and, in particular, Senators BARTLETT and JOHNSTON for coming up with this approach to the system compliance option and, further, for the amendment that is pending which will make it operative and workable.

I want everyone to know that all we are trying to do is to create a fair situation for the utilities that serve our consumers in the Southwest who have been in the past using natural gas and are more than willing to make the conversion, just that the reality of economics and the supply of natural gas require that they be permitted to do it as prescribed by the system compliance option, and the Bartlett-Domenici amendment would let the Secretary make some decisions as to the use of natural gas for the peaking periods that are permitted by the system compliance option.

It just appears to me this is eminently fair. We will end up getting off natural gas. Our consumers will obviously be paying more eventually, but this just permits some reasonable economic management of this conversion while forcing it as rapidly as possible.

I commend in particular the Senator from Oklahoma for his genuine concern and diligence in this regard.

Mr. HASKELL. Mr. President, I would like to state my understanding of this amendment so that I am sure we are clear.

Mr. President, there are two dates of accountability, one of 1990 and the other of 1995, beyond which we cannot use gas except for peaking purposes.

It is my understanding that this amendment provides the utility a right to enter into a new gas contract, but not to build additional facilities or new facilities?

Mr. BARTLETT. The Senator from Colorado is entirely correct.

Mr. HASKELL. With that understanding, I find the amendment completely acceptable and I yield back the remainder of my time.

Mr. HANSEN. Mr. President, I would like to add emphasis to the statement made by Senator BARTLETT. We feel that his amendment is necessary for the proper functioning of this bill.

If Senator BARTLETT's amendment passes, there will not be excess gas burned under electric boilers. The Administrator is authorized to allow the signing of new gas contracts only to the extent that they are necessary to insure reliability of service under an approved plan. This provides protection both for the gas consumers in States that face shortage as well as for the consumers of electric power.

It was agreed by all sides, including the administration, that the utilities in the four States affected by the gas ban are in a unique position. They depend on gas for the generation of most, if not all, of their electricity. If we cut them off prematurely, it is the small homeowners and small businesses that will be affected—the same people we are trying to help by imposing the gas burning ban in the first place.

The utilities affected by this bill are moving as rapidly as possible to convert to other sources of fuel. Conversion to oil, which is what will necessarily happen unless Senator BARTLETT's amendment is adopted, will cause a loss of from 75 to 50 percent of the system's capacity. It will also cause an increase in oil imports. Oklahoma consumers will face a doubling of their electric bills.

Administration spokesmen have assured us that they favor this amendment; indeed, they assisted in drafting it. With the safeguards inserted in the amendment, no one need suffer.

The PRESIDING OFFICER. Is all time yielded back?

All time having been yielded back, the question is on agreeing to the amendment of the Senator from Oklahoma.

The amendment was agreed to.

Mr. HASKELL. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. BARTLETT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

AMENDMENT NO. 836

Mr. HANSEN. Mr. President, I call up my amendment No. 836.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Wyoming (Mr. HANSEN) for himself, Mr. WALLOP, Mr. SCHMITT, Mr. GARN, Mr. HATCH, Mr. MCCLURE, Mr. LAXALT, Mr. DOMENICI, Mr. HAYAKAWA, Mr. BENTSEN, and Mr. HELMS, proposes an amendment No. 836:

On page 134, between lines 13 and 14, insert a new section as follows:

SEC. 309. Part A of title I of the Clean Air Act is hereby amended by striking section 125.

Mr. HANSEN. Mr. President, this amendment would repeal section 125 of part A of title I of the Clean Air Act.

Mr. President, I wonder if Senator METZENBAUM might be brought to the floor since this deals with his amendment that he earlier had offered and which was accepted. I would be pleased if he could be here.

Mr. HASKELL. Mr. President, I would like to state to the distinguished Senator from Wyoming that somebody has been sent for Senator METZENBAUM. He is in the very near vicinity, so he should be in

shortly. He has been informed and he is here.

Mr. HANSEN. Mr. President, for the benefit of my good friend, the distinguished Senator from Ohio, I have just called up my amendment No. 836 which would repeal section 125 of part A of title I of the Clean Air Act.

Under section 125, the President, the Administrator of the Environmental Protection Agency, or a Governor acting with the written consent of the President or his designee, in order to prevent local or regional economic disruption or unemployment, is authorized to require any major fuel burning stationary source not in compliance with an implementation plan or under a coal conservation order to use local or regional coal, petroleum products, or natural gas or a combination.

Each source, under such an order, is required to enter into long-term contracts of at least 10 years in duration for local or regional energy sources.

It is my belief, Mr. President, that this provision suffers from a number of deficiencies. First, its application and interpretation are unclear and imprecise. Second, it is unnecessary, given the dramatic increases in coal production which are forecast for the years ahead. Third, as the Senator from Maine stated during debate, it is the first step toward economic Balkanization, the same sort of economic Balkanization which nearly destroyed a very young America. Fourth, it will cause severe distortions to the national economy, an economy already suffering from deficiencies of investment capital.

For these reasons, I opposed the adoption of this section when it came before the Senate in early June and now move to repeal it. I urge my colleagues to join me in repealing this section.

Mr. ROBERT C. BYRD. Mr. President, will the Senator yield?

Mr. HANSEN. I am happy to yield.

Mr. ROBERT C. BYRD. Mr. President, would the offerer of the amendment be agreeable to a time limitation on his amendment of 30 minutes, to be equally divided?

Mr. HANSEN. I would be.

Mr. ROBERT C. BYRD. I thank the distinguished author of the amendment.

Mr. President, I make that request.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. I reserve the remainder of my time.

The PRESIDING OFFICER. The time limit is 30 minutes, equally divided.

Who yields time?

Mr. METZENBAUM. Mr. President, let us put this amendment in its proper perspective. However, prior to doing so, I ask that Senator JENNINGS RANDOLPH, who was a coauthor of the amendment, Senator BAYH, and Senator HEINZ be summoned to the floor, because they were parties to the adoption of the original amendment.

It is important that the Senate understand what is before us. On June 10, the amendment to which the distinguished Senator from Wyoming refers was considered by the Senate. There was lengthy debate. The debate included an amendment by the Senator from New Mexico (Mr. DOMENICI) that modified the amendment to a considerable extent. The matter was discussed. The same claim of Balkanization was made at that time. The Senate, in its good wisdom and judgment, saw fit to adopt the amendment by a vote of 45 to 44.

Thereafter, the usual motion was made to lay on the table after reconsideration. At that time, the Presiding Officer ruled that the motion was agreed to. It was at that point that the Senator from Wyoming took the floor to say that he had been asking for a rollcall vote. The Presiding Officer indicated that he had not heard the request for a rollcall vote.

The leader of the Senate then asked me, as the principal author of the amendment, whether or not I would agree, by unanimous consent, that we could go forward with a rollcall vote. That we did, and I agreed to it. The motion to lay on the table was adopted by a vote of 43 to 44.

There was extensive debate on this subject. The law has only become effective as of approximately 30 days ago, August 6.

I say to the Members of the Senate that there is a real question before us, regardless of the merits of this issue, as to how many times we rehash the same issue over and over and over again. It is a matter of law at the present time. It was adopted. There was a second vote with respect to tabling of the motion to reconsider, which came about after the full discussion with reference to whether or not it actually had been laid to rest once. So it was up once, it was up twice, and then by unanimous consent it went to a rollcall vote. Then it went to a conference committee, and the conference committee had some disagreement between the House measure and the Senate measure, and that was agreed upon.

Are we again to rehash the same piece of legislation over and over and over again, before it has had an opportunity to work? I say to the Members of the Senate that I do not think that is a proper legislative approach, regardless of the merits of the subject, and I still believe it has great merit.

However, rather than discussing the merits, I believe that this measure has been considered enough. The law should be given a fair chance to work. I certainly do not think that 1 month after its effectiveness could be considered a fair chance to work.

I hope the Senate will not see fit, in the Coal Conversion Act, to repeal a measure that was adopted just a few months earlier in the Clean Air Act.

Mr. HANSEN. Mr. President, the Senator from Ohio has pointed out that this measure was adopted by a one-vote margin. I have talked to at least one Senator who told me that he had misunderstood the application of the amendment, and had he known what was implicit in it, he would have voted differently.

My concern certainly is not to beat a dead horse or to pound on an issue that I think is unimportant, but I do think that in a day, a time, and a year when the President of the United States has called for expanded use of coal, when everyone is concerned about the rising costs of power, when we are looking forward to a winter with no little apprehension, realizing that imported oil is very expensive, realizing that production of domestic gas could very well be insufficient to fulfill the energy demands of this country expected of natural gas in the coming winter, we cannot be oblivious to any action that this Nation may have taken that is improvident or inadvisable.

As a consequence, I seek this opportunity to point out what I think are some very serious problems with this amendment which was adopted by a one vote margin.

In effect, we are telling the major users of coal in the United States that it may be of little value to them to try to see where they can buy coal the cheapest; that it may be an exercise in futility for them to try to be discerning in choosing the one coal, whether it is a low-sulfur coal or whether it has a higher Btu characteristic than another. Because of these actions, which normally would be taken by responsible management in companies, whether they are public utility operators who are supplying electricity, whether they are in manufacturing, or whatever it may be, we are in effect, if we leave this law on the books, telling them that they very well could be overruled.

I cannot think of anything more destructive of the continuing inclination on the part of management to try to do the best job it can do. We are saying to them that all that is necessary to be frustrated in their efforts to economize, to provide power at the very lowest possible rate, is to be overruled, as this law now on the books provides for, so that their actions, well-intentioned, in the public interest, could all go for naught.

I know my friend from Ohio is concerned about insuring that the coal producers in his State have a little better than an even break with everybody else, and I would be misunderstood if it were to be inferred from my remarks that I am trying to promote the consumption of Wyoming coal. There are people in Wyoming who think we may be producing more than we should be already, but there are other factors that make this sort of concern of no concern.

One of those factors is the cost of transportation. Coal is expensive to move around. After all, the problem this Nation faces is not going to be the unemployment or the economic hardship that could result because industry or a utility was trying to make the best possible buy it could, but rather the real crunch is going to come, and will turn, on the availability of coal to do the job it can and must do if we are going to decrease our dependency upon foreign sources of oil.

What this amendment can do, Mr. President, is to vitiate the bad effects that could come from coal that would be higher-priced or have other attributes that would make it less acceptable to use, such as the amount of pollution that is discharged in the air as compared to what might otherwise be available. These

are the considerations, along with reducing our dependency upon uncertain foreign supplies of petroleum products, that cause me to arise today and to offer this amendment which, I think, clearly is in the public interest.

It will be too bad if we beguile ourselves into believing, as we could easily do, that we are going to protect home industry. I have heard that argument before, and the European nations know it all too well. They know what happens when you try to set up a little fence around an area of the country and say to one's sister States, "We won't let your products come into Ohio or into Wyoming," or wherever else, "because you may hurt employment in our State."

A long time ago in this country, in the United States, we decided that that clearly was not in the national interest.

It is this growing conviction and growing realization on the part of more than one Member of Congress what has resulted in their saying to me, "I did not understand what was contained in this amendment, and were I given a second opportunity I would vote differently than I did the first time."

I appeal to Members of the Senate to respond to the clear logic of recognizing that we have got to stand together or fall separately. We cannot build little fences around each State or each region saying, "We won't let somebody else in another part of the country compete for the markets there, whether they be public utility markets or whether they be industry markets." If we start down that course of action, Mr. President, I say in all honesty and in some sadness that it will be a very unfortunate day indeed for America.

The PRESIDING OFFICER. Who yields time? The Senator from Indiana is recognized.

Mr. BAYH. Mr. President, I would like to have just a minute or two from my colleague from Ohio. I am anxious to hear what our distinguished colleague from West Virginia has to say on this matter because this is not a new issue.

I appreciate the position of our distinguished friend and colleague from Wyoming. Frankly, I look at this from a different perspective, I suppose. I do not look at this as regionalization or trying to Balkanize the United States.

The way I look at this is whether we are really going to try to use energy as efficiently as we can, and whether we are going to require industries at all levels, in all areas, of our country to use the latest environmental protection equipment to stop pollution, instead of buying their way out and going out West and buying all different kinds of coals, instead of using the latest technology for stopping pollution and, in the process of doing that, of course, they put a lot of people out of work.

It seems to me that is how simple that is, whether you are going to shift this burden, put people out of work who are now working.

If this law continues to be on the books—and I am proud to have played a small role just as one cosponsor—we are not putting a lot of people out of work, but what we are saying is the raiding is going to take place the other way around.

Let us say if you are going to cause significant economic dislocation and high unemployment in certain areas, then let us look at the standard, and let us make sure that before that happens the latest environmental protection equipment is used, and let us build into this system what the actual cost is of transporting that coal.

That may be an oversimplification, but I appreciate the Senator from Ohio permitting me to have a chance to just say a word.

Mr. METZENBAUM. Mr. President, do I have approximately 7 minutes remaining?

The PRESIDING OFFICER. That is correct.

Mr. METZENBAUM. Would the Senator from West Virginia care for 5 minutes?

Mr. RANDOLPH. Yes.

The PRESIDING OFFICER. The Senator from West Virginia.

Mr. RANDOLPH. Mr. President, I think it is understandable that our knowledgeable friend and colleague from Wyoming (Mr. HANSEN) would on the pending measure move to strike the provision that was a part of the Clean Air Amendments of 1977. An amendment on locally available coal was included in that bill which, of course, went to conference with the House and the conference report has been voted on favorably both in the Senate and in the House on that important measure.

I do not fault the Senator from Wyoming in this matter, because when a loss is by only one vote as in the clean air amendments, it is very understandable to me that within the rules of this body a Member will attempt to come back and debate the subject matter as we are having it debated here this afternoon. I am fully understanding of that situation.

I would remind us that the debate was very, very substantial during the Clean Air Act amendments, when the principal sponsor. Senator METZENBAUM, the Senator from Indiana (Mr. BAYH), the Senator from Pennsylvania (Mr. HEINZ), and the Senator from West Virginia now speaking, debated the issue.

I do not know if there were Members present or not present on the floor. I will not argue that point. But that happens on every measure, on every amendment that is offered here. There are times when we, in proposing something, believe in it so strongly we want every seat occupied.

But that does not happen.

The effort being made by Senator HANSEN would strike from the Clean Air Act a provision of considerable importance, and that action in the Senate was just a little more than 30 days ago. This authority which is sought to be repealed was included, as I have said and I underscore, in both Senate and House versions of our clean air amendments and contained in the final bill signed by President Carter on August 7 of this year. It was an amendment to the Senate bill that we believed was important.

I do not believe that this important authority to protect locally available coal and assure compliance with environmental standards should be repealed and certainly not without a period of trial and evaluation. It was adopted into law for what I believe to be sound policy reasons. Nothing has changed in the last month to alter those compelling reasons.

The provision that Senator HANSEN and his amendment would strike from the act has often been, I think, characterized in really an unfair way. This provision does not contribute to any balkanization. I said so during the debate in the Senate when it was originally a matter of concern. It will not create, as Senator BAYH has indicated, regional economic barriers. In fact, the locally available coal authority will do just the opposite. The careful use of that authority will serve to prevent economic competition between sections of the Nation in reference to the use of coal.

The provision in question allows the President, or in certain circumstances a Governor, or the designee of the President, to order the use of locally or regionally available coal, if a loss of jobs or other local or regional economic disruption would occur with the use of nonlocal coal or other fuel.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. RANDOLPH. May I have 1 additional minute?

Mr. METZENBAUM. There are 2 minutes remaining?

The PRESIDING OFFICER. The Senator is correct.

The Senator from West Virginia is recognized for 1 additional minute.

Mr. RANDOLPH. Additional requirements I think are very important because they are necessary to comply with the Clean Air Act. They may also be imposed on a source ordered to burn locally available coal.

We have said it often in this debate and before, and I for one have said it many, many times personally. The energy concerns of America can be substantially alleviated by the expanded use of coal. That is what we are doing here in the bill that is now before us. When we talk of the use of coal, it must be the profitable use of coal, profitable for small companies, as well as for large companies. I firmly believe that this greater use of coal must not be undertaken at the expense of a clean environment. Coal can be mined and burned environmentally in sound and clean ways. And the Clean Air Act requires this in the facilitation of the increased use of coal.

The technology exists to permit the burning of coal without environmental damage. Such continuous controls are required by the Clean Air Act. In certain instances, installations that use coal are attempting to meet air quality standards by using low sulfur coal. That can be a correct and practical approach. But it can cause hardship and local economic disruption.

There have been instances when users have chosen to import coal from other States or regions, even when an ample supply of coal was close at hand. In

some cases the local coal had a higher sulfur content and burning it would require installation of pollution control equipment—a step some users are, frankly, unwilling to take.

Such instances, Mr. President, have occurred in my own State of West Virginia. Coal companies within the State have been bypassed in favor of lower sulfur coal from outside West Virginia. This has taken place even when low sulfur West Virginia coal was available. In one county alone in West Virginia, a loss of perhaps 1,400 miners' jobs was possible because of the importation of coal rather than using that available nearby.

We should not allow a situation to exist where there is conflict and competition between eastern and western coal. There will be ample need for coal from all areas of the Nation as we expand our total use of this fuel. Users of coal should take advantage of the supplies which are most readily available, and also avoid the energy costs of long-distance transportation of coal.

The language of the Clean Air Act which Senator HANSEN's amendment seeks to repeal, allows a directive to burn locally available coal only after a finding that economic hardship would result locally from the use of coal from other areas or other fuels.

There were some Members of the Senate who originally opposed this provision because they felt it should not be included among clean air amendments. That it more properly belonged in an energy bill. But it was added to that clean air bill, and is now part of the clean air law. It does not make any sense to use an energy bill to try to remove it from existing law.

The purpose of the Metzenbaum-Randolph amendment is to support the structure of the Clean Air Act, adjusting it to meet energy and related economic needs. It has the obvious benefit of encouraging the use of locally available coal. At the same time, this authority reduces the pressure to weaken the requirements of the Clean Air Act for those who would resist the installation of emission control equipment.

This aspect of existing law is a balanced approach to the problem, and I urge the rejection of the amendment which would repeal it.

Mr. METZENBAUM. Mr. President, I wish to point out to the distinguished Senator from Wyoming that from the standpoint of pollution, this amendment when it was originally considered, as I pointed out, had the support of the National Clean Air Coalition, the Environmental Policy Center, and the Sierra Club, and beyond that it has the support of all of the workers, the United Mine Workers, AFL–CIO, United Steel Workers, and the United Transportation Union; and it also has the support of ConRail.

I believe that we have rehashed this matter enough. Mr. President, my time I think has expired, and I think the time of the Senator from Wyoming has expired, if I understand correctly.

The PRESIDING OFFICER. The Senator from Wyoming has 4 minutes remaining.

Mr. METZENBAUM. At the appropriate time I wish to make a motion to lay the proposed amendment on the table, and I understand it can only be made after the time has all expired; is that correct?

The PRESIDING OFFICER. That is correct, or yielded back.

Mr. METZENBAUM. I thank the Chair.

The PRESIDING OFFICER. The Senator from Wyoming.

Mr. HANSEN. Mr. President, I point out what could very well happen under the law as it is presently drafted. Let us assume that the State of Ohio or West Virginia is determined to be an area where unemployment is a problem. So the Governor, acting under the authority contained now in the Clean Air Act, says, "You cannot bring coal in from any other part of the country." That is clearly an action that could be taken.

Then let us assume that a wildcat strike breaks out. That is exactly the situation now in Appalachia. That is what is happening today. Are we as a result of the Clean Air Act as it now stands, going to tie our Nation's hands and deny to the utilities in the area of the country that would be served by those mines shut down by a wildcat strike the coal that they need for survival? I would hope that we would not be so naive as to think that that is good national policy. Yet that is precisely what can happen today under the Metzenbaum amendment. It can happen now.

I think that this amendment deserves an up and down vote. I would hope that when the motion is made by the distinguished Senator from Ohio to table this amendment that that tabling motion not prevail and that Senators will have an opportunity to vote on this amendment on its merits. It seems to me to be in the national interest not to take such a foolhardy action as would result from leaving this law unchanged.

I yield back the remainder of my time in order that my friend from Ohio may move to table my motion.

Mr. METZENBAUM. Mr. President, I move to table.

Mr. HANSEN. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays are ordered on the motion to table. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. HANSEN. Regular order, Mr. President.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. HUMPHREY), the Senator from Alaska (Mr. GRAVEL), the Senator from Arkansas (Mr. MCCLELLAN), and the Senator from Montana (Mr. METCALF) are necessarily absent.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY), would vote "yea."

Mr. STEVENS. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Michigan (Mr. GRIFFIN), the Senator from Oregon (Mr. HATFIELD), the Senator from Maryland (Mr. MATHIAS), and the Senator from Idaho (Mr. MCCLURE) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) would vote "yea".

The result was announced—yeas 44, nays 47, as follows:

[Rollcall Vote No. 353 Leg.]

YEAS—44

Abourezk	Heinz	Nelson
Anderson	Hollings	Pell
Bayh	Huddleston	Percy
Biden	Inouye	Proxmire
Byrd, Robert C.	Jackson	Randolph
Clark	Johnston	Ribicoff
Cranston	Kennedy	Riegle
Culver	Lugar	Sarbanes
DeConcini	Magnuson	Sasser
Durkin	Matsunaga	Schweiker
Eagleton	McGovern	Sparkman
Ford	McIntyre	Stone
Glenn	Metzenbaum	Williams
Hart	Morgan	Zorinsky
Haskell	Moynihan	

NAYS—47

Allen	Dole	Nunn
Baker	Domenici	Packwood
Bartlett	Eastland	Pearson
Bellmon	Garn	Roth
Bentsen	Goldwater	Schmitt
Bumpers	Hansen	Scott
Burdick	Hatch	Stafford
Byrd, Harry F., Jr.	Hathaway	Stennis
Cannon	Hayakawa	Stevens
Case	Helms	Stevenson
Chafee	Javits	Talmadge
Chiles	Laxalt	Thurmond
Church	Leahy	Tower
Curtis	Long	Wallop
Danforth	Melcher	Weicker
	Muskie	Young

NOT VOTING—9

Brooke	Hatfield	McClellan
Gravel	Humphrey	McClure
Griffin	Mathias	Metcalf

So the motion to lay Mr. HANSEN's amendment on the table was rejected.

Mr. HANSEN. Mr. President, I move to reconsider the vote by which the motion to lay on the table was rejected.

Mr. DOLE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The question now recurs on the amendment.

Mr. HANSEN. Mr. President, I am willing to yield back any remaining time on the amendment, if the Senator from Ohio is also willing. I believe the issue has been adequately debated.

The PRESIDING OFFICER (Mr. LEAHY). There is no time remaining on the amendment.

Mr. METZENBAUM. Mr. President, a point of order.

The PRESIDING OFFICER. The Senator will state it.

Mr. METZENBAUM. The amendment is not germane to the pending legislation. The unanimous-consent order provides that it must be germane.

The PRESIDING OFFICER. The unanimous-consent agreement under which the bill is being considered requires germaneness of amendments. The amendment deals with a different subject, the Clean Air Act. The point of order is well taken.

Mr. METZENBAUM. I thank the Chair.

The PRESIDING OFFICER. The bill is open to further amendment.

Does the Senator from Louisiana seek recognition?

Mr. JOHNSTON. Yes, Mr. President.

Mr. ROBERT C. BYRD. Will the Senator yield to me?

Mr. JOHNSTON. I yield.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that time on any remaining amendments today be limited to 30 minutes, to be equally divided in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

[Several Senators addressed the Chair.]

The PRESIDING OFFICER. The Senator from Louisiana.

Mr. DOLE. Mr. President, the point of order is debatable.

The PRESIDING OFFICER. The point of order is not debatable unless it is submitted to the Senate, and this one was not. An appeal from the ruling of the Chair would be debatable.

Mr. HANSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. HANSEN. Mr. President, I appeal the ruling of the Chair.

Mr. JOHNSTON. Mr. President——

Mr. HANSEN. Mr. President——

The PRESIDING OFFICER. The Chair had recognized the Senator from Louisiana, who yielded to the Senator from West Virginia. The Senator from West Virginia had finished and the Chair had again recognized the Senator from Louisiana. Does the Senator from Louisiana yield for the purposes of an appeal to be made from the ruling of the Chair?

Mr. JOHNSTON. Mr. President, who is making the request?

The PRESIDING OFFICER. The Senator from Wyoming is making the request.

Mr. JOHNSTON. I have a brief amendment. I do not want to deny the Senator his right to have a vote at this time, but I wonder if he would let me go ahead and finish this amendment.

The PRESIDING OFFICER. The Chair will advise the Senator from Louisiana if the Senator moves onto other business with another amendment, the question of an appeal would then be too late.

Mr. ROBERT C. BYRD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Louisiana yield?

Mr. JOHNSTON. I yield to the distinguished majority leader.

Mr. METZENBAUM. Mr. President, a parliamentary inquiry.

Mr. ROBERT C. BYRD. Mr. President, the Senator has yielded to me.

The PRESIDING OFFICER. The Senator from West Virginia is recognized.

Will the Senate be in order so that the majority leader can be heard. The Chair notes that a number of conferences are going on among the staffs and other Senators. The Chair asks that the Senate be in order. The Chair is having an extremely difficult time hearing the majority leader or any other Senator.

The Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, business has been transacted subsequent to the vote.

The PRESIDING OFFICER. The amendment was not laid down. There has been debate, however.

Mr. ROBERT C. BYRD. But business has been transacted.

I asked unanimous consent on a matter and the Senate agreed to it. Business has been transacted. Does not the point of order come too late?

The PRESIDING OFFICER. Does the Senator mean the appeal on the point of order?

Mr. ROBERT C. BYRD. Yes, the appeal.

The PRESIDING OFFICER. The Senator is correct. The Senator did make a unanimous-consent request and the Chair did rule on the unanimous-consent request. The Senator is correct that business has been transacted.

Mr. ROBERT C. BYRD. So the appeal comes too late.

The PRESIDING OFFICER. The Chair agrees with the Senator from West Virginia on that point.

Mr. ROBERT C. BYRD. I thank the Chair.

The PRESIDING OFFICER. The Senator from Louisiana is recognized.

Mr. ROBERT C. BYRD. Will the Senator yield further?

Mr. JOHNSTON. Yes, I shall yield further.

Mr. ROBERT C. BYRD. I hope that my friend from Wyoming takes no umbrage at my calling the attention of the Chair and the Senate to the procedure which has to be followed under the rules. Had the shoe been on the other foot, as the Senator well knows, I would have risen to protect his rights, as I did on a previous matter.

Mr. HANSEN. Mr. President, if the distinguished Senator from Louisiana will yield further, let me say that I appreciate very much the fairness that has been demonstrated by the majority leader. I am a great admirer of his and respect the evenhandedness which he has just displayed. I knew at the time that I could have appealed the ruling of the Chair. It seems to me that, on that issue, I would have had a difficult time trying to make the case.

I think the case has been made. I think the public and the Nation at large will understand very clearly that the Senate recognizes the wisdom of the amendment that I offered. It is clear from the vote of this body today that the Senate recognizes that the sort of scenario that I last spoke of could well take place. In such a case a Governor, acting under the authority that could be granted him by the President of the United States, could say to my good friend from Ohio, "We will not let coal from any other State come into Ohio."

Or a Governor could say to my good friend from West Virginia, "We will not let any coal from any other source come into this State because it may bring about economic disruption or unemployment."

Then we could have break out precisely the kind of situation I depicted. We could have a wildcat strike.

In such a case, it would not be a case of the absence of the resource but a matter of the inability of that State to produce coal to satisfy its needs. At that time, my good friend from West Virginia would be on this floor, saying:

> For heaven's sake, let us lay aside this rule or let us do something to get the Governor to reverse the decision. Because, despite the fact that we have coal in West Virginia, and despite the fact that competition from other coal producing states may bring about unemployment, that is not what happened. A wildcat strike broke out, and we have no coal to heat our houses or run our factories.

We may indeed be sorry that we did not amend this law, because that could well happen.

If we were dependent upon the coal that might be mined today in this great part of the country, a part of the country for which I have the highest respect, a part of the country represented by two very able and dear friends of mine, I can see that we would be in a real tough situation.

My good friend from Ohio says, let us not worry about that, let us give the law a chance to operate. However, it is clearly because I understand, and I think a majority of the Members of the Senate understand, what could happen that we voted to repeal that law. It has not been repealed.

I shall not further impose on the time of my good friend from Louisiana, but I do appreciate this opportunity to call attention to the fact that a majority of the Senate, right now, saw the wisdom in repealing a law that sooner or later will be repealed.

I thank my friend from Louisiana. I say again to my good friend, the majority leader, that he certainly earns the high regard in which he is held by all of us.

Mr. ROBERT C. BYRD. I thank the Senator.

Mr. JOHNSTON. Mr. President, I ask unanimous consent that the colloquy just ended not be counted against the time of the Senator from Louisiana.

The PRESIDING OFFICER. Without objection, it is so orederd.

UP AMENDMENT NO. 768

Mr. JOHNSTON. Mr. President, I have an amendment in behalf of myself and Senator Stone which I ask to have considered immediately.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

> The Senator from Louisiana (Mr. JOHNSTON) for himself and Mr. STONE, proposes Unprinted Amendment 768.

Mr. JOHNSTON. I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

> On page 67, after line 25, delete the period and insert the following:
>
> ", *Provided*, that a new major fuel burning installation which is by design not capable of consuming fuel at a fuel heat input rate of three hundred million British thermal units per hour or more shall not be subject to the prohibition set forth in this section with respect to petroleum."

Mr. JOHNSTON Mr. President, I shall be very brief. This is a very simple

amendment. I hope the manager of the bill listens carefully, because I think he can accept it, and I hope my colleagues will listen carefully because it is simple and it is important.

Under the bill as presently written, a major fuel burning installation which would be required to burn coal is one which burns 100 million Btu's per day or less. My amendment says that a major fuel burning installation is one which burns 300 million Btu's or less, provided they burn petroleum.

The reason for this is very simple, Mr. President. We ought to discourage—fuel-burning installations from burning natural gas. They ought to be required to switch to coal. That is not true with respect to residual fuel oil. In other words, what this amendment would do is allow a single fuel-burning installation to burn residual fuel oil up to 300 million Btu's per day. They would not be stuck with the problem of having to convert to coal

Why should we allow the burning of residual fuel oil? First, there is the very obvious environmental question. That is, the burning of coal produces not only the fly ash but the SO_2 in rather great quantities. This amendment, by allowing the burning of petroleum, particularly residual fuel oil, would be an environmental plus. But, frankly, that is not the biggest reason. The biggest reason is that we have a glut of residual fuel oil in this country and we are going to have to find a market for that residual fuel oil. This applies only to new facilities.

Mr. President, right at the present time, there is an oversupply in this country of heavy sour crude. All of the Alaskan pipeline crude that is coming in is heavy gravity sour crude. There is now no market for that heavy gravity sour crude.

I say there is no market for it. There are at least 500,000 barrels today for which there is no market and for which there is no refining capacity. The same thing is true of our domestic supply other than Alaskan crude. Our percentage of sweet crude reserves in this country has fallen to 42 percent. The other 58 percent is heavy gravity sour crude—with no refining capacity, no market for the sour crude.

The same thing is true in the Middle East, Mr. President. OPEC's supply of heavy gravity sour crude is 5.5 times greater than its supply of low-gravity sweet crude.

What are we going to do with the sour crude—with the Alaskan crude, for example—in this country? They wanted to send it to Japan on exchange, because Japan has some refining capacity and they can burn residual in Japan. The President said, No, we want to keep our heavy gravity sour crude in this country. Well, what are we going to do with it? We do not have a use for it; we do not have refining capacity.

We are presently working, in the Energy Committee, on a bill to encourage the building of refining capacity that will refine this heavy gravity sour crude and that will have some refineries that can handle it. At present, we do not. But we can build all the refineries in the world and if we do not have a market for it, then we cannot use it.

The final reason, Mr. President, is that when we burn fuel oil, when we burn residual fuel oil, we are not taking that oil from another customer in the same way we do with natural gas.

I strongly agree that we should not allow the natural gas to be used in major fuel burning installations because if we burn the natural gas in my State, for example, it takes away from the supply somewhere else.

That is not so with heavy resid because it is in oversupply right now. We just do not have the market for that Alaskan crude right now.

One final reason, Mr. President. The technology for burning coal is evolving right now. We are working on new technology of fluidized bed. It is a proven technology, but not fully demonstrated. We are working on MHD. We are working on combined power fuels, ways of burning coal that may make it environmentally safe to burn.

The scrubber, the technology to which we are now married, is, first of all, extremely expensive, and second, environmentally a long way from what it should be. It does not take care of any of the SO_2 completely. It does not do anything for the sulfates and it produces a sludge, and we do not have a place to do away with the sludge.

What this amendment would do is give us a chance to take this resid, which is going to be in oversupply for a long time to come, to be able to use that and keep the environment cleaner in the process and yet not take any fuel, any precious fuel like natural gas, away from somebody else.

I hope the committee can accept this. I know we had discussion about an amendment similar to this in committee, but that amendment in committee also involved natural gas.

I ask the distinguished chairman to consider that this involves residual fuel oil which is in oversupply at this time.

Mr. HASKELL. Mr. President, I say to the distinguished Senator from Louisiana that he is quite correct, that the discussion in committee revolved around both gas and oil.

I also know that the committee turned that particular item down.

However, there was considerable discussion, when we get in this category between 100 and 300, of whether or not the majority of people might not be exempted under the act.

I am inclined, Mr. President, speaking for the majority, to accept this amendment, but with a proviso. If the Senator from Louisiana could amend his amendment so that the study which we adopted yesterday, it was amendment No. 753, a 1-year study with a report, would cover this particular situation. In other words, in 1 year we could be informed by the FEA as to the effect, the scope of the Senator's amendment, how many people does it let out, is the Senator well informed when he says there is a glut of residual fuel, how much oil we might be saving if we did not adopt the Senator's amendment.

If we could put this situation under that study so that in a year we would really know where we stand, I would accept the Senator's amendment.

Mr. JOHNSTON. Could we allow the amendment to take effect, have it studied? I submit to the Senator, it is very clear what I said about a glut of resid. That is beyond question, I submit. I think the figures already exist.

The market condition on the west coast is in very difficult condition. In other words, if we could allow this to proceed for the year pending the study and then if the study should, for some unknown reason, come in unfavorably, we could come in and change it.

Mr. HASKELL. Mr. President, I should mention to the——

Mr. JOHNSTON. Does the Senator mean to exempt it now and then put it back in?

Mr. HASKELL. Yes. My thought is to accept the Senator's amendment, but instruct the FEA to come back, analyzing the effect of the Senator's amendment within a 1-year period, and then if the FEA decides that the effect is very adverse and if the committee similarly decides, then we would repeal the Senator's amendment.

But I think it is essential that in some parliamentary form we be sure that the study covers this situation.

In order to give the staff a little time to work this out, I am going to suggest the absence of a quorum if that would seem in order.

Mr. JOHNSTON. Yes, that would be agreeable.

Mr. HASKELL. Mr. President, I suggest the absence of a quorum.

Mr. HANSEN. Will the Senator withhold that for a moment?

Mr. HASKELL. Yes, I withhold it.

Mr. HANSEN. Mr. President, I think this is a good amendment. I hope it will be accepted.

It seems to me, to state as succinctly as I can the reasons for my supporting it. It will help small industrial facilities by eliminating redtape. It will get these facilities off gas.

The size of these facilities does not lend them to the easy use of coal, and the savings of residential oil that would result if this amendment fails is significant.

I hope that the Senate will accept the amendment.

Mr. HASKELL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. HASKELL. Equally divided.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. JOHNSTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSTON. Mr. President, I amend my amendment by striking the quotation marks and the period at the end of the amendment and a semicolon and adding the following language:

Provided further, That the Federal Energy Administration shall study the effect of this provision and report the results of said study to the Committee on Energy and Natural Resources of the Senate and the Interstate and Foreign Commerce Committee of the House not later than September 15, 1978.

The PRESIDING OFFICER. Will the Senator send the modification to the desk?

Mr. JOHNSTON. Yes.

The PRESIDING OFFICER. The amendment is so modified.

The modified amendment is as follows:

On Page 67, after line 25, delete the period and insert the following:

", *Provided*, That a new major fuel burning installation which is by design not capable of consuming fuel at a fuel heat input rate of three hundred million British thermal units per hour or more shall not be subject to the prohibition set forth in this section with respect to petroleum; provided further, that the Federal Energy Administration shall study the effect of this provision and report the results of said study to the Committee on Energy and Natural Resources of the Senate and the Interstate and Foreign Commerce Committee of the House not later than September 15, 1978."

Mr. HASKELL. Mr. President, the Senator's amendment as modified is acceptable to me, and I assume it is acceptable to the Senator from Wyoming.

Mr. JOHNSTON. I yield back the remainder of my time. I believe the Senator from Wyoming already has spoken on that.

Mr. HASKELL. The Senator from Wyoming was satisfied with the amendment prior to the modification, so I presume he is satisfied with it now.

I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, without objection the amendment, as modified, is agreed to.

Mr. JOHNSTON. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. HASKELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 769

Mr. HUDDLESTON. Mr. President, on behalf of myself and Mr. FORD, I send to the desk an unprinted amendment.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Kentucky (Mr. HUDDLESTON), for himself and Mr. FORD, proposes an unprinted amendment numbered 769.

Mr. HUDDLESTON. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 139, after line 2, insert the following section:

SEC. 314 (a) The Secretary of Commerce shall immediately convene a federal-state task force composed of representatives of the Department of Housing and Urban Development, the Department of Health, Education, and Welfare, the Environmental Protection Agency, the Appalachian Regional Commission, the Farmers' Home Administration, the Department of Energy, the Department of the Interior, the Office of Management and Budget, the Department of Transportation, and the National Governors' Conference as well as such other federal agencies as the Secretary shall designate. To develop the basis for comprehensive new federal initiatives in impact assistance, the task force shall conduct an intensive review and evaluation of existing federal programs which provide assistance to states and local communities in alleviating the socioeconomic impacts of rapid energy development.

(b) The task force shall gather data and information on—

(1) the level of assistance provided under existing programs related to impact assistance.

(2) the timeliness of assistance in meeting impacts caused by federal decisions on energy policy as well as private sector decisions, and

(3) the obstacles to effective assistance contained in regulations of eixsting programs related to impact assistance.

(c) The task force shall recommend—

(1) techniques to improve coordination between existing programs,

(2) options for new comprehensive federal initiatives (in addition to those specified in Section 306 of this Act) including but not limited to new grant and loan programs to deal with financing and providing housing, sewer and water systems, transportation, health care services, schools, and other public infrastructure needs in energy development impacted areas, and

(3) selection of a lead agency responsible for the centralized delivery of federal impact assistance.

(d) No later than three months after the date of enactment of this Act, the Secretary of Commerce shall deliver to the President and to both Houses of Congress a comprehensive report detailing the findings and recommendations of the task force pursuant to subsections (a), (b), and (c) of this section.

Mr. HUDDLESTON. Mr. President, this bill signifies a major step toward our commitment to placing coal in the forefront of our efforts to meet the energy shortage head on and achieve the maximum possible energy self-sufficiency. It will mean that coal production will have to expand dramatically—to as much as 1.1 billion tons by 1985. And, in turn, this rapid expansion will mean extensive socioeconomic impacts in the areas where this development will take place. To be sure, many of the effects will be beneficial. Expanded coal production can mean jobs and a new level of prosperity in some of the most economically depressed parts of our country.

But it will also put new strains on the entire spectrum of services and facilities in those areas—many of which already are strained beyond reasonable limits. It will increase demands on housing, sewer and water systems, transportation, health care, schools, law enforcement and all other public and private infrastructures in energy-impacted areas.

The bill reported by the Energy Committee recognizes this and wisely provides for planning grants to study impacts in such areas of the development boom and to determine housing and service needs. There is no doubt in my mind that this assistance for planning at the local level is needed immediately so that State and local governments can intelligently deal with the boomtown situations already developing.

At the same time, however, we need to get a national grip on the problem to determine how adverse impacts can be alleviated and what the Federal role properly should be.

For example, nowhere is there a clear statement of what the Federal role should be in the maintenance of an adequate transportation system for energy supplies from place of origin to place of use. A national resource demands the attention of the national Government.

Thus, the amendment which I am proposing today directs the Secretary of Commerce to convene a Federal-State task force composed of the representatives of HUD, HEW, EPA, ARC, FmHA, DOE, DOI, OMB, DOT, the National Governors Conferences as well as such others as the Secretary shall designate to evaluate existing Federal programs and develop the basis for comprehensive new Federal initiatives to provide assistance to States and local communities in alleviating the socioeconomic impacts of rapid energy development. The task force would be directed to report to the President and the Congress on its findings and recommendations within 3 months after the date of enactment of this act.

Mr. President, I believe that this amendment has been scrutinized by both sides of the aisle and has been found to be acceptable. I yield to the distinguished floor manager of the bill.

Mr. HASKELL. The Senator from Kentucky is right. The microscope has been applied. Speaking for myself, I consider it a meritorious amendment on which no flyspecks were found.

Mr. HUDDLESTON. I thank the Senator.

Mr. HASKELL. I believe I can speak for the Senator from Wyoming, that he would be willing to accept this amendment.

Mr. RANDOLPH. Mr. President, I am pleased to join with my distinguished colleagues from Kentucky (Mr. HUDDLESTON and Mr. FORD) in establishing a task force under the direction of the Secretary of Commerce to review all Federal efforts providing impact assistance to States and local communities undergoing rapid energy development.

These Senators know, as I do, that it will take intensive national efforts to increase coal production. This cannot be accomplished without substantial increases in employment. The influx of employees into these impacted areas will strain community facilities, housing, and services.

The Energy and Natural Resources Committee recognized this need in section 306 of the Coal Conversion Act, just as I did in amending that section earlier to assure impact assistance was granted on significant increases in employment.

I think the administration must attempt to coordinate all Federal efforts to assure communities of the type and kind of aid they can expect to receive.

Mr. HANSEN. Mr. President, the Senator from Wyoming is impressed with the amendment offered by the distinguished Senator from Kentucky. I am happy to support it. I yield back the remainder of my time.

Mr. HASKELL. I yield back the remainder of my time.

Mr. HUDDLESTON. Mr. President, I ask unanimous consent that the Senator from West Virginia (Mr. RANDOLPH) be added as a cosponsor of this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

All time having been yielded back, without objection, the amendment is agreed to.

Mr. HUDDLESTON. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. HASKELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 770

Mr. GLENN. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Ohio (Mr. GLENN) proposes an unprinted amendment numbered 770.

Mr. GLENN. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 118, at the end of line 8, add the following new sentence: "Notwithstanding section 402(d)(1) of the Department of Energy Organization Act, after the effective date of such section, the Secretary of Energy shall have jurisdiction to hear and determine matters required by this subsection to be determined on the record. The Federal Energy Regulatory Commission shall have no jurisdiction to hear and determine any such matter unless such matter is assigned to such Commission pursuant to section 402(e) of such Act."

Mr. GLENN. Mr. President, I ask unanimous consent that Lyle Morris and Leonard Bickwit be granted the privilege of the floor during the consideration of this legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GLENN. Mr. President, this will take just a couple of minutes. We have agreement on both sides of the aisle. I will state briefly the purpose of this amendment, which I regard as basically technical in nature. It is designed to avoid an unfortunate result of the meshing of this bill with the recently passed Department of Energy Organization Act—a result which I believe is not intended by the sponsors of either piece of legislation.

The problem is this. Section 402(d)(1) of the Department of Energy Organization Act specifies that all matters required by law to be determined on the record after an opportunity for an agency hearing shall be under the jurisdiction of the Federal Energy Regulatory Commission as opposed to the Secretary of the new Department of Energy. Since on the record proceedings involve trial type adjudicatory procedures and since the Commission was intended to function in part as the adjudicatory arm of the new Department, this provision was appropriately included in the law.

It was understood by the sponsors, however, that certain significant energy policy determinations—even if arrived at by on the record proceedings—logically should be left to the jurisdiction of the Nation's chief energy policymaker, the Secretary of Energy. Accordingly, specific exemptions from section 402(d)(1) were provided to allow the Secretary to continue to make certain leasing decisions under the Energy Policy and Conservation Act of 1975, even though such decisions are required by law to be made on the record.

The coal conversion legislation we are now considering requires that certain important policy decisions essential to the administration of the law will be made through the use of formal on-the-record procedures. Section 301(d) of the bill provides that applications for exemptions from the basic requirements of the act shall be submitted to the Federal Energy Administration which shall determine after on-the-record hearings whether such exemptions should be granted. If not amended, section 301 thus would require that, once the FEA's functions were transferred to the new Department of Energy, decisions on these exemptions, because of their formal adjudicatory nature, would be required to be made by the Federal Energy Regulatory Commission and not the Secretary of Energy. In other words, without an amendment, it would be the Commission which would be making many of the most important policy decisions under the coal conversion legislation we are considering.

Mr. President, I do not believe that was the intention of the Energy Committee; nor do I believe it is the intent of those on the Senate Governmental Affairs Committee who were most instrumental in moving the Department of Energy Organization Act through the Congress. In none of our discussions involving the DOE Act was it ever suggested that significant policy decisions in the coal conversion area should be assigned to the new Federal Energy Regulatory Commission.

My amendment would avoid that result. It would simply specify that, notwithstanding the on-the-record nature of the determinations regarding exceptions and exemptions under the act, the Secretary of Energy would be responsible for such determinations. The Secretary, of course, could assign these functions to the Commission but would be under no obligation to do so. This amendment is supported by the administration, and I do not anticipate that it will cause anyone in the Chamber any problems. If I am right in that assessment, I would hope that we could move quickly to adopt the amendment by voice vote.

Mr. HASKELL. Mr. President, I would like to ask the Senator from Ohio if my understanding is correct. This bill, this coal conservation bill, obviously provides for hearings for exemptions, for example, permanent exemptions and temporary exemptions. My understanding is that the Senator is saying under the Department of Energy bill this type of hearing is normally held at the secretarial level, with appeal to the three-man or woman or mixed administrative board; is that correct?

Mr. GLENN. I am not sure that was exactly correct.

Mr. HASKELL. What I was understanding we were trying to do was to make the procedures under this coal conversion bill conform to the procedures provided for in the Department of Energy bill.

Mr. GLENN. That is absolutely correct.

Mr. HASKELL. And my understanding is that under the Department of Energy the type of hearing prescribed in this coal conversion bill would normally not go directly to the three-person board; am I correct in that?

Mr. GLENN. Well, yes, I think that is correct. Under the DOE bill anything that is on the record must go to the Federal Energy Regulatory Commission.

Under this bill we are considering now any exemptions would also have to be on-the-record proceedings, so it would mean unless we had this amendment anything done under this bill would automatically go to that Federal Energy Regulatory Commission, and that would bog them down completely if there were a number of exemptions. So this would give the flexibility of the Department of Energy Secretary being able to take care of these in his own shop or refer it to the Federal Energy Regulatory Commission if he felt it was appropriate to do so.

Mr. HASKELL. I will say to my friend from Ohio what I am trying to do is to be sure that by accepting the amendment the hearings prescribed in here, let us say they involve something that is now in the Department of Energy, would normally take place not on-the-record at the secretarial level.

Mr. GLENN. That is correct.

Mr. HASKELL. Well, with that understanding then I would be pleased to accept the Senator's amendment.

Mr. DOMENICI. Mr. President, on behalf of the minority we concur that the Senator from Ohio has added to the bill in that it will be more expeditious and probably the kind of exemptions that are being asked for are in the nature of those that should be made by the executive rather than a board, and we have no objection to the amendment.

Mr. GLENN. I thank the distinguished Senator, and I yield back my time.

Mr. HASKELL. I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Ohio.

The amendment was agreed to.

UP AMENDMENT NO. 771

Mr. HASKELL. Mr. President, I have an amendment on behalf of the distinguished Senator from Maine (Mr. MUSKIE). This amendment I understand has been cleared with the minority, and I send this to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Colorado (Mr. HASKELL) for the Senator from Maine (Mr. MUSKIE) proposes unprinted amendment No. 771.

Mr. HASKELL. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, further reading is dispensed with.

The amendment is as follows:

On page 131, line 14, after the period strike all that follows through page 132, line 7, and insert the following:

"(a) In the event the President declares a severe energy supply interruption, as defined in section 3(8) of the Energy Policy and Conservation Act, as amended, the Administrator may, by order, prohibit an electric power plant or major fuel-burning installation using natural gas or petroleum as a primary energy source from so using natural gas or petroleum for the duration of such interruption. Any suspension of emission limitations or other requirments of applicable implementation plans as defined in section 110(d) of the Clean Air Act required by such prohibition shall be issued only in accordance with section 110(f) of the Clean Air Act."

ENERGY EMERGENCY AUTHORITY

Mr. MUSKIE. Mr. President, since the time when S. 977 was reported by the Committee on Energy and Natural Resources, the Clean Air Act Amendments of 1977 have cleared the House-Senate conference and became Public Law 95–95. That law contains a new section 110 (f) of the Clear Air Act providing authority to deal with energy emergencies such as blackouts, natural gas curtailments or oil embargoes. Therefore, an amendment would be appropriate to section 308(a), the emergency powers section of this bill, to bring it into conformity with the Clean Air Act, as amended.

Thus, if the President declares a "severe energy supply interruption" in accordance with the Energy Policy and Conservation Act, then the Administrator of FEA—or the successor—may prohibit use of natural gas or petroleum as a primary energy source by any powerplant or major fuel burning installation for the duration of such interruption, just as in the committee bill. However, if that prohibition makes necessary a suspension of an air quality requirement, the procedures of the Clean Air Act—section 110(f)—will be used in issuing such a suspension.

Section 110(f) of the Clean Air Act allows the Governor of a State to issue a temporary emergency suspension of any part of the applicable implementation plan for air quality if the President has determined that a national—or regional—energy emergency exists of such severity that the suspension may be necessary. If the emergency appears likely to persist the State has recourse to measures authorized by the Clean Air Act; for example, the issuance of delayed compliance orders or the revision of the State's plan.

I understand that this approach is acceptable to the distinguished floor manager of the bill, and I trust that other Members will agree.

Mr. HASKELL. Mr. President, this amendment is satisfactory to me as the floor manager. It is my understanding it is acceptable to the minority and, therefore, I yield back my time.

Mr. DOMENICI. The minority concurs that the amendment is appropriate, and we have no objection. I yield back our time.

The PRESIDING OFFICER. All time being yielded back, the question is on agreeing to the amendment of the Senator from Maine.

The amendment was agreed to.

UP AMENDMENT NO. 772

Mr. HASKELL. Mr. President, I again send another amendment to the desk on behalf of Mr. MUSKIE.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Colorado (Mr. HASKELL), for the Senator from Maine (Mr. MUSKIE), proposes unprinted amendment No. 772.

Mr. HASKELL. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

On page 63, line 14, strike "or" and insert after the word "State" the following: 'or local".

On page 63, line 22, insert a period before the colon and strike all through page 64, line 5.

At the appropriate place in Title III, insert the following new section:

"SEC. . No temporary exception or permanent exemption shall be granted pursuant to sections 105(a)(2)(A), 106(a)(1)(A), 206(a)(1)(B), and 207(a)(1) of this Act if the Administrator determines that such exception or exemption would be required because of the adoption of a local government standard, limitation or requirement applicable to environmental pollutants or disposal of solid waste or residues resulting from the combination of coal or other fuels or the operation of air pollution control equipment."

Mr. MUSKIE. Mr. President, I would like to seek clarification of some of the provisions of S. 977 as they relate to environmental requirements. If a locality has adopted a requirement for sources which is more stringent than Federal or State requirements or adopted a more stringent air quality standard, it is the intent of S. 977 that such requirements must be met by any facility affected by this bill; is that correct?

Mr. HASKELL. That is correct. Local requirements are not preempted under this legislation. However, a source may not get an exemption from the requirement to burn coal as a result of local environmental requirements. The owner has the choice of using fuel other than petroleum or natural gas and meeting the standard or moving to a different site. The source does not have the choice of seeking an exemption which would allow the use of oil or natural gas.

Mr. MUSKIE. So the intent of sections 103 and 104 is not to preempt local requirements. The intent is to disallow an exemption under sections 105, 106, 206, and 207 to be based on such local requirements. Therefore, if a source could not burn coal and meet local standards, the facility would have to be moved to a site where all standards and requirements could be met. The source could not argue that the definition on page 63 preempted the local requirements and only left the Federal and State requirements as binding on the source.

Mr. HASKELL. That is correct.

Mr. MUSKIE. In order to clarify the question, I understand the committee intends to accept a technical amendment which carries out the discussion of intent we have just concluded. Is that correct?

Mr. HASKELL. That is correct.

The Clean Air Act presently sets forth certain Federal requirements. The State then must establish standards which have to be federally approved.

And under some State laws, like New York and California, local governments can establish standards, but they have to be approved by the State.

Under State law the local requirement in effect becomes a part of the State standards as they pretain to that area.

For example, a local government may undertake to set standards that are in conflict with, whether higher or lower, than State law. The procedure is for the local government to submit their proposal to the State agency. After appropriate hearings and findings, then the State agency in effect can make the local ordinance a part of State law. Such actions by local government would not be excluded.

Under S. 977 before an air pollution requirement can be considered in an applicable environmental requirement it must be contained in the State implementation plan which has been federally approved pursuant to the Clean Air Act. To the extent that local requirements are contained in that plan, they are considered applicable environmental requirements.

But to the extent that local requirements are not contained in the State plan or have not been approved by the State government, they do not fall within the definition.

Therefore, other local restrictions would not be grounds for a waiver except in the discretion of the administration under sections 106(c) and 207(c). If no waiver were granted, then the local restriction would result in a prohibition of construction of any powerplant.

Mr. President, this amendment has been examined by myself and found satisfactory. It is my understanding it has been examined by the minority and found satisfactory.

Mr. DOMENICI. We have no objection. I yield back our time.

Mr. HASKELL. I yield back the remainder of my time and request that the amendment be adopted.

The PRESIDING OFFICER. All time being yielded back, the question is on agreeing to the amendment of the Senator from Maine.

The amendment was agreed to.

AMENDMENT NO. 835

Mr. DOMENICI. Mr. President, I call up my printed amendment number 835 and ask the clerk to report.

The PRESIDING OFFICER. The clerk will report the amendment.

The legislative clerk read as follows:

The Senator from New Mexico (Mr. DOMENICI) proposes printed amendment number 835.

Mr. DOMENICI. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 116, line 24, insert the following:

STUDY OF COMPLIANCE PROBLEM

SEC. 215. The Administrator shall conduct a study of the problems of compliance with this Act experienced by those electric utility systems which have a total system generating capacity of less than two thousand megawatts. The Administrator shall report his findings and his recommendations to the Congress not later than two years after the enactment of this Act.

The PRESIDING OFFICER. The Senator from New Mexico.

Mr. DOMENICI. Mr. President, I think the floor manager is familiar with this amendment. It is the study we require that the administration do on small utility systems, 2,000 megawatts or less.

We have been asked especially by the REA to have this evaluated rather quickly. It prescribes the study and indicates when a report should be made.

I believe the floor manager has indicated his approval and acceptance. If that is the case, I would yield back the remainder of my time.

Mr. HASKELL. Mr. President, I have examined amendment No. 835 proposed by the distinguished Senator from New Mexico and I concur that it is a meritorious amendment, and I would be perfectly willing to accept it, and I yield back the remainder of my time.

The PRESIDING OFFICER. All time is yielded back. The question is on agreeing to the amendment of the Senator from New Mexico.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open for further amendment. Are there further amendments?

Mr. METZENBAUM. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. METZENBAUM. I suggest it be equally divided. The purpose of doing it, Mr. President, is I have an amendment I wish to call up, but Senator JACKSON and Senator KENNEDY are both cosponsors of it, and I sent word for them to be on the floor. There is a limited——

Mr. FORD. Mr. President, reserving the right to object, I talked to the distinguished Senator from Washington, and he told me he did not intend to speak on the amendment.

Mr. METZENBAUM. Is that right?

Mr. FORD. That is what he told me. I do not know that it is necessary—I hope we will have 10 minutes each anyhow.

Mr. METZENBAUM. How much time is allowed on each of these amendments?

The PRESIDING OFFICER. Thirty minutes are allowed.

Mr. FORD. The unanimous-consent agreement gotten by the majority leader a few moments ago reduced all amendments to 20 minutes, 10 minutes to each side.

The PRESIDING OFFICER. The Chair's understanding is it is reduced to 30 minutes total. The Senator from Ohio has asked, as the Chair understands, that there be a quorum call of relatively short duration without the time being charged to either side; is that correct?

Mr. METZENBAUM. That is correct. I would just like to ascertain—I am certain the Senator from Kentucky states the fact correctly—but——

The PRESIDING OFFICER. Without objection, it is so ordered, and under those circumstances, the clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. DOMENICI. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOMENICI. Mr. President, I ask unanimous consent that Senator STONE from Florida be shown as an original cosponsor of the Domenici amendment that was just agreed to, the last agreed-to amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOMENICI. I suggest the absence of a quorum.

The PRESIDING OFFICER. On whose time?

Mr. DOMENICI. I am just putting back the quorum that the Senator from Ohio had on.

Mr. METZENBAUM. I am sorry.

Mr. DOMENICI. I obtained a unanimous-consent request and I was going to have the quorum call back on in behalf of the Senator from Ohio with the same request that he had as to whose time it be charged to.

Mr. METZENBAUM. I think I had proposed that it be split equallly between both sides.

Mr. DOMENICI. And that the time come off the bill.

Mr. METZENBAUM. Yes, off the bill, and now I am going to make two calls and I shall be right back.

Mr. SASSER addressed the Chair.

The PRESIDING OFFICER. Is there objection?

Mr. DOMENICI. The Senator from Tennessee was seeking recognition.

Mr. SASSER. Mr. President, will the Senator withhold the request for a quorum call?

Mr. DOMENICI. I am delighted to.

The PRESIDING OFFICER. The request is withdrawn.

Who yields time?

Mr. SASSER. I send an amendment to the desk.

The PRESIDING OFFICER. Does the Senator from Colorado yield time?

Mr. SASSER. Will the Senator from Colorado yield me 5 minutes?

Mr. HASKELL. I believe that if the Senator from Tennessee has an amendment he can send it to the desk and then he has 15 minutes of his own time. I think I know what the amendment is and I think it is meritorious.

The PRESIDING OFFICER. The Senator from Colorado is correct.

Does the Senator from Tennessee send to the desk an amendment?

UP AMENDMENT NO. 773

Mr. SASSER. Mr. President, I send an unprinted amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Tennessee (Mr. SASSER) proposes unprinted amendment No. 773.

Mr. SASSER. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 140, between lines 5 and 6, insert the following and renumber subsequent sections accordingly.

COAL INDUSTRY PERFORMANCE AND COMPETITION STUDY

SEC. 7. (a) The President is hereby requested to make a complete investigation of the performance and competition of the coal industry. The study should be an interagency effort which shall include, but not be limited to, participation by—

(1) Federal Trade Commission,
(2) Department of Justice,
(3) Department of Energy,
(4) Department of Transportation,
(5) Department of Commerce,
(6) Council on Wage and Price Stability,
(7) Tennessee Valley Authority, and
(8) Appalachian Regional Commission.

(b) In particular the study shall consider the following elements relating to competition:

(1) interests in, ownership or production of coal reserves by firms which—

(A) own or have an interest in commodity transportation systems by rail, water or pipeline,

(B) own or produce oil, natural gas or uranium, and

(C) use significant amounts of coal in their processes, including electrical generation and steelmaking,

(2) prices, profitability, and levels of concentration in sales of various identifiable submarket structures in the coal industry, including but not limited to the market for—

(A) steam and metallurgical coal,

(B) low-sulfur coal,

(C) lignite, anthracite, bituminous and subbituminous coal,

(D) spot sales and long-term delivery contracts, and

(E) exports,

(3) overall profitability of coal operations,

(4) capital requirements, sources and uses of funds,

(5) vertical integration of production, cleaning, processing, gasification, liquefaction, transportation, marketing, distribution, combustion and other phases of the coal fuel cycle,

(6) the effect of interfuel ownership, vertical integration and market concentration upon innovation, efficiency, prices and profits,

(7) costs of production, transportation, processing and other components of coal prices for different regions and different types of mines,

(8) responsiveness of coal supply to market demand,

(9) productive capacity,

(10) productivity,

(11) economies and diseconomies of scale,

(12) distribution and flow of executive, managerial and technical personnel between the various coal producers,

(13) management and directorate interlocks,

(14) relationships to financial institutions,

(15) government-industry relationships, including lease bidding, technology, research, development, demonstration and transfer, and personnel movement,

(16) joint ventures, consortia and cross-ownership,

(17) identification of the major owners of coal industry stock,

(18) control of patents and technologies,

(19) barriers to greater competition in the market for coal, and

(20) Federal income tax policies.

(c) The study shall evaluate the economic and social impacts upon coal-producing counties and States of present and prospective land ownership patterns and levels of income, property, severance and other taxes paid by coal producers.

(d) The study shall evaluate public policies toward the export of metallurgical coal as they relate to—

(1) national security,

(2) national energy goals,

(3) balance of payments,

(4) comparative advantage in world trade,

(5) materials policy,

(6) United States and international reserves and resources, or

(7) likely future metallurgical technologies.

(e) Pursuant to the provisions of the preceding subsections of this section, the President shall submit to the Congress such interim reports as he deems advisable and, not later than twenty-four months following the date of the enactment of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act of 1977, a comprehensive and final report to the Congress containing the findings and recommendations of the President with respect to such study and investigation. Such recommendations may include such legislative and administrative actions as the President deems advisable.

(f) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this section.

The PRESIDING OFFICER. The Senator from Tennessee is recognized for not to exceed 15 minutes.

Mr. SASSER. Mr. President, the amendment that I am offering is a very simple one. It simply requires the President to submit to Congress within 2 years a comprehensive study of the nature and performance of the coal industry.

There has been a great deal of discussion here this afternoon and on previous occasions about the growing concentration of coal resources in the hands of large energy industries. I think we owe it to the consumers of the Nation to examine this issue more carefully, and I urge this amendment be adopted to enable us to gain a more complete understanding of this complex problem.

Mr. President, yesterday the Tennessee Valley Authority released a study on the relationships which exist between the coal and oil industries. As it was reported in the Washington Post this morning, Chairman Aubrey Wagner was properly angry at what the study revealed: that the interlocking ownerships of oil and coal interests lead to less competition and unjustly higher prices for consumers.

I deplore this lack of competition and I think that we must take action to correct it.

The amendment I propose is designed to provide us with the information we need to put a stop to the increasing anticompetitive nature of the coal industry. It directs the President to submit to Congress within 2 years a comprehensive report on the nature and performance of the coal industry, with recommendations to insure that consumers may enjoy the full benefits of a vigorously competitive and productive coal industry. The study will draw on the resources of several Federal agencies, and will not be confined to an investigation of the state of the industry alone. It will also examine areas such as export and tax policy, as well as the far-reaching social and economic impacts which this coal conversion program will undoubtedly have.

The people of my State depend heavily on coal for their energy needs. The TVA, as a matter of record, is the Nation's largest single coal consumer. And it is alarming to be told in its report that TVA buys 67 percent of its coal from only eight companies, five of which are owned by large petroleum companies. Most of the oil and gas companies acquired their coal interests in the last 5 years, during which time the price of coal to TVA has jumped by about 400 percent.

Profits in the coal business today are no less impressive. While the average rate of return on common equity is 12 percent, return on investment for some coal companies reaches up to 50 percent. It is no wonder that consumers now pay higher prices for their electricity.

Mr. President, the price on coal is borne by each and every American consumer, whether through the direct costs of home electricity, or through the industrial uses of coal to produce goods. And the consumer also pays the price when prices are inflated in times of national trial, such as now.

We must acquire information. There is not enough information available for the Government of the United States to frame a coherent and rational policy to insure that the goals of coal conversion are met. We do not know basic information about coal company profits. We do not know about the sources and uses of funds in the coal industry. We do not know the full strength and extent of the coal industry's market power. We do not know enough about capital investment requirements. We do not know to what extent the coal producers control transportation. We do not know what the economies and diseconomies of scale are, or what it costs to mine coal in different places and using different coal-mining technologies.

Mr. President, I believe we owe it to the consumers of this Nation to include provisions in this energy legislation to prevent the heavily concentrated energy industry from gaining excessive, lavish profits by it. I believe this amendment is a step in that direction.

I agree that this program is essential to reduce our dependency on foreign sources of energy. Coal conversion will be a significant milestone in the history of this industrial democracy. But I think we must take prudent and positive steps to keep this chapter in American history from being recorded as one about "how to profit from an energy crisis."

I urge adoption of this amendment.

Mr. President, I ask unanimous consent that an article appearing in the Washington Post this morning on the TVA study of noncompetitive nature of the coal industry be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TVA OPPOSES ENERGY FUEL CONTROL BY OIL COMPANIES

(By J. P. Smith)

The Tennessee Valley Authority said yesterday that the spiraling rise in coal and uranium prices in recent years is due, in part to oil company ownership of coal and uranium interests.

"When one company owns all the sources of energy, you don't have competition," TVA head Aubrey J. Wagner said after releasing a report highly critical of integrated oil companies acquiring other fuel holdings.

Wagner said release of the three-volume report was timed to congressional debate today over a floor amendment Sen. Edward Kennedy (D-Mass.) will offer to prevent large oil and natural gas producers from buying up coal and uranium.

The report cites the four-fold rise in coal prices the last five years, and the three-fold jump in uranium prices since 1974. Some of the price boost the report says, "is accounted for by the uncompetitive structure of the coal and uranium markets."

The agency scores the trend since the late '60s and early '70s when many major oil companies moved into coal and uranium markets.

"Since the same group of energy companies which dominate the coal markets also dominate the uranium market, consumers are even deprived of the potential benefits of price and supply competition between those two substitute fuels," the study said.

TVA is the nation's largest coal user, consuming about 5 per cent of U.S. production, and expects to have 17 nuclear power plants in operation by 1986. The federal agency was created by Congress during the Depression and is the nation's largest utility, serving seven Southeastern states. The TVA's fuel costs have risen from $455 million in 1975 to over $730 million last year.

"The coal and uranium markets are so concentrated that any further mergers of large coal companies, uranium companies or energy companies will noticeably increase concentration and the likelihood of uncompetitive practices," the report said.

The report called for legislation preventing further acquisitions by large oil and other energy companies. "We are now endorsing legislation that would put a stop to further mergers for two or three years to determine whether it is in the public interest or not," Wagner said.

TVA also says it will take legal action to try to bar major acquisitions it considers to have anti-competitive implications even if the Federal Trade Commission and Justice Department do not file suits against such acquisitions.

The report is the result of an investigation of coal and uranium interests the agency undertook in April, 1976, but does not call for immediate legal action against mergers which have been completed.

Ironically, the TVA considered purchasing Peabody Coal Co., the agency's largest coal supplier, after Kennecott Copper Corp. was ordered to sell Peabody by the FTC three years ago. TVA later ruled out buying the coal company after widespread criticism that the purchase would have given a government agency a major role in the U.S. coal market.

S. David Freeman, recently named by President Carter to TVA's three-member board, said the report documents that "TVA has been facing a steadily more concentrated market structure. The price it has to pay do not reflect the kind of competition before the oil company takeovers."

Between 1970 and 1975, TVA residential customer's electrical rates nearly doubled.

The report details concentration of larger energy company holdings in the Midwest, Northern Great Plains, and Southwestern states. Concentration is not as heavy, the report said, in the Appalachian coal states, which now supply 30 per cent of TVA's coal needs.

Mr. SASSER. Mr. President, at this time I move passage of this amendment. It is my understanding that the amendment will be accepted by the distinguished manager of the bill and also by the ranking minority member.

Mr. HASKELL. Mr. President, the amendment is very satisfactory to me and I believe the same is true of the minority.

Mr. DOMENICI. The minority has no objection.

The PRESIDING OFFICER. Is all time yielded back?

Mr. HASKELL. I yield back my time.

Mr. SASSER. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Tennessee.

The amendment was agreed to.

UP AMENDMENT NO. 774

Mr. KENNEDY. Mr. President, I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Massachusetts (Mr. KENNEDY) on behalf of himself and Senators LEAHY and BROOKE proposes unprinted amendment No. 774.

On page 80, line 17, after "service." insert the following:

"In the case of a new electric powerplant which, as of April 20, 1977, has received a final decision from an appropriate State energy agency authorizing construction of such powerplant, certification by the appropriate State energy agency that such powerplant is necessary to prevent impairment of reliability of service shall be conclusive that a permanent exemption pursuant to this subsection is necessary to prevent impairment of reliability of service and require the granting of a permanent exemption by the Administrator pursuant to this subsection from the requirements and prohibitions of section 103 of this Act and the penalties of section 303 of this Act."

Mr. KENNEDY. Mr. President, I have talked to the manager of the bill and I believe the minority has also been informed.

The intent of this amendment is to speed the process of exemption from the conversion requirements of the act for those intermediate load powerplants which, prior to the announcement of the President's energy legislation on April 20, have received approval from a State regulatory agency for the construction of such a plant. The amendment says that where an appropriate State agency has, prior to April 20, approved a powerplant for construction and the State agency certifies to the FEA Administrator that the powerplant is necessary to maintain reliability of service, the Administrator shall consider the State determination to be conclusive evidence that the reliability requirement has been fulfilled and shall issue a permanent exemption within 30 days. In other words, this amendment supercedes any requirement that the FEA itself determine reliability. In this narrow case that determination is left to the State.

The virtue of this amendment is that it respects the action of State regulatory agencies and suppliers of electricity to the public who have agreed to construction of an intermediate load powerplant using oil or gas, where such an agreement was reached prior to April 20, 1977. In my opinion, such a criteria, when limited in its scope, is fully as appropriate as the act's requirement that construction has begun, as evidenced by the sinking of pilings or other evidence of construction as required in section 101.

It is completely consistent with the provisions of the bill.

I offer it and I have talked to the members of the staff as well as the manager of the bill and I believe it is acceptable.

Mr. FORD. Mr. President, representing the floor manager of the bill, I discussed the amendment of the Senator from Massachusetts with him, and he says it is perfectly agreeable with him and would suggest that it be agreed to by voice vote, and hopefully the other side of the aisle will agree to it also.

Mr. DOMENICI. We have no objection and yield back the remainder of our time.

The PRESIDING OFFICER. Is all time yielded back?

Mr. FORD. I yield back the remainder of my time.

Mr. KENNEDY. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time is yielded back.

The question is on agreeing to the amendment of the Senator from Massachusetts.

The amendment was agreed to.

UP AMENDMENT NO. 775

Mr. KENNEDY. Mr. President, I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Massachusetts (Mr. KENNEDY) proposes unprinted amendment No. 775.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 138, between lines 19 and 20, insert the following new section:

"ENERGY INFORMATION

"SEC. 314. Any energy information acquired, collected, or held by the Department of Energy shall be subject to the requirements of section 11(d) of the Energy Supply and Environmental Coordination Act of 1974, Public Law 93-319.".

The Table of Contents of the Energy Supply and Environmental Coordination Act of 1974, as amended by this Act, is further amended by adding immediately after

"Sec. 313. Reports."

the following:

"Sec. 314. Energy information.".

Mr. KENNEDY. Mr. President, in 1974 the Energy Supply and Environmental Coordination Act spelled out in very careful detail the powers of the Federal Energy Administration to acquire information. It also, in section 11(d), spelled out how that information was to be protected, how trade secrets were to be held as confidential, how there would be availability of information to those agencies of Government like the FTC and Justice Department that had a need for that information, and how Congress could gain access.

That is a very brief description. But those provisions were very important, and the bill containing them passed overwhelmingly in the House of Representatives and in the Senate.

This amendment insures that all energy information gathered by the Energy Department, whether obtained voluntarily or not, and whether obtained under the Energy Supply Act or under some other authority, will be subject to the provisions of that legislation we passed in 1975. At the current time FEA collects information under different statutes; therefore, it has different regulations and procedures dealing with such information. The result has been denial of some energy data held by FEA to the Attorney General and the FTC.

All this amendment is meant to do is provide a uniform application of laws to energy information. This will effectively reduce the burdens on business because they will not then have to respond to separate and overlapping requests by the different agencies of Government. It also reduces dramatically the potential for duplication of agency action which otherwise may be necessary if each agency wants to acquire particular information for its own purposes.

I think most of us would have assumed that this result was achieved under section 11 of the Energy Supply and Environmental Coordination Act because that really is what Congress intended, I believe. This will simply insure that all energy information in DOE will conform to that particular provision. My concern, unfortunately, is not academic.

Recent hearings before the Subcommittee on Antitrust and Monopoly of the Committee on the Judiciary have disclosed that the Department of Justice and the Federal Trade Commission are being denied the use of data and other information which lies in the files of their sister departments and agencies. Frankly, I am appalled at this situation and I am concerned that the problem will be perpetuated under the new Department of Energy.

The time is ripe for the Congress to correct the situation. The vigorous enforcement of the antitrust laws in the energy industries is crucial to the people of this country. With my proposed amendment we can make it abundantly clear that the Department of Energy does not have the authority to deny the Justice Department and the Federal Trade Commission information which those agencies believe they need to do their jobs and which is already stored or may be collected by or on behalf of the Department of Energy.

This is, after all, one Government. The departments and agencies of the Government must work closely together and share information if the people are to be served well. It is ludicrous to me that the giant energy companies seem to be able to treat each agency concerned with energy competition as separate governments whose files of company-provided energy data are immune from common analysis.

The problem is worse at the Interstate Commerce Commission where the FTC staff has been attempting to assist the ICC in its investigation of whether the ownership of common carrier pipelines by major vertically integrated petroleum companies is in violation of section 7 of the Clayton Antitrust Act. ICC Ex Parte 308 (Sub-No. 1). That section of the Clayton Act relates primarily to mergers and acquisitions; it is a provision with which the ICC has essentially no experience whereas the FTC and the Justice Department deal with it all the time. Despite the FTC's experience with section 7, its superior expertise in antitrust matters, and its long experience with petroleum problems, the ICC officer presiding over the proceeding concluded that the FTC staff could not have access to or make any analysis of the individual company data being provided to the ICC by the petroleum companies.

Now that the energy functions of agencies such as ERDA and the ICC, as well as FEA, are being transferred to the Department of Energy, it is incumbent upon Congress to make clear to DOE the importance we attach to the full participation of the antitrust agencies in the analysis of individual energy company data submitted to DOE or its predecessors. The amendment I propose would guarantee that the FTC and the Department of Justice will have access to all DOE-collected energy data and will be able to use that information for investigations and adjudicative proceedings under the antitrust laws and the FTC Act and for meaningful participation in DOE rulemakings and other proceedings.

This amendment is directly relevant to achieving definitive answers in studies to be made under the competition aspects of the national energy plan. It also is essential if the antitrust enforcement agencies are to fulfill their responsibilities under our antitrust laws.

I have had a chance to talk to the floor manager of the bill. This relates purely to the information sharing procedure, and I can give assurance that this does nothing to affect public disclosure. It adheres to section 11 of the Energy Supply and Environmental Coordination Act, and it will assure that all information that is gathered or held by the Energy Department falls only under that particular provision.

Mr. FORD. Mr. President, will the floor manager of the bill yield for a question as it relates to this amendment?

Mr. HASKELL. Certainly.

Mr. FORD. I am trying to put my thoughts together here. I am under the opinion that when we passed the Department of Energy legislation, the Department was specifically given this direction. It seems to me that we are trying to put the same thing on this bill that we have already mandated the Department to do, to come up with this program.

I would hate to see us not give any thought to what we have already passed, and pass something else and get at cross purposes.

Mr. HASKELL. Mr. President, will the Senator from Massachusetts yield?

Mr. KENNEDY. Yes.

Mr. HASKELL. It is my understanding, I will say to the Senator from Kentucky, that this may well be the fact. In fact, when I first saw it I thought it was. But if it is, this amendment does no harm in saying the same thing over again, and it does deal with protections afforded to confidential information taken under the act. So I think it is an excellent proposal that the Senator from Massachusetts is offering. It may be in prior law. If it is, we can take it out in conference.

Mr. FORD. I just think we are going at cross purposes. This amendment tells them specifically what to do. I think under the Department of Energy legislation, they are given the responsibility of developing a program without any restrictions or curtailment, to come back with an energy program recommendation.

As I say, I think we are at cross purposes. I hope we will find out whether I am right or wrong without having an amendment on every bill that says the same thing, which does not make a whole lot of sense to me.

Mr. KENNEDY. Mr. President, if I may have the attention of the Senator from Kentucky, those particular provisions in the 1975 act were not carried forward for all information.

What happens is that the FEA claims that it still gets information under the other legislation, and therefore, they feel they are not bound by section 11 of the 1974 act if they have gathered information under other provisions. There may well be other information provisions in other legislation passed by this body, and this would make things uniform.

All we really wanted to make sure of in this particular measure is that all information that is gathered by FEA—all information—will follow the section 11 provisions of the 1975 act. But the FEA has interpreted the law so that if they gather information under section 11, those provisions will apply, but if they gather information under other legislation, then the other legislation will apply, and they will be guided by its restrictions or guidelines.

What we are attempting to do it get uniformity, because we have had complaints from industries that have provided information under one particular provision, and then have had to provide it under other provisions, and there is a duplicative burden put on those industries, as well as on the agencies that would have the ability to gather exactly the same information under section 11.

Mr. FORD. I accept the Senator's explanation. All I want is uniformity. Rather than going first under this bill and then under that bill, I wanted to make it clear.

Mr. KENNEDY. We want to make it as clear as we can in the legislation that the clear intention is that if they gather information in the future the provisions of section 11, will be applicable generally for all information that is gathered.

Mr. FORD. I understand.

Mr. KENNEDY. That particular provision has had very extensive hearings by committees in the Senate, and we went into it with great care and detail with industry and other groups; and it seems to me that those are very valuable guidelines that are not always being adhered to.

Mr. FORD. What the Senator is trying to do and what I want are identically the same thing. I hope he will arrive at that point.

Mr. KENNEDY. I thank the Senator.

Mr. HASKELL. Mr. President, as I have stated before, the amendment is satisfactory to me.

The PRESIDING OFFICER. Is all remaining time yielded back?

Mr. HASKELL. I yield back the remainder of my time.

Mr. KENNEDY. All time is yielded back, Mr. President.

Mr. HANSEN. Mr. President, may I suggest the absence of a quorum, to be charged equally against both sides?

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HANSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HANSEN. Mr. President, there is no objection so far as I know from this side of the aisle. We are willing to accept the amendment.

Mr. HASKELL. I yield back the remainder of my time.

Mr. HANSEN. I yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 776

Mr. GLENN. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Ohio (Mr. GLENN) proposes an unprinted amendment numbered 776.

Mr. GLENN. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER (Mr. CANNON). Without objection, it is so ordered.

The amendment is as follows:

On page 134, between lines 13 and 14, add a new subsection to read as follows:

"(g) (1) In the event the President—

"(A) declares a severe energy supply interruption, as defined in section 3(8) of the Energy Policy and Conservation Act or

"(B) finds that a national or regional

shortage of natural gas exists or may exist which the President determines—

"(I) is, or is likely to be, of significant scope and duration, and of an emergency nature; and

"(II) causes, or may cause, major adverse impact on public health, safety or welfare or on the economy;

the Administrator may take such action as is authorized under paragraph (2) of this subsection.

"(2) Immediately upon a declaration or finding of the President under paragraph (1) of this subsection, the Administrator may, by order, prohibit any powerplant or major fuel burning installation from burning natural gas if the Administrator, in his discretion, determines that:

"(i) such powerplant or installation had on August 1, 1977 (or at any time thereafter) the capability to burn petroleum products,

"(ii) an order under section 203(a) of this Act has not been issued, with respect to such powerplant or installation,

"(iii) significant quantities of natural gas otherwise burned by such powerplant or installation would be saved prior to the expiration of the emergency period,

"(iv) petroleum products are expected to be available during the period the order is in effect;

"(3) The Administrator may specify in any order issued under this subsection the periods of time during which the order will be in effect and the quantity (or rate of use) of natural gas that may be burned by a powerplant or major fuel burning installation during such periods, including the burning of natural gas by a powerplant to meet peak load requirements.

"(4) Conversion to petroleum products pursuant to an order issued under this subsection shall not be deemed to be a modification for the purposes of paragraphs (2) and (4) of subsection 111(a) of the Clean Air Act, as amended.

"(5) The Administrator shall exempt from any order issued pursuant to this subsection the burning of natural gas for the necessary processes of ignition, startup, testing, and flame stabilization by a facility.

"(6) The Administrator shall modify or suspend any order issued pursuant to this subsection to the extent necessary to alleviate short-term air quality emergencies or other danger to the public health, or welfare.".

Mr. GLENN. Mr. President, the experience of last winter's severe natural gas shortage with its attendant hardships of business shutdowns and school closings revealed our excessive dependence upon natural gas. Existing law as amended by S. 977 will help alleviate that dependence on natural gas through conversions to coal. This law will similarly reduce our excessive dependence on oil through conversions from oil to coal. However, neither existing law nor S. 977 provides the Administrator with what I believe to be the needed additional flexibility during times of natural gas shortage to order conversions from gas to oil. My amendment would authorize such gas to oil conversions during natural gas supply emergencies declared by the President.

Under the terms of my amendment, the Administrator's authority to require such conversions would be narrowly limited. After the President's emergency declaration, the Administrator would have to determine that the facilities to be converted have the capability to burn oil on or after August 1, 1977, and are not subject to an order to burn coal under other provisions of S. 977. The Administrator must also determine that significant amounts of gas would be freed up by the facility during the emergency period.

The House-passed National Energy Act contains a provision similar to this amendment. Moreover, another provision similar to this amendment passed the Senate in the 94th Congress as part of S. 2310, the major natural gas legislation considered by the Congress. That provision was initially proposed by the Ford administration, which consistently supported its enactment. The entire bill, however, died in the House. The Carter administration would like to have this type of authority available for emergency situations and, therefore, also supports this concept. The administration position is that authority to order conversions from natural gas to oil during a natural gas emergency is appropriate as part of S. 977 and should be included.

If the provisions of my amendment were utilized during a natural gas emergency, much-needed natural gas could be freed-up for residential and other high priority uses. Existing curtailment authority would not be adequate to fully accomplish this objective. Last winter's natural gas shortage should not be quickly forgotten. We must prepare well ahead of time for what may be another difficult winter. Providing for adequate mechanisms to assure natural gas in emergencies to those hardest hit should be one of our highest priorities.

Mr. HASKELL. Mr. President, I really believe the idea contained in the amendment obviously is meritorious. The Energy Committee today, tomorrow, and probably Monday, will be marking up the natural gas amendments. This amendment, I am told—I have not had the chance to personally examine it but I am told—goes beyond what the Congress had previously authorized. I am sure the intent is good. As far as I know, the intent is carried out well in the drafting of the amendment. However, I will have to oppose this amendment not because I do not think it is necessarily a good idea, but because it deals with a subject that the committee is right at this minute considering. It really is only on that basis that I would oppose this amendment.

Mr. GLENN. I submit to the distinguished floor manager of the bill that the Natural Gas Act before, of course, ran into trouble last year. It had a similar provision in it to this. Of course, it died. It may well be a controversial piece of legislation again this year. There is precedent for considering gas measures in this bill. We have a provision in this bill now to prohibit electric utilities from burning gas, for instance, after 1990. So we are, in a way, already dealing with gas in this particular piece of legislation.

The reason I would like to see it in this particular bill is because winter is upon us. If we get into a lengthy debate with the natural gas bill, for whatever reason it does not pass in this session of Congress, with our limited legislative days left this year, then this additional flexibility, which the Ford administration, the Carter administration, and the Senate last year passed as part of S. 2310, would not be given to the administration this year. It could be very valuable if we find ourselves in a situation similar to last year.

The administration has indicated they do want it on this bill. We have their full support on this. I would urge the floor manager of the bill to accept this. I do not want to go to a record vote, but I would hope the floor manager could see his way clear to accept this provision. The minority, I believe, indicated their support for this earlier.

Mr. HASKELL. Mr. President, all I can do is reiterate what I said before. This very matter of natural gas is before the Energy Committee. This does go, at least the one that was at the desk before, beyond what the Congress did last year. I understand that in the House energy bill, as such—which is a very large package—something comparable to this is involved. For that reason, obviously, the matter would be in conference. If we want to go to a record vote, let us go to a record vote, but I cannot accept it.

Mr. GLENN. Mr. President, in that case, I ask for the yeas and nays on this amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. HANSEN. Mr. President, may I observe that, in the opinion of the Senator from Wyoming, section 308(a)(1) of the bill, I believe, covers substantially what is intended to be handled by the amendment offered by the Senator from Ohio. In addition to the very cogent reasons which were stated for opposing the amendment by my friend from Colorado, the floor manager of the bill, I, too, would hope that the amendment might be rejected.

The PRESIDING OFFICER. Do Senators yield back their time?

Mr. HASKELL. Mr. President, I yield back my time.

Mr. GLENN. If the Chair will wait just a moment, we are checking the section just referred to by the Senator from Wyoming.

Mr. HANSEN. Page 131.

Mr. GLENN. I would ask the Senator from Wyoming and the distinguished floor manager of the bill on this side of the aisle if on page 131, to clarify that portion which was what our amendment would have done, really, if they would accept on line 19 after the word "petroleum" adding "or both"? That would clarify it and I would be happy to withdraw my amendment, if that would be acceptable.

Mr. HASKELL. Mr. President, I would have to say to the distinguished Senator from Ohio, I am a little slow in the upstairs department and I cannot operate quite that quickly. However, if it is meritorious, it is the kind of thing I would think we could push in conference. I just cannot that quickly absorb something, I say to the distinguished Senator.

Mr. HANSEN. If the Senator from Colorado would yield to me for an observation, I would say to my friend from Ohio it seems as though, and he suggests

inserting "or both" after "petroleum" in line 19—is that right?

Mr. GLENN. That is correct.

Mr. HANSEN. To pick it up, "or major fuel-burning installation using natural gas or petroleum."

It would seem to me that if such an installation used both, clearly this language would cover it anyway. Would that not be the feeling of my friend from Ohio?

Mr. GLENN. No. The intent of that in the words "or both" being added would be to convert from one to the other. Right now, by existing law, we cannot do that. We cannot convert now from gas to oil even though there might be a natural gas shortage and oil would be available. That is what we were trying to correct. The "or both" would permit it to go either direction, as I would interpret it.

Mr. HASKELL. Mr. President, I am informed that that particular section of the bill has been amended by Senator MUSKIE. I am not quite sure how things mesh at this particular stage of the game.

I am prepared to yield back the remainder of my time.

Mr. GLENN. A record vote has been ordered, I believe. Is that correct, I will ask the Chair?

The PRESIDING OFFICER. That is correct.

Mr. GLENN. Mr. President, I am prepared to yield back the remainder of my time and go to a vote.

Mr. HASKELL. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr HUMPHREY), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), the Senator from South Dakota (Mr. ABOUREZK), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

On this vote, the Senator from Alabama (Mr. SPARKMAN) is paired with the Senator from Minnesota (Mr. HUMPHREY). If present and voting, the Senator from Alabama would vote "nay" and the Senator from Minnesota would vote "yea."

Mr. STEVENS. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from Oregon (Mr. HATFIELD), the Senator from Nevada (Mr. LAXALT), the Senator from Maryland (Mr. MATHIAS), the Senator from Idaho (Mr. MCCLURE), the Senator from Oregon (Mr. PACKWOOD), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD), would vote "yea."

The result was announced—yeas 31, nays 55, as follows:

[Rollcall Vote No. 354 Leg.]

YEAS—31

Anderson	Bartlett	Bayh
Bumpers	Hollings	Percy
Byrd, Harry F., Jr.	Inouye	Ribicoff
Cannon	Javits	Riegle
Case	Leahy	Roth
Cranston	Lugar	Sarbanes
Dole	McIntyre	Schweiker
Glenn	Metzenbaum	Stevens
Hart	Morgan	Thurmond
Heinz	Moynihan	Zorinsky
	Pell	

NAYS—55

Allen	Ford	Nelson
Baker	Garn	Nunn
Bellmon	Gravel	Pearson
Bentsen	Hansen	Proxmire
Biden	Haskell	Randolph
Burdick	Hatch	Sasser
Byrd, Robert C.	Hathaway	Schmitt
Chafee	Hayakawa	Scott
Chiles	Helms	Stafford
Church	Huddleston	Stennis
Clark	Jackson	Stevenson
Culver	Johnston	Stone
Curtis	Kennedy	Talmadge
Danforth	Long	Tower
DeConcini	Magnuson	Wallop
Domenici	Matsunaga	Weicker
Durkin	McGovern	Williams
Eagleton	Melcher	
Eastland	Muskie	

NOT VOTING—14

Abourezk	Humphrey	Metcalf
Brooke	Laxalt	Packwood
Goldwater	Mathias	Sparkman
Griffin	McClellan	Young
Hatfield	McClure	

So the amendment was rejected.

Mr. HASKELL. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. CRANSTON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 777

Mr. CRANSTON. Mr. President, on behalf of myself and Senator HAYAKAWA, I send an amendment to the desk and ask for its immediate consideration. This will not require a rollcall.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from California (Mr. CRANSTON) proposes an unprinted amendment Number 777:

On page 117, line 18, after "thereon." insert the following:

"The Administrator, upon receipt of such application, shall consult with the appropriate State energy agencies having primary authority to permit or regulate the construction or operation of the electric powerplant or, where appropriate, major fuel-burning installation which is the subject of such application."

Mr. CRANSTON. Mr. President, I yield to the Senator from West Virginia.

Mr. ROBERT C. BYRD. I thank the Senator.

Mr. President, I ask unanimous consent that time on any remaining rollcall votes tonight be limited to 10 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, this amendment is to clarify S. 977, the Natural Gas and Petroleum Conservation and Coal Utilization Act of 1977, with respect to the role of State energy agencies.

The bill implies that State energy agencies—those agencies that are responsible for permitting or regulating the construction or operation of electric powerplants—are not to be denied their important role in the exemption process. The committee has recognized the meaningful contribution that can be made to energy decisionmaking by the State agencies that have been established to oversee powerplant siting in their areas. However, I believe that the matter is of enough importance to merit clarifying language.

Too often in energy—as well as other matters—decisions have been made in Washington without first taking into consideration their potential impacts on regional or local areas. The Senate has tried to come to grips with this problem. For example, the Senate recently approved legislation which will, if enacted, bring affected coastal States into the program for developing our offshore oil and gas reserves. By providing for the input of the coastal areas, we hope to avoid many of the environmental problems and procedural delays that have long plagued our Nation's search for oil and gas along the Outer Continental Shelf.

In much the same way, the Federal Government has an obligation, I believe, to insure that State concerns are fully considered before applications for powerplant exemptions are decided in Washington.

This amendment simply makes it clear that the Administrator of the Federal Energy Administration—or the President's designee for the purposes of this act—shall consult with State energy agencies in exemption matters.

I understand that this amendment is acceptable to the majority and minority on the committee. I trust this is the case and that the amendment can be adopted.

Mr. HASKELL. Mr. President, it seems to me to be a very meritorious amendment and is acceptable to the majority.

Mr. DOMENICI. Mr. President, the minority has no objection. I yield back the remainder of my time.

Mr. HASKELL. I yield back the remainder of my time.

Mr. CRANSTON. I thank the Senator.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from California.

The amendment was agreed to.

UP AMENDMENT NO. 778

Mr. CRANSTON. Mr. President, on the previously adopted Kennedy amendment (UP 774) I would like to ask unanimous consent to offer an amendment to that amendment. It will have no effect on the substance of the Kennedy amendment. It is something affecting a powerplant in California, as his amendment affected a powerplant in Massachusetts.

The language has been worked out with the committee. It is acceptable to them. While we were doing that, the Kennedy amendment went through without my being aware of the fact.

Therefore, I ask unanimous consent that I may offer an amendment to the Kennedy amendment.

The PRESIDING OFFICER. Is there objection?

Mr. HASKELL. Reserving the right to object, I think we have a lack of communication in staff. I do not know whether I have seen this.

Mr. CRANSTON. This is an amendment that I discussed with the Senator from Colorado which affects a single powerplant in California which has an application pending. We have written an amendment, pursuant to the discussions that the Senator and I had, which makes very plain that it is only this one plant that would be affected. It does not open the barn door.

Mr. HASKELL. I do not object to offering it. I want to hear it before I accept it.

Mr. CRANSTON. I am just asking consent to offer it.

Mr. HASKELL. I have no objection.

The PRESIDING OFFICER. Without objection, the amendment is in order.

Mr. CRANSTON. It amends amendment No. 774. I will read the amendment to the Senator, and then I will send it to the desk:

On the previously adopted Kennedy amendment on the fourth line after the word, *"powerplant,"* insert the following: or in the case of an electric powerplant consisting of one or more combined cycle units in an electric utility system serving at least two million customers for which an application has been filed for at least one year prior to the date of enactment of this section with the appropriate State energy agency for authorization to construct such powerplant,".

That is the language.

Mr. HASKELL. I say to the distinguished Senator from California that I have no objection.

Mr. CRANSTON. I send the amendment to the desk at this point, and I thank the Senator very much.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 779

Mr. METZENBAUM. Mr. President, I call up my amendment which is at the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Ohio (Mr. METZENBAUM), for himself, Mr. JACKSON, and Mr. KENNEDY, proposes an unprinted amendment numbered 779.

Mr. METZENBAUM. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

Insert at an appropriate point in title III:

"SEC. . If the Administrator determines that during any 12-month period, computed on a quarterly basis, the rate of increase in the weighted average price of coal committed to contract is 10 percent, or more, greater than the rate of inflation as measured by the adjusted GNP deflator, the Administrator shall, within 60 days of such determination, make such recommendations to the Congress in connection therewith as he deems appropriate."

Mr. METZENBAUM. Mr. President, I believe Senators will find this amendment on their desks. It is a very simple amendment, an uncomplicated amendment. It directs itself to the problem that I think this Nation faces in the coming years. It has to do with the fact that if the Administrator determines that during any 12-month period the rate of increase of the price of coal has gone up 10 percent greater than the rate of inflation, as measured by the adjusted gross national product deflator, the Administrator is called upon to perform a responsibility. That responsibility is that within 6 days he is to make such recommendations to Congress as he deems appropriate.

This amendment was considered by the Energy Committee. It was not adopted by the Energy Committee. It lost by a vote of 9 to 9.

When we talk about this amendment, I want to make it very clear from the inception that this is nct an amendment to provide for price control. Some persons have suggested that it may be. On the other hand, I am frank enough to say to the Members of the Senate that that could be one of the recommendations of the Administrator, but there could be many others.

The fact is, that no matter what the Administrator's recommendation might be, all this amendment would do would be to require the Administrator to come forth with a recommendation to Congress.

I think we have to concern ourselves about this subject for the following reason:

We have to concern ourselves about it because the administration program provides for a doubling of consumption of coal within the next 7 or 8 years. It is anticipated that the utilities will increase their consumption of coal from 459 million tons in 1976 to 777 million tons in 1985; that industrial users will increase their consumption from 156 million tons to 360 million tons.

Mr. President, I believe that if that occurs and if no attention is given to this subject, if we do not provide an alerting mechanism to the coal companies that Congress has a concern about this subject, we are going to see skyrocketing coal prices. I will state why I believe that.

First, I believe it because informed sources in the industry are talking about a $60-a-ton price. Not all of them; some say it will be less. But it is a fact that prices went from $9.91 in January of 1973, in the spot market, to $17.02 by January of 1974, almost double, and by November of 1974 they had gone up to $31.95. The average price for coal was $8.41 in January of 1973. By January of 1974, it had gone up to $11.32. By November of 1974, the average price had gone up to $19.23, more than double the price it was in January of the year previous. Then it receded a bit. But it is now $19.42.

I say to the Members of the Senate that I am personally familiar with situations during 1974 when utility companies in Ohio were required to pay $50 and $55 and $60 a ton.

I want Senators to understand that I expect the price of coal to go up. The amendment I have proposed, in conjunction with Senators JACKSON and KENNEDY, anticipates that prices will go up. They are permitted to go up 10 percent, plus the inflation factor. That would mean approximately 16 percent. Using the present price of approximately $20, that would mean something like $3 a ton.

As a matter of fact, it is fair to point out that the Federal Power Commission, in 1976, indicated in their projections that by 1980 coal would only be $22 a ton, $24 by 1982, and $26.80 by 1985. If that were to be the case, this amendment would not have any impact.

I should point out that the director of the TVA was talking about this subject of increased coal prices in a report he made just yesterday. The report cites the fourfold increase in coal prices in the last 5 years and the threefold jump in uranium prices since 1974.

I hope that coal prices will not go up, but when demand is great, as is anticipated, I believe that Congress should in some way give an indication to the coal companies that if that occurs, we will be interested in legislative proposals that might have some impact, that could have some impact, in holding down prices.

It is fair to point out that I believe there will be additional costs in the mining of coal by reason of the new contract with mine workers. I believe there will be additional cost by reason of the Strip Mining Act. I believe there will be additional cost by reason of the Environmental Protection Act.

That would be taken into consideration by the Administrator; and if he concluded that by reason of those increased costs the only recommendation he should make to Congress would be that it take no action in connection with coal prices, that would be highly appropriate.

However, we now have prices that are limited and regulated with respect to natural gas; we now have limitations with respect to the price of oil. But with respect to coal, which we are urging people to use, which we want industries to use, which we want utilities to use, there is no way of providing for any regulation, any concern on the part of our Government as pertains to those prices which could rapidly soar.

So I urge upon the Senate that it adopt this amendment and at least give us an opportunity to place the responsibility on the Administrator to come forward with some program, if there need be one; and if there need not be one, then I would not expect that he would do so.

Mr. HANSEN. Mr. President, I yield such time as may be required to the distinguished Senator from Kentucky.

Mr. FORD. I thank the distinguished Senator from Wyoming.

I rise in opposition, Mr. President, to the amendment by the Senator from Ohio. He says in his "Dear Colleague" letter sent to the Senators—and I suppose all get it—that this amendment does not establish price controls.

But if he was not interested in price controls, if it did not mandate some type

of legislation as to price controls, there would be no need for this amendment, so price control is the base for his amendment.

He has just said that the price of coal is going up because this Congress has placed certain restrictions on the coal industry. Will they go up more than 16 percent? We have added the strip mining legislation to it, we have added water pollution control to it; payments of black lung, he forgot, we shifted to the operator, which are an additional cost; mine safety is an additional cost, and then he brought in a new factor that the new contract is going to be an additional cost.

It is strange he would bring up TVA in this statement when they own a great majority of their own coal, so it would not make much difference to them in the pricing.

It seems to me that if you go back and look at the record of the production of coal in this country that one of these things you want is increased production, and I use the Senator's figures. I start in 1968 where we produced 540 million tons; 560 million tons in 1969—and these are the Senator's figures—1970, 602 million tons; but in 1971 we went down to 552 million tons. In 1972 we came back a smidgen to 590 million tons. In 1973 we dropped again to 591 million tons. The reason we dropped was because of the Nixon administration's price controls on coal.

You cannot find where any new investment was made to extract coal because of price controls. Price controls were drying up the production of coal.

If you want to dry up the production of coal—and this administration is depending on this resource—then let us put a price control on it because a rose by any other name is called price controls, and that is exactly what you are doing in this amendment.

The problem that I want to put into the RECORD, one other additional thing I want to put into the RECORD, is that price controls in the early 1970's caused many producers to incur operating losses, and led to declining investment in the expansion of coal production capacity.

In the Senator's support, the Senator from Ohio's support, of the Kennedy amendment—that, by the way, was horizontal divestiture so-called which was defeated by better than 2 to 1—in his support of that amendment the Senator from Ohio cited figures under the decline of production of coal companies which had been purchased by oil companies. But the distinguished Senator from West Virginia said the production had increased in West Virginia 7.5 percent, not a decline.

In addition to citing figures for Island Creek and Old Ben, the Senator suggested that the same pattern was evident in other companies bought up by coal companies, which was refuted.

The Senator is correct, coal production of these companies dropped in the early 1970's. However, the Senator has identified the wrong cause, and that is the problem. Production declines in the coal industry in the early 1970's were caused by the removal of adequate incentives.

The price controls which led to the production turndown in the 1970's are not different in degree from the price controls the Senator is recommending in his amendment. Indeed, his price controls will have the same disastrous effect which he has cited himself in the figures he provided, not the figures I provided. I took his figures.

There is an unsettling development in this legislation in the energy field today. It is a slow, almost unperceivable, movement to weaken the cause for coal as a significant energy source in the medium phase of energy development for this country.

This movement began with the administration's budget figures for this year. The movement has been strengthened by increasingly restrictive legislation limiting the use of coal as a widespread energy resource.

The amendment as suggested by my colleague from Ohio threatens to accelerate that movement toward what might reasonably be called the eclipse of coal. I cannot support that, the Nation cannot tolerate it, and I hope that my colleagues will vote to reject the amendment.

Mr. RANDOLPH. Mr. President, will my colleague yield?

Mr. FORD. Yes; I will yield. I do not want to take all the time.

Mr. RANDOLPH. Just for 30 seconds.

Mr. FORD. Yes.

Mr. RANDOLPH. The trend the Senator has mentioned certainly is recognizable and has been in the last few weeks. But we do know there are instances where electric utility companies have moved forward to use coal. The Florida Power Co., not with any help from any Federal source, has committed itself to an electric generating plant fired with coal. That plant in the State of Florida will cost $310 million and produce 600 kilowatts of electricity. There obviously is a recognition in the utility industry that coal must be used.

Mr. FORD. The Senator is quite correct. In Louisville, at the L.G. & E., the Environmental Protection Agency used them as a focal point on what great things are being done to clean up the air, and I believe that if we get into this area the expense is going to be beyond the figure which the Senator points out.

I thank the distinguished Senator from Wyoming, and I yield back the remainder of the time.

The PRESIDING OFFICER. Who yields time?

Mr. METZENBAUM. Mr. President, I again want to repeat that this proposal does not contemplate any price control. It is possible, however, that the administrator could come back with that kind of a recommendation, but there is no requirement that he do so.

I also want to say that apparently the distinguished Senator from Kentucky and I read the figures that have been submitted into the record as to production levels a bit differently.

But I am not really certain it makes a lot of difference at this point as to whether it is the coal companies that are independent or coal companies that are owned by petroleum companies because, as I see it, the question is to keep anybody from just getting the idea that this is the time to take advantage of the market.

I want to say to the distinguished Senator from Kentucky, my good friend, who serves on the Energy Committee with me, that I would be prepared if he were prepared to support this amendment, I would have no difficulty at all in putting in a proviso saying that the administrator shall disallow such additional costs as may result from increased labor costs, environmental protection costs, black lung costs, strip mining costs, or any other special factors. I have no desire to have this amendment become effective by reason of increased costs over which the coal companies have no control.

Mr. FORD. Will the Senator allow me to counter his proposal?

Mr. METZENBAUM. Certainly.

Mr. FORD. The Senator states he in no way intends his amendment to control the price of coal, and that it is just merely a monitoring of the prices and a report back on recommendations from the Secretary.

Well, the Federal Government recently conducted a major review of coal prices, and the report, which is a study of coal prices, and it is by the U.S. Council on Wage and Price Stability—now we are already doing that. The Senator's amendment, if what he says there is so, there is really no need for it because it is just duplicating what is already being done by the U.S. Council on Wage and Price Stability, and I want to read what they said.

It shows that the rapid rise and drop in spot market prices that the Senator quoted was easily explained by the then current market conditions.

The report also documented the healthy state of competition in the coal industry. It indicated:

> The outlook for coal prices in the next decade is favorable with good prospects for stable price in 1975 dollars.

If all the Senator from Ohio wants is someone to monitor and to report the U.S. Council on Wage and Price Stability is already doing it. So why does the Senator not just withdraw his amendment and allow a commission that is already in place to do that?

Mr. METZENBAUM. We need the legislative recommendation.

I believe very seriously that without permitting Congress to have a look at this subject in the event there is a need to have a look at it we would be remiss in our responsibility, and it is for that reason that I have drafted the legislation in the language as indicated.

Mr. President, I offer at this time an article from the Wall Street Journal of July 28, 1976, relative to coal company profits and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFITS

Profits. Coal operators can no longer argue so strongly that lagging profits are crimping expansion. Many bankers and coal executives

feel that coal profits are at, or are nearing, levels that can sustain the estimated capital outlays of $15 billion to $22 billion that the industry says will be required to meet 1985's demand.

"Capital generation is becoming possible for companies that a couple of years ago couldn't generate anything", agrees the marketing vice president for a large midwestern coal producer. The reason is the Arab oil embargo, plus furious coal buying by utilities in 1974 to beat the nationwide miners' strike that year. These two events enabled most large producers, who generally sell under long-term contracts, to push up prices on new contracts, renegotiate some existing ones and keep smiling.

The average price of coal has gone up 145 percent during the past three years—to an estimated $18.75 a ton—compared with a rise of only 50 percent in the previous 25 years.

Mr. METZENBAUM. Mr. President, the hour is 8 o'clock p.m. and if the distinguished Senators from Kentucky and Wyoming—I am not sure, does the Senator have something further?

Mr. HASKELL. No.

Mr. METZENBAUM. I am prepared to yield back the remainder of my time.

Mr. FORD. The Senator made one reference that I wish clarified. It is the last reference about the profits. I also wish to point out that it is in the time frame of price and wage controls. He is talking about the new contracts going to cost more money, and he is talking about putting a cap on prices. But he has not said a word about wages.

Mr. METZENBAUM. I did say something about wages.

Mr. FORD. It is going to be involved. The Senator is only going to allow them 10 percent or 6 percent.

Mr. METZENBAUM. No, I did not say that. If the Senator will find the amendment acceptable——

Mr. FORD. This is what I tried to explain a few moments ago when the Senator from Massachusetts was trying to put on an amendment to a bill that I thought we had already in the energy bill.

What the Senator is trying to do now is put another amendment on this energy bill that is already being conducted by another commission.

It is one of the things that the Nation looks at this body and says, "You appoint another committee, you appoint another study, and it is another bureaucratic mess."

We already have a commission to do it. Why not leave them in place and not add additional cost and additional bureaucrats to something that the public does not want?

Mr. METZENBAUM. The Senator alludes to the distinguished Senator from Massachusetts who was interested in this subject. It is a fact that he is a cosponsor of this legislation.

The Senator from Kentucky is aware of the fact that the Senator from Washington, the chairman of the Energy Committee, is a cosponsor of this amendment.

I think that this is the appropriate way to do it. I am prepared to submit the matter to a vote of the Members of the Senate. I ask for a rollcall vote.

Mr. CHURCH. Vote.

Mr. FORD. I would alert the Eastern State Senators that if we have price controls on coal the same thing will happen as did under the Nixon administration and their price control, and coal could not be sold at that time. I was there, and I think I know a little something about what I am talking about.

Mr. METZENBAUM. That would be an excellent argument in the event that the Senate should consider the subject of price control at some future date. That is not the subject before the Senate today.

Mr. FORD. A rose by any other name.

Mr. METZENBAUM. I am prepared to yield back the remainder of my time if the opponents are prepared to yield back the remainder of their time.

Mr. HANSEN. Mr. President, I yield back the remainder of my time.

Mr. METZENBAUM. I ask for the yeas and nays.

The PRESIDING OFFICER (Mr. MOYNIHAN). Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Ohio.

On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY) would vote "yea."

Mr. STEVENS. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Massachusetts (Mr. BROOKE), the Senator from Rhode Island (Mr. CHAFEE), the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from Oregon (Mr. HATFIELD), the Senator from Nevada (Mr. LAXALT), the Senator from Maryland (Mr. MATHIAS), the Senator from Idaho (Mr. MCCLURE), the Senator from Oregon (Mr. PACKWOOD), the Senator from Connecticut (Mr. WEICKER), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Tennessee (Mr. BAKER) and the Senator from Oregon (Mr. HATFIELD) would each vote "nay."

The result was announced—yeas 39, nays 44, as follows:

[Rollcall Vote No. 355 Leg.]

YEAS—39

Anderson	Haskell	Moynihan
Bayh	Hathaway	Muskie
Biden	Heinz	Nelson
Bumpers	Inouye	Pell
Cannon	Jackson	Proxmire
Case	Javits	Ribicoff
Church	Kennedy	Riegle
Clark	Leahy	Sarbanes
Cranston	Magnuson	Sasser
Culver	Matsunaga	Stevenson
DeConcini	McGovern	Stone
Eagleton	McIntyre	Williams
Gravel	Metzenbaum	Zorinsky

NAYS—44

Allen	Ford	Nunn
Bartlett	Garn	Pearson
Bellmon	Glenn	Percy
Bentsen	Hansen	Randolph
Burdick	Hart	Roth
Byrd, Harry F., Jr.	Hatch	Schmitt
	Hayakawa	Schweiker
Byrd, Robert C.	Helms	Scott
Chiles	Hollings	Stafford
Curtis	Huddleston	Stennis
Danforth	Johnston	Stevens
Dole	Long	Talmadge
Domenici	Lugar	Thurmond
Durkin	Melcher	Tower
Eastland	Morgan	Wallop

NOT VOTING—17

Abourezk	Hatfield	Metcalf
Baker	Humphrey	Packwood
Brooke	Laxalt	Sparkman
Chafee	Mathias	Weicker
Go.dwater	McClellan	Young
Griffin	McClure	

So Mr. METZENBAUM's amendment was rejected.

Mr. FORD. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. RANDOLPH. I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing on the motion to lay on the table.

Mr. METZENBAUM. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is not a sufficient second.

The yeas and nays were not ordered.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 780

Mr. HASKELL. Mr. President, I send an unprinted amendment to the desk, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Colorado, (Mr. HASKELL) proposes an unprinted amendment numbered 780.

Mr. HASKELL. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 136, after line 7, insert, "(g) For the purposes of this section, the provisions of sections 201(1)(B)(ii) and 201(2)(B)(ii) shall not apply."

The PRESIDING OFFICER. The Senate will be in order.

The Senator from Colorado may proceed.

Mr. HASKELL. Mr. President, this amendment, I am told, has been cleared with the minority. The purpose of the amendment is to insure that existing facilities which do not have standby coal burning capability are not—repeat not—affected by the existing law or by the bill. As I say, it is my understanding that this has been cleared with the minority. I would appreciate hearing whether that is the case.

Mr. DOMENICI. Mr. President, the minority has no objection. In fact, we compliment the floor manager for this amendment. We think it clarifies the bill, and is consistent with the purposes

with which the committee reported the bill to the floor.

Mr. HASKELL. I yield back the remainder of my time.

Mr. DOMENICI. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado.

The amendment was agreed to.

UP AMENDMENT NO. 781

Mr. HANSEN. Mr. President, I send to the desk an unprinted amendment and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Wyoming (Mr. HANSEN) proposes an unprinted amendment numbered 781.

The amendment is as follows:

On page 134, between lines 13 and 14 insert:

"SEC. 310. The Department of Energy Organization Act is hereby amended by adding a new subsection (g) at the end of Section 503 to read as follows:

"(g) The Secretary or his delegate may not exercise discretion to maintain a civil action (other than an action for injunctive relief) or issue a remedial order against any person whose sole petroleum industry operation relates to the marketing of petroleum products, for any violation of any rules or regulation if—

"(1) such civil action or order is based upon a retroactive application of such rule or regulation or is based upon a retroactive interpretation of such rule or regulation; and

"(2) such person relied in good faith upon rules, regulations, or ruling interpreting such rules or regulations, in effect on the date of the violation.".

Mr. HANSEN. Mr. President, in the hours and days preceeding the August recess as this body sought to take action on the Department of Energy Reorganization Act, a vital provision of the Federal Energy Act of 1974 was inadvertently stricken.

Section 7(k) which limited the FEA's authority to retroactively impose rule changes on petroleum product marketers in its enforcement program was repealed by supposedly purely technical provisions of the DOE bill. Fortunately, this matter was brought to the attention of the Senate and the House and the Congress has received the assurances of both the chairman of the Senate Government Affairs Committee and the chairman of the House Government Operations Committee that it was not the intent of the conferees to repeal section 7(k) and that the concept of that section as a fundamental due process guarantee should be followed by the new Department of Energy.

As well, Secretary Schlesinger indicated both during his confirmation hearings and in a letter to the Senator from Connecticut, the intention of the Carter administration and the DOE to carry out the regulatory functions relative to section 7(k) of the FEA Act as if that subsection were still in force.

I am greatly pleased that this matter came to the attention of the Congress prior to the August recess and assurances were given concerning subsection (k). However, Mr. President, I fear that assurances alone will not be enough since it appears likely that the applicability of section 7(k) to specific factual situations will soon be tested in the courts. It is important that this measure, which was passed by the Congress, be not merely the announced policy of the administration, but a part of the law in order that those who disagree with the administration interpretation of the intent of Congress in the passage of section 7(k) may have that question resolved by the courts as our Constitution has long guaranteed.

Thus today, I bring up an amendment to the Coal Conversion Act to reinstate section 7(k) in order to guarantee that the original intent of Congress in adopting that provision will not only be administration policy but will be part of the law.

Senator JACKSON, the distinguished chairman of the new Energy and Natural Resources Committee joins me in proposing this amendment and I urge its adoption.

Mr. President, this amendment, sponsored by the Senator from Washington (Mr. JACKSON) and me, is designed to make clear what was the intention of the Senate when section 7(k), which limited the FEA's authority to retroactively impose rule changes on petroleum products marketers in its enforcement program, was repealed by supposedly purely technical provisions of the DOE bill.

It was not intended that the whole thing would be struck out. Unfortunately, this matter was brought to the attention of the Senate and the House of Representatives, and Congress has received the assurance of both the chairman of the Senate Government Affairs Committee and the chairman of the House Government Operations Committee that it was not the intent of the conferees to repeal section 7(k), and that the concept of that section as a fundamental due process guarantee should be followed by the new Department of Energy.

While there has been some legislative history put into the record to make clear what the intention of the Congress was, Senator JACKSON and I think it would be well to adopt this amendment so as to leave no doubt at all in the mind of anyone, or the court, as to what was the intention.

Unless there are further questions, I would be prepared to yield back the remainder of my time. I ask my distinguished floor manager if he would accept the amendment.

Mr. HASKELL. Mr. President, I accept the amendment, and I yield back the remainder of my time.

Mr. HANSEN. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. HASKELL. Mr. President, have the yeas and nays been ordered for final passage?

The PRESIDING OFFICER. They have not been ordered.

Mr. HASKELL. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

ADDITIONAL STATEMENTS SUBMITTED

Mr. MUSKIE. Mr. President, as the Senate considers S. 977, the coal conversion bill, it is appropriate to comment on the second budget resolution's relationship in function 300 to forthcoming energy legislation. This month will be "energy month" in the Senate, as we consider various bills that will comprise the national energy plan.

Funding for energy is classified in Function 300: Natural Resources, Environment and Energy. The ceilings for this function recommended in the second budget resolution for fiscal year 1978 are $24.9 billion in budget authority and $20.8 billion in outlays.

These amounts are sufficient to accommodate the various programs found in function 300. These programs include Federal energy activities including those in FEA, ERDA, and the Nuclear Regulatory Commission, the environmental activities of the EPA, the water resources activities of the Corps of Engineers and the Bureau of Reclamation, and various activities of the Department of Interior such as Parks and Federal Land Management.

Mr. President, the recommended ceilings for function 300 are ample. They are designed to fund the major new energy legislation that comprise the national energy plan, additional environmental programs, as well as to supplemental current funding for important natural resources programs. But the ceilings are not designed to accommodate every future spending request that may fall within function 300.

Let me outline the situation in this function. Appropriations to date total $15.5 billion in budget authority and $18.9 billion in outlays. These amounts are $9.4 billion in budget authority and $1.9 billion in outlays below the recommended ceilings of the second budget resolution as reported. While this difference is sizable, the expected requests for additional funding in this function from legislation not yet enacted are even greater.

Mr. President, I ask unanimous consent that a table showing these expected requests for additional fiscal year 1978 funding in function 300 be printed in the RECORD at this point.

The table shows that expected requests for additional funding in function 300 total at least $11.4 billion in budget authority. Together with the other expected additional funding request in this function, the amounts for energy—if all were enacted and fully funded—would bring the functional total to $26.9 billion in budget authority. This is $2 billion above the recommended ceiling of $24.9 billion. Outlay totals associated with this budget authority are within the outlay ceiling of the second budget resolution. However, one reason we are so concerned with limiting budget authority is the future year outlay implications of such authority.

What all this means is that the recommended ceiling for budget authority

in function 300 cannot accommodate every possible item that might emerge. Anyone who believes we should fund everything, who thus believes that the ceiling is too small, ought to try to amend the budget resolution when it is debated by the Senate rather than seek appropriations later that will breach the functional ceiling.

I firmly believe that the function 300 ceilings recommended by the Budget Committee are generous. Not extravagant, but generous. We are recommending, after all, a level that is $9.4 billion in budget authority and $1.9 billion in outlays above what already has been appropriated. And we are recommending ceilings that are $4.2 billion in budget authority and $0.8 billion in outlays above the function 300 targets of the first budget resolution.

But in fiscal year 1978, we are facing a budget deficit of $64 billion, and we simply cannot afford to be extravagant. We cannot afford everything that we would like to have. But we can afford—and the recommended ceilings in function 300 of the second budget resolution allow for—major new spending in fiscal year 1978 for energy, environmental, and natural resource programs.

Expected requests for additional budget authority in function 300

(In billions)

	Budget authority
Action completed and underway	15.5
Expected requests:	
EPA construction grants	4.5
Natural resources supplemental	.5
Energy:	
S. 701—weatherization grants to schools and hospitals	.2
S. 977—coal conversion, as reported	.6
S. 2057—national energy conservation policy	5.3
Indirect costs associated with energy plan	.3
Subtotal, expected requests	(11.4)
Total	26.9
Function 300 recommended ceiling	24.9
Difference	2.0

EXEMPTION OF BASE-LOAD GENERATION FOR RELIABILITY REASONS

Mr. CRANSTON. Mr. President, several possible ambiguities in the committee report have been brought to my attention which could be of great importance to consumers in my State. I would like to discuss these with the very able floor manager of this bill so that there may be no question as to the intent of the language.

Due to the enactment of the Coastal Act of 1972 and the creation of the Energy Resources and Conservation Development Commission and to that agency's requirements for siting powerplants, no new nuclear base-load plant, other than the two already under construction at Diablo Canyon, can be licensed and constructed in northern and central California before 1988 at the earliest.

Coal-fired base-load plants are also being planned in the area, but regulatory procedures for siting plants plus normal construction time means that they cannot come on line until 1984 or 1985. Remember, the use of coal is new to my State. California has no commercial coal deposits of its own and no existing transportation system to provide for coal shipment on a large scale. Thus, the problems which might arise in connection with siting such plants are unknown at this time.

As a result, there could be a gap of about 3,000 megawatts of capacity in northern and central California in the 1980 to 1986 period that must be filled to provide for service to customers and to maintain an adequate margin for reliability. The only alternative for meeting this baseload requirement may be the installation of efficient gas turbine combined cycle generators. Most, if not all will be located at the site of existing generating facilities to provide a prudent use of land. Without this capacity, a serious reliability problem is expected to develop in my State.

With these concerns in mind, can the distinguished manager of the bill tell me if the exemption in paragraph (d) "Exemption for Reliability," of section 107 "Special Exemptions for New Electric Powerplants," is a "generic" exemption that would apply to such baseload facilities—the facilities which are needed in my State to insure reliability of service? Or is the exemption in some way limited to peakload or intermediate load plants?

Mr. HASKELL. I thank the distinguished Senator from California for bringing this to my attention. There is a misplaced paragraph on page 49 of the report that might leave that impression. However, it is the intent of the committee that the 107(d) "Exemption for Reliability" be generic to all new electric powerplants including baseload capacity that is necessary to prevent impairment of reliability of service.

Mr. CRANSTON. If I understand the Senator correctly, a utility that will experience a reliability problem—and by that I mean that it will be unable to provide service to customers without curtailment while maintaining a reasonable margin for reliability—can get a permanent exemption for baseload capacity that will be necessary to meet this gap in reliability.

Mr. HASKELL. The Senator is absolutely correct. That is the intent of the committee. We recognized the "reliability gap," as you describe it, that may result from the immediate application of the prohibitions of this legislation and the long leadtime necessary to bring new coal and nuclear facilities on line. This generic exemption is necessarily a permanent one for the life of the exempted facility needed to maintain the reliability of the system recognizing the high capital costs of such capacity. Let it not be mistaken, however, that this legislation is designed to require utilities to take account of the prohibitions it contains in their normal planning processes.

Mr. STEVENS. Mr. President, there are a few questions regarding the application to new facilities in Alaska of the prohibitions against the burning of oil and gas which my colleague from Alaska and I would like to address to the manager of this bill.

Alaska has great potential reserves of coal, as well as oil and gas. But only a very minute portion of this potential has been developed. Commercial production of coal is presently underway at only one field. The rest awaits the development of transportation links, the resolution of some important land-use questions, and some other factors.

But, whether or not coal is available or other sources become practicable, communities in Alaska will continue to grow and new industries will develop; and thus the need for energy will increase. Unless utilities and firms are permitted to use petroleum to meet the growing needs in cases where coal and other sources are not available, the supply of energy in these places will be severely restricted and the economy in both Alaska and the Nation will suffer.

I ask the distinguished Senator from Colorado, does the bill accommodate situations such as this?

Mr. HASKELL. I appreciate the concern of the Senator from Alaska. Yes, the bill requires, in section 106(a), that the Administrator shall grant a permanent exemption for a facility to burn petroleum in the case where an adequate and reliable supply of coal or other fuel is not expected to be available over most of the useful life of the facility. This is intended to cover the type of situation you have mentioned where the coal mines simply are not yet developed.

Mr. STEVENS. I thank the Senator for his answer. As my colleagues are well aware, a lively debate is currently running over the disposition of some Federal lands in Alaska. The outcome will affect development of coal and other energy resources on non-Federal as well as Federal lands, since air and water quality standards are affected and some transportation corridors may be impacted. The pending nature of these questions will probably delay the development of coal and other energy resources. Does S. 977 recognize this situation?

Mr. HASKELL. Yes, the provisions in section 106 which I just mentioned would apply here and, in addition, the circumstances under which an exemption shall be granted includes "other physical, environmental, and legal factors—including, but not limited to, applicable environmental requirements—exist which cannot reasonably be expected to be overcome by diligent good faith efforts by the applicant and which preclude compliance." Transportation, and land use, air and water quality problems in Alaska are covered here.

Mr. STEVENS. I thank the Senator.

Mr. GRAVEL. I appreciate the response of the floor manager to the questions of my colleague from Alaska. I am also concerned that the bill might require the use of coal or other fuel in cases where it is inordinately uneconomic. What exemption could be obtained here?

Mr. HASKELL. I thank the Senator from Alaska for his question. An exemp-

tion shall also be granted when, and I quote from section 106(a)(1)(B):

The cost of using coal or other fuel substantially exceeds the cost of using imported petroleum.

To demonstrate that coal or other fuel is uneconomic, it is sufficient that the applicant make a good faith attempt, without success, to secure bids for the purchase of coal, or alternate fuel, which would result in a cost below that of imported petroleum.

Mr. GRAVEL. I appreciate the Senator's answer to my question.

STANDBY FUEL USE

Mr. HARRY F. BYRD, JR. Section 207 (e) of S. 977 provides for a permanent exemption from the operation of the coal conversion program for units maintained for standby or emergency purposes. One of the industrial facilities in my State plans to convert a recovery boiler—which is used to recover chemicals for reuse—to a standby basis. However, in order to prevent corrosion of the equipment, it will be necessary to burn a small amount of fuel in the boiler, although the total oil consumption at the site will not increase. The boiler would be used at full capacity only when unanticipated equipment outages occur. Would section 207 (e) authorize a company to maintain this standby equipment in this manner for that purpose?

Mr. HASKELL. Yes, S. 977 contemplates that a permanent exemption will be granted for units for standby or emergency operations including the minimum amounts of fuel necessary to maintain such units in operating condition.

NEED FOR EARLY PLANNING PROCESS REPORTS

Mr. HANSEN. Am I correct in my understanding of title I of S. 977, that a new facility is automatically subject to the prohibitions of that title unless an exception or exemption is received?

Mr. HASKELL. Yes; that is essentially the way title I would operate.

Mr. HANSEN. This would then be a significant change from existing law. Under the Energy Supply and Environmental Coordination Act of 1974, the Administrator is required to identify specific new facilities in order to issue prohibition orders. In light of this, it would appear that S. 977 would substantially reduce the paperwork burden on the new Department of Energy as well as upon the private sector, since there will no longer be a need for collection of early planning process reports.

Mr. HASKELL. Yes; one of the important goals of S. 977 was to simplify the administrative burdens of implementing a program designed to foster greater coal utilization. In view of the change from existing law made in title I of S. 977, the lengthy form FEA C-607-S-0—major fuel-burning installation early planning process identification report—would no longer appear to be required; a less burdensome reporting requirement would appear appropriate, where new installations will utilize coal or other fuels in lieu of natural gas or petroleum.

Mr. SCHMITT. Mr. President, the Energy and Natural Resources Committee has reported a bill intended to increase our utilization of coal and decrease our consumption of natural gas and petroleum. At the outset this is a difficult task. Our oil and gas industries respond to a curious and often burdensome combination of free market and governmental planning economic signals. This is becoming more and more true of our coal industry, as well. Past experience has shown that the result of Federal actions is not always what was intended by the Congress or the regulating bureaucrats. I honestly believe this is the case with S. 977.

Let us talk first about oil. We are told that this is a petroleum conservation bill in its title. This may even be the intent of the committee, but is certainly not the projected outcome of S. 977.

For all practical purposes there is no such thing as "conversion" from gas to coal; it is not feasible economically. So, those presently burning natural gas are faced with two choices: Either abandon their existing facilities and replace them with coal burning or nuclear facilities—the intent of the committee and, perhaps the long term outcome—or substitute oil for natural gas and accept the reduced plant efficiency and increased environmental costs. Our jumbled economic signals will lead to a decision to substitute oil for natural gas, at least in the short term. Thus, oil imports will increase to cover this new use.

We are told that this is a natural gas conservation bill, again in the title. On this point, however, the committee is correct.

We would conserve natural gas for residential customers, largely in the East and Far West. At what expense is natural gas conserved; who are the losers? If S. 977 passes the losers are those who followed the economic signals for the last 25 years and used the cheapest and most convenient fuel available—natural gas. Where are the losers? Or perhaps a better question, where are the industrial and utility users of natural gas? If they do not know already the burden will fall on the people of Oklahoma, Texas, Louisiana, New Mexico and many others.

Finally, we are told that this bill will increase coal utilization. In our patchwork energy economic system that may or may not be true. In order to burn more coal, more coal must be mined and transported to a user. New coal plants will not be built unless a coal supply specifically for a given plant can be guaranteed. OTA was recently told this by the largest source of financing for coal development, the Continental Bank of Chicago. The Federal Government now stands as the major holder of new coal supplies. Is the committee prepared to guarantee that these new supplies will be made available for commercial development? Without the guarantee of new coal supplies, there will be no massive building program for new coal facilities.

We, in the Senate—to the man—are deeply concerned about natural gas shortages and our vulnerability to foreign political intrigues. We all recognize the enormous potential of coal. Why is it that so many of us feel that private firms are not equally capable of understanding these basic facts? Further complication of our economic signals will not conserve gas or oil, and will not produce more coal. People do these things and they do it best with minimum Federal intervention. In principle I cannot accept S. 977, because it thwarts the basic economic signals necessary to save oil and gas, and produce more coal. The best Coal Utilization Act that this body could possibly enact is the price deregulation of oil and natural gas and the increased emphasis on research and development related to improved coal mining, cleaning, and utilization.

In practice I have stated that S. 977 will not conserve oil, will conserve gas, but at disproportionate cost to some, and may not result in more coal.

In addition, S. 977 will have great and only incompletely analyzed economic impact on business and all consumers. New sources of already scarce capital must be found. New costs must be added to the monthly energy bill. New distortions in coal transportation will occur.

Finally, and most importantly, the Washington bureaucracy will further control our energy economy without any foreseeable benefits. These and other points of importance have been well covered by Senator BARTLETT in his minority views in the committee report on S. 977.

Frankly, I think it will serve no useful purpose to continue supporting the vain hope that "Government can do it better." Very simply, Government cannot do it better. The sooner we eliminate the attitude that profits are bad, that all companies act to harm the public good, the more productive we will be as a nation.

I will vote, and urge all my colleagues to vote, against just one more layer of bureaucracy—one more phony signal.

Mr. JACKSON. Mr. President, upon final Senate action on this, the coal conversion measure, I want to commend the senior Senator from West Virginia, (Mr. RANDOLPH) for his leadership in shaping the concepts embodied in the bill.

Senator RANDOLPH has long been an advocate of increased coal use. The distinguished Senator from West Virginia has ably represented in this body, for almost two decades, one of the largest coal-producing States in our Nation. He has constantly during this service, espoused the benefits of coal as a primary energy source.

Senator RANDOLPH has continually sponsored legislation to expand the uses of coal. He has been a vigorous proponent of synthetic fuels produced from coal and liquification processes. The Senator has been a leader in developing coal conversion legislation.

As the energy crisis became a reality in 1973, Senator RANDOLPH helped develop the first legislation mandating the conversion to coal by electric utilities. His interest in furthering coal conversion has continued in recent years as evidenced by legislation introduced by the senior Senator from West Virginia (Mr. RANDOLPH).

Senator RANDOLPH is a cosponsor of the legislation which the Energy and Natural Resources Committee used to develop the pending measure. A substantial portion of Senator RANDOLPH's ideas

are retained in the bill on which the Senate is completing action today.

I commend the Senator for his foresight in recognizing the importance of coal as an energy source. His effective efforts on behalf of coal are valuable as the Senate continues to respond to the national energy problem.

Mr. President, Senator RANDOLPH has been a leader in energy policy decisions throughout his career. Even before his service in the Senate, during his years in the House of Representatives, he headed efforts to improve coal technologies and to strengthen American coal production capabilities. I cannot recall any significant energy issue in recent years in which Senator RANDOLPH was not importantly involved. His hard work and expertise have been influential in shaping every major energy measure acted upon by the Congress.

He was among the first of our national leaders to recognize the seriousness of the energy crisis. The package of proposals transmitted to the Congress by President Carter in his energy message reflects many concepts originally developed with Senator RANDOLPH's participation. This measure, the coal conversion portion of the energy package, is only one of such concepts.

UP AMENDMENT NO. 782

Mr. JACKSON. Mr. President, I send an unprinted amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The clerk will report the amendment.

The legislative clerk read as follows:

The Senator from Washington (Mr. JACKSON) proposes unprinted amendment No. 782:

At the end of S. 977, add the following: *"Provided,"* that title III of H.R. 5146 shall not be effective so long as title II of H.R. 5146 remains law."

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendments to be proposed, the question is on agreeing to the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and the third reading of the bill.

The bill was ordered to be engrossed for a third reading and read the third time.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all references to S. 701 which were in the agreement entered into today be vitiated.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Now, Mr. President, under the unanimous-consent agreement, H.R. 5146, as amended, in accordance with that agreement, is to be voted upon without a rollcall vote. The yeas and nays have been ordered on the Senate bill. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the yeas and nays on the Senate bill be vitiated.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Now, Mr. President, I ask for the yeas and nays on H.R. 5146, as amended.

The PRESIDING OFFICER. The Chair will state that, under the previous order, the bill will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 5146) to amend the Tariff Schedules of the United States to provide for the duty-free entry of competition bobsleds and luges.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

UP AMENDMENT NO. 783

The PRESIDING OFFICER. Under the order previously entered certain amendments are made thereto.

The amendments are as follows:

TITLE II—NATURAL GAS AND PETROLEUM CONSERVATION AND COAL UTILIZATION POLICY ACT OF 1977

SEC. 201. This title may be cited as the "Natural Gas and Petroleum Conservation and Coal Utilization Policy Act of 1977".

SHORT TITLE

SEC. 202. The Energy Supply and Environmental Coordination Act of 1974, as amended, is amended by striking out the table of contents and sections 1 (a) and (b), and inserting in lieu thereof, following the enacting clause, the following: "That this Act may be cited as the 'Natural Gas and Petroleum Conservation and Coal Utilization Policy Act'.

"TABLE OF CONTENTS

"Sec. 1. Short title.
"Sec. 2. Findings and purposes.
"Sec. 3. General definitions.

"TITLE I—NATURAL GAS AND PETROLEUM CONSERVATION BY NEW FACILITIES

"Sec. 101. Definitions.
"Sec. 102. Territorial application.

"Sec. 412. Definitions.

"FINDINGS AND PURPOSES

"SEC. 2. (a) FINDINGS.—(1) The Congress finds that the protection of public welfare and the preservation of national security require—

"(A) the furtherance of national energy self-sufficiency consistent with applicable environmental requirements;

"(B) the capability to use indigenous energy resources of the United States in lieu of imported or scarce energy supplies by the substitution of coal and other fuels in lieu of natural gas and petroleum as the primary energy sources for certain new electric powerplants and major fuel-burning installations and for certain existing electric powerplants and major fuel-burning installations; and

"(C) the conservation of natural gas and petroleum for uses for which there are no feasible alternative fuels or raw material substitutes.

"(2) The Congress finds that any electric powerplant or any major fuel-burning installation shall be deemed in compliance with the purposes of this Act if such powerplant or installation utilizes coal or other fuel in lieu of natural gas or petroleum as its primary energy source in conformance with applicable environmental requirements.

"(b) PURPOSES.—The purposes of this Act are—

"(1) to assist in meeting the essential needs of the United States for energy in a manner which is consistent, to the fullest extent practicable, with Federal and State commitments to protect the environment;

"(2) to foster the greater use of coal, fuels derived from coal, and other fuels in lieu of natural gas and petroleum as the primary energy sources for certain electric powerplants and major fuel-burning installations;

"(3) to require that new electric powerplants and major fuel-burning installations which propose to use fossil energy resources as a primary energy source use coal or other fuel in lieu of natural gas or petroleum, except in those circumstances provided for herein;

"(4) to encourage the full utilization of coal and energy sources derived from coal through the rehabilitation and upgrading of railroad service and equipment necessary to transport coal or coal products to regions

or States which can use these resources in greater quantities;

"(5) to foster, in those instances where the use of coal or other fuel is not feasible, the replacement or modernization of certain existing electric powerplants or major fuel-burning installations to improve their energy efficiency;

"(6) to reduce the United States' vulnerability to energy supply interruptions; and

"(7) to regulate interstate commerce and for other purposes.

"GENERAL DEFINITIONS

"SEC. 3. For the purposes of this Act:

"(1) The term 'Administrator' means the Administrator of the Federal Energy Administration established by the Federal Energy Administration Act of 1974, as amended; except that if such Administration ceases to exist such term means any officer of the United States designated as Federal Energy Administrator by the President for the purposes of this Act.

"(2) The term 'person' includes (A) any person or individual; (B) any corporation, company, partnership, association, firm, society, trust, joint venture, or joint stock company; (C) the Federal Government, including corporations, departments, Federal agencies, and other instrumentalities thereof; and (D) any State or political subdivision thereof (including the District of Columbia), or any agency or instrumentality of either.

"(3) The term 'natural gas'—

"(A) includes—

"(i) natural gas,

"(ii) liquid petroleum gas,

"(iii) dry natural gas and casing-head gas,

"(iv) synthetic gas derived from petroleum and natural gas liquids, and

"(v) synthetic gas derived from coal, except as provided in (B) (ii) and (iii) of this paragraph;

"(B) but does not include—

"(i) natural gas which is commercially unmarketable (either by reason of quality or quantity) as determined under rules prescribed by the Administrator,

"(ii) synthetic natural gas which is derived from coal where such gas is owned by the user when it enters a pipeline for transportation to the user, and

"(iii) synthetic gas which is derived from coal where such gas has a heat content below six hundred British thermal units per standard cubic foot at 14.73 psia. and 60 degrees Fahrenheit.

"(4) The term 'petroleum' includes crude oil, residual fuel oil, and refined petroleum products, but does not include such substances as (A) liquid petroleum gas, (B) process waste gases, and (C) waste gas, liquid, and solid byproducts of refinery operations within the United States, where such fuels are of a quality or quantity as to be commercially unmarketable, as determined by the Administrator.

"(5) The term 'coal or other fuel' means coal and any fuel other than natural gas or petroleum, including, without limitation, (A) coal derivatives, including synthetic liquid or solid fuels which are derived from coal; (B) nuclear fuels; (C) solar energy; (D) geothermal energy; (E) petroleum coke; (F) combustible municipal, industrial, or agricultural waste; (G) oil extracted from shale or products derived from such oil; (H) wood or other bio-mass, and (I) process waste gases; but does not include coal derivatives where such derivatives are produced by a person for the primary purpose of use as other than a fuel.

"(6) The term 'electric powerplant' means a fossil-fuel-fired electric generating unit, including a gas turbine unit or a combined cycle unit, that produces electric power for the purpose of sale or exchange.

"(7) The term 'peakload' when used to modify electric powerplant means a powerplant which operates the equivalent of less than one thousand five hundred full-load hours per calendar year: *Provided, however,* that hours operated by a peakload unit in an emergency situation shall not be counted against the one thousand five hundred full-load hours per calendar year limitation on peakload operation.

"(8) The term 'intermediate load' when used to modify electric powerplant means a powerplant which operates the equivalent of one thousand five hundred to three thousand five hundred full-load hours per calendar year.

"(9) The term 'base load' when used to modify electric powerplant means a powerplant which operates in excess of the equivalent of three thousand five hundred full-load hours per calendar year.

"(10) The term 'major fuel-burning installation' means a major industrial installation, which is a fossil fuel-fired boiler, a gas turbine unit, combined cycle unit, indirect-fired unit, or internal combustion engine, but does not include (A) an electric powerplant, or (B) a pipeline where natural gas or petroleum is used in the production, gathering, transmission, storage, and distribution of gases and liquids.

"(11) The term 'indirect-fired use' means a use of fuel where the flame or the products of combustion do not come into direct contact with the material being processed.

"(12) The term 'cogeneration facility' means an electric powerplant or a major fuel-burning installation which produces—

"(A) electric energy and

"(B) other forms of useful energy (such as steam, gas or heat) which is, or will be, used for industrial, commercial, or space heating purposes."

"(13) The term 'primary energy source' means the fuel or combination of fuels used simultaneously by an electric powerplant or a major fuel-burning installation for normal operation, but does not include the minimum amounts of fuel required for startup, testing, flame stabilization, or control uses.

"(14) The term 'fuel' means natural gas, petroleum, coal or any other substance which is utilized to produce heat, but does not include natural gas, petroleum, coal, or other substance which is used as a raw material or feedstock for production of other materials.

"(15) The term 'applicable environmental requirements' includes the governmental standards, limitations, or other requirements promulgated pursuant to Federal, State or local law applicable to emissions of environmental pollutants (including air and water polluants) or disposal of solid waste or residues resulting from the combustion of coal or other fuels or the operation of air pollution control equipment, and includes, without limitation, any standard, limitation, or other requirement established pursuant to the Clean Air Act, as amended, the Federal Water Pollution Control Act, as amended, or the Solid Waste Disposal Act, as amended.

"(16) The term 'cost' means total costs (both operating and capital) incurred over the estimated useful life of an electric powerplant or major fuel-burning installation, discounted to present value, as determined by the Administrator. In the case of an electric powerplant, cost shall take into account any change in the utilization of such powerplant in the relevant dispatching system and other economic factors that are included in planning for the production, transmission, and distribution of electric power within such system.

"(17) The term 'legal factors' includes all applicable Federal, State, or local governmental laws or other legal requirements but does not include any local governmental standard, limitation, or other requirement applicable to emissions of air pollutants or any local governmental standard, limitation, or other legal requirement applicable to emissions of air pollutants respecting the use of coal that is more stringent than a State or Federal standard, limitation, or other requirement promulgated pursuant to section 110 of the Clean Air Act.

"TITLE I—NATURAL GAS AND PETROLEUM CONSERVATION BY NEW FACILITIES

"DEFINITIONS

"SEC. 101. For the purposes of this title:

"(1) The term 'new electric powerplant' means any electric powerplant—

"(A) (i) with respect to which an order was issued pursuant to section 2(c) of the Energy Supply and Environmental Coordination Act of 1974, as amended, prior to the effective date of this title, or

"(ii) which, as of ninety days after the effective date of regulations implementing section 103 of this title, has not commenced the driving of the foundation piling, or other appropriate on-site structural event, as determined by the Administrator, in accordance with an approved design document for the facility; or

"(iii) which, as of the date of enactment of this title, has not been contracted for in whole or in part or can be canceled, redesigned, or rescheduled without adversely affecting electric system reliability; and

"(B) which (i) is by design capable of consuming fuel at a fuel heat input rate of one hundred million British thermal units per hour or greater, or

"(ii) is a combination of more than one such powerplant at the same site or facility which in the aggregate is by design capable of consuming fuel at a fuel heat input rate of two hundred fifty million British thermal units per hour or greater

"(2) The term 'planning process' means that period ending when the major fuel-burning installation can no longer reasonably be designed and constructed so as to be capable of using coal or other fuel as its primary energy source without incurring significant financial or operational detriment, as determined by rule by the Administrator.

"(3) The term 'new major fuel-burning installation' means a major fuel-burning installation—

"(A) (i) with respect to which an order was issued pursuant to section 2(c) of the Energy Supply and Environmental Coordination Act of 1974, as amended, prior to the effective date of this title, or

"(ii) which, as of the effective date of regulations implementing section 104, is not beyond the planning process; and

"(B) which (i) is by design capable of consuming fuel at a fuel heat input rate of one hundred million British thermal units per hour or greater, or

"(ii) is a combination of more than one such installation at the same site or facility which in the aggregate is by design capable of consuming fuel at a fuel heat input rate of two hundred and fifty million British thermal units per hour or greater.

"(4) The term 'capability to use coal or other fuel' means that a new electric powerplant or new major fuel-burning installation is designed (including the necessary equipment and facilities) to use coal or other fuel as its primary energy source.

"TERRITORIAL APPLICATION

"SEC. 102. The provisions of this title shall apply to the contiguous forty-eight States, Alaska, and the District of Columbia.

"NEW ELECTRIC POWERPLANTS

"SEC. 103. Except as provided for in sections 105, 106, and 107, any new electric powerplant shall be constructed with the capability to use, and shall use, coal or other fuel in lieu of natural gas or petroleum as its primary energy source in compliance with applicable environmental requirements.

"NEW MAJOR FUEL-BURNING INSTALLATIONS

"SEC. 104. Except as provided for in sections 105, 106, and 108, any new major fuel-burning installation shall be constructed with the capability to use, and shall use, coal or other fuel in lieu of natural gas or petroleum as its primary energy source in com-

pliance with applicable environmental requirements: *Provided*, That a new major fuel-burning installation which is by design not capable of consuming fuel at a fuel heat input rate of three hundred million British thermal units per hour or more shall not be subject to the prohibition set forth in this section with respect to petroleum: *Provided further*, That the Federal Energy Administration shall study the effect of this provision and report the results of said study to the Committee on Energy and Natural Resources of the Senate and the Interstate and Foreign Commerce Committee of the House not later than September 15, 1978.

"TEMPORARY EXCEPTIONS

"SEC. 105. (a) GENERAL TEMPORARY EXCEPTION.—The Administrator, upon application of the person owning, constructing, or proposing to construct or operate a new electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title proposing to use petroleum as its primary energy source, shall grant a temporary exception with respect to the use of petroleum from such requirements and prohibitions and the penalties of section 303 of this Act for up to five years, if—

"(1) such person, prior to the effective date of any such requirement or prohibition has submitted a compliance plan to the Administrator containing a compliance schedule for such powerplant or installation which the Administrator has approved pursuant to subsection (d); and

"(2) such person has demonstrated that during the proposed period of the temporary exception, despite diligent good faith efforts,

"(A) (i) an adequate and reliable supply of coal or other fuel allowable as a primary energy source pursuant to sections 103 and 104 of this title and of the quality necessary to achieve compliance with applicable environmental requirements or conformance with design and operation requirements is not expected to be available; or

"(ii) adequate transportation facilities for such coal or other fuel are not expected to be available; or

"(iii) pollution control equipment or devices, including flue gas desulfurization equipment and particulate control equipment, necessary to assure compliance with applicable environmental requirements are not expected to be available; or

"(iv) other equipment or other facilities necessary for the reliable operation of such powerplant or installation are not expected to be available; and

"(B) in the case of a new electric powerplant, there is no alternative supply of electric power which can be obtained from another source for the length of the temporary exception without impairing reliability of service.

"(b) SYNTHETIC FUELS EXCEPTION.—(1) The Administrator, upon application by a person owning, constructing, or proposing to construct a new electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title, proposing to use natural gas or petroleum as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if—

"(A) such person has submitted a compliance plan to the Administrator containing a compliance schedule for such powerplant or installation which the Administrator has approved pursuant to subsection (d) of this section and

"(B) such person has demonstrated—

"(i) that such powerplant or installation will comply with such requirements and prohibitions within five years of their effective date by the use of synthetic fuels derived from coal or other fuel; and

"(ii) that the intention so to comply with the prohibition and the anticipated compliance date is evidenced by the existence of binding contracts for fuels or facilities that would enable the applicant to comply with the prohibition.

"(2) Temporary exceptions under this subsection may be granted for up to five years beyond the effective date of such prohibition, but not beyond the anticipated compliance date. The Administrator shall renew the exception for up to five years if the circumstances justifying the initial exception are likely to persist.

"(c) PUBLIC HEALTH EXCEPTION.—(1) The Administrator, upon application by a person owning, constructing, or proposing to construct a new electric powerplant or a major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title proposing to use natural gas as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if—

"(A) the Environmental Protection Agency or the appropriate State certifies to the Administrator that such use of natural gas is necessary—

"(i) to enable the air quality control region to attain or maintain compliance with a national primary ambient air quality standard, and

"(ii) to permit such powerplant installation to comply with the applicable implementation plan, as defined in section 110(d) of the Clean Air Act, as amended; and

"(B) such person demonstrates why such powerplant or installation cannot comply with the applicable implementation plan without the temporary exception and establishes the probable duration of its need for such natural gas to comply with such plan.

"(2) A temporary exception under this subsection may be granted for a period up to five years and may be extended for additional periods of up to five years if the Environmental Protection Agency or the appropriate State certifies to the Administrator that the use of such natural gas is necessary to permit the air quality control region to attain the national primary ambient air quality standards.

"(d) COMPLIANCE PLAN.—(1) The Administrator shall approve a compliance plan submitted pursuant to this section only if the compliance plan sets forth—

"(A) a schedule for compliance with the applicable requirements and prohibitions pursuant to this title; and

"(B) evidence of binding contracts or other commitments, for fuels or facilities that would enable the applicant to comply with such requirements and prohibitions.

"(2) The compliance plan approved pursuant to this subsection shall be revised annually as required by the Administrator to reflect appropriate changing circumstances.

"(3) Failure to comply with the compliance plan approved pursuant to this subsection may result in termination or modification of the terms of the temporary exception granted under this section.

"(e) TERMS AND CONDITIONS.—Any temporary exception granted pursuant to this section shall be upon such terms and conditions as may be reasonable and necessary to carry out the purposes of this Act.

"(f) ENVIRONMENTAL COMPLIANCE.—In no event may the action of the Administrator on a request for a temporary exception under this section result in any delay in compliance with any applicable environmental requirement.

"PERMANENT EXEMPTIONS

"SEC. 106. (a) GENERAL PERMANENT EXEMPTION.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title utilizing or proposing to utilize petroleum as its primary energy source shall grant a permanent exemption with respect to petroleum from such requirements and prohibitions and the penalties of section 303 of this Act, if such person has demonstrated that—

"(1) (A) despite good faith efforts an adequate and reliable supply of coal or other fuel allowable as a primary energy source pursuant to section 103 or 104 of this title and of the quality necessary to achieve compliance with the applicable environmental requirements or conformance with design requirements is not expected to be available for use during a majority of the useful life of such powerful or installation, or

"(B) the cost of using coal or other fuel substantially exceeds the cost of using imported petroleum; or

"(C) other physical, environmental, and legal factors (including, but not limited to, applicable environmental requirements) exist which cannot reasonably be expected to be overcome by diligent good faith efforts by the applicant and which preclude compliance with the requirements of section 103 or 104 of this title; and

"(2) in the case of a new electric powerplant, despite good faith efforts, there is—

"(A) no reasonable alternative site (i) at which an adequate and reliable supply of coal or other fuel allowable as a primary energy source pursuant to section 103 of this title is or would be available for use during a majority of the useful life of such powerplant;

"(ii) at which the other resources or facilities necessary for operation of a powerplant using coal or other allowable fuel are expected to be reasonably available during a majority of the useful life of such powerplant; and

"(iii) at which a powerplant can be constructed and operated in compliance with applicable environmental requirements; and

"(B) no alternative supply of electric power which can be obtained without impairing reliability of service.

"(b) MIXTURES OF COAL AND PETROLEUM.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title proposing to utilize a mixture of coal and petroleum as its primary energy source, shall grant a permanent exemption with respect to the use of such mixture from such requirements and prohibitions and the penalties of section 303 of this Act, if the applicant has demonstrated that he would otherwise be entitled to a permanent exemption from the requirements and prohibitions of this title. Such exemption shall be conditioned on the use of petroleum in amounts no greater than necessary to maintain reliability of operation.

"(c) PUBLIC INTEREST EXEMPTION.—Any person owning, constructing or proposing to construct a new electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title may apply to the Administrator for a permanent exemption under this section from such requirements and prohibitions and the Administrator may grant a permanent exception from such requirements and prohibitions and the penalties of section 303 of this Act upon a finding that—

(1) compliance with applicable environmental standards and legal factors pursuant to Federal or State law would be feasible, but compliance with local environmental and legal requirements would not be feasible; and

(2) compliance with the requirements and prohibitions of this title would not be in the public interest or would not be of significant value in serving the purposes of this Act.

"(d) STANDBY OPERATION EXEMPTION.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 103 or 104 of this title, proposing to use

petroleum or natural gas as a primary energy source, shall grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act if such person demonstrates that such powerplant or installation shall be operated only for standby or emergency purposes when the normal sources of energy supply are not available.

"(e) MIXTURES OF COAL AND OTHER FUELS.—Except for peakload exemptions pursuant to section 107(a) of this title, before granting a permanent exemption pursuant to section 106, 107, or 108 of this title from the requirement to use coal or other fuel in lieu of natural gas or petroleum, the Administrator shall require the applicant for a permanent exemption to prove that the use of a mixture of coal or other fuel, and petroleum, or fluidized bed combustion of coal, is not feasible.

"(f) EXCLUSION.—Any new electric powerplant or major fuel-burning installation that has had a construction order issued pursuant to section 2(c) of the Energy Supply and Environmenal Coordination Act, as amended, or section 203 of this Act reversed on the merits by judicial review or withdrawn or rescinded by the Administrator shall not thereafter be subject to the requirements and prohibitions of sections 103 and 104 of this Act.

"SPECIAL EXEMPTIONS FOR NEW ELECTRIC POWERPLANTS

"SEC. 107. (a) NEW PEAKLOAD ELECTRIC POWERPLANTS.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant subject to the requirements and prohibitions of section 103 of this title—

"(1) proposing to use petroleum as its primary energy source, shall grant a permanent exemption for such powerplant from such requirements and prohibitions and the penalties of section 303 of this Act, if such person has demonstrated that such powerplant is to be constructed or operated as a peakload powerplant; or

"(2) proposing to use natural gas as its primary energy source at a site which the Administrator of the Environmental Protection Agency or the appropriate State agency certifies to the Administrator are in air quality control regions where any national primary ambient air quality standard has not been attained or is not expected to be attained or maintained, shall grant a permanent exemption for such powerplant from such requirements and prohibitions and the penalties of section 303 of this Act if such person has demonstrated that such powerplant is to be operated solely as a peakload powerplant.

"(b) INTERMEDIATE LOAD POWERPLANTS.—(1) The Administrator, upon application by a person owning, or proposing to operate a new electric powerplant subject to the requirements and prohibitions of section 103 of this title, proposing to use petroleum as its primary energy source, may grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act, if the applicant demonstrates that—

"(A) such powerplant is to be operated as an intermediate load powerplant;

"(B) such powerplant is to be constructed or operated to replace no more than the equivalent capacity of existing natural gas or petroleum fired electric powerplants in air quality control regions which the Administrator of the Environmental Protection Agency or the appropriate State agency certifies to the Administrator is in a region were any national primary ambient air quality standard has not been attained or is not expected to be attained or maintained;

"(C) the net heat input rate for the new electric powerplant will be maintained at nine thousand five hundred British thermal units per kilowatt hour or less during the useful life of such powerplant;

"(D) such powerplant is to be constructed with the capability to use synthetic fuels derived from coal; and

"(E) the applicant in good faith intends to convert to the use of synthetic fuels derived from coal or other fuels at the earliest practicable time.

"(2) The Administrator shall review, from time to time, exemptions granted pursuant to this subsection. When he finds that a supply of synthetic fuels derived from coal suitable for use by a powerplant previously granted an exemption under paragraph (1) is available he shall terminate the exemption.

"(c) COGENERATION.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new cogeneration facility requesting an exemption or temporary exception from any requirements and prohibitions of section 103 or 104 of this title, may grant a permanent exemption or temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if the Administrator finds that the applicant has fully evaluated the feasibility of utilizing coal or other fuel in such cogeneration facility and has demonstrated that the economic and other benefits of cogeneration are unobtainable unless petroleum may be used in such facility.

"(d) EXEMPTION FOR RELIABILITY.—The Administrator, upon application by a person owning, constructing, or proposing to construct or operate a new electric powerplant subject to the requirements and prohibitions of section 103 proposing to use petroleum as a primary energy source, shall grant a permanent exemption with respect to the use of petroleum from such requirements and prohibitions and the penalties of section 303 of this Act if such person demonstrates that the permanent exemption is necessary to prevent impairment of reliability of service. In the case of a new electric powerplant which, as of April 20, 1977, has received a final decision from an appropriate State energy agency authorizing construction of such powerplant, or in the case of an electric powerplant consisting of one or more combined cycle units in an electric utility system serving at least two million customers for which an application has been filed for at least one year prior to the date of enactment of this section with the appropriate State energy agency for authorization to construct such powerplant, certification by the appropriate State energy agency that such powerplant is necessary to prevent impairment of reliability of service shall be conclusive that a permanent exemption pursuant to this subsection is necessary to prevent impairment of reliability of service and require the granting of a permanent exemption by the Administrator pursuant to this subsection from the requirements and prohibitions of section 103 of this Act and the penalties of section 303 of this Act.

"SPECIAL EXEMPTION FOR NEW MAJOR FUEL-BURNING INSTALLATIONS

"SEC. 108. PRODUCT QUALITY EXEMPTION.—The Administrator, upon application by a person owning, constructing, or proposing to construct a new major fuel-burning installation subject to the requirements and prohibitions of section 104 of this title, proposing to use natural gas or petroleum as its primary energy source, shall grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act if such person demonstrates that—

"(a) the use of an energy source other than natural gas or petroleum is technically infeasible in indirect firing use due to the necessity to maintain satisfactory control of product quality; and

"(b) substitution of steam for indirect heat is not possible due to process requirements.

"TITLE II—RECONSTRUCTION AND CONVERSION OF EXISTING FACILITIES

"DEFINITIONS

"SEC. 201. For the purposes of this title:

"(1) The term 'existing electric powerplant' means an electric powerplant—

"(A) (i) which is not a new electric powerplant as defined in section 101(1): or

"(ii) with respect to which an order was issued, prior to the effective date of this section, pursuant to section 2(a) of the Energy Supply and Environmental Coordination Act of 1974, as amended; and

"(B) which—

"(i) is by design capable of consuming coal or other fuel in lieu of natural gas or petroleum as its primary energy source at a fuel heat input rate of one hundred million British thermal units per hour or greater, or

"(ii) is by design not capable of consuming coal or other fuel as its primary energy source but is capable of consuming natural gas or petroleum at a fuel heat input rate of two hundred fifty million British thermal units per hour or greater; or

"(iii) is a combination of more than one powerplant at the same site or facility which in the aggregate is by design capable of consuming coal or other fuel in lieu of natural gas or petroleum as its primary energy source at a fuel heat input rate of two hundred fifty million British thermal units per hour or greater.

"(2) The term 'existing major fuel-burning installation' means a major fuel-burning installation—

"(A) (i) which is not a new major fuel-burning installation as defined in section 102(2); or

"(ii) with respect to which an order was issued, prior to the effective date of the Coal Utilization Act of 1977, pursuant to section 2(a) of the Energy Supply and Environmental Coordination Act of 1974, as amended; and

"(B) which—

"(i) is by design capable of consuming coal or other fuel in lieu of natural gas or petroleum as its primary energy source at a fuel heat input rate of one hundred million British thermal units per hour or greater, or

"(ii) is by design not capable of consuming coal or other fuel as its primary energy source but is capable of consuming natural gas or petroleum at a fuel heat input rate of two hundred fifty million British thermal units per hour or greater; or

"(iii) is a combination of more than one such installation at the same site or facility which in the aggregate is by design capable of consuming coal or other fuel in lieu of natural gas or petroleum as its primary energy source at a fuel heat input rate of two hundred fifty million British thermal units per hour or greater, but—

"(C) does not include an existing major fuel-burning installation for the extraction of mineral resources located (A) on or above the Continental Shelf of the United States or (B) on wetland areas adjacent to the Continental Shelf of the United States where coal storage is not practicable or would produce adverse effects on environmental quality.

"(3) The term 'capable of consuming coal or other fuel' means that an existing electric powerplant or major fuel burning installation was designed and constructed to use coal or other fuel in lieu of natural gas or petroleum as its primary energy source, but excludes an existing electric powerplant or major fuel-burning installation which (A) would require substantial modifications to any boiler or nonboiler unit in order to utilize coal or other fuel in lieu of natural gas or petroleum as its primary energy source in

that unit or (B) would suffer a substantial downgrading of the rated capacity of such unit in order to utilize coal or other fuel in lieu of natural gas or petroleum as its primary energy source.

"(4) The term 'small electric powerplant' means a fossil-fuel fired electric generating unit, which by design is not capable of consuming fuel at a fuel heat input rate of greater than two hundred fifty million British thermal units per hour.

"(5) The term 'small industrial installation' means a fuel-burning installation that by design is not capable of being operated at a total fuel heat input rate in excess of two hundred fifty million British thermal units per hour.

"(6) The term 'air pollution control device' means equipment designed to reduce the quantity of atmospheric emissions by any electric powerplant or major fuel-burning installation using coal or other fuel as its primary energy source.

"(7) The term 'electric utility system' means a person and its affiliates which individually or in combination own, lease, operate, or control any electric powerplant subject to the requirements and prohibitions of this title.

"(8) The term 'affiliate', when used in relation to a person, means another person which controls, is controlled by, or is under common control with such person.

"TERRITORIAL APPLICATION

"SEC. 202. The provisions of this title shall apply to the contiguous forty-eight States and the District of Columbia.

"EXISTING ELECTRIC POWERPLANTS AND MAJOR FUEL-BURNING INSTALLATIONS

"SEC. 204. (a) NATURAL GAS PROHIBITION.—(1) Except as provided for in sections 206, 207, 208, and 209 of this title, effective January 1, 1990, no existing electric powerplant shall utilize natural gas as its primary energy source: *Provided, however,* That any existing electric powerplant with the capability to use either natural gas or petroleum as its primary energy source shall be subject to the requirements and prohibitions of paragraph (3) of this subsection.

"(2) Except as provided in sections 206, 207, 208, and 209 of this title, no existing electric powerplant using petroleum as its primary energy source on April 20, 1977, may thereafter convert to the use of natural gas as its primary energy source.

"(3) Except as provided in sections 206, 207, 208, and 209 of this title, no existing electric powerplant shall use natural gas in greater proportions than—

"(A) the average yearly proportion of natural gas that it used as a primary energy source in calendar years 1974 through 1976, or

"(B) in the case of an electric powerplant beginning operation after January 1, 1974, the average yearly proportion of natural gas that is used as a primary energy source during the first two calendar years of its operation.

"(b) MIXTURES AND COMBINATIONS OF FUELS.—Subject to the provisions of sections 206, 207, 208, and 209 of this title, the Administrator may, by order, prohibit an existing electric powerplant or major fuel-burning installation in which it is feasible to use a combination of coal or other fuel and natural gas or petroleum as a primary energy source from using natural gas or petroleum, or both, in amounts greater than is necessary to maintain reliability of service or operation.

"(c) PERMIT TO USE PETROLEUM.—The Administrator shall by rule require that no existing electric powerplant or major fuel-burning installation which, on or after April 20, 1977, uses coal as a primary energy source may increase its use of petroleum as a primary energy source unless it first obtains a permit which authorizes such increased use of petroleum. Such a permit shall be issued only if the appropriate State certifies to the Administrator that the increased use of petroleum by such powerplant or installation is necessary to permit such powerplant or installation—

"(1) to comply with the applicable implementation plan, as defined in section 110(d) of the Clean Air Act, and

"(2) if such person (A) demonstrates to the satisfaction of the Administrator that it cannot comply with the applicable implementation plan without the issuance of a permit and (B) documents the expected duration of its need for increased use of natural gas or petroleum to comply with such plan.

"COMPLIANCE REPORT

"SEC. 205. Any person owning, operating, or proposing to operate one or more existing electric powerplants or major fuel-burning installations required to come into compliance with the requirements and prohibitions of this title shall on or before January 1, 1980, and annually thereafter, submit to the Administrator a report identifying all such existing electric powerplants or major fuel-burning installations owned or operated by such person. Such report shall—

"(a) set forth the anticipated schedule for compliance with the applicable requirements and prohibitions by each such electric powerplant or major fuel-burning installation;

"(b) indicate proposed or existing contracts or other commitments or good faith negotiations for such contracts or commitments for coal and other fuels or equipment that would enable such powerplant or installation to attain compliance with such requirements and prohibitions; and

"(c) identify those electric powerplants or major fuel-burning installations, if any, for which application for temporary exceptions or permanent exemption from the requirements and prohibitions of this title may be filed.

"TEMPORARY EXCEPTIONS

"SEC. 206. (a) GENERAL TEMPORARY EXCEPTION.—(1) The Administrator, upon application of a person owning, operating or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of sections 203 and 204 of this title proposing to use petroleum as a primary energy source, shall grant temporary exceptions with respect to petroleum from such requirements and prohibitions and the penalties of section 303 of this Act for a period of up to five years, if—

"(A) such person, prior to the effective date of any such requirement or prohibition, has submitted a compliance plan to the Administrator which the Administrator has approved pursuant to subsection (g) of this section; and

"(B) such person has demonstrated that, prior to the applicable compliance date, despite diligent good faith efforts—

"(i) an adequate and reliable supply of coal or other fuel allowable as a primary energy source and of the quality necessary to achieve compliance with applicable environmental requirements and to meet design and operation requirements is not expected to be available; or

"(ii) adequate transportation facilities for such coal or other fuel are not expected to be available; or

"(iii) pollution control equipment or devices, including the flue gas desulfurization equipment and particulate control equipment, necessary to assure compliance with applicable environmental requirements are not expected to be available; or

"(iv) the cost of using coal or other fuel substantially exceeds the cost of using imported petroleum; or

"(v) other equipment or other facilities necessary for the reliable operation of such powerplant or installation are not expected to be available.

"(b) SYNTHETIC FUELS EXCEPTION.—(1) The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title, proposing to use natural gas or petroleum as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if—

"(A) such person has submitted a compliance plan to the Administrator containing a compliance schedule for such powerplant or such installation, which the Administrator has approved pursuant to subsection (g) of this section; and

"(B) such person has demonstrated—

"(i) that such powerplant or installation will comply with such requirements and prohibitions within five years of their effective date by the use of synthetic fuels derived from coal or other fuel; and

"(ii) that the intention so to comply with the requirements and prohibitions and the anticipated compliance date are evidenced by the existence of binding contracts or commitments for fuels or facilities that would enable the applicant to comply with the prohibition.

"(2) Temporary exceptions under this subsection may be granted for periods of up to five years beyond the effective date of such prohibition, but not beyond the anticipated compliance date. The Administrator shall renew the exception for up to five years if the circumstances justifying the initial exception are likely to persist.

"(c) INNOVATIVE TECHNOLOGY EXCEPTION.—(1) The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title proposing to use natural gas or petroleum as a primary energy source, shall grant a temporary exception from such requirments and prohibitions and the penalties of section 303 of this Act, if—

"(A) such person has submitted a compliance plan to the Administrator containing a compliance schedule for such powerplant or such installation which the Administrator has approved pursuant to subsection (g) of this section; and

"(B) such person has demonstrated—

"(i) that such powerplant or installation will comply with such requirements and prohibitions within five years of their effective date by innovative techniques for using coal or other fuel; and

"(ii) that the intention so to comply with the prohibition and the anticipated compliance date are evidenced by the existence of binding contracts or commitments for fuels or facilities that would enable the applicant to comply with such prohibition.

"(2) Temporary exceptions under this subsection may be granted for up to five years beyond the effective date of the requirement or prohibition, but not beyond the anticipated compliance date. The Administrator shall renew the exception for up to five years if the circumstances justifying the initial exception are likely to persist.

"(d) PUBLIC HEALTH EXCEPTION.—(1) The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title proposing to use natural gas as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if—

"(A) the Environmental Protection Agency or the appropriate State certifies to the Administrator that such use of natural gas is necessary—

"(i) to enable the air quality control region to attain or maintain compliance with a national primary ambient air quality standard, and

"(ii) to permit such powerplant or installation to comply with the applicable implementation plan, as defined in section 110 (d) of the Clean Air Act, as amended; and

"(B) such person demonstrates why such powerplant or installation cannot comply with the applicable implementation plan without the temporary exception and establishes the probable duration of its need for such natural gas to comply with such plan.

"(2) A temporary exception under this subsection may be granted for a period up to five years and may be extended for additional periods of up to five years if the Environmental Protection Agency or the appropriate State certifies to the Administrator that the use of such natural gas is necessary to permit the air quality control region to attain the national primary ambient air quality standards.

"(e) RETIREMENT EXCEPTION.—(1) The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or a major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title, proposing to use petroleum or natural gas as a primary energy source, shall grant a temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act for a period of up to five years from the effective date of such requirements and prohibitions if such person, prior to the effective date of the applicable requirements and prohibitions, has submitted a retirement plan to the Administrator setting forth a retirement schedule for such facility and demonstrates that such powerplant or installation—

"(A) shall be retired from service and shall permanently cease operation within five years from the effective date of such requirements or prohibitions or

"(B) shall thereafter be maintained only for standby or emergency purposes and operated only intermittently during interruptions in normal energy supplies.

"(2) Any installation with respect to which a temporary exception is granted under this subsection is no longer eligible for, and cannot be granted, any further permanent exemption or temporary exception under this title.

"(f) Any temporary exception granted pursuant to this section shall be upon such terms and conditions as may be reasonable and necessary to carry out the purposes of this Act.

"(g) COMPLIANCE PLAN.—(1) The Administrator shall approve any compliance plan submitted pursuant to this section only if the compliance plan sets forth—

"(A) a schedule for compliance with the applicable requirements or prohibitions imposed pursuant to this title; and

"(B) evidence of binding contracts or other commitments or good faith negotiation for such contracts or commitments for fuels or facilities that would enable the applicant to comply with such requirements and prohibitions.

"(2) The compliance plan approved pursuant to this section shall be revised annually as required by the Administrator to reflect changing circumstances.

"(3) Failure to comply with a compliance plan approved pursuant to this section may result in termination or modification of the terms of the temporary exception granted under this section.

"PERMANENT EXEMPTIONS

"SEC. 207. (a) GENERAL PERMANENT EXEMPTION.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title utilizing or proposing to utilize petroleum as its primary energy source shall grant a permanent exemption with respect to petroleum from such requirements and prohibitions, and the penalties of section 303 of this Act, if such person has demonstrated that—

"(1) despite good faith efforts an adequate and reliable supply of coal or other fuel allowable as a primary energy source pursuant to section 203 or 204 of this title and of the quality necessary to achieve compliance with the applicable environmental requirements or conformance with design requirements is not expetced to be available for use during a majority of the remaining useful life of such powerplant or installation, or

"(2) the cost of using coal or other fuel substantially exceeds the cost of using imported petroleum; or

"(3) other physical, environmental, and legal factors (including, but not limited to, applicable environmental requirements) exist which cannot reasonably be expected to be overcome by diligent good faith efforts by the applicant and which preclude compliance with the requirements of section 203 or 204 of this title.

"(b) MIXTURES OF COAL AND PETROLEUM.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title utilizing or proposing to utilize a mixture of coal and petroleum as its primary energy source shall grant a permanent exemption with respect to the use of such mixture from such requirements and prohibitions and the penalties of section 303 of this Act, if the applicant demonstrates that he would otherwise be entitled to a permanent exemption under other provisions of this title. Such exemption shall be conditioned on the use of petroleum in amounts no greater than necessary to maintain reliability of operation.

"(c) PUBLIC INTEREST EXEMPTION.—Any person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title, may apply to the Administrator for a permanent exemption under this section from such requirements and prohibitions and the Administrator may grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act upon a finding that—

"(1) compliance with applicable environmental standards and legal factors pursuant to Federal or State law would be feasible, but compliance with local environmental requirements and legal factors would not be feasible; and

"(2) compliance with the requirements and prohibitions of this title would not be in the public interest or would not be of significant value in serving the purposes of this Act.

"(d) SPECIAL EXEMPTION.—Any person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of section 203 or 204 of this title may apply to the Administrator for a permanent exemption under this subsection from such requirements and prohibitions. The Administrator shall grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act if the applicant for such exemption demonstrates that—

"(1) the natural gas or petroleum is being obtained by the applicant under an existing contractual commitment, which the applicant has no right to terminate without financial penalties;

"(2) the prohibition of burning such natural gas or petroleum will not make it available for other uses in the United States; and

"(3) the revenues derived from the sale or transportation tariffs of such natural gas are essential to the economic viability of the pipeline system in which it is delivered to the applicant.

"(e) STANDBY OPERATION EXEMPTION.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant or major fuel-burning installation subject to the requirements and prohibitions of this title, proposing to use petroleum or natural gas as a primary energy source, shall grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act if such person, prior to the effective date of any applicable requirements and prohibitions, demonstrates that such powerplant or installation will be maintained only for standby or emergency purposes and will be operated only for such purposes when the normal sources of energy supply are not available.

"(f) CONSIDERATION OF ALTERNATIVES.—Except for peakload exemptions pursuant to section 208(a) of this title, before granting a permanent exemption pursuant to section 207, 208, or 209 of this title from the requirement to use coal or other fuel in lieu of natural gas or petroleum, the Administrator shall require the applicant for a permanent exemption to prove that the use of a mixture of coal or other fuel, and petroleum, or fluidized bed combustion of coal, is not feasible.

"(g) EXCLUSION.—Any existing electric powerplant or major fuel-burning installation that has had a prohibition order issued pursuant to the Energy Supply and Environmental Coordination Act of 1974, as amended, or section 203 of this Act reversed on the merits by judicial review or withdrawn or rescinded by the Administrator shall not therefore be subject to the requirements and prohibitions of title II of this Act.

"SPECIAL EXEMPTIONS FOR EXISTING ELECTRIC POWERPLANTS

"SEC. 208. (a) PEAKLOAD POWERPLANTS.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant subject to the requirements and prohibitions of section 203 or 204 of this title, proposing to use petroleum as its primary energy source, may grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act, if the applicant demonstrates that—

"(1) the powerplant is operated solely as a peakload powerplant; and

"(2)(A) a denial of the application for exemption is likely to result in an impairment of reliability or adequacy of service; or

"(B) modification of the powerplant to permit compliance with such requirements and prohibitions is technically infeasible; or

"(C) such modification would result in an unreasonable cost to the applicant's customers.

"(b) INTERMEDIATE LOAD POWERPLANTS.—(1) The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant subject to the requirements and prohibitions of section 203 or 204 of this title, proposing to use petroleum as its primary energy source, may grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act, if the applicant demonstrates that—

"(A) such powerplant is to be operated solely as an intermediate load powerplant;

"(B) such powerplant is to be operated at a site which the Administrator of the En-

vironmental Protection Agency or the appropriate State agency certifies to the Administrator is in an air quality control region where any national primary ambient air quality standard has not been attained or is not expected to be attained or maintained;

"(C) the net fuel heat input rate for the existing electric powerplant will be maintained at nine thousand five hundred British thermal units per kilowatt hour or less during the useful life of such powerplant;

"(D) such powerplant is constructed with the capability to use synthetic fuels derived from coal; and

"(E) the applicant in good faith intends to convert to the use of synthetic fuels derived from coal or other fuels at the earliest practicable time.

"(2) The Administrator shall review, from time to time, exemptions granted pursuant to this subsection. When he finds that a supply of synthetic fuels derived from coal suitable for use by a powerplant previously granted an exemption under paragraph (1) is available he shall terminate the exemption.

"(c) EXEMPTION FOR RELIABILITY.—The Administrator, upon application by a person owning, operating, or proposing to operate an existing electric powerplant subject to the requirements and prohibitions of section 203 proposing to use petroleum as a primary energy source, shall grant a permanent exemption with respect to the use of petroleum from such requirements and prohibitions, and the penalties of section 303 of this Act if such person demonstrates that the permanent exemption is necessary to prevent impairment of reliability of service.

"SPECIAL EXEMPTIONS FOR EXISTING MAJOR FUEL-BURNING INSTALLATIONS

"SEC. 209. PRODUCT QUALITY EXEMPTIONS.—(a) The Administrator, upon application by a person owning, operating, or proposing to operate an existing major fuel-burning installation subject to the requirements and prohibitions of section 204 of this title, proposing to use natural gas or petroleum as its primary energy source, shall grant a permanent exemption from such requirements and prohibitions and the penalties of section 303 of this Act if such person demonstrates that—

"(1) the use of a primary energy source other than natural gas or petroleum is technically infeasible in indirect firing due to the necessity to maintain satisfactory control of product quality; and

"(2) substitution of steam for indirect heat is not possible due to process requirements.

"(b) COGENERATION EXEMPTION.—The Administrator, upon application by a person owning or operating a cogeneration facility requesting an exemption or temporary exception from any requirements and prohibitions of this title, may grant an exemption or temporary exception from such requirements and prohibitions and the penalties of section 303 of this Act if the Administrator finds that the applicant has fully evaluated the feasibility of utilizing coal or other fuel in such cogeneration facility and has demonstrated that the economic and other benefits of cogeneration are unobtainable unless petroleum may be used in such facility.

"COAL CONVERSION COMPENSATION

"SEC. 210. (a) To the extent provided in Appropriations Acts, the Administrator is authorized, in accordance with such rules and regulations as the Administrator may prescribe, to compensate or to make commitments to compensate any person who owns or operates any existing electric powerplant or major fuel-burning installation which in the absence of such compensation would otherwise be issued an order granting a permanent exemption pursuant to sections 207, 208, or 209 of this title. Such compensation shall be no greater than necessary to compensate such person for the differential capital and operating cost, if any, to such person between complying with the applicable requirements and prohibitions of section 203 or 204 of this title and the granting of such exemption.

"(b) A person receiving compensation pursuant to this section shall provide evidence in writing to the Administrator in such form and with such content and other submissions as the Administrator by rule requires to protect the interests of the United States.

"(c) There are hereby authorized to be appropriated to the Administrator such sums as shall be sufficient for the purposes of this title.

"COAL CONVERSION LOANS

"SEC. 211. (a)(1) The Administrator is authorized, in accordance with the provisions of this section and such rules and regulations as he shall prescribe, and after consultation with the Secretary of the Treasury, to make loans and to make commitments to loan to any person who owns or operates any existing electric powerplant, or major fuel-burning installation which converts to coal or other fuel in lieu of natural gas or petroleum as its primary energy source subsequent to June 22, 1974, for the specific purpose of financing the purchase and installation of air pollution control devices at such electric powerplants or installations and any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal. The aggregate amount of loans outstanding under this section may at no time exceed $2,000,000,000. No loan or commitment to loan shall be made under this section after January 1, 1985.

"(2) An applicant for a loan under this section shall provide evidence in writing to the Administrator in such form and with such content and other submissions as the Administrator shall by rule require to protect the interests of the United States.

"(3) Each loan shall be extended in such form, under such conditions and terms, and pursuant to such regulations as the Administrator deems appropriate.

"(4) The Administrator shall, from time to time as he deems appropriate and on advice of the Secretary of the Treasury, establish the interest rate or rates at which loans shall be made under this section at the current rate being paid by the Secretary of the Treasury on bonds, notes, and other obligations of comparable duration issued on behalf of the Federal Government, plus such fees and other charges as the Administrator may specify pursuant to subsection (c) of this section, not to exceed 1 per centum per annum.

"(b) The Administrator shall loan or make a commitment to loan sums under subsection (a) of this section with respect to the purchase and installation of air pollution control devices and any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal only if he finds that—

"(1) the financial assistance applied for is not otherwise available from other Federal agencies and that assistance as provided in section 212 of this title has not been obtained for such air pollution control devices and any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal; and

"(2) the applicant is unable to obtain sufficient funds on reasonable terms and conditions from any other source.

"(c) Loans made pursuant to this section shall not (1) exceed two-thirds of the cost of acquiring and installing such air pollution control devices and any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal; and (2) have a maturity date in excess of ten years.

"(c)(1) The Administrator shall charge and collect such amounts as he may deem reasonable for the investigations for a loan, for the appraisal of properties offered as security for a loan, or for the issuance of a commitment: *Provided*, That such amounts shall not exceed one-half of one per centum of the loan amount authorized pursuant to subsection (a) of this section.

"(2) The Administrator shall charge and collect an insurance fee designed to avoid a Federal revenue loss in the event of a default of a loan made pursuant to this section.

"(d)(1) If there is a default in any payment by the obligor of interest or principal due under a loan entered into by the Administrator under this section and such default has continued for ninety days, the Administrator has the right to demand payment of such unpaid amount, unless the Administrator finds that such default has been remedied, or a satisfactory plan to remedy such default by the obligor has been accepted by the Administrator.

"(2) In demanding payment of unpaid interest or principal by the obligor, the Administrator has all rights specified in the loan-related agreements with respect to any security which he held with respect to the loan, including, but not limited to, the authority to complete, maintain, operate, lease, sell, or otherwise dispose of any property acquired pursuant to such loan or related agreements.

"(3) If there is a default under any loan or commitment to loan, the Administrator shall notify the Attorney General who shall take such action against the obligor or other parties liable thereunder as is, in his discretion, necessary to protect the interests of the United States. The holder of such loan shall make available to the United States all records and evidence necessary to prosecute any such suit.

"(e) There are hereby authorized to be appropriated to the Administrator such sums as shall be sufficient for the purposes of this title, but which shall not exceed the sum of $400,000,000 for each fiscal year 1978 through 1982.

"LOAN GUARANTEES

"SEC. 212. (a)(1) The Administrator is authorized, in accordance with the provisions of this section and such rules and regulations as he shall prescribe, and after consultation with the Secretary of the Treasury, to guarantee and to make commitments to guarantee the bonds, debentures, notes, and other obligations issued by or on behalf of any person who owns or operates any existing electric powerplant or major fuel-burning installation, which converts from natural gas or petroleum to coal or other fuels after June 22, 1974, for the specific purpose of financing the purchase and installation of air pollution control devices and any auxiliary equipment and facilities which the Administrator determines is necessary to burn coal at such electric powerplants or major fuel-burning installations. The aggregate amount of outstanding indebtedness guaranteed under this section may at no time exceed $10,000,000,000. No guarantee or commitment to guarantee shall be undertaken under this section after January 1, 1985.

"(2) An applicant for a guarantee under this section shall provide evidence in writing to the Administrator in such form and with such content and other submissions as the Administrator may require to protect the interest of the United States. Each guarantee and commitment to guarantee shall be extended in such form, under such terms and conditions, and pursuant to such regulations as the Administrator deems appropriate.

"(b) The Administrator may guarantee or make a commitment under subsection (a) of this section, with respect to air pollution control devices or any auxiliary equipment

and facilities which the Administrator determines are necessary to burn coal, subject to conditions and priorities pursuant to section 213 of this title, and if he finds that—

"(1) the guarantee will significantly reduce the borrowing costs associated with acquisition of capital for the purchase of air pollution control devices or any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal; and

"(2) the acquisition of such air pollution control devices or any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal would be significantly delayed in the absence of a loan guarantee; and

"(3) the financial assistance applied for is not otherwise available from other Federal agencies and that assistance as provided in section 211 of this title has not been obtained for such air pollution control devices or any auxiliary equipment and facilities which the Administrator determines are necessary to burn coal; and

"(c) The amount of any guarantee under this section shall not exceed two-thirds of such air pollution or auxiliary equipment and facilities control acquisition costs; and

"(d) The bonds, debentures, notes, or other obligations for which guarantees are made shall not have redemption dates or a maturity in excess of ten years from date of issuance.

"(e)(1) The Administrator shall charge and collect such amounts as he may deem reasonable for the investigations for a guarantee, for the appraisal of properties offered as security for a guarantee, or for the issuance of commitments for a loan or other obligation guaranteed under this section, but such charge shall not exceed one-quarter of 1 per centum of the amount of the loan or other obligation.

"(2) The Administrator shall charge and collect an insurance fee designed to avoid a Federal revenue loss in the event of a default of a loan or other obligation guaranteed under this section.

"(f)(1) If there is a default in any payment by the obligor of interest or principal due under an obligation guaranteed by the Administrator under this section and such default has continued for ninety days, the holder of such obligation or his agents has the right to demand payment by the Administrator of such unpaid amount. Within such period as may be specified in the guarantee or related agreements, but not later than forty-five days from the date of such demand, the Administrator shall promptly pay to the obligee or his agent the unpaid interest on and unpaid principal of the obligation guaranteed by the Administrator as to which the obligor has defaulted, using funds collected for such purpose as insurance fees pursuant to subsection (e), unless the Administrator finds that there was no fault by the obligor in the payment of interest or principal or that such default has been remedied.

"(2) If the Administrator makes a payment under paragraph (1) of this subsection, he shall have all rights specified in the guarantee or related agreements with respect to any security which he held with respect to the guarantee of such obligation, including, but not limited to, the authority to complete, maintain, operate, lease, sell, or otherwise dispose of any property acquired pursuant to such guarantee or related agreements.

"(3) If there is a default under any guarantee or commitment to guarantee an obligation, the Administrator shall notify the Attorney General who shall take such action against the obligor or any other parties liable thereunder as is, in his discretion, necessary to protect the interests of the United States. The holder of such obligation shall make available to the United States all records and evidence necessary to prosecute any such suit.

"CONDITIONS AND PRIORITIES

"SEC. 213. (a) The Administrator shall guarantee or make a commitment to guarantee as authorized in section 212 of this title, or loan or make a commitment to loan as authorized in section 211 of this title, only when conditions set forth in such sections are satisfied, and if—

"(1) air pollution control devices to be acquired pursuant to this title shall satisfy any applicable environmental requirements;

"(2) the Administrator, in consultation with the Administrator of the Environmental Protection Agency, is satisfied that such air pollution control device does not duplicate or displace existing air pollution control devices with a remaining useful economic life in excess of two years; or

"(3) the Administrator has determined that there will be a continued reasonable assurance of full repayment of a loan, or that a realistic plan exists for redeeming all bonds, debentures, notes, or other obligations for which a guarantee is requested; and

"(4) the Administrator is satisfied that competition among private entities for the provision of air pollution control devices for any electric powerplant or major fuel-burning installations using coal as their primary energy source to be assisted under this title will be in no way limited or precluded.

"(b) In making guarantees or commitments to guarantee pursuant to section 212 of this title, or in making loans or commitments to loan pursuant to section 211 of this title, the Administrator is directed to—

"(1) allocate 25 per centum of available financial assistance, to the extent feasible and practicable, to existing small electric powerplants, and to existing small industrial installations; and

"(2) give priority consideration to requests for financial assistance by existing major fuel-burning installations and electric powerplants subject to, and in receipt of, a coal conversion order issued by the Administrator pursuant to section 203 of this Act.

"(c)(1) The Administrator shall require all persons receiving financial assistance or guarantees under this title whether in the form of loans, obligation guarantees, or other arrangements, to keep such records as the Administrator shall prescribe, including records which fully disclose the amount and disposition by such recipient of the proceeds of such assistance, the total cost of the project or undertaking in connection with which such assistance was given or used, the amount of that portion of the cost of the project or undertaking supplied by other sources, and such other records as will facilitate an effective audit.

"(2) The Administrator and the Comptroller General of the United States, or any of their duly authorized representatives, shall, until the expiration of three years after completion of the project or undertaking referred to in subsection (a) of this section or full repayment of interest and principal on a loan made or guaranteed pursuant to provisions of this title, have access for the purposes of audit and examination to any books, documents, papers, and records of such receipts which in the opinion of the Administrator or the Comptroller General may be related or pertinent to the loans, obligation guarantees, or other arrangements referred to in such subsection.

"SYSTEM COMPLIANCE OPTION

"SEC. 214. (a) The Administrator, upon application by an electric utility company owning or operating any existing electric powerplants subject to the requirements and prohibitions of section 204 of this title and using intrastate natural gas owned by, or under contract to, such company prior to the date of enactment of this section, shall approve in lieu of any other provision of this Act a system compliance plan if such plan:

"(1) Contains a commitment that no new base load electric powerplant constructed by the electric utility company after the date of enactment of this Act will utilize natural gas or petroleum as its primary energy source;

"(2) Provides by 1990 for the reduction of the use of such intrastate natural gas to less than 20 per centum of (A) the quantities used in calendar year 1976 by those powerplants in the company's system which began operation on or before January 1, 1976, and (B) one half the quantities used as the primary energy source during the first twenty-four months of operation of powerplants which began operation after January 1, 1976 but before the effective date of this section;

"(3) Provides that subsequent to 1990 the use of such intrastate natural gas as the primary energy source will only be for the company's system peakload operation, defined as the total kilowatt hours generated annually by natural gas on the system of the applicant electric utility company system divided by the aggregate capacity of all the electric powerplants in such system, but not to exceed one thousand five hundred full-load hours per year;

"(4) Provides that subsequent to the date of enactment of this section that the natural gas utilized by electric powerplants on such electric utility company system will come only from—

"(i) existing natural gas contracts;

"(ii) renewals or extensions thereof under normal escalation clauses or other clauses which set forth an objective basis on which price can be determined at or before renewal of such contracts; or

"(iii) such new contracts or other renewals or extensions of existing contracts as the Administrator determines are necessary to meet the system compliance plan or are necessary to maintain reliability of service;

"(5) Provides for an orderly progression of phasing such electric powerplants into intermediate load operation and for the construction of coal or other fuel electric powerplants for base load use; and

"(6) Contains a ten-year forecast of demand for electricity, a ten-year construction forecast, and a ten-year financial plan which provides a reasonable basis for concluding that the commitments in such plan will be carried out.

"(b) The approval of a system's compliance plan pursuant to subsection (a) of this section shall suspend the application of the requirements of section 204 of this title to the utility system submitting the plan for as long as such approval is in effect.

"(c) The Administrator shall require the utility system to reaffirm the commitments and update the information in the system compliance plan at such intervals as he shall specify, not less frequently than every two years and not more frequently than every year, and the utility system may from time to time supplement or update the information in such plan.

"(d) The Administrator may extend the deadlines in paragraph (a)(2) of this section for periods of up to five years if the applicant demonstrates that despite good faith efforts to comply with such deadlines because of delays in the construction of new electric powerplants by such electric utility company is not feasible to comply with such deadlines without impairing reliability of service.

"(e) The Administrator may extend the deadline in paragraph (a)(3) of this section if he finds that it is not feasible to use any fuel other than natural gas or that such extension is in the national interest.

"(f) After January 1, 1955, any powerplant covered by a plan approved pursuant to this section and using natural gas as its primary energy source shall be eligible for an ex-

emption pursuant to section 207(e) or 208(a) of this Act.

STUDY OF COMPLIANCE PROBLEM

"SEC. 215. The Administrator shall conduct a study of the problems of compliance with this Act experienced by those electric utility systems which have a total system generating capacity of less than two thousand megawatts. The Administrator shall report his findings and his recommendations to the Congress not later than two years after the enactment of this Act.

"TITLE III—GENERAL

"ADMINISTRATIVE RULES AND REGULATIONS

"SEC. 301. (a) Except to the extent otherwise provided in this section rules prescribed under this Act shall be made in accordance with the procedures set forth in section 553 of Title 5, United States Code.

"(b) Any application filed under this Act for a permit, a permanent exemption or temporary exception from the requirements and prohibitions of sections 103, 104, 203, and 204 of this Act shall be in such form and contain such information as the Administrator shall require by rule promulgated within one hundred eighty days after the date of the enactment of this section. The Administrator, upon receipt of such application, shall publish a notice thereof in the Federal Register together with a detailed summary of the reasons set forth in such application for requesting such exemption, and provide a minimum of forty-five days for written comments thereon. The Administrator, upon receipt of such application, shall consult with the appropriate State energy agencies having primary authority to permit or regulate the construction or operation of the electric powerplant or, where appropriate, major fuel-burning installation which is the subject of such application.

"(c) When an application for a permit, or temporary exception or a permanent exemption from any requirement or prohibition of this Act is based on an alleged inability to comply with applicable environmental requirements, a copy of the application shall also be filed with the Administrator of the Environmental Protection Agency and, pursuant to the requirements of section 304 of this Act, the Administrator shall request the Environmental Protection Agency to comment thereon within the period provided to the public.

"(d) All determinations by the Administrator on those applications submitted in accordance with section 301(b) of this Title shall be determined on the record, subject to the procedures of section 554 of Title 5, United States Code. Notwithstanding section 402(d)(1) of the Department of Energy Organization Act, after the effective date of such section, the Secretary of Energy shall have jurisdiction to hear and determine matters required by this subsection to be determined on the record. The Federal Energy Regulatory Commission shall have no jurisdiction to hear and determine any such matter unless such matter is assigned to such Commission pursuant to section 402(e) of such Act.

"(e) The Administrator, within six months after the filing of a completed application, shall issue an order granting or denying such application, except that in the case of a permanent exemption, or if necessary to provide time for compliance with the National Environmental Policy Act of 1969, the Administrator may publish a notice in the Federal Register extending such period to a date certain but in no event greater than twelve months after the filing of the completed application. Such notice shall include the reasons for such an extension. Before promulgating any order granting or denying a permanent exemption, temporary exception, or permit under this section, the Administrator shall publish such proposed order in the Federal Register, together with a statement of the reasons for such order. Whenever the Administrator is required to take into account certain factors prior to issuing any rule or order, the Administrator shall include in the published statement of the reasons for such rule or order the Administrator's findings with respect to each such factor.

"(f) If the Administrator does not issue an order within the time limits stated in subsection (e), any party to the proceeding may file a motion demanding action by the Administrator. If the Administrator does not issue an order within thirty days after the filing of such motion, the application shall be granted.

"(g) The Administrator may by rule establish criteria by which the Administrator will approve or deny an application for a permanent exemption, a temporary exception, or permit, or a stay for an electric powerplant or a major fuel-burning installation from the requirements and prohibitions of this Act.

"JUDICIAL REVIEW

"SEC. 302. (a) Judicial review of any action by the Administrator pursuant to section 301(e) of this Act shall be in accordance with the provisions of Chapter 7, Title 5, United States Code. At any time before the sixtieth day after the date an order is published in the Federal Register, a person entitled under such chapter may file a petition to review any such order with the United States court of appeals for the circuit wherein such person resides or has his principal place of business, or the United States Court of Appeals for the District of Columbia.

"(b) Subject to the direction and control of the Attorney General, as provided in section 519 of title 28, United States Code, attorneys appointed by the Administrator may appear for and represent the Administrator in any proceeding instituted under this section.

"ENFORCEMENT AND PENALTIES

"SEC. 303. (a) It shall be unlawful for any person to violate any provision of this Act or to violate any rule, regulation, requirement, or order issued pursuant to this Act.

"(b)(1) Whenever, on the basis of any information available, the Administrator finds that any person is in violation of any provision of this Act or any rule, regulation, requirement, or order issued pursuant to this Act, the Administrator shall issue notice of such violation and may issue an order requiring compliance with such provision, rule, regulation, requirement, or order.

"(2) Any notice issued under this section shall be in writing and shall state with reasonable specificity the nature of the violation and any order shall specify a time for compliance which the Administrator determines is reasonable, taking into account the seriousness of the violation and any good faith efforts to comply with applicable prohibitions and requirements of this Act.

"(c)(1) Any person who violates any provision of this Act, or rule or order issued thereunder, shall be subject to a civil penalty of not more than $25,000 for each violation. Each day a violation continues shall constitute a separate violation.

"(2) Any person who willfully violates any provision of this Act, or rule or order issued thereunder, shall be subject to a fine of not more than $50,000 or to imprisonment for not more than one year, or both, for each violation. Each day a violation continues shall constitute a separate violation.

"(3) Any individual director, officer, or agent of a corporation who knowingly and willfully authorizes, orders, or performs any of the acts or practices constituting in whole or in part a violation described in paragraphs (1) and (2) of this subsection, shall be subject to penalties under this subsection without regard to any penalties to which the corporation may be subject under paragraphs (1) and (2) except that no such individual director, officer, or agent shall be subject to imprisonment under paragraph (2), unless he also knows of noncompliance by the corporation, or has received actual notice from the Administrator of such noncompliance.

"(4) Whenever it appears to the Administrator that any person has engaged, is engaged, or is about to engage in acts or practices constituting a violation of the provisions of this Act or any rule or order issued thereunder, the Administrator may request the Attorney General to bring a civil action to enjoin such acts or practices, and upon a proper showing, a temporary restraining order or a preliminary or permanent injunction shall be granted without bond. In such action, the court may also issue mandatory injunctions commanding any person to comply with any provision of this Act or any rule or order issued thereunder.

"(d) Any person owning or operating an electric powerplant granted a permanent exemption under section 10 or 208 of this Act as a peakload electric powerplant, under section 107(b) or 208(b) as an intermediate-load electric powerplant, under section 106 (d) or 207(e) for standby operation, or temporary exception under section 206(e) under a retirement plan, which operates in violation of the terms and conditions of such exception or exemption, shall be liable for a civil penalty of up to $10 per barrel of oil or $3 per thousand cubic feet of natural gas used in excess of such terms and conditions. In the case of a peakload electric powerplant, the civil penalties shall not apply where such person can demonstrate that operation in excess of one thousand five hundred full-load hours was necessary to meet peakload demand and that other peakload electric powerplants within the system were unavailable for service due to unit or system outages or were also exceeding the one thousand five hundred full-load hours per calendar year limitation on peakload operation.

"(e) For purposes of subsections (c)(1), (2), and (3) of this section, the term 'person' shall not include the Federal Government, including corporations, departments, Federal agencies, and other instrumentalities.

"ENVIRONMENTAL REQUIREMENTS

"SEC. 304. (a) CONSULTATION.—For the purposes of this Act, in order to ascertain environmental control equipment and fuel requirements necessary to comply with applicable environmental requirements, the Administrator shall consult, as appropriate, with the Administrator of the Environmental Protection Agency or appropriate State authorities.

"(b) APPLICABILITY OF NATIONAL ENVIRONMENTAL POLICY ACT.—The grant or denial of an application filed under this Act for (1) a permit, or (2) a temporary exception or permanent exemption from the requirements and prohibitions of sections 103, 104, 203, and 204 of this Act shall not be deemed to be a major Federal action for purposes of section 102 of the National Environmental Policy Act of 1969, except when such application relates to a new electric powerplant or new major fuel-burning installation which otherwise involves a major Federal action. In such cases the environmental impact statement otherwise prepared for such action shall be deemed a sufficient statement for the Administrator's action on the application, if such statement adequately considers the fuel uses involved in the grant or denial of the application.

"ENERGY EFFICIENCY AND INNOVATIVE TECHNOLOGY REQUIREMENTS

"SEC. 305. For the purposes of this Act, in order to ascertain appropriate efficiency requirements and technological feasibility of converting any electric powerplant, or any major fuel-burning installation, subject to the requirements or prohibitions of this Act,

the Administrator shall consult, as appropriate, with the Administrator of the Energy Research and Development Administration.

"ASSISTANCE TO REGIONS IMPACTED BY EXPANDED COAL OR URANIUM PRODUCTION

"SEC. 306. (a) When the Governor of any State or chairman of any Indian tribe determines that employment in the coal- or uranium-mining industries and in coal- or uranium-related industries in an area has increased by 8 percent or more over the 1976 level of employment in coal or uranium mining and coal- or uranium-related industries in the area which will require the provision of additional public facilities and services or housing, the Governor or chairman may designate such an area within his jurisdiction as an 'energy-impacted region.' The Governor or chairman shall notify the Administrator of this designation, setting forth the boundaries of the impacted region and describing existing and anticipated socioeconomic impact.

"(b) Upon designation of an energy impacted region by a Governor or chairman, the Administrator shall—

"(1) make available from available appropriations one hundred per centum federally funded planning grants for such regions for the purpose of developing a growth management and housing plan for the impacted region. Such plan shall identify anticipated levels of coal or uranium development within the region, the nature and extent of projected socioeconomic impacts and the need for temporary and permanent housing sites and facilities. If the Governor concurs, such grants may be made directly to counties or other appropriate political subdivisions, including areawide councils of local government and designated substate planning and development clearinghouses. If the Administrator finds in writing after consultation with the Governor and local officials that particular grants are unnecessary, the Administrator may veto grants on a case-by-case basis;

"(2) transfer funds authorized for this section to the Farmers Home Administration to—

"(A) subject to the approval of the Governor or chairman, acquire land by purchase, donation, or condemnation, and develop and transfer acquired land to any State or to a political subdivision thereof, or to any qualified housing contractor if he determines that such transfer is an integral and necessary element of an economically feasible plan for the development of housing in the energy-impacted region. Such activities shall be accomplished under such terms and conditions as the Administrator shall require, which may include transfer of land with or without monetary consideration: Provided, That, after completion of the housing project, the recipient of the transferred land shall pay to the Administrator fair market value of the land prior to development. Land development shall be limited to site preparation work and construction of access roads and off-site improvements such as sewers and water extensions which the Governor or chairman determines are necessary or appropriate to the economic feasibility of a project; and

"(B) provide technical assistance to any State or political subdivision thereof for the development of housing, sewers, water systems, and other public facilities.

"(c) In selecting land pursuant to paragraph (b)(2)(A) of this section for acquisition and development, the Administrator shall give priority to acquiring tracts of land which were uninhabited or which were previously mined prior to the date of enactment of this Act. No part of the funds provided under this section may be used to pay the actual construction costs of housing.

"(d) The Administrator of the Farmers Home Administration may carry out the purposes of subsection (b) of this section directly or may make grants and commitments for grants and may advance money under such terms and conditions as he may require to any State, or any department, agency, or instrumentality of a State, or any public body or nonprofit organization designated by a State.

"(e) To expedite the construction or rehabilitation of housing in designated energy-impacted regions, the Administrator of the Farmers Home Administration or his designee shall convene a strike force in each designated energy-impacted region made up of representatives of the Governor or chairman, local political subdivisions, and each of the Federal agencies or departments which have existing programs relating to housing, public facilities, reclamation of abandoned mined lands, flood insurance, and such other programs as the Administrator deems relevant. The strike force shall be empowered to waive eligibility requirements for assistance under such programs on a case-by-case basis for applicants from the energy-impacted regions: *Provided*, That, no eligibility requirements relating to civil rights or to protection of the environment may be waived. The Administrator of the Farmers Home Administration or his designee shall serve as the Chairman of the strike force and shall prescribe the terms and conditions under which waivers are approved.

"(f) Within three months of designation of an energy-impacted region, all coal- or uranium-related companies operating within the region or transporting large quantities of coal or uranium through the region, shall prepare a report to the Administrator. Such report shall include projected employment demand over the life of the operations, annual projected influx of employees from outside the region, and projected annual coal or uranium production. Copies of the report shall be filed with the Governor or Indian tribe, the Administrator of the Farmers Home Administration or his designee, and appropriate county or local officials and shall be available for public review at each county courthouse within the energy-impacted region.

"(g) There is authorized to be appropriated annually for eight years to the Administrator the sum of $150,000,000, beginning with fiscal year 1978, which shall remain available until expended for the purposes of this section.

"DISRUPTION OF NATURAL GAS SUPPLY CONTRACTS

"SEC. 307. (a) RETENTION OF TITLE.—Whenever the application of any of the provisions of this Act to any electric powerplant of any major fuel-burning installation would result in prohibiting the use of natural gas or petroleum under contract, as of the date of enactment of this section, by any facility as its primary energy source, the sale, exchange, or other transfer of such natural gas or petroleum by any such powerplant or installation shall not be prevented or otherwise impaired by the force majeure or other clauses of such a contract.

"(b) COMPENSATION.—(1) Whenever the application of the requirements and prohibitions of sections 103 and 104 of this Act to any new electric powerplant or any new major fuel-burning installation would result in prohibiting any person from utilizing natural gas for which such person contracted prior to the date of enactment of this section, then such person shall be eligible for just compensation from the person or persons to whom such gas is sold. The person or persons to whom such natural gas is delivered shall make payment of just compensation to the person to whom the prohibition applies and to any person who but for such prohibition would have transported such natural gas to such facility. The person or persons who pay such just compensation shall, upon payment thereof, be entitled to assume any contractual rights which the person to whom the prohibition applies may have with respect to such natural gas. If the charges for transportation or sale of natural gas delivered pursuant to such a contract were not regulated under the Natural Gas Act prior to its assumption under this subsection, the assumption of such contract under this subsection and transportation or sale of such natural gas under such contract after its assumption shall not be subject to the Natural Gas Act.

"(2) For purposes of this subsection, the term 'just compensation' means compensation for—

"(A) increased fuel costs, if any, including transportation and handling costs, incurred by the electric powerplant or major fuel-burning installation to which the prohibition applies; and

"(B) loss of revenue, if any, incurred by the person who transported gas to such powerplant, to the extent such loss would not have occurred but for such prohibition.

"(3) In the event of a dispute between or among the parties, the amount of such compensation, as between those parties disagreeing, shall be determined on the record after agency hearing by the Administrator. A prohibition on the use of natural gas under this Act may take effect before the amount of such compensation is finally determined by the Administrator. The Administrator may order any person to pay the amount of compensation established by the Administrator or to adjust rates of payment to reflect underpayments or overpayments.

"(c) No action taken pursuant to this section and no permanent exemption granted pursuant to any other section of this Act shall be construed to—

"(1) permit a person to receive more natural gas from a pipeline company or distribution company than the maximum quantities permitted such person under the curtailment plan in effect for such pipeline company or distribution company; or

"(2) require suppliers of natural gas which is subsequently sold, exchanged, or otherwise transferred by electric powerplants or major fuel-burning installations as provided under subsection (a) to supply an annual amount exceeding the lesser of (A) the volume specified in the contract, or (B) the volume which would actually have been delivered to the electric powerplant or major fuel-burning installation but for the application of section 103, 104, 203, or 204 of this title; or

"(3) limit in any way the power of the Federal Power Commission or of the States to regulate the allocation of natural gas.

"EMERGENCY POWERS

"SEC. 308. (a) In the event the President declares a severe energy supply interruption, as defined in section 3(8) of the Energy Policy and Conservation Act, as amended, the Administrator may, by order, prohibit an electric powerplant or major fuel-burning installation using natural gas or petroleum as a primary energy source from so using natural gas or petroleum for the duration of such interruption. Any suspension of emission limitations or other requirements of applicable implementation plans as defined in section 110(d) of the Clean Air Act required by such prohibition shall be issued only in accordance with section 110(f) of the Clean Air Act.

"(b) A person operating a peakload electric powerplant for the purposes of supplying power in an emergency situation shall notify the Administrator within twenty-four hours of commencement of such operation. The Administrator may order the cessation of the operations of such powerplant at any time if in his judgment the emergency does not justify such operation. Hours of operation accumulated after such order shall be included in the peakload powerplant's opera-

ting hours for the purposes of the penalties in section 303(d).

"(c) The Administrator may stay or otherwise exempt for such period as the Administrator deems appropriate, the application of the requirements, prohibitions, and penalties of section 103, 104, 203, 204, or 303 of this Act—

"(1) in the event of national, regional, or systemwide shortages of coal or other fuel supplies or of coal transportation facilities or other necessary facilities which may or will affect reliability of service of new electric powerplants subject to such requirements and prohibitions; or

"(2) otherwise as necessary to alleviate or prevent any emergencies directly affecting the public health, safety, or welfare, which would result from electric power outages.

"(d) The Administrator shall stay the application of the requirements, prohibitions, and penalties of section 103, 104, 203, 204, or 303 of this Act for such periods as necessary to implement enforceable air pollution requirements.

"(e) Any allocation of coal or coal transportation facilities or equipment must be documented and a report stating the need, justification, and results of such allocation must be filed with the Administrator and available as public information.

"(f) Persons experiencing temporary emergency conditions which render it infeasible to use coal or other fuel or which require immediate action to forestall injury to life or property may commence the use of fuels other than coal or other fuel, notwithstanding any order or obligation otherwise imposed by or issued pursuant to this Act, but must notify the Administrator within twenty-four hours of such use. Such use of fuels may continue for the duration of the temporary emergency condition unless the Administrator, by order, directs that the use of such replacement fuels halt. Within one hundred eighty days after the enactment of this section, the Administrator shall by rule issue regulations prescribing the form and content of such notices and specifying the conditions which may constitute a temporary emergency, which shall include:

"(1) temporary unavailability of sufficient supplies of coal or other fuel;

"(2) disruption in transportation facilities needed to deliver sufficient quantities of coal or other fuel to users; and

"(3) severe weather conditions which render the use of coal or other fuel infeasible.

"REMEDIAL ORDER

"SEC. 310. The Department of Energy Organization Act is hereby amended by adding a new subsection (g) at the end of section 503 to read as follows:

"'(g) The Secretary or his delegate may not exercise discretion to maintain a civil action (other than an action for injunctive relief) or issue a remedial order against any person whose sole petroleum industry operation relates to the marketing of petroleum products, for any violation of any rules or regulation if—

"'(1) such civil action or order is based upon a retroactive application of such rule or regulation or is based upon a retroactive interpretation of such rule or regulation; and

"'(2) such person relied in good faith upon rules, regulations, or ruling interpreting such rules or regulations, in effect on the date of the violation.'"

CONFORMING AMENDMENTS

SEC. 203. (a) Sections 2(a), (b), (c), (e), and (f) of the Energy Supply and Environmental Coordination Act of 1974, as amended, are hereby designated as sections 203 (a), (b), (c), (d), and (e), respectively, of this title.

(b) Section 2(d) of the Energy Supply and Environmental Coordination Act of 1974, as amended, is hereby designated as section 309 of this title.

(c) Insert following the redesignated section 203(e) the following:

"(f) OTHER PROVISIONS.—(1) Orders outstanding under the Energy Supply and Environmental Coordination Act of 1974, as amended, as of the effective date of this Act shall remain in effect. Any proceedings in process pursuant to any such orders shall continue under the provisions of the Energy Supply and Environmental Coordination Act of 1974, as amended, and as in effect immediately prior to the passage of this Act: *Provided, however,* That the Administrator, on his own initiative or on motion of any interested person, shall rescind or modify any order (including any order issued pursuant to section 2(a) of the Energy Supply and Environmental Coordination Act of 1974, as amended, issued prior to the effective date of this Act) if the order is inconsistent with any provision of title II of this Act so that such order, as rescinded or modified, complies with this Act.

"(2) Before modifying or rescinding any such order the Administrator shall give notice to the public and the recipient of the order and afford interested parties an opportunity for a public hearing with appropriate procedural rights including oral and written presentation of data, views, and arguments.

"(3) No provision of any such order (or modification thereof) that prohibits the utilization of petroleum or natural gas shall become effective until the date which the Administrator of the Environmental Protection Agency has certified pursuant to section 119(d)(1)(B) of the Clean Air Act is the earliest date that such powerplant or installation will be able to utilize coal or other fuel in lieu of petroleum or natural gas and comply with all applicable environmental requirements. The Administrator of the Environmental Protection Agency shall give the Administrator the notice described herein within two hundred seventy days of the date on which the notice under paragraph (2) of this subsection was issued.

"(g) For the purposes of this section, the provisions of sections 201(1)(B)(ii) and 201(2)(B)(ii) shall not apply.".

CONFORMING AMENDMENTS

SEC. 204. The Energy Supply and Environmental Coordination Act of 1974, as amended, is further amended by inserting following new section 310 of this title, the following:

"DISCLOSURE

"SEC. 311. The Administrator shall require the disclosure of the extent, characteristics, and productive capacity of coal reserves held by any private, corporate, public, or Government owner, or interest-holder in such reserves, as necessary, pursuant to section 409 of this Act, and shall publish a summary of such information: *Provided,* That the Administrator may exempt small reserves from the requirements of this section where the Administrator finds that the imposition of the requirements of this section would impose an unreasonable economic burden on the owner or would not be of significant aid to achievement of the purposes of this Act.

"FEDERAL FACILITIES

"SEC. 312. (a) Each department, agency, and instrumentality of the executive, legislative, and judicial branches of the Federal Government having jurisdiction over any electric powerplant, or major fuel-burning installation subject to the requirements and prohibitions of this Act, shall comply with the requirements and prohibitions of this Act.

"(b) The President may exempt from the requirements of subsection (a) any electric powerplant or major fuel-burning installation of any department, agency, or instrumentality in the executive branch from compliance with such requirement or prohibition, if the President determines it to be in the paramount interest of the United States to do so. No such exemption shall be granted due to lack of appropriation unless the President shall have specifically requested such appropriations as a part of the budgetary process and the Congress shall have failed to make available such requested appropriation.

"(c) The President shall report each January to the Congress all exemptions granted under this section from the requirements and prohibitions of this Act during the preceding calendar year, together with his reason for granting each such exemption.

"COAL PRICE MONITORING

"SEC. 313. (a) The Administrator is directed to make a study of the costs of mining coal in various regions of the country by various mining techniques. The Administrator shall submit his study to the Congress no later than twelve months after enactment.

"(b) The Administrator is authorized and directed to monitor the price of significant amounts of coal committed to contract after enactment of this section and to provide the Congress with semiannual reports summarizing the data collected under this subsection and analyzing the factors influencing changes in coal prices, including but not limited to the impact of the provisions of this Act.

"REPORT

"SEC. 314. Beginning one year after the date of enactment of this title, the Administrator shall report annually to the Congress on the implementation of this title. Such report shall identify the permanent exemptions granted or denied pursuant to sections 107(b) and 208(b) of this Act.

"STUDY

"SEC. 315. (a) The Administrator shall conduct a detailed study of the uses of petroleum and natural gas by major fuel-burning installations. Such study shall—

"(1) identify those categories of major fuel-burning installations, including the specific process, in which the substitution of coal or other fuels for petroleum and natural gas is economically and technically feasible;

"(2) distinguish between in-direct and direct-fired uses of natural gas and petroleum;

"(3) distinguish between new and existing major fuel-burning installations; and

"(4) include estimates of the savings of natural gas and petroleum expected from such substitution.

"(b) The results of such study shall be transmitted to the Congress within one year of enactment of this section, together with any recommendations for legislation the Administrator may consider appropriate.

"RAILROAD REHABILITATION FOR CARRIAGE OF COAL

"SEC. 316. (a) AUTHORIZATION.—In order to facilitate and encourage the use of and conversion to coal as an energy resource in regions and States which can use coal in greater quantity as a substitute for imported oil and depleted domestic fuel supplies, there is hereby authorized to be appropriated, for deposit in the Railroad Rehabilitation and Improvement Fund established under section 502 of the Railroad Revitalization and Regulatory Reform Act of 1976 (45 U.S.C. 882), not more than $100,000,000.

"(b) PURPOSES.—The money authorized to be appropriated to the Railroad Rehabilitation and Improvement Fund by subsection (a) shall be expended by the Secretary of Transportation, in the same manner as other money in such Fund, to provide financial assistance to railroads for maintenance, rehabilitation, improvements, and acquisition

of equipment and facilities (1) designed generally but which will be used for, or (2) designed specifically for, the rail transportation of coal or coal products to regions or States which can use coal in greater quantity as a substitute for imported oil and depleted domestic fuel supplies.

"(c) CONFORMING AMENDMENTS.—Title V of the Railroad Revitalization and Regulatory Reform Act of 1976 (45 U.S.C. 821 et seq.), as amended, is amended as follows:

"(i) Section 501(2) of such Act (45 U.S.C. 821(2)) is amended by inserting '(except as provided in section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act).' immediately after 'or other features.'.

"(ii) Section 502(b) of such Act (45 U.S.C. 822(b)) is amended by inserting at the end thereof the following: 'Money deposited in the Fund as authorized in section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act shall be used to provide assistance necessary for the purposes of facilitating and encouraging the rail transportation of coal and coal products to regions or States which can use coal in greater quantity as a substitute for imported oil or depleted domestic fuel supplies, as specified in section 314 of such Act.'.

"(iii) Section 502(f) of such Act (45 U.S.C. 822(f)) is amended by: (1) striking out 'and' at the end of clause (5) thereof; (2) inserting between clauses (5) and (6) the following new clause: '(6) funds as may hereafter be appropriated to the Fund as authorized under section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act; and'; and (3) renumbering clause (6) to '(7)'.

"(iv) Section 502(i) of such Act (45 U.S.C. 822(i)) is amended by (1) striking out 'and' at the end of clause (4) thereof; (2) striking out 'Treasury.' at the end of clause (5) and inserting in lieu thereof the language 'Treasury, and'; and (3) adding at the end thereof the following new clause: '(6) to carry out the purposes of section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act.'

"(v) Section 505(b)(2) of such Act (45 U.S.C. 825) is amended by inserting between the fourth and fifth sentences thereof the following new sentence: 'With respect to funds appropriated for financial assistance under this section which were authorized pursuant to section 314 of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act, applications for such funds for the purpose of coal transportation shall be deemed to be for the provision of essential freight services.'

"(vi) Section 505(d)(3) is amended by changing the figure in the first sentence from $600,000,000 to '$700,000,000.', and the figure in the second sentence from $100,000,000 to $150,000,000.".

"OFFICE OF RAIL PUBLIC COUNSEL

"SEC. 317. Section 27 of the Interstate Commerce Act is amended by striking 'and' at the end of section 24(4)(d), striking the period at the end of section 27(4)(e) and inserting in lieu thereof a semicolon and the word "and", and by inserting after such section the following:

"'(f) shall present the views of communities and users and providers of rail services in proceedings of Federal agencies whenever the Director determines that it is in the public interest that transportation policy be implemented in a manner consistent with national energy policy.'.

"FEDERAL-STATE TASK FORCE

"SEC. 318. (a) The Secretary of Commerce shall immediately convene a Federal-State task force composed of representatives of the Department of Housing and Urban Development, the Department of Health, Education, and Welfare, the Environmental Protection Agency, the Appalachian Regional Commission, the Farmers' Home Administration, the Department of Energy, the Department of the Interior, the Office of Management and Budget, the Department of Transportation, and the National Governors' Conference as well as such other Federal agencies as the Secretary shall designate. To develop the basis for comprehensive new Federal initiatives in impact assistance, the task force shall conduct an intensive review and evaluation of existing Federal programs which provide assistance to States and local communities in alleviating the socioeconomic impacts of rapid energy development.

"(b) The task force shall gather data and information on—

"(1) the level of assistance provided under existing programs related to impact assistance.

"(2) the timeliness of assistance in meeting impacts caused by Federal decisions on energy policy as well as private sector decisions, and

"(3) the obstacles to effective assistance contained in regulations of existing programs related to impact assistance.

(c) The task force shall recommend—

"(1) techniques to improve coordination between existing programs,

"(2) options for new comprehensive federal initiatives (in addition to those specified in section 306 of this Act) including but not limited to new grant and loan programs to deal with financing and providing housing, sewer and water systems, transportation, health care services, schools, and other public infrastructure needs in energy development impacted areas, and

"(3) selection of a lead agency responsible for the centralized delivery of Federal impact assistance.

"(d) No later than three months after the date of enactment of this Act, the Secretary of Commerce shall deliver to the President and to both Houses of Congress a comprehensive report detailing the findings and recommendations of the task force pursuant to subsections (a), (b), and (c) of this section.

"TEMPORARY EXCEPTIONS OR PERMANENT EXEMPTIONS

"SEC. 319. No temporary exception or permanent exemption shall be granted pursuant to sections 105(a)(2)(A), 106(a)(1)(A), 206(a)(1)(B), and 207(a)(1) of this Act if the Administrator determines that such exception or exemption would be required because of the adoption of a local government standard, limitation or requirement applicable to environmental pollutants or disposal of solid waste or residues resulting from the combination of coal or other fuels or the operation of air pollution control equipment.

"ENERGY INFORMATION

"SEC. 320. Any energy information acquired, collected, or held by the Department of Energy shall be subject to the requirements of section 11(d) of the Energy Supply and Environmental Coordination Act of 1974, Public Law 93-319.".

CONFORMING AMENDMENTS

SEC. 205. (a) The Energy Supply and Environmental Coordination Act of 1974 is amended—

(1) by redesignating sections 3 through 14 (and all references thereto) as sections 401 through 412, respectively, of this Act, and

(2) by inserting before section 401 (as so redesignated) of this Act, the following:

"TITLE IV—OTHER PROVISIONS"

(b) The Energy Supply and Environmental Coordination Act of 1974, as amended, is amended in section 412 (as redesignated) by inserting before the word "Act" wherever it appears "sections 203, 309, and 401 through 412 of this".

DEFINITION

SEC. 206. The Energy Policy and Conservation Act of 1975 in section 102 by adding at the end of subsection (c) the following new paragraph:

"(4) The term 'developing new underground coal mine' includes construction of a coal preparation plant which is designed to reduce the sulfur content of coal produced from any coal mine.".

TRANSITIONAL PROVISIONS

SEC. 207. (a) All orders, determinations, rules, regulations, permits, contracts, certificates, licenses, and privileges—

(1) which have been issued, made, granted, or allowed to become effective by the President, by any Federal department or agency or official thereof, or by a court of competent jurisdiction, in the performance of functions which are transferred under this title, and

(2) which are in effect at the time this title takes effect,

shall continue in effect according to their terms until modified, terminated, superseded, set aside, or revoked by the President, the Administrator, other authorized officials, a court of competent jurisdiction, or by operation of law.

(b) The provisions of this title shall not affect suits commenced prior to the date this title takes effect, and in all such suits proceedings shall be had, appeals taken, and judgments rendered, in the same manner and effect as if this title had not been enacted.

NATIONAL COAL POLICY STUDY

SEC. 208. (a) The President is hereby requested to make a full and complete investigation and study of the alternative national uses of coal available in the United States to meet the Nations' energy requirements consistent with national policies for the protection and enhancement of the quality of the environment and for economic recovery and full employment. In particular the study should evaluate—

(1) current and prospective coal requirements of the United States;

(2) current and prospective voluntary and energy conservation measures and their potential for reduction of the United States coal requirements;

(3) current and prospective coal resource production, transportation, conversion, and utilization requirements;

(4) the adequacy of coal research, development, and demonstration programs being carried out by Federal, State, local, and nongovernmental entities, including the ability (including financial resources, manpower, and statutory authority) of such Federal, State, local, and nongovernmental entities to implement such programs;

(5) programs for the development of all new coal mining technologies which increase coal production and utilization;

(6) alternative strategies for meeting anticipated United States coal requirements, consistent with achieving other national goals, including national security and environmental protection;

(7) existing and prospective governmental policies and laws affecting the coal industry with the view of determining what, if any, changes in and implementation of such policies and laws may be advisable in order to consolidate, coordinate, and provide an effective and equitable national energy policy, and

(8) the most efficient use of the Nation's coal resources considering economic (including capital and consumer costs, and balance of payments), social (including employment), environmental, technological, national defense, and other aspects.

(b) Within one year of enactment, the President shall submit to the Congress a report with respect to the studies and investigations, together with findings and recommendations in order that the Congress may

have such information in a timely fashion. Such report shall include the President's determinations with respect to—

(1) the Nation's projected coal needs, broken down into regional areas, for the next two decades with particular reference to electric power;

(2) the coal resources available or which must be developed to meet those needs, including, as applicable, the programs for research, development, and demonstration necessary to provide those major technological advances which may greatly enhance the Nation's ability to efficiently and economically utilize its fuel resources;

(3) the air, water, and other pollution created by coal requirements, including any programs to overcome promptly and efficiently any technological or economic barriers to the elimination of such pollution; and

(4) the existing policies and programs of the Federal Government and of State and local governments, which have any significant impact on the availability, production or efficient and economic utilization of coal resources and on the ability to meet the Nation's energy needs and environmental requirements, including proposals, policies, and programs for reconciling the Nation's environmental quality requirements with energy needs.

(c) There is hereby authorized to be appropriated for use in carrying out the purpose of this section not to exceed $18,000,000.

COAL INDUSTRY PERFORMANCE AND COMPETITION STUDY

SEC. 209. (a) The President is hereby requested to make a complete investigation of the performance and competition of the coal industry. The study should be an interagency effort which shall include, but not be limited to, participation by—

(1) Federal Trade Commission,
(2) Department of Justice,
(3) Department of Energy,
(4) Department of Transportation,
(5) Department of Commerce,
(6) Council on Wage and Price Stability,
(7) Tennessee Valley Authority, and
(8) Appalachian Regional Commission.

(b) In particular the study shall consider following elements relating to competition:

(1) interests in, ownership or production of coal reserves by firms which—

(A) own or have an interest in commodity transportation systems by rail, water or pipeline,

(B) own or produce oil, natural gas or uranium, and

(C) use significant amounts of coal in their processes, including electrical generation and steelmaking,

(2) prices, profitability, and levels of concentration in sales of various identifiable submarket structures in the coal industry, including but not limited to the market for—

(A) steam and metallurgical coal,

(B) low-sulfur coal,

(C) lignite, anthracite, bituminous and subbituminous coal,

(D) spot sales and long-term delivery contracts, and

(E) exports,

(3) overall profitability of coal operations,

(4) capital requirements, sources and uses of funds,

(5) vertical integration of production, cleaning, processing, gasification, liquefaction, transportation, marketing, distribution, combustion and other phases of the coal fuel cycle,

(6) the effect of interfuel ownership, vertical integration and market concentration upon innovation, efficiency, prices and profits,

(7) costs of production, transportation, processing and other components of coal prices for different regions and different types of mines,

(8) responsiveness of coal supply to market demand,

(9) productive capacity,

(10) productivity,

(11) economies and diseconomies of scale,

(12) distribution and flow of executive, managerial and technical personnel between the various coal producers,

(13) management and directorate interlocks,

(14) relationships to financial institutions,

(15) government-industry relationships, including lease bidding, technology, research, development, demonstration and transfer, and personnel movement,

(16) joint ventures, consortia and cross-ownership,

(17) identification of the major owners of coal industry stock,

(18) control of patents and technologies,

(19) barriers to greater competition in the market for coal, and

(20) Federal income tax policies.

(c) The study shall evaluate the economic and social impacts upon coal-producing counties and States of present and prospective land ownership patterns and levels of income, property, severance and other taxes paid by coal producers.

(d) The study shall evaluate public policies toward the export of metallurgical coal as they relate to—

(1) national security,
(2) national energy goals,
(3) balance of payments,
(4) comparative advantage in world trade,
(5) materials policy,
(6) United States and international reserves and resources, or
(7) likely future metallurgical technologies.

(e) Pursuant to the provisions of the preceding subsections of this section, the President shall submit to the Congress such interim reports as he deems advisable and, not later than twenty-four months following the date of the enactment of the Natural Gas and Petroleum Conservation and Coal Utilization Policy Act of 1977, a comprehensive and final report to the Congress containing the findings and recommendations of the President with respect to such study and investigation. Such recommendations may include such legislative and administrative actions as the President deems advisable.

(f) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this section.

EFFECTIVE DATE

SEC. 10. The amendments to the Energy Supply and Environmental Coordination Act of 1974 made by this title shall take effect one hundred eighty days after enactment except that the Administrator is authorized to issue rules pursuant to this title at any time after enactment of this title, which rules may take effect no earlier than one hundred eighty days after enactment of this title: *Provided*, That title III of H.R. 5146 shall not be effective so long as title II of H.R. 5146 remains law.

TITLE III—CONVERSION FROM NATURAL GAS AND PETROLEUM TO COAL AND OTHER FUEL RESOURCES

SUBPART A—GENERAL PROVISIONS

FINDINGS AND STATEMENT OF PURPOSES

SEC. 301. (a) The Congress finds that the protection of public health and welfare, the preservation of natural security, and the regulation of interstate commerce require the establishment of a program for the expanded use, consistent with applicable environmental requirements, of coal and other fuels as primary energy sources for existing and new electric powerplants and major fuel-burning installations.

(b) The purposes of this part, which shall be carried out in a manner consistent with applicable environmental requirements, are—

(1) to reduce the importation of petroleum and increase the Nation's capability to use indigenous energy resources of the United States to the extent such reduction and use are in the best interests of the United States;

(2) to conserve natural gas and petroleum for uses other than as a boiler fuel or for the generation of electricity and to conserve such resources for the benefit of present and future generations;

(3) to encourage and foster the greater use of coal and other fuels, in lieu of natural gas and petroleum as a primary energy source for existing and new electric powerplants and major fuel-burning installations, and for other purposes;

(4) to encouarge the use of synthetic gas derived from coal and, to the extent permitted by this part, to encourage the use of synthetic gas derived from coal mixed with natural gas;

(5) to prohibit or, as appropriate, minimize the use of natural gas and petroleum as a primary energy source for existing and new electric powerplants, major fuel-burning installations, and for other purposes;

(6) to require the improvement or modernization of existing and new electric powerplants and major fuel-burning installations, which utilize natural gas or petroleum as a primary energy source and which cannot utilize coal or other fuels, in order to conserve natural gas and petroleum;

(7) to require that existing and new electric powerplants and major fuel-burning installations which utilize petroleum, coal, or other fuels pursuant to this part comply with applicable environmental requirements;

(8) to insure that all Federal agencies utilize their authorities fully in furtherance of the purposes of this part by carrying out programs designed to prohibit or discourage the use of natural gas and petroleum as a primary energy source and by taking such action as lies within their authorities to maximize the efficient use of energy and conserve natural gas and petroleum in programs funded or carried out by such agencies;

(9) to insure that adequate supplies of natural gas are available for essential agricultural uses, including crop drying, seed drying, irrigation, fertilizer production, and production of essential fertilizer ingredients for such uses; and

(10) to reduce the United States' vulnerability to energy supply interruptions.

DEFINITIONS

SEC. 302. For the purposes of this part—

(1) The term "Administrator" means the Administrator of the Federal Energy Administration.

(2) The term "person" means any individual, corporation, company, partnership, association, firm, institution, society, trust, joint venture, or joint stock company, or any State, the District of Columbia, Puerto Rico, and any territory or possession of the United States, or any agency or instrumentality thereof.

(3) The term "natural gas" means—

(A) natural gas, as defined in section 2(5) of the Natural Gas Act, other than—

(i) natural gas which is commercially unmarketable (either by reason of quality or quantity) as determined under rules prescribed by the Administrator; and

(ii) natural gas which is produced by the user from a well the maximum efficient production rate of which is less than 250 million Btu's per day;

(B) liquid petroleum gas; and

(C) synthetic gas derived from crude oil.

(4) The term "petroleum" means crude oil, residual fuel oil, and products derived from crude oil other than—

(A) synthetic gas derived from crude oil;
(B) liquid petroleum gas; and
(C) liquid, solid, or gaseous waste by-products of refinery operations which are commercially unmarketable, as determined under rules prescribed by the Administrator.

(5) The term "coal" means anthracite and bituminous coal and lignite.

(6) The term "other fuels" means electricity or any fuel (other than coat, natural gas, or petroleum) and includes—

(A) petroleum coke, uranium, biomass, wood, and renewable and geothermal energy sources;

(B) synthetic gas derived from coal; and

(C) liquid, solid, or gaseous waste byproducts of refinery operations which are commercially unmarketable, as determined under rules prescribed by the Administrator.

(7) The terms "electric powerplant" and "powerplant" mean any electric generating unit, including a gas turbine or a combined cycle unit, which produces electric power for purposes of sale or exchange and—

(A) has the design capability of consuming any fuel (or mixture or combination thereof) at a fuel heat input rate of 100 million Btu's per hour or greater; or

(B) is a combination, of two or more electric generating units (excluding, if determined appropriate by rule by the Administrator, any such unit not having a design capability to consume any fuel (or mixture or combination thereof) at a fuel heat input rate of less than 100 million Btu's per hour) which are located at the same site and which in the aggregate have a design capability of consuming any fuel (or mixture or combination thereof) at a fuel heat input rate of 250 Btu's per hour or greater.

Such terms do not include any such unit subject to the licensing jurisdiction of the Nuclear Regulatory Commission.

(8) The term "new electric powerplant" means—

(A) any electric powerplant (other than a peakload powerplant) the onsite construction or replacement of which, in accordance with final drawings or an equivalent design document approved by the State regulatory authority, had not commenced on or before April 20, 1977; or

(B) a peakload powerplant (i) the construction or acquisition of which, in whole or in part, had not been contracted for on or before April 20, 1977, or (ii) if contracted for on or before such date, the construction or acquisition of which could be canceled, rescheduled, or modified without—

(I) adversely affecting electric system reliability (as determined by the Administrator after consultation with the Federal Power Commission and the appropriate State regulatory authority), or

(II) incurring significant financial penalty (as determined under rules prescribed by the Administrator).

(9) The term "existing electric powerplant" means any electric powerplant other than a new electric powerplant.

(10) The terms "major fuel-burning installation" and "installation" mean a unit, other than an electric powerplant, consisting of a boiler, gas turbine unit, combined cycle unit, or internal combustion engine which—

(A) has a design capability of consuming any fuel (or mixture or combination thereof) at a fuel heat input rate of 100 million Btu's per hour or greater; or

(B) is a combination, of two or more such units (excluding, if determined appropriate by the Administrator, any such unit having a design capability to consume any fuel (or mixture or combination thereof) at a fuel heat input rate of less than 100 million Btu's per hour) which are located at the same site and which in the aggregate have a design capability of consuming such fuel at a fuel heat input rate of 250 million Btu's per hour or greater.

(11) The term "new major fuel-burning installation" means any major fuel-burning installation—

(A) the construction or acquisition of which, in whole or in part, had not been contracted for, on or before April 20, 1977; or

(B) if contracted for on or before such date, the construction or acquisition of which could be canceled, rescheduled, or modified without incurring significant financial penalty (as determined under rules prescribed by the Administrator).

(12) The term "existing major fuel-burning installation" means any installation—

(A) which is not a new major fuel-burning installation, and

(B) which has the design capability of consuming any fuel (or mixture or combination thereof) at a fuel heat input rate of 300 million Btu's per hour or greater.

The provisions of subparagraph (B) shall not apply to exclude any installation from being considered an existing major fuel-burning installation if the Administrator finds, by order, that it is technically and financially feasible (as determined under rules prescribed by the Administrator), in view of the remaining useful life of such installation, for such installation to comply with the prohibitions to which such installation would be subject if it were treated as an existing major fuel-burning installation.

(13) The term "primary energy source" means the fuel or fuels used by any existing or new electric powerplant or major fuel-burning installation or the use of which by such powerplant or installation is technically feasible, except it does not include, as determined under rules prescribed by the Administrator—

(A) the minimum amounts of fuel required for boiler startup, testing, flame stabilization, and control uses, and

(B) the minimum amounts of fuel required to alleviate or prevent unanticipated equipment outages and emergencies directly affecting the health, safety, or welfare which would result from electric power outages.

(14) The term "site limitations" means, when used with respect to any powerplant or installation, specific limitations associated with a particular site which relate to the use of coal or other fuels as a primary energy source for such powerplant or installation, such as—

(A) inaccessibility to coal or other fuels;

(B) lack of transportation facilities for coal or other fuels;

(C) lack of adequate facilities for the handling and storage of coal or other fuels;

(D) lack of adequate means for the disposal of wastes from such powerplant or installation; and

(E) lack of an adequate and reliable supply of water for use in compliance with applicable environmental requirements.

(15) The term "applicable environmental requirements" includes—

(A) any Federal, State, or local government law, standard, limitation, or other requirement (including any final order of any Federal or State court) applicable to emissions of environmental pollutants (including air and water pollutants) or disposal of solid waste residues resulting from the use of coal or other fuels or natural gas or petroleum as a primary energy source or from the operation of air pollution control equipment in connection with such use; and

(B) any standard, limitation, or other requirement established by, or pursuant to, the Clean Air Act, the Federal Water Pollution Control Act, the Solid Waste Disposal Act, or the National Environmental Policy Act of 1969.

(16) The term "peakload powerplant" means a powerplant the generation of which in kilowatt hours does not exceed, for any 12-month period, such powerplant's design capacity multiplied by 1,500 hours. Not later than 90 days after the date of the date of the enactment of this Act, the Federal Power Commission shall prescribe rules under which a powerplant's design capacity may be determined for purposes of this paragraph.

(17) The term "cost", unless the context indicates otherwise, means total costs (both operating and capital) incurred over the estimated useful life of an electric powerplant or major fuel-burning installation, discounted to present value, as determined by the Administrator in consultation with the State regulatory authority or other State agency, as appropriate. In the case of an electric powerplant, such costs shall take into account any change required in the use of existing and other economic factors which are included in planning for the production, transmission, and distribution of electric power within such system.

(18) The term "Btu" means British thermal unit.

(19) The term "Mcf" means, when used with respect to natural gas, 1,000 cubic feet of natural gas.

(20) The term "qualifying cogeneration facility" shall have the same meaning as given such term in section 546(b).

(21) The term "State regulatory authority" means any State agency which has ratemaking authority with respect to the sale of electricity by any electric utility.

(22) The term "electric utility" means any person or Federal agency which sells electric power.

(23) The term "Federal agency" has the same meaning as is given the term "agency" in section 551(1) of title 5, United States Code.

EFFECT ON ENVIRONMENTAL REQUIREMENTS

SEC. 303. Except as provided in section 331, nothing in this part shall be construed as permitting any existing or new electric powerplant or major fuel-burning installation to delay or avoid compliance with applicable environmental requirements.

TERRITORIAL APPLICATION

SEC. 304. The provisions of this part shall apply in all the States, Puerto Rico, and the territories and possessions of the United States, except that the provisions of sections 311, 312, and 313 shall only apply to powerplants and installations situated on lands within the contiguous 48 States, Alaska, and the District of Columbia.

SUBPART B—PROHIBITIONS; EXEMPTIONS

NEW ELECTRIC POWERPLANTS

SEC. 311. (a) No new electric powerplant shall use natural gas as a primary energy source.

(b) No new electric powerplant shall use petroleum as a primary energy source.

(c) Any person who proposes to use petroleum or natural gas, or both, as a primary energy source for a new electric powerplant may file a petition with the Administrator requesting an exemption for such powerplant from the prohibition of such use under subsections (a) and (b).

(d) The Administrator, after consideration of a petition filed under subsection (c) for a temporary exemption and any comments thereon, shall grant such exemption, by order, for such period as the Administrator determines appropriate if he finds that the petitioner has demonstrated that for the period of the proposed exemption—

(1) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of coal or other fuels as a primary energy source, it is likely such supply will not be available to such powerplant;

(2) despite diligent good faith efforts, site limitations exist which cannot reasonably be expected to be overcome;

(3) the prohibitions of subsections (a) and (b) could not be satisfied without violating applicable environmental requirements; or

(4) the issuance of such exemption furthers the purposes of this part.

No exemption under this subsection, including any extensions or renewals thereof, may exceed a period of 5 years' duration.

(e) After consideration of a petition filed under subsection (c) requesting a permanent exemption and any comments thereon, the Administrator shall grant such permanent exemption, by order, if he finds that the petitioner has demonstrated that—

(1) there is no site at which—

(A) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of coal or other fuels as a primary energy source, it is likely that such supply will be available at a cost (taking into account associated facilities for the transportation and utilization of such fuel) which, based upon the best practicable estimates, does not substantially exceed the costs, as determined by rule by the Administrator, of using petroleum derived from imported crude oil as a primary energy source during the useful life of the powerplant;

(B) despite diligent good faith efforts, site limitations would permit the location of a powerplant using coal or other fuel as a primary energy source;

(C) the prohibitions of subsections (a) and (b) could be satisfied without violating applicable environmental requirements; and

(D) the required use of coal or other fuels would allow the petitioner to obtain adequate capital for the financing of such powerplant; or

(2) the issuance of such exemption furthers the purposes of this part.

(f) Before the Administrator grants any petition for any exemption under subsection (d) or (e), the Administrator shall submit a copy of the petition to the Federal Power Commission for the purpose of the Commission's certifying that there is no alternative supply of electric power which can be obtained without impairing reliability of service.

(g) In the case of any petition for a permanent exemption from the prohibitions of subsection (b) applicable to a new electric powerplant, the Administrator shall grant such exemption, by order, if the petitioner certifies that such powerplant is to be constructed and operated solely as a peakload powerplant.

(h) If the appropriate State regulatory authority has not approved a powerplant for which a petition for an exemption has been filed under subsection (c), such exemption may not take effect until the Administrator has determined that approval by such State regulatory authority has occurred.

(i) Any new electric powerplant issued an order before the effective date of this part pursuant to section 2(c) of the Energy Supply and Environmental Coordination Act of 1974 shall, notwithstanding the provisions of such section (c), be subject to the provisions of this part, except that if such order became final before such date, the preceding provisions of this section shall not apply to such powerplant. Nothing in this subsection shall be construed to affect the validity of any such final order or to require the Administration to reissue any such order.

NEW MAJOR FUEL-BURNING INSTALLATIONS

SEC. 312. (a)(1) No new major fuel-burning installation which is a boiler shall use natural gas or petroleum, or both, as a primary energy source.

(2)(A) The Administrator may, by rule, prohibit categories (identified in such rule) of new major fuel-burning installations, other than boilers, from using natural gas or petroleum, or both, as a primary energy source. In identifying categories of new major fuel-burning installations pursuant to this subparagraph, the Administrator shall take into account any special circumstances or characteristics of each category of such installations (such as the technical feasibility of burning coal or other fuels and the size or location of such installations). Any such rule shall not apply in the case of any new major fuel-burning installation subject to such rule pending a resolution of any petition for an exemption for such installation which may be filed with the Administrator not later than 60 days after such rule is published under section 321(g).

(B) The Administrator may, by order, prohibit any new major fuel-burning installation, other than a boiler, from using natural gas or petroleum, or both, as a primary energy source if such installation is not, at the time of the issuance of such order, in a category identified in a rule prescribed under subparagraph (A). The Administrator shall not issue an order under this subparagraph to any installation if it is demonstrated that such installation would have been granted an exemption, if such prohibition had been established by rule pursuant to subparagraph (A) rather than by order pursuant to this subparagraph.

(b) Any person who proposes to use petroleum or natural gas, or both, as a primary energy source for any new major fuel-burning installation may file a petition with the Administrator requesting an exemption for such installation from the prohibitions of subsection (a)(1) or (2)(A).

(c)(1) The Administrator, after consideration of a petition for a temporary exemption from the prohibitions of subsection (a)(1) or (2)(A) and any comments thereon, shall grant such exemption, by order, for such period as the Administrator determines appropriate, if he finds that the petitioner has demonstrated that for the period of the proposed exemption—

(A) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of coal or other fuels, it is likely such supply will not be available to such installation;

(B) despite diligent good faith efforts, site limitations exist which cannot reasonably be expected to be overcome;

(C) the prohibitions of subsection (a)(1) or (2)(A) could not be satisfied without violating applicable environmental requirements;

(D)(i) such installation is not technically capable of using coal; and

(ii) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of synthetic fuels derived from coal, such supply will not be available to such installation and the petitioner has a contract or other similar arrangement binding on the petitioner and the supplier of such fuels to provide such a supply at the end of the period of the proposed exemption; or

(E) the issuance of such exemption furthers the purposes of this part.

(2) No exemption under paragraph (1), including any extensions or renewals thereof, may exceed a period of 5 years' duration, except that any exemption based on subparagraph (1)(D) may, upon petition, be extended an additional period of 5 years. Notwithstanding the preceding provisions, any exemption based on subparagraph (1)(D) may not be effective after December 31, 1994.

(d)(1) After consideration of a petition requesting a permanent exemption from the prohibitions of subsection (a)(1) or (2)(A) and any comments thereon, the Administrator shall grant such permanent exemption, by order, if he finds that the petitioner has demonstrated that—

(A) there is no site proposed by the petitioner at which—
